A. Separately enclosed, pre-assembled, combination variable frequency drives (VFD), rated 600 V and less, solid-state, PWM, for speed control of poly-phase, squirrel-cage induction motors.

1.02 RELATED REQUIREMENTS

A. Section 23 05 13 “Common Motor Requirements for HVAC Equipment

B. Section 23 05 48 “Vibration and Supports for HVAC”

C. Section 23 08 00 “Commissioning of HVAC”

1.03 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

DEFINITIONS

B. Factory-Installed VFD: A VFD installed by motorized-equipment manufacturer as a component of equipment.

C. Field-Installed VFD: A VFD installed at project site. VFDs shipped with motorized-equipment but installed at project site shall be considered Field-Installed VFDs.

D. Legend:
   1. BAS: Building Automation System.
   2. EMI: Electromagnetic Interface.
   3. IBC: International Building Code.
   4. ICC-ES: ICC-Evaluation Service.
   5. IGBT: Insulated-Gate Bipolar Transistor.
   6. LAN: Local Area Network.
   7. LED: Light-Emitting Diode.
   8. MCP: Motor-Circuit Protector.
   9. NC: Normally Closed.
   10. NO: Normally Open.
   11. OCPD: Overcurrent Protective Device.
   12. OSHPD: Office of Statewide Health Planning & Development (for the State of California).
   13. PID: Control Action, Proportional Plus Integral Plus Derivative.
   14. PWM: Pulse-Width Modulation.
   15. TDD: Total Demand (harmonic current) Distortion.
   16. THD(V): Total Harmonic Voltage Demand.
   17. VFD: Variable Frequency Drive.

1.04 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data for each type of VFD
   1. For each type and rating of VFD indicated, include features, performance, electrical ratings, operating characteristics, location of wiring terminations, conduit entry and ground lug locations, shipping and operating weights, and furnished specialties and accessories.

C. Shop Drawings
   1. For each VFD indicated, include dimensioned plans, elevations, and sections; and conduit entry locations and sizes, mounting arrangements, and details, including required clearances and service space around equipment.
   2. Show tabulations of installed devices, equipment features, and ratings. Include the following:
      a. Each installed VFD's type and details.
      b. Factory-installed devices.
      c. Enclosure types and details.
      d. Nameplate legends.
      e. Short-circuit current (withstand) rating of enclosure unit.
      f. Features, characteristics, ratings, and factory settings of each VFD and installed devices.
      g. Specified Modifications.
   3. Schematic and Connection Wiring Diagrams for power, signal, and control wiring.

D. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around VFDs where pipe and ducts are prohibited. Show VFD layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

E. Manufacturer Seismic Qualification Certification: Submit certification that VFDs, accessories, and components will withstand seismic forces defined in Section 23 05 48 "Vibration and Supports for HVAC." Include the following:
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
      a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
      b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

F. Qualification Data: For manufacturer and testing agency.

G. Test Report: Field quality-control test reports.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance data: For VFDs to include in emergency, operation, and maintenance manuals.
   1. Manufacturer's written instructions for testing and adjusting thermal-magnetic circuit breaker and MCP trip settings.
   2. Manufacturer's written instructions for setting field-adjustable overload relays.
   3. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
   4. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.

1.06 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Power Fuses: equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
   2. Control Power Fuses: equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.

3. Indicating Lights: Two of each type and color installed.
4. Auxiliary Contacts: Furnish one spare(s) for each size and type of magnetic controller installed.
5. Power Contacts: Furnish three spares for each size and type of magnetic contactor installed.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualification: A qualified manufacturer. Maintain, within 100 miles of Project site, a service center capable of providing training, parts, and emergency maintenance and repairs.

B. Electrical Components, Devices, and Accessories: listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Source Limitations: Obtain factory and field-installed VFD's of a single type through one source from a single manufacturer.

D. VFD's and options shall be UL listed as a complete assembly. The base VFD shall be UL listed for 100 KAIC without the need for input fuses.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver VFD's in shipping splits of lengths that can be moved past obstructions in delivery path.

B. Store VFDs indoors in clean, dry space with uniform temperature to prevent condensation. Protect VFDs from exposure to dirt, fumes, water, corrosive substances, and physical damage.

C. If stored in space that is not permanently enclosed and air conditioned
1. Cover VFDs to protect them from weather, dirt, dust, corrosive substances, and physical damage.
2. Remove loose packing and flammable materials from inside controllers.
3. Install electric heating of sufficient wattage to prevent condensation.

1.09 PROJECT CONDITIONS

A. Environmental/Service Limitations: Rate equipment for continuous operation, capable of driving full load without derating, under the following conditions unless otherwise indicated:
1. Ambient temperature, 32 to 105°F.
2. Ambient Storage Temperature: Not less than minus 4°F and not exceeding 140°F.
3. 0% to 95% relative humidity, non-condensing.
4. Elevation: Not exceeding 3,300 feet without derating.
5. AC line voltage variation, -15% to +10% of nominal.

B. Interruption of Existing Electrical Systems: Do not interrupt electrical systems in facilities occupied by the Contracting Agency or others unless permitted under the following conditions, and then only after arranging to provide temporary electrical service according to requirements indicated:
1. Notify the Contracting Agency no fewer than three weeks in advance of proposed interruption of electrical systems.
2. Indicate method of providing temporary electrical service.
3. Do not proceed with interruption of electrical systems with the Contracting Agency's written permission.
4. Comply with NFPA-70E.

C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFDs, including clearances between VFDS, and adjacent surfaces and other items.

1.10 COORDINATION

A. Coordinate the features of motors, load characteristics, installed units, and accessory devices of each VFD to be compatible with the following:
1. Torque, speed, and horsepower requirements of the load.
2. Designed and labeled for use with each motor throughout speed range without overheating
3. Ratings and characteristics of supply circuit and required control sequence.

4. Ambient and environmental conditions of installation location.

B. Coordinate layout and installation of VFDs with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

C. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3 Section "Cast-in-Place Concrete."

D. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 7 Section "Roof Accessories."

E. Provide comprehensive commission of mechanical systems in accordance with Division 23 Section 23 08 00 "Commissioning of HVAC" and as specified elsewhere in these Specifications. This includes cooperation and assistance with the Commissioning Authority to provide fully commissioned systems. Review the commissioning requirements of the project and provide support as required.

1.11 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace VFDs that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Five years from date of start-up.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. ABB.

B. Danfoss.

C. Yaskawa.

2.02 GENERAL

A. VFD's serving mechanical equipment shall be provided from one manufacturer.

B. Furnish complete variable frequency drives as specified herein for the equipment designated as variable speed.
   1. All standard and optional features shall be included within the VFD enclosure, unless otherwise specified.
   2. Include inlet air filters.
   3. Interior VFD enclosure shall be ventilated and have UL/NEMA Type 12 rating, unless otherwise specified.
   4. Exterior VFD enclosure shall be ventilated and have UL/NEMA Type 3R rating, unless otherwise specified.VFD enclosure shall be ventilated and have UL/NEMA Type 3R rating, unless otherwise specified.

C. The VFD shall convert three-phase, 60 Hz utility power to adjustable voltage and frequency, three-phase power for stepless motor speed control from 10% to 100% of the motor's 60 Hz speed. Input voltage shall be as specified on the drawing schedules.

D. The VFD shall include a converter and an inverter section. The converter section shall convert fixed frequency and voltage AC utility power to DC voltage. The inverter section of the VFD shall invert the DC voltage into a quality output waveform, with adjustable voltage and frequency for stepless motor speed control. The VFD shall maintain a constant V/Hz ratio

E. The VFD and options shall be tested to ANSI/UL Standard 508. The complete drive, including all specified options, shall be UL or ETL listed.

F. Power line noise shall be limited to a voltage distortion factor and line notch depth as defined in IEEE Standard 519-2014, IEEE Recommended Practice and Requirements for Harmonic Control in Electrical Power Systems. The total voltage distortion shall not exceed 5% at the point of common coupling.

G. PWM type drives shall include EMI/RFI filters that meet EN61800-3 for First Environment restricted level.

H. Motor noise as a result of the VFD shall be limited to three dB across the line operation, measured at three feet from the motor's center line.

I. The VFD's full load amp rating shall meet or exceed NEC Table 430-150.

J. Protective Features:
   1. Individual motor overload protection for each motor controlled.
   2. Protection against input power undervoltage, overvoltage, and phase loss.
   3. Protection against output current overload and instantaneous over current.
   4. Protection against exceeding temperature limits within VFD enclosure.
   5. Protection against overvoltage on the DC bus.
   6. Protect VFD from sustained power or phase loss. Undervoltage trip activates automatically when line voltage drops more than 10% below rated input voltage.
   7. Automatically reset faults due to undervoltage, overvoltage, phase loss, or exceeding temperature limits.
   8. Protection against output short circuit and motor winding shorting to case faults, as defined by UL 508.
   9. Status lights or digital display for indication of individual fault conditions.
   10. Controller capable of operating without a motor or any other equipment connected to the drive output to facilitate start-up and troubleshooting.
   11. The VFD shall have a dual 5% impedance DC link reactor on the positive and negative rails of the DC buss to minimize power line harmonics and protect the VFD from power line transients.
      a. The chokes shall be non-saturating. Swinging chokes that do not provide full harmonic filtering throughout the entire range are not acceptable.
      b. VFDs with saturating (non-linear) DC link reactors shall require an additional 3% AC line reactor to provide acceptable harmonic performance at full load, where harmonic performance is most critical.

K. Interface Features
   1. Door mounted or digital Hand/Off/Auto selector switch to start and stop the VFD. In the AUTO position, the VFD will start/stop from a remote contact closure. In the HAND position, the VFD will run regardless of the remote contact position.
   2. Manual speed control capability.
   3. Local selector switch: Motor speed is determined by the manual or digital speed control.
   4. Power/On light to indicate that the VFD is receiving utility power.
   5. Fault light to indicate that the VFD has tripped on a fault condition.
   6. Digital meter with selector switch to indicate percent speed and percent load.
   7. A set of form-C, dry contacts to indicate when the VFD is in the run mode.
   8. A set of form-C, dry contacts to indicate when the VFD is in the fault mode.
   9. A 0-10VDC or 4020 mA output signal to vary in direct proportion to the controller's speed.
   10. VFD to have terminal strip to accept N.C. safety contacts. VFD to safety shut down in drive or by-pass mode when contacts open.
   11. VFD to accept an additional N.C. contact to interface with the Hand/Off/Auto switch for remote Stop/Start control.
   12. VFD shall accept an external 0-10 VDC or 4-20 mA speed control signal.
   13. VFD shall have Proportional Integral Derivative (PID) loop control for VFD operation and independent PID loop control for Contracting Agency use.

L. Adjustments
   1. Maximum speed, adjustable 50-100% base speed.
   2. Minimum speed, adjustable 0-50% base speed.
   3. Acceleration time, adjustable 3-60 seconds.
   4. Deceleration times, adjustable 3-60 seconds with override circuit to prevent nuisance trips if deceleration time is set too short.
   5. Current limit, adjustable 0-105%.
   6. Overload trip set point.
   7. Offset and gain to condition the input speed signal.

M. Special Features
   1. The following special features shall be included in the VFD enclosure:
      a. VFD shall include a communication port with standard protocols (BACnet/Modbus/N2) to match Contracting Agency DDC system. Coordinate with DDC manufacturer to provide a seamless interface between the VFD and DDC system.
      b. All panels shall be marked for 100,000 AMP short circuit current rating in compliance with UL.
      c. Provide a manual door interlocked main fused disconnect switch, pad lockable in the off position.
   2. All power and low voltage terminations into and out of VFD on NEMA 3R enclosures shall be through the bottom of drive cabinet through factory provided knock-outs.
   3. The VFD shall be able to provide full rated output current continuously, 110% of rated current for 60 seconds and 130% of rated torque for up to 2 seconds while starting. The VFD shall provide full motor torque at any selected frequency from 20 Hz to based speed while providing a variable torque V/Hz output at reduced speed. Breakaway torque of 140% shall be available.
   4. The VFD shall include current sensors on all output phases.
   5. The VFD shall continue to operate with reduced output without faulting with input voltage as low as 85% of the nominal voltage and shall provide full rated output for input voltages of 90% of nominal.
   6. The VFD shall have a minimum of Class 20 I2t motor overload protection, which shall automatically compensate for changes in motor speed.
   7. All VFDs shall have the same interchangeable customer interface keypad to allow a single programmable keypad to download information to multiple VFDs during startup procedures.
   8. The VFD shall accept up to two feedback signals, each with independent scaling.
   9. None of the above features shall affect the UL or ETL listing of the unit.

2.03 PERFORMANCE REQUIREMENTS

A. Seismic Performance: VFDs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7. The designated VFDs shall be tested and certified by an NRTL as meeting the ICC-ES AC 156 test procedure requirements.
   1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

2.04 LINE CONDITIONING AND FILTERING

A. Input Line Conditioning: Based on the manufacturer's harmonic analysis study and report, provide input filtering, as required, to limit total demand (harmonic current) distortion and total harmonic voltage demand at the defined point of common coupling to meet IEEE 519 recommendations.

B. Output Filtering: Supply Dv/Dt on motor lead lengths over 75 feet.

C. CE Mark – The base drive shall conform to the European Union Electromagnetic Compatibility directive, a requirement for CE marking. The base drive shall meet product standard EN 61800-3 for the First Environment restricted distribution (Category C2).

2.05 BYPASS SYSTEMS

A. Bypass Operation: Safely transfers motor between power converter output and bypass circuit, manually, automatically, or both. Selector switches set modes and indicator lights indicate mode selected. Unit is capable of stable operation (starting, stopping, and running) with motor completely disconnected from power converter.

B. Bypass Mode: Manual operation only; requires local operator selection at VFD. Transfer between power converter and bypass contactor, and retransfer shall only be allowed with the motor at zero speed.

C. Bypass Mode: Field-selectable automatic or manual, allows local and remote transfer between power converter and bypass contactor and retransfer, either via manual operator interface or automatic-control system feedback.

D. Bypass Controller: Three-contactor-style bypass allows motor operation via the power converter or the bypass controller; with input isolating switch and barrier arranged to isolate the power converter input and output and permit safe testing and troubleshooting of the power converter, both energized and de-energized, while motor is operating in bypass mode.
   1. Bypass Contactor: Load-break, IEC rated contactor.
   2. Input and Output Isolating Contactors: Non-load-break, IEC rated contactors.
   3. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.

E. Bypass Contactor Configuration: Full voltage across the line for applications 75 HP and below. Solid State reduced voltage starting for motors 75 HP and above.
   1. NORMAL/BYPASS selector switch.
   2. HAND/OFF/AUTO selector switch.
   3. NORMAL/TEST Selector Switch: Allows testing and adjusting of VFD while the motor is running in the bypass mode.
   4. Contactor Coils: Pressure-encapsulated type with coil transient suppressors.
      a. Operating Voltage: Depending on contactor IEC size and line-voltage rating, manufacturer's standard matching control power or line voltage.
      b. Power Contacts: Totally enclosed, double break, and silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
   5. Control Circuits: 120 V ac; obtained from integral CPT, with primary and secondary fuses with CPT of sufficient capacity to operate all integral devices and remotely located pilot, indicating, and control devices. Retain "CPT Spare Capacity" Subparagraph below if retaining "CPT" option in "Control Circuits" Subparagraph above and spare CPT capacity is required. Spare capacity is normally available in 100-VA increments. Consult manufacturers for maximum spare capacity and for available CPT sizes for different NEMA and enclosure sizes, because adding spare capacity and an oversized CPT may require using an enlarged enclosure.
   6. Overload Relays: NEMA ICS 2.
      a. Melting-Alloy Overload Relays:
         1) Inverse-time-current characteristic.
         2) Selectable Class 10, 20 and 30 tripping characteristic.
         3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
      b. Bimetallic Overload Relays:
         1) Inverse-time-current characteristic.
         2) Selectable Class 10, 20 and 30 tripping characteristic.
         3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
         4) Ambient compensated.
         5) Automatic resetting.
      c. Solid-State Overload Relays:
         1) Switch or dial selectable for motor-running overload protection.
         2) Sensors in each phase.
         3) Class 10 and 20 tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
         4) Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
         5) Analog communication module.
      d. NC and NO isolated overload alarm contact.
      e. External overload, reset push button.

PART 3 EXECUTION

3.01 INSTALLATION

A. Provide factory mounting brackets and attachments for VFDs. Field modification or drilling of enclosures is not permitted. Mounting brackets and supports shall not block required access and clearances for VFD.

3.02 START-UP AND COMMISSIONING SERVICE

A. The manufacturer shall provide start-up commissioning of the variable frequency drive and its optional circuits by a factory certified service technician who is experienced in start-up and repair services. The commissioning personnel shall be the same personnel that will provide the factory service and warranty repairs at the customer's site. Sales personnel and other agents who are not factory certified technicians for drive field repairs shall not be acceptable as commissioning agents. Coordinate commissioning requirements with the Commissioning Authority as specified under Section 23 08 00 "Commissioning of HVAC."

B. Start-up services shall include checking for verification of proper operation and installation for the VFD, its options and its interface wiring to the building automation system. Included in this service shall be (as a minimum):
   1. Verification of contractor wire terminations to the VFD and its optional circuitry.
   2. Installation verification for proper operation and reliability of the VFD, the motor being drive, and the building automation system.
   3. Conform to training requirements specified elsewhere. In addition, the VFD manufacturer's certified trainer shall provide up to one-hour of customer operator training on operation and service diagnostics at the time of the equipment commissioning.
   4. Measurements for verification of proper operation on each of the following items:
      a. Motor voltage and frequency. Verification of proper motor operation.
      b. Control input for proper building automation system interface and control calibration.
      c. Calibration check for the following setpoints (and adjustments as necessary):
         1) minimum speed.
         2) maximum speed.
         3) acceleration rate.
         4) deceleration rate.
      d. VFD manufacturer technician shall document all default and custom drive settings.
   5. Submit Start-Up and Commissioning Reports.

3.03 EXAMINATION

A. Contractor shall coordinate with Manufacturer/Supplier to verify that jobsite meets factory recommended and code required conditions for proper VFD installation prior to the installation. Additionally, contractor shall address Manufacturer/Supplier's recommendations to assure proper installation prior to the installation. Manufacturer/Supplier shall visit jobsite subsequent to the installation to verity VFD's are installed properly. Items considered shall include (at a minimum):
   1. Clearance spacing
   2. Temperature, contamination, dust, and moisture of the environment.
   3. Separate conduit installation of the motor wiring, power wiring, and control wiring.
   4. Installation per the manufacturer's recommendation.
   5. Measure voltage rise, time, and magnitude.
   6. Cover and protect the VFD from installation dust and contamination until the environment is cleaned and ready for operation. The VFD shall not be operated while the unit is covered.
   7. VFD input and output power shall be installed in separate conduits.

END OF SECTION 23 05 49

SECTION 23 05 53

IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Equipment labels.

B. Warning signs and labels.

C. Pipe labels.

D. Duct labels.

E. Stencils.

F. Valve tags.

G. Warning tags.

1.02 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.03 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of product.

C. Samples: For color, letter style, and graphic representation required for each identification material and device.

D. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.

E. Valve Schedules: For each piping system to include in maintenance manuals.

1.04 COORDINATION

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 PRODUCTS

2.01 GENERAL

A. Manufacturers:
   1. Craftmark Identification Systems.
   2. Seton Identification Products.
   3. MSI Marking Services.
   4. Setmark.

2.02 EQUIPMENT LABELS

A. Metal Labels for Equipment:
   1. Material and Thickness: Brass or anodized aluminum, 0.032-inch minimum thickness and having predrilled or stamped holes for attachment hardware.
   2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
4. Fasteners: Stainless-steel rivets or contact-type permanent adhesive, compatible with label and substrate.
5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Plastic Labels for Equipment:
1. Material and Thickness: Three-layer, multicolor, plastic labels for mechanical engraving, 1/16 inch thick and having predrilled holes for attachment hardware.
2. Color Coding:
   a. Letter Color: White.
   b. Background Color: Red.
3. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
5. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
6. Fasteners: Stainless-steel rivets or contact-type permanent adhesive, compatible with label and substrate.

C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.03 WARNING SIGNS AND LABELS

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.

B. Color Coding:
1. Background Color: Yellow.
2. Letter Color: Black.

C. Maximum Temperature: Able to withstand temperatures up to 160 deg F.

D. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

E. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

F. Fasteners: Stainless-steel rivets or self-tapping screws.

G. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

H. Label Content: Include caution and warning information, plus emergency notification instructions.

2.04 PIPE LABELS

A. Do not use pipe labels or plastic tapes for bare pipes conveying fluids at temperatures of 125 deg F (52 deg C) or higher.

B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

C. Pre-tensioned Pipe Labels for Outside Diameter Less or Equal to 8 Inches: Pre-coiled, semi-rigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.

D. Self-Adhesive Pipe Labels for Outside Diameter Greater than 8 Inches: Printed plastic with contact-type, permanent-adhesive backing. Either marker shall show accepted color-coded background, proper color of legend in relation to background color, accepted legend letter size, accepted marker length.

E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, and an arrow indicating flow direction.
   1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
   2. Lettering Size: At least 1-1/2 inches high.

2.05 DUCT LABELS

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.

B. Maximum Temperature: Able to withstand temperatures up to 160 deg F.

C. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

D. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

E. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

F. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, and an arrow indicating flow direction.
   1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions, or as separate unit on each duct label to indicate flow direction.
   2. Lettering Size: At least 1-1/2 inches high.

2.06 STENCILS

A. Stencils for Piping: Prepared with letter sizes according to ASME A13.1 for piping; minimum letter height of 1-1/4 inches for ducts; and minimum letter height of □ inch for access panel and door labels, equipment labels and similar operational instructions.
   1. Stencil Material: Brass
   2. Stencil Paint: Exterior, gloss, alkyd enamel, black unless otherwise indicated. Pain may be in pressurized spray-can form.
   3. Identification Paint: Exterior, alkyd enamel in colors according to ASME A13.1 unless otherwise indicated.

B. Stencils for Ducts:
   1. Lettering Size: Minimum letter height of 1-1/4 inches for viewing distances up to 15 feet and proportionately larger lettering for greater viewing distances.
   2. Stencil Material: Brass.
   3. Stencil Paint: Exterior, gloss, acrylic enamel. Paint may be in pressurized spray-can form.
   4. Identification Paint: Exterior, acrylic enamel. Paint may be in pressurized spray-can form.

C. Stencils for Access Panels and Door Labels, Equipment Labels, and Similar Operational Instructions:
   1. Lettering Size: Minimum letter height of 1/2 inch for viewing distances up to 72 inches and proportionately larger lettering for greater viewing distances.
   2. Stencil Material: Brass
   3. Stencil Paint: Exterior, gloss, acrylic enamel. Paint may be in pressurized spray-can form.

4. Identification Paint: Exterior, acrylic enamel. Paint may be in pressurized spray-can form.

2.07 VALVE TAGS

A. Valve Tags: Stamped or engraved with □-inch letters for piping system abbreviation and □ inch sequenced numbers.
   1. Tag Material: Brass, 0.032-inch minimum thickness and having predrilled or stamped holes for attachment hardware.
   2. Fasteners: Brass wire-link or beaded chain; or S-hook.

B. Valve Schedules: For each piping system, on 8-1/2 by 11 inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
   1. Valve tag schedule shall be included in operation and maintenance data.

2.08 WARNING TAGS

A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.
   1. Size: Approximately 4 by 7 inches.
   2. Fasteners: Brass grommet and wire.
   3. Nomenclature: Large-size primary caption such as “DANGER”, “CAUTION” or “DO NOT OPERATE.”
   4. Color:
      a. Background Color: Yellow.
      b. Letter Color: Black.

PART 3 EXECUTION

3.01 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.02 GENERAL INSTALLATION REQUIREMENTS

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

3.03 EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

3.04 PIPE LABEL INSTALLATION

A. Piping Color-Coding: Painting of piping is specified in Section 09 91 23 "Interior Painting"

B. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
   1. Within one foot of each valve and control device.
   2. Near each branch connection and riser takeoff.
   3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
   4. Near major equipment items and other points of origination and termination.
   5. At access doors, manholes, and similar access points that permit view of concealed piping.
   6. Spaced at maximum intervals of 20 feet along each run, but not less than once in each room at entrance and exit of each concealed space.
   7. On piping above removable acoustical ceilings.

C. Directional Flow Arrows: Arrows shall be used to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.

D. Pipe Label Color Schedule:
   1. Condenser-Water Piping:
      a. Background Color: Green.
      b. Letter Color: White.

3.05 DUCT LABEL INSTALLATION

A. Locate ductwork labels where ductwork is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
   1. Within one foot of each control device.
   2. Near each branch connection and riser takeoff.
   3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
   4. Near major equipment items and other points of origination and termination.
   5. Spaced at maximum intervals of 20 feet along each run, but not less than once in each room at entrance and exit of each concealed space.
   6. On ductwork above removable acoustical ceilings.

B. Install plastic-laminated duct labels with permanent adhesive on air ducts in the following color codes:
   1. Exhaust Air Ducts:
      a. Background Color: Yellow.
      b. Letter Color: Black.
   2. Supply Air, Return Air and Outside Air:
      a. Background Color: Blue.
      b. Letter Color: White
   3. Return Air and Outside Air:
      a. Background Color: Green.
      b. Letter Color: White
   4. ASME A13.1 Colors and Designs: For hazardous material exhaust.

3.06 VALVE-TAG INSTALLATION

A. Install tags on valves and control devices in piping systems, except valves within factory-fabricated equipment units; faucets; convenience and lawn-watering hose connections. List tagged valves in a valve schedule.

B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
   1. Valve-Tag Size and Shape:
      a. Chilled Water: 2 inches, round.
      b. Condenser Water: 2 inches, round.
      c. Hot Water: 2 inches, round.
      d. Refrigerant: 2 inches, round.
      e. Gas: 2 inches, round.
      f. Steam: 2 inches, round.
   2. Valve-Tag Color:
      a. Chilled Water: Natural.
      b. Condenser Water: Natural.
      c. Hot Water: Natural.
      d. Refrigerant: Natural.
      e. Gas: Natural.
      f. Steam: Natural.
   3. Letter Color:
      a. Chilled Water: Black.
      b. Condenser Water: Black.

c. Hot Water: Black.
d. Refrigerant: Black.
e. Gas: Black.
f. Steam: Black.

C. All above and below grade and interior and exterior valves shall be tagged. Submit valve tag chart to the Contracting Agency Representative for review and approval at the completion of the project.

3.07 WARNING-TAG INSTALLATION

A. Write required message on, and attach warning tags to, equipment and other items where required.

END OF SECTION 23 05 53

SECTION 23 05 93

TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Balancing Air Systems:
   1. Constant-volume air systems.
   2. Variable-air-volume systems.

B. Balancing Hydronic Piping Systems:
   1. Constant-flow hydronic systems.
   2. Variable-flow hydronic systems.
   3. Primary-secondary hydronic systems.

C. Testing, Adjusting, and Balancing Equipment:
   1. Motors.Cooling towers.
   2. Boilers.
   3. Heat-transfer coils.
   4. Pumps.

D. Sound tests.

E. Vibration tests.

F. Duct leakage tests.

G. Control system verification.

1.02 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.03 DEFINITIONS

A. AABC: Associated Air Balance Council.

B. BAS: Building automation systems.

C. NEBB: National Environmental Balancing Bureau.

D. TAB: Testing, adjusting, and balancing.

E. TABB: Testing, Adjusting, and Balancing Bureau.

F. TAB Specialist: An independent entity meeting qualifications to perform TAB work.

G. TDH: Total dynamic head.

1.04 PREINSTALLATION MEETINGS

A. TAB Conference: Conduct a TAB conference at Project site with the Engineer and Commissioning Agent after approval of the TAB strategies and procedures plan to develop a mutual understanding of the details. Provide a minimum of 14 days' advance notice of scheduled meeting time and location.
   1. Minimum Agenda Items:
      a. The Contract Documents examination report.
      b. The TAB plan.
      c. Needs for coordination and cooperation of trades and subcontractors.
      d. Proposed procedures for documentation and communication flow.

1.05 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.

2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. TAB Report:
   1. Air-Balance Report for Prerequisite IEQ 1: Documentation indicating that work complies with ASHRAE 62.1, Section 7.2.2 - "Air Balancing."
   2. TAB Report for Prerequisite EA 2: Documentation indicating that work complies with ASHRAE/IESNA 90.1, Section 6.7.2.3 - "System Balancing."

1.06 INFORMATIONAL SUBMITTALS

A. Qualification Data: Submit documentation that the TAB specialist and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.

B. Contract Documents Examination Report: Submit the Contract Documents review report as specified in Part 3.

C. Strategies and Procedures Plan: Submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.

D. System Readiness Checklists: Submit system readiness checklists as specified in "Preparation" Article.

E. Examination Report: Submit a summary report of the examination review required in "Examination" Article.

F. Certified TAB reports.

G. Sample report forms.

H. Instrument calibration reports, to include the following:
   1. Instrument type and make.
   2. Serial number.
   3. Application.
   4. Dates of use.
   5. Dates of calibration.

1.07 QUALITY ASSURANCE

A. TAB Specialists Qualifications: Engage an independent TAB Contractor certified by AABC, NEBB or TABB.
   1. TAB Field Supervisor: Employee of the TAB specialist and certified by AABC, NEBB or TABB.
   2. TAB Technician: Employee of the TAB specialist and certified by AABC, NEBB or TABB as a TAB technician.

B. Instrumentation Type, Quantity, Accuracy, and Calibration: Comply with requirements in ASHRAE 111, Section 4, "Instrumentation."

C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 7.2.2 - "Air Balancing."

D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.7.2.3 - "System Balancing."

1.08 FIELD CONDITIONS

A. Full Contracting Agency Occupancy: Contracting Agency will occupy the site and existing building during entire TAB period. Cooperate with Contracting Agency during TAB operations to minimize conflicts with Contracting Agency's operations.

B. Partial Contracting Agency Occupancy: Contracting Agency may occupy completed areas of building before Substantial Completion. Cooperate with Contracting Agency during TAB operations to minimize conflicts with Contracting Agency's operations.

PART 2 PRODUCTS (NOT APPLICABLE)

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems designs that may preclude proper TAB of systems and equipment.

B. Examine installed systems for balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are applicable for intended purpose and are accessible.

C. Examine the approved submittals for HVAC systems and equipment.

D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems output, and statements of philosophies and assumptions about HVAC system and equipment controls.

E. Examine equipment performance data including fan and pump curves.
   1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
   2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.

F. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.

G. Examine test reports specified in individual system and equipment Sections.

H. Examine HVAC equipment and verify that bearings are greased, belts are aligned and tight, filters are clean, and equipment with functioning controls is ready for operation.

I. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible and their controls are connected and functioning.

J. Examine strainers. Verify that startup screens have been replaced by permanent screens with indicated perforations.

K. Examine control valves for proper installation for their intended function of throttling, diverting, or mixing fluid flows.

L. Examine heat-transfer coils for correct piping connections and for clean and straight fins.

M. Examine system pumps to ensure absence of entrained air in the suction piping.

N. Examine operating safety interlocks and controls on HVAC equipment.

O. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

3.02 PREPARATION

A. Prepare a TAB plan that includes the following:
   1. Equipment and systems to be tested.
   2. Strategies and step-by-step procedures for balancing the systems.
   3. Instrumentation to be used.
   4. Sample forms with specific identification for all equipment.

B. Perform system-readiness checks of HVAC systems and equipment to verify system readiness for TAB work. Include, at a minimum, the following:
   1. Airside:
      a. Verify that leakage and pressure tests on air distribution systems have been satisfactorily completed.
      b. Duct systems are complete with terminals installed.
      c. Volume, smoke, and fire dampers are open and functional.
      d. Clean filters are installed.
      e. Fans are operating, free of vibration, and rotating in correct direction.
      f. Variable-frequency controllers' startup is complete and safeties are verified.
      g. Automatic temperature-control systems are operational.
      h. Ceilings are installed.
      i. Windows and doors are installed.
      j. Suitable access to balancing devices and equipment is provided.
   2. Hydronics:
      a. Verify leakage and pressure tests on water distribution systems have been satisfactorily completed.
      b. Piping is complete with terminals installed.
      c. Water treatment is complete.
      d. Systems are flushed, filled, and air purged.
      e. Strainers are pulled and cleaned.
      f. Control valves are functioning per the sequence of operation.
      g. Shutoff and balance valves have been verified to be 100 percent open.
      h. Pumps are started and proper rotation is verified.
      i. Pump gage connections are installed directly at pump inlet and outlet flanges or in discharge and suction pipe prior to valves or strainers.
      j. Variable-frequency controllers' startup is complete and safeties are verified.
      k. Suitable access to balancing devices and equipment is provided.

3.03 GENERAL PROCEDURES FOR TESTING AND BALANCING

A. Perform testing and balancing procedures on each system according to the procedures contained in ASHRAE Standard 111 or SMACNA's "HVAC Systems - Testing, Adjusting, and Balancing" and in this Section.

B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
   1. After testing and balancing, install test ports and duct access doors that comply with requirements in Section 23 33 00 "Air Duct Accessories."
   2. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Section 23 07 13 "Duct Insulation," Section 23 07 16 "HVAC Equipment Insulation," and Section 23 07 19 "HVAC Piping Insulation."

C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.

D. Take and report testing and balancing measurements in inch-pound (IP) units.

3.04 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Cross-check the summation of required outlet volumes with required fan volumes.

B. Prepare schematic diagrams of systems' "as-built" duct layouts.

C. For variable-air-volume systems, develop a plan to simulate diversity.

D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.

E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.

F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.

G. Verify that motor starters are equipped with properly sized thermal protection.

H. Check dampers for proper position to achieve desired airflow path.

I. Check for airflow blockages.

J. Check condensate drains for proper connections and functioning.

K. Check for proper sealing of air-handling-unit components.

L. Verify that air duct system is sealed as specified in Section 23 31 13 "Metal Ducts."

3.05 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
   1. Measure total airflow.
      a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
      b. Where duct conditions allow, measure airflow by Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses to obtain total airflow.
      c. Where duct conditions are not suitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
      d. If a reliable Pitot-tube traverse or coil traverse is not possible, measure airflow at terminals and calculate the total airflow.
   2. Measure fan static pressures as follows:
      a. Measure static pressure directly at the fan outlet or through the flexible connection.
      b. Measure static pressure directly at the fan inlet or through the flexible connection.
      c. Measure static pressure across each component that makes up the air-handling system.
      d. Report artificial loading of filters at the time static pressures are measured.
   3. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
   4. Obtain approval from Contracting Agency for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
   5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload occurs. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.

B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows.
   1. Measure airflow of submain and branch ducts.
   2. Adjust submain and branch duct volume dampers for specified airflow.
   3. Re-measure each submain and branch duct after all have been adjusted.

C. Adjust air inlets and outlets for each space to indicated airflows.
   1. Set airflow patterns of adjustable outlets for proper distribution without drafts.
   2. Measure inlets and outlets airflow.
   3. Adjust each inlet and outlet for specified airflow.
   4. Re-measure each inlet and outlet after they have been adjusted.

D. Verify final system conditions.
   1. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to design if necessary.
   2. Re-measure and confirm that total airflow is within design.
   3. Re-measure all final fan operating data, rpms, volts, amps, and static profile.
   4. Mark all final settings.
   5. Test system in economizer mode. Verify proper operation and adjust if necessary.
   6. Measure and record all operating data.
   7. Record final fan-performance data.

3.06 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

A. Adjust the variable-air-volume systems as follows:
   1. Verify that the system static pressure sensor is located at least two-thirds of the distance down the duct from the fan discharge or as shown on the Drawings.
   2. Verify that the system is under static pressure control.
   3. Select the terminal unit that is most critical to the supply-fan airflow. Measure inlet static pressure, and adjust system static pressure control set point so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
   4. Calibrate and balance each terminal unit for maximum and minimum design airflow as follows:
      a. Adjust controls so that terminal is calling for maximum airflow. Some controllers require starting with minimum airflow. Verify calibration procedure for specific project.
      b. Measure airflow and adjust calibration factor as required for design maximum airflow. Record calibration factor.
      c. When maximum airflow is correct, balance the air outlets downstream from terminal units.
      d. Adjust controls so that terminal is calling for minimum airflow.
      e. Measure airflow and adjust calibration factor as required for design minimum airflow. Record calibration factor. If no minimum calibration is available, note any deviation from design airflow.
      f. On constant volume terminals, in critical areas where room pressure is to be maintained, verify that the airflow remains constant over the full range of full cooling to full heating. Note any deviation from design airflow or room pressure.
   5. After terminals have been calibrated and balanced, test and adjust system for total airflow. Adjust fans to deliver total design airflows within the maximum allowable fan speed listed by fan manufacturer.
      a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
      b. Set terminals for maximum airflow. If system design includes diversity, adjust terminals for maximum and minimum airflow so that connected total matches fan selection and simulates actual load in the building.
      c. Where duct conditions allow, measure airflow by Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses to obtain total airflow.
      d. Where duct conditions are not suitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
      e. If a reliable Pitot-tube traverse or coil traverse is not possible, measure airflow at terminals and calculate the total airflow.
   6. Measure fan static pressures as follows:
      a. Measure static pressure directly at the fan outlet or through the flexible connection.
      b. Measure static pressure directly at the fan inlet or through the flexible connection.
      c. Measure static pressure across each component that makes up the air-handling system.
      d. Report any artificial loading of filters at the time static pressures are measured.

7. Set final return and outside airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
    a. Balance the return-air ducts and inlets the same as described for constant-volume air systems.
    b. Verify that terminal units are meeting design airflow under system maximum flow.
8. Re-measure the inlet static pressure at the most critical terminal unit and adjust the system static pressure set point to the most energy-efficient set point to maintain the optimum system static pressure. Record set point and give to controls contractor.
9. Verify final system conditions as follows:
    a. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to match design if necessary.
    b. Re-measure and confirm that total airflow is within design.
    c. Re-measure final fan operating data, rpms, volts, amps, and static profile.
    d. Mark final settings.
    e. Test system in economizer mode. Verify proper operation and adjust if necessary. Measure and record all operating data.
    f. Verify tracking between supply and return fans.
    g. Verify building pressurization control by measuring building pressure at various operating conditions.

3.07 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

A. Prepare test reports for pumps, coils, and heat exchangers. Obtain approved submittals and manufacturer-recommended testing procedures. Crosscheck the summation of required coil and heat exchanger flow rates with pump design flow rate.

B. Prepare schematic diagrams of systems' "as-built" piping layouts.

C. In addition to requirements in "Preparation" Article, prepare hydronic systems for testing and balancing as follows:
    1. Check liquid level in expansion tank.
    2. Check highest vent for adequate pressure.
    3. Check flow-control valves for proper position.
    4. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
    5. Verify that motor starters are equipped with properly sized thermal protection.
    6. Check that air has been purged from the system.

3.08 PROCEDURES FOR CONSTANT-FLOW HYDRONIC SYSTEMS

A. Adjust pumps to deliver total design gpm.
    1. Measure total water flow.
        a. Position valves for full flow through coils.
        b. Measure flow by main flow meter, if installed.
        c. If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.
    2. Measure pump TDH as follows:
        a. Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
        b. Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
        c. Convert pressure to head and correct for differences in gage heights.
        d. Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow, and verify that the pump has the intended impeller size.
        e. With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.
    3. Monitor motor performance during procedures and do not operate motor in an overloaded condition.

B. Adjust flow-measuring devices installed in mains and branches to design water flows.
   1. Measure flow in main and branch pipes.
   2. Adjust main and branch balance valves for design flow.
   3. Re-measure each main and branch after all have been adjusted.

C. Adjust flow-measuring devices installed at terminals for each space to design water flows.
   1. Measure flow at terminals.
   2. Adjust each terminal to design flow.
   3. Re-measure each terminal after it is adjusted.
   4. Position control valves to bypass the coil, and adjust the bypass valve to maintain design flow.
   5. Perform temperature tests after flows have been balanced.

D. For systems with pressure-independent valves at terminals:
   1. Measure differential pressure and verify that it is within manufacturer's specified range.
   2. Perform temperature tests after flows have been verified.

E. For systems without pressure-independent valves or flow-measuring devices at terminals:
   1. Measure and balance coils by either coil pressure drop or by using P/T ports.
   2. If balanced by coil pressure drop, perform temperature tests after flows have been verified.

F. Verify final system conditions as follows:
   1. Re-measure and confirm that total water flow is within design.
   2. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
   3. Mark final settings.

G. Verify that memory stops have been set.

3.09 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS

A. Balance systems with automatic two- and three-way control valves by setting systems at maximum flow through heat-exchange terminals, and proceed as specified above in General Procedures for Hydronic Systems.

B. Adjust the variable-flow hydronic system as follows:
   1. Verify that the differential-pressure sensor is located as indicated.
   2. Determine whether there is diversity in the system.

C. For systems with no diversity:
   1. Adjust pumps to deliver total design gpm.
      a. Measure total water flow.
         1) Position valves for full flow through coils.
         2) Measure flow by main flow meter, if installed.
         3) If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.
      b. Measure pump TDH as follows:
         1) Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
         2) Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
         3) Convert pressure to head and correct for differences in gage heights.
         4) Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
         5) With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.
      c. Monitor motor performance during procedures and do not operate motor in an overloaded condition.
   2. Adjust flow-measuring devices installed in mains and branches to design water flows.
      a. Measure flow in main and branch pipes.

b. Adjust main and branch balance valves for design flow.
c. Re-measure each main and branch after all have been adjusted.

3. Adjust flow-measuring devices installed at terminals for each space to design water flows.
   a. Measure flow at terminals.
   b. Adjust each terminal to design flow.
   c. Re-measure each terminal after it is adjusted.
   d. Position control valves to bypass the coil and adjust the bypass valve to maintain design flow.
   e. Perform temperature tests after flows have been balanced.
4. For systems with pressure-independent valves at terminals:
   a. Measure differential pressure and verify that it is within manufacturer's specified range.
   b. Perform temperature tests after flows have been verified.
5. For systems without pressure-independent valves or flow-measuring devices at terminals:
   a. Measure and balance coils by either coil pressure drop or temperature method.
   b. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
6. Prior to verifying final system conditions, determine the system differential-pressure set point.
7. If the pump discharge valve was used to set total system flow with variable-frequency controller at 60 Hz, at completion open discharge valve 100 percent and allow variable-frequency controller to control system differential-pressure set point. Record pump data under both conditions.
8. Mark final settings and verify that all memory stops have been set.
9. Verify final system conditions as follows:
   a. Re-measure and confirm that total water flow is within design.
   b. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
   c. Mark final settings.
10. Verify that memory stops have been set.

D. For systems with diversity:
1. Determine diversity factor.
2. Simulate system diversity by closing required number of control valves, as approved by the design engineer.
3. Adjust pumps to deliver total design gpm.
   a. Measure total water flow.
      1) Position valves for full flow through coils.
      2) Measure flow by main flow meter, if installed.
      3) If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.
   b. Measure pump TDH as follows:
      1) Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
      2) Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
      3) Convert pressure to head and correct for differences in gage heights.
      4) Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
      5) With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.
   c. Monitor motor performance during procedures and do not operate motor in an overloaded condition.
4. Adjust flow-measuring devices installed in mains and branches to design water flows.
   a. Measure flow in main and branch pipes.

b. Adjust main and branch balance valves for design flow.
c. Re-measure each main and branch after all have been adjusted.

5. Adjust flow-measuring devices installed at terminals for each space to design water flows.
   a. Measure flow at terminals.
   b. Adjust each terminal to design flow.
   c. Re-measure each terminal after it is adjusted.
   d. Position control valves to bypass the coil, and adjust the bypass valve to maintain design flow.
   e. Perform temperature tests after flows have been balanced.
6. For systems with pressure-independent valves at terminals:
   a. Measure differential pressure, and verify that it is within manufacturer's specified range.
   b. Perform temperature tests after flows have been verified.
7. For systems without pressure-independent valves or flow-measuring devices at terminals:
   a. Measure and balance coils by either coil pressure drop or temperature method.
   b. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
8. Open control valves that were shut. Close a sufficient number of control valves that were previously open to maintain diversity, and balance terminals that were just opened.
9. Prior to verifying final system conditions, determine system differential-pressure set point.
10. If the pump discharge valve was used to set total system flow with variable-frequency controller at 60 Hz, at completion open discharge valve 100 percent and allow variable-frequency controller to control system differential-pressure set point. Record pump data under both conditions.
11. Mark final settings and verify that memory stops have been set.
12. Verify final system conditions as follows:
    a. Re-measure and confirm that total water flow is within design.
    b. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
    c. Mark final settings.
13. Verify that memory stops have been set.

3.10 PROCEDURES FOR PRIMARY-SECONDARY HYDRONIC SYSTEMS

A. Balance the primary circuit flow first.

B. Balance the secondary circuits after the primary circuits are complete.

C. Adjust pumps to deliver total design gpm.
   1. Measure total water flow.
      a. Position valves for full flow through coils.
      b. Measure flow by main flow meter, if installed.
      c. If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.
   2. Measure pump TDH as follows:
      a. Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
      b. Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
      c. Convert pressure to head and correct for differences in gage heights.
      d. Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
      e. With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.
   3. Monitor motor performance during procedures and do not operate motor in an overloaded condition.

D. Adjust flow-measuring devices installed in mains and branches to design water flows.
   1. Measure flow in main and branch pipes.
   2. Adjust main and branch balance valves for design flow.
   3. Re-measure each main and branch after all have been adjusted.

E. Adjust flow-measuring devices installed at terminals for each space to design water flows.
   1. Measure flow at terminals.
   2. Adjust each terminal to design flow.
   3. Re-measure each terminal after it is adjusted.
   4. Position control valves to bypass the coil and adjust the bypass valve to maintain design flow.
   5. Perform temperature tests after flows have been balanced.

F. For systems with pressure-independent valves at terminals:
   1. Measure differential pressure and verify that it is within manufacturer's specified range.
   2. Perform temperature tests after flows have been verified.

G. For systems without pressure-independent valves or flow-measuring devices at terminals:
   1. Measure and balance coils by either coil pressure drop or temperature method.
   2. If balanced by coil pressure drop, perform temperature tests after flows have been verified.

H. Verify final system conditions as follows:
   1. Re-measure and confirm that total water flow is within design.
   2. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
   3. Mark final settings.

I. Verify that memory stops have been set.

3.11 PROCEDURES FOR MOTORS

A. Motors 1/2 HP and Larger: Test at final balanced conditions and record the following data:
   1. Manufacturer's name, model number, and serial number.
   2. Motor horsepower rating.
   3. Motor rpm.
   4. Phase and hertz.
   5. Nameplate and measured voltage, each phase.
   6. Nameplate and measured amperage, each phase.
   7. Starter size and thermal-protection-element rating.
   8. Service factor and frame size.

B. Motors Driven by Variable-Frequency Controllers: Test manual bypass of controller to prove proper operation.

3.12 PROCEDURES FOR COOLING TOWERS

A. Balance total condenser-water flows to towers. Measure and record the following data:
   1. Condenser-water flow to each cell of the cooling tower.
   2. Entering- and leaving-water temperatures.
   3. Wet- and dry-bulb temperatures of entering air.
   4. Wet- and dry-bulb temperatures of leaving air.
   5. Condenser-water flow rate recirculating through the cooling tower.
   6. Cooling-tower spray pump discharge pressure.
   7. Condenser-water flow through bypass.
   8. Fan and motor operating data.

3.13 PROCEDURES FOR BOILERS

A. Hydronic Boilers:
   1. Measure and record entering- and leaving-water temperatures.
   2. Measure and record water flow.
   3. Record relief valve pressure setting.

B. Steam Boilers:
   1. Measure and record entering-water temperature.
   2. Measure and record feed water flow.
   3. Measure and record leaving-steam pressure and temperature.
   4. Record relief valve pressure setting.

3.14 PROCEDURES FOR HEAT-TRANSFER COILS

A. Measure, adjust, and record the following data for each water coil:
   1. Entering- and leaving-water temperature.
   2. Water flow rate.
   3. Water pressure drop for major (more than 20 gpm) equipment coils, excluding unitary equipment such as reheat coils, unit heaters, and fan-coil units.
   4. Dry-bulb temperature of entering and leaving air.
   5. Wet-bulb temperature of entering and leaving air for cooling coils.
   6. Airflow.

B. Measure, adjust, and record the following data for each electric heating coil:
   1. Nameplate data.
   2. Airflow.
   3. Entering- and leaving-air temperature at full load.
   4. Voltage and amperage input of each phase at full load.
   5. Calculated kilowatt at full load.
   6. Fuse or circuit-breaker rating for overload protection.

C. Measure, adjust, and record the following data for each steam coil:
   1. Dry-bulb temperature of entering and leaving air.
   2. Airflow.
   3. Inlet steam pressure.

D. Measure, adjust, and record the following data for each refrigerant coil:
   1. Dry-bulb temperature of entering and leaving air.
   2. Wet-bulb temperature of entering and leaving air.
   3. Airflow.

3.15 SOUND TESTS

A. After the systems are balanced and construction is Substantially Complete, measure and record sound levels at locations as designated by the Architect.

B. Instrumentation:
   1. The sound-testing meter shall be a portable, general-purpose testing meter consisting of a microphone, processing unit, and readout.
   2. The sound-testing meter shall be capable of showing fluctuations at minimum and maximum levels, and measuring the equivalent continuous sound pressure level (LEQ).
   3. The sound-testing meter must be capable of using 1/3 octave band filters to measure mid-frequencies from 31.5 Hz to 8000 Hz.
   4. The accuracy of the sound-testing meter shall be plus or minus one decibel.

C. Test Procedures:
   1. Perform test at quietest background noise period. Note cause of unpreventable sound that affects test outcome.
   2. Equipment should be operating at design values.
   3. Calibrate the sound-testing meter prior to taking measurements.
   4. Use a microphone suitable for the type of noise levels measured that is compatible with meter. Provide a windshield for outside or in-duct measurements.
   5. Record a set of background measurements in dBA and sound pressure levels in the eight un-weighted octave bands 63 Hz to 8000 Hz (NC) with the equipment off.
   6. Take sound readings in dBA and sound pressure levels in the eight un-weighted octave bands 63 Hz to 8000 Hz (NC) with the equipment operating.

7. Take readings no closer than 36 inches from a wall or from the operating equipment and approximately 60 inches from the floor, with the meter held or mounted on a tripod.
8. For outdoor measurements, move sound-testing meter slowly and scan area that has the most exposure to noise source being tested. Use A-weighted scale for this type of reading.

D. Reporting:
1. Report shall record the following:
a. Location.
b. System tested.
c. dBA reading.
d. Sound pressure level in each octave band with equipment on and off.
2. Plot sound pressure levels on NC worksheet with equipment on and off.

3.16 VIBRATION TESTS

A. After systems are balanced and construction is Substantially Complete, measure and record vibration levels on equipment having motor horsepower equal to or greater than 25.

B. Instrumentation:
1. Use portable, battery-operated, and microprocessor-controlled vibration meter with or without a built-in printer.
2. The meter shall automatically identify engineering units, filter bandwidth, amplitude, and frequency scale values.
3. The meter shall be able to measure machine vibration displacement in mils of deflection, velocity in inches per second, and acceleration in inches per second squared.
4. Verify calibration date is current for vibration meter before taking readings.

C. Test Procedures:
1. To ensure accurate readings, verify that accelerometer has a clean, flat surface and is mounted properly.
2. With the unit running, set up vibration meter in a safe, secure location. Connect transducer to meter with proper cables. Hold magnetic tip of transducer on top of the bearing, and measure unit in mils of deflection. Record measurement, then move transducer to the side of the bearing and record in mils of deflection. Record an axial reading in mils of deflection by holding nonmagnetic, pointed transducer tip on end of shaft.
3. Change vibration meter to velocity (inches per second) measurements. Repeat and record above measurements.
4. Record CPM or rpm.
5. Read each bearing on motor, fan, and pump as required. Track and record vibration levels from rotating component through casing to base.

D. Reporting:
1. Report shall record location and the system tested.
2. Include horizontal-vertical-axial measurements for tests.
3. Verify that vibration limits follow Specifications, or, if not specified, follow the General Machinery Vibration Severity Chart or Vibration Acceleration General Severity Chart from the AABC National Standards. Acceptable levels of vibration are normally "smooth" to "good."
4. Include in report General Machinery Vibration Severity Chart, with conditions plotted.

3.17 DUCT LEAKAGE TESTS

A. Witness the duct pressure testing performed by Installer.

B. Verify that proper test methods are used and that leakage rates are within specified tolerances.

C. Report deficiencies observed.

3.18 CONTROLS VERIFICATION

A. In conjunction with system balancing, perform the following:
1. Verify temperature control system is operating within the design limitations.
2. Confirm that the sequences of operation are in compliance with Contract Documents.
3. Verify that controllers are calibrated and function as intended.

4. Verify that controller set points are as indicated.
5. Verify the operation of lockout or interlock systems.
6. Verify the operation of valve and damper actuators.
7. Verify that controlled devices are properly installed and connected to correct controller.
8. Verify that controlled devices travel freely and are in position indicated by controller: open, closed, or modulating.
9. Verify location and installation of sensors to ensure that they sense only intended temperature, humidity, or pressure.

B. Reporting: Include a summary of verifications performed, remaining deficiencies, and variations from indicated conditions.

3.19 TOLERANCES

A. Set HVAC system's airflow rates and water flow rates within the following tolerances:
1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus 5 percent or minus 0 percent.
2. Air Outlets and Inlets: Plus or minus 10 percent.
3. Heating-Water Flow Rate: Plus or minus 10 percent.
4. Cooling-Water Flow Rate: Plus or minus 10 percent.

B. Maintaining pressure relationships as designed shall have priority over the tolerances specified above.

3.20 PROGRESS REPORTING

A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems balancing devices. Recommend changes and additions to systems balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.

B. Status Reports: Prepare monthly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.21 FINAL REPORT

A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
2. Include a list of instruments used for procedures, along with proof of calibration.
3. Certify validity and accuracy of field data.

B. Final Report Contents: In addition to certified field-report data, include the following:
1. Pump curves.
2. Fan curves.
3. Manufacturers' test data.
4. Field test reports prepared by system and equipment installers.
5. Other information relative to equipment performance; do not include Shop Drawings and Product Data.

C. General Report Data: In addition to form titles and entries, include the following data:
1. Title page.
2. Name and address of the TAB specialist.
3. Project name.
4. Project location.
5. Architect's name and address.
6. Engineer's name and address.
7. Contractor's name and address.

8. Report date.
9. Signature of TAB supervisor who certifies the report.
10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
11. Summary of contents including the following:
    a. Indicated versus final performance.
    b. Notable characteristics of systems.
    c. Description of system operation sequence if it varies from the Contract Documents.
12. Nomenclature sheets for each item of equipment.
13. Data for terminal units, including manufacturer's name, type, size, and fittings.
14. Notes to explain why certain final data in the body of reports vary from indicated values.
15. Test conditions for fans and pump performance forms including the following:
    a. Settings for outdoor-, return-, and exhaust-air dampers.
    b. Conditions of filters.
    c. Cooling coil, wet- and dry-bulb conditions.
    d. Face and bypass damper settings at coils.
    e. Fan drive settings including settings and percentage of maximum pitch diameter.
    f. Inlet vane settings for variable-air-volume systems.
    g. Settings for supply-air, static-pressure controller.
    h. Other system operating conditions that affect performance.

D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outdoor, supply, return, and exhaust airflows.
2. Water and steam flow rates.
3. Duct, outlet, and inlet sizes.
4. Pipe and valve sizes and locations.
5. Terminal units.
6. Balancing stations.
7. Position of balancing devices.

E. Air-Handling-Unit Test Reports: For air-handling units with coils, include the following:
1. Unit Data:
    a. Unit identification.
    b. Location.
    c. Make and type.
    d. Model number and unit size.
    e. Manufacturer's serial number.
    f. Unit arrangement and class.
    g. Discharge arrangement.
    h. Sheave make, size in inches, and bore.
    i. Center-to-center dimensions of sheave and amount of adjustments in inches.
    j. Number, make, and size of belts.
    k. Number, type, and size of filters.
2. Motor Data:
    a. Motor make, and frame type and size.
    b. Horsepower and rpm.
    c. Volts, phase, and hertz.
    d. Full-load amperage and service factor.
    e. Sheave make, size in inches, and bore.
    f. Center-to-center dimensions of sheave and amount of adjustments in inches.
3. Test Data (Indicated and Actual Values):
    a. Total airflow rate in cfm.
    b. Total system static pressure in inches wg.
    c. Fan rpm.

d. Discharge static pressure in inches wg.
e. Filter static-pressure differential in inches wg.
f. Preheat-coil static-pressure differential in inches wg.
g. Cooling-coil static-pressure differential in inches wg.
h. Heating-coil static-pressure differential in inches wg.
i. Outdoor airflow in cfm.
j. Return airflow in cfm.
k. Outdoor-air damper position.
l. Return-air damper position.
m. Vortex damper position.

F. Apparatus-Coil Test Reports:
1. Coil Data:
a. System identification.
b. Location.
c. Coil type.
d. Number of rows.
e. Fin spacing in fins per inch o.c.
f. Make and model number.
g. Face area in sq. ft.
h. Tube size in NPS.
i. Tube and fin materials.
j. Circuiting arrangement.
2. Test Data (Indicated and Actual Values):
a. Airflow rate in cfm.
b. Average face velocity in fpm.
c. Air pressure drop in inches wg.
d. Outdoor-air, wet- and dry-bulb temperatures in deg F.
e. Return-air, wet- and dry-bulb temperatures in deg F.
f. Entering-air, wet- and dry-bulb temperatures in deg F.
g. Leaving-air, wet- and dry-bulb temperatures in deg F.
h. Water flow rate in gpm.
i. Water pressure differential in feet of head or psig.
j. Entering-water temperature in deg F.
k. Leaving-water temperature in deg F.
l. Refrigerant expansion valve and refrigerant types.
m. Refrigerant suction pressure in psig.
n. Refrigerant suction temperature in deg F.
o. Inlet steam pressure in psig.

G. Fan Test Reports: For supply, return, and exhaust fans, include the following:
1. Fan Data:
a. System identification.
b. Location.
c. Make and type.
d. Model number and size.
e. Manufacturer's serial number.
f. Arrangement and class.
g. Sheave make, size in inches, and bore.
h. Center-to-center dimensions of sheave and amount of adjustments in inches.
2. Motor Data:
a. Motor make, and frame type and size.
b. Horsepower and rpm.
c. Volts, phase, and hertz.
d. Full-load amperage and service factor.

e. Sheave make, size in inches, and bore.
f. Center-to-center dimensions of sheave, and amount of adjustments in inches.
g. Number, make, and size of belts.

3. Test Data (Indicated and Actual Values):
a. Total airflow rate in cfm.
b. Total system static pressure in inches wg.
c. Fan rpm.
d. Discharge static pressure in inches wg.
e. Suction static pressure in inches wg.

H. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
1. Report Data:
a. System and air-handling-unit number.
b. Location and zone.
c. Traverse air temperature in deg F.
d. Duct static pressure in inches wg.
e. Duct size in inches.
f. Duct area in sq. ft.
g. Indicated airflow rate in cfm.
h. Indicated velocity in fpm.
i. Actual airflow rate in cfm.
j. Actual average velocity in fpm.
k. Barometric pressure in psig.

I. Air-Terminal-Device Reports:
1. Unit Data:
a. System and air-handling unit identification.
b. Location and zone.
c. Apparatus used for test.
d. Area served.
e. Make.
f. Number from system diagram.
g. Type and model number.
h. Size.
i. Effective area in sq. ft.

2. Test Data (Indicated and Actual Values):
a. Airflow rate in cfm.
b. Air velocity in fpm.
c. Preliminary airflow rate as needed in cfm.
d. Preliminary velocity as needed in fpm.
e. Final airflow rate in cfm.
f. Final velocity in fpm.
g. Space temperature in deg F.

J. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:
1. Unit Data:
a. System and air-handling-unit identification.
b. Location and zone.
c. Room or riser served.
d. Coil make and size.
e. Flowmeter type.

2. Test Data (Indicated and Actual Values):
a. Airflow rate in cfm.
b. Entering-water temperature in deg F.
c. Leaving-water temperature in deg F.

d. Water pressure drop in feet of head or psig.
e. Entering-air temperature in deg F.
f. Leaving-air temperature in deg F.

K. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:
1. Unit Data:
a. Unit identification.
b. Location.
c. Service.
d. Make and size.
e. Model number and serial number.
f. Water flow rate in gpm.
g. Water pressure differential in feet of head or psig.
h. Required net positive suction head in feet of head or psig.
i. Pump rpm.
j. Impeller diameter in inches.
k. Motor make and frame size.
l. Motor horsepower and rpm.
m. Voltage at each connection.
n. Amperage for each phase.
o. Full-load amperage and service factor.
p. Seal type.
2. Test Data (Indicated and Actual Values):
a. Static head in feet of head or psig.
b. Pump shutoff pressure in feet of head or psig.
c. Actual impeller size in inches.
d. Full-open flow rate in gpm.
e. Full-open pressure in feet of head or psig.
f. Final discharge pressure in feet of head or psig.
g. Final suction pressure in feet of head or psig.
h. Final total pressure in feet of head or psig.
i. Final water flow rate in gpm.
j. Voltage at each connection.
k. Amperage for each phase.

L. Instrument Calibration Reports:
1. Report Data:
a. Instrument type and make.
b. Serial number.
c. Application.
d. Dates of use.
e. Dates of calibration.

3.22 VERIFICATION OF TAB REPORT

A. The TAB specialist's test and balance engineer shall conduct the inspection in the presence of commissioning authority.

B. Commissioning authority shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to either 10 percent of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.

C. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."

D. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.

E. If TAB work fails, proceed as follows:
   1. TAB specialists shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.
   2. If the second final inspection also fails, Contracting Agency may contract the services of another TAB specialist to complete TAB work according to the Contract Documents and deduct the cost of the services from the original TAB specialist's final payment.
   3. If the second verification also fails, Contracting Agency may contact AABC, NEBB or TABB Headquarters regarding the Performance Guaranty.

F. Prepare test and inspection reports.

3.23 ADDITIONAL TESTS

A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.

B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

END OF SECTION 23 05 93

This page intentionally left blank

SECTION 23 07 13
DUCT INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Insulating the following duct services:
   1. Indoor, concealed supply and outdoor air.
   2. Indoor, exposed supply and outdoor air.
   3. Indoor, concealed return located in unconditioned space.
   4. Indoor, exposed return located in unconditioned space.
   5. Indoor, concealed, Type I, commercial, kitchen hood exhaust.
   6. Indoor, exposed, Type I, commercial, kitchen hood exhaust.
   7. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
   8. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
   9. Outdoor, concealed supply and return.
   10. Outdoor, exposed supply and return.

1.02 RELATED REQUIREMENTS

A. Section 23 07 16 "HVAC Equipment Insulation."

B. Section 23 07 19 "HVAC Piping Insulation."

C. Section 23 31 13 "Metal Ducts" for duct liners.

1.03 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.04 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).

C. Sustainable Design/LEED Submittals:
   1. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.

D. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
   2. Detail insulation application at elbows, fittings, dampers, specialties and flanges for each type of insulation.
   3. Detail application of field-applied jackets.
   4. Detail application at linkages of control devices.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

C. Field quality-control reports.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
   1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
   2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.08 COORDINATION

A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment."

B. Coordinate clearance requirements with duct Installer for duct insulation application. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

C. Coordinate installation and testing of heat tracing.

1.09 SCHEDULING

A. Schedule insulation application after pressure testing systems. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 PRODUCTS

2.01 INSULATION MATERIALS

A. Comply with requirements in "Duct Insulation Schedule, General," "Indoor Duct and Plenum Insulation Schedule," and "Aboveground, Outdoor Duct and Plenum Insulation Schedule" articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type III with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. CertainTeed Corporation; SoftTouch Duct Wrap
      b. Johns Manville; Microlite.
      c. Knauf Insulation; Friendly Feel Duct Wrap.
      d. Owens Corning; SOFTR All-service Duct Wrap.

2.02 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
   1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below ambient services.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Childers Brand; H. B. Fuller Construction Products.
      b. Foster Brand; H. B. Fuller.
      c. Knauf Insulation.
   2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm at 43-mil dry film thickness.
   3. Service Temperature Range: Minus 20 to plus 180 deg F.
   4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
   5. Color: White.

C. Vapor-Barrier Permeance: ASTM 96/E 96M, Procedure B, 0.013 perm at 43-mil dry film thickness.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      a. Childers Brand; H. B. Fuller Construction Products.; CP10
      b. Eagle Bridges - Marathon Industries.; 550
      c. Foster Brand; H. B. Fuller Construction Products.; 146-50
   2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm at 30-mil dry film thickness.
   3. Service Temperature Range: Minus 50 to plus 220 deg F.
   4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
   5. Color: White.

2.03 SEALANTS

A. FSK and Metal Jacket Flashing Sealants:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Childers Brand; H. B. Fuller Construction Products.; CP-76.
      b. Foster Brand; H. B. Fuller Construction Products.; 95-44.
      c. Mon-Eco Industries, Inc.; 44-05
      d. Eagle Bridges – Marathon Industries; 405.
   2. Materials shall be compatible with insulation materials, jackets, and substrates.
   3. Fire- and water-resistant, flexible, elastomeric sealant.
   4. Service Temperature Range: 20 to plus 250 deg F.
   5. Color: Aluminum.
   6. For indoor applications, use sealants that have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   7. Use sealants that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers," including 2004 Addenda.

2.04 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. Metal Jacket:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Childers.

b. ITW Insulation Systems; Illinois Tool Works, Inc.
c. RPR Products, Inc.

2. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
   a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      1) Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Metal Jacketing Systems.
      2) ITW Insulation Systems; Aluminum and Stainless Steel Jacketing.
      3) RPR Products, Inc.; Insul-Mate.
3. Factory cut and rolled to size.
4. Finish and thickness are indicated in field-applied jacket schedules.
   a. Moisture Barrier for Indoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
   b. Moisture Barrier for Outdoor Applications: 2.5-mil- thick polysurlyn.

2.05 TAPES

A. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Compac Corporation; 110 and 111.
      b. ABI, Ideal Tape Division; 491 AWF FSK.
      c. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.
      d. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
   2. Width: 3 inches.
   3. Thickness: 6.5 mils.
   4. Adhesion: 90 ounces force/inch in width.
   5. Elongation: 2 percent.
   6. Tensile Strength: 40 lbf/inch in width.
   7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

2.06 SECUREMENTS

A. Bands:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ITW Insulation Systems; Illinois Tool Works, Inc.; Gerrard Strapping and Seals.
      b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.
   2. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with wing seal or closed seal.
   3. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.
   4. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
      a. Midwest Fasteners or approved equal.
      b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
      c. Spindle: Zinc-coated, low-carbon steel, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
      d. Adhesive-backed base with a peel-off protective cover.
   5. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick, galvanized-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

B. Wire: 0.062-inch soft-annealed, stainless steel.
   1. Manufacturers: Subject to compliance with requirements, provide product by:

a. C & F Wire, or equal.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
   1. Verify that systems to be insulated have been tested and are free of defects.
   2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.03 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.

B. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Keep insulation materials dry during application and finishing.

G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

H. Install insulation with least number of joints practical.

I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
   1. Install insulation continuously through hangers and around anchor attachments.
   2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
   3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.

J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

K. Install insulation with factory-applied jackets as follows:
   1. Draw jacket tight and smooth.
   2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
   3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
      a. For below ambient services, apply vapor-barrier mastic over staples.
   4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
   5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.

L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

3.04 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
   1. Seal penetrations with flashing sealant.
   2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
   3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
   4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
   1. Seal penetrations with flashing sealant.
   2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
   3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
   4. Seal jacket to wall flashing with flashing sealant.

C. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

D. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.
   1. Comply with requirements in Section 07 84 13 "Penetration Firestopping."

E. Insulation Installation at Floor Penetrations:
   1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
   2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 07 84 13 "Penetration Firestopping."

3.05 INSTALLATION OF MINERAL-FIBER INSULATION

A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
   1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 50 percent coverage of duct and plenum surfaces.
   2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
   3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
      a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.

b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
d. Do not over compress insulation during installation.
e. Impale insulation over pins and attach speed washers.
f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
   a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
   b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
5. Overlap un-faced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

3.06 FIELD-APPLIED JACKET INSTALLATION

A. Where FSK jackets are indicated, install as follows:
   1. Draw jacket material smooth and tight.
   2. Install lap or joint strips with same material as jacket.
   3. Secure jacket to insulation with manufacturer's recommended adhesive.
   4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
   5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

B. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.07 FINISHES

A. Insulation with ASJ, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in 09 90 00 "Painting and Coating."
   1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
      a. Finish Coat Material: Interior, flat, latex-emulsion size.

B. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.

C. Do not field paint aluminum or stainless-steel jackets.

3.08 DUCT INSULATION SCHEDULE, GENERAL

A. Plenums and Ducts Requiring Insulation:
   1. Indoor, concealed supply and outdoor air.
   2. Indoor, exposed supply and outdoor air in unconditioned space.
   3. Indoor, concealed return located in unconditioned space.
   4. Indoor, exposed return located in unconditioned space.
   5. Indoor, concealed, Type I, commercial, kitchen hood exhaust.
   6. Indoor, exposed, Type I, commercial, kitchen hood exhaust.
   7. Outdoor, concealed supply and return.
   8. Outdoor, exposed supply and return.

B. Items Not Insulated:
   1. Metal ducts with duct liner of sufficient thickness to comply with WA State energy code.
   2. Metal ducts located in conditioned spaces.
   3. Factory-insulated flexible ducts.
   4. Factory-insulated plenums and casings.
   5. Flexible connectors.
   6. Vibration-control devices.
   7. Factory-insulated access panels and doors.

3.09 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

A. Supply and return air duct and plenum insulation shall be the following:
   1. Mineral-Fiber Blanket: 1.5 inches thick and 0.75-lb/cu. ft. nominal density.

3.10 ABOVEGROUND, OUTDOOR DUCT AND PLENUM INSULATION SCHEDULE

A. Insulation materials and thicknesses are identified below. If more than one material is listed for a duct system, selection from materials listed is Contractor's option.

B. Supply and return air duct insulation shall be the following:
   1. Mineral-Fiber Blanket: 2 inches thick and 0.75-lb/cu. ft. nominal density.

3.11 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. Ducts and Plenums, Exposed, up to 48 Inches in Diameter or with Flat Surfaces up to 72 Inches:
   1. Aluminum, Smooth: 0.024 inch thick.

C. Ducts and Plenums, Exposed, Larger Than 48 Inches in Diameter or with Flat Surfaces Larger Than 72 Inches:
   1. Aluminum, Smooth with 2-1/2-Inch- Deep Corrugations 0.040 inch thick.

END OF SECTION 23 07 13

SECTION 23 07 16
HVAC EQUIPMENT INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. insulating the following HVAC equipment that is not factory insulated:
   1. Heat exchangers.
   2. Chilled-water pumps.
   3. Heating hot-water pumps.
   4. Chilled-water tanks.
   5. Heating, hot-water tanks.
   6. Chilled-water air separators.
   7. Heating hot-water air separators.

1.02 RELATED REQUIREMENTS

A. Section 23 07 13 "Duct Insulation."

B. Section 23 07 19 "HVAC Piping Insulation."

1.03 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.04 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance, thickness, and jackets (both factory and field-applied, if any).

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
   2. Detail removable insulation at equipment connections.
   3. Detail application of field-applied jackets.
   4. Detail application at linkages of control devices.
   5. Detail field application for each equipment type.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

C. Field quality-control reports.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
   1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
   2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.08 COORDINATION

A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment."

B. Coordinate clearance requirements with equipment Installer for equipment insulation application.

1.09 SCHEDULING

A. Schedule insulation application after pressure testing systems. Insulation application may begin on segments that have satisfactory test results.

PART 2 PRODUCTS

2.01 INSULATION MATERIALS

A. Comply with requirements in "Equipment Insulation Schedule" articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

D. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

E. Cellular Glass:
   1. Description: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article. Comply with ASTM C 552.
   2. Products: Subject to compliance with requirements, provide one of the following:
      a. Pittsburgh Corning Corporation; Foamglas
      b. Specialty Products & Insulation (SPI)
      c. Or approved equal.
   3. Material Properties
      a. Thermal Conductivity: 0.31 BTU-in/(h-°F-ft2) max. at 75 °F
      b. Service Temperature Range: -450 °F to 800 °F
      c. Density: 6.1 to 8.6 lb/ft3
      d. Absorption of Moisture: 0.2% by Vol max.
      e. Water Vapor Permeability: 0.05 per in, max.
      f. Compressive Strength: 60 psi, min.
      g. Flexural Strength: 41 psi, min.
   4. Block Insulation: ASTM C 552, Type I.
   5. Special-Shaped Insulation: ASTM C 552, Type III.
   6. Board Insulation: ASTM C 552, Type IV.
   7. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.

F. Flexible Elastomeric Insulation:
   1. Description: Closed-cell. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
   2. Products: Subject to compliance with requirements, provide one of the following:
      a. Armacell LLC.
      b. Aeroflex USA, Inc.
      c. K-Flex USA.
      d. Or approved equal.
   3. Material Properties
      a. Thermal Conductivity: 0.28 BTU-in/(h-°F-ft2) max. at 75 °F
      b. Service Temperature Range: -290 °F to 250 °F
      c. Density: 3.0 to 6.0 lb/ft3
      d. Absorption of Moisture: 0.2% by Vol max.
      e. Water Vapor Permeability: 0.05 per in, max.

G. Mineral-Fiber Blanket Insulation
   1. Description: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type III with factory-applied foil-scrim-kraft (FSK) jacket.
   2. Products: Subject to compliance with requirements, provide one of the following:
      a. CertainTeed Corp.; Duct Wrap.
      b. Johns Manville; Microlite.
      c. Knauf Insulation; Duct Wrap.
      d. Manson Insulation Inc.; Alley Wrap.
      e. Owens Corning; All-Service Duct Wrap.
      f. Or equal.

H. Mineral-Fiber Board Insulation
   1. Description: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For equipment applications, provide insulation without factory-applied jacket if needed for building up thicknesses of insulation otherwise provide with factory-applied ASJ or with factory-applied FSK jacket.
   2. Products: Subject to compliance with requirements, provide one of the following:
      a. CertainTeed Corp.; Commercial Board.
      b. Fibrex Insulations Inc.; FBX.
      c. Johns Manville; 800 Series Spin-Glas.
      d. Knauf Insulation; Insulation Board.
      e. Manson Insulation Inc.; AK Board.
      f. Owens Corning; Fiberglas 700 Series.
      g. Or equal.

I. Phenolic:
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Resolco Inc. Insul-Phen Green.
      b. Kingspan Tarec Industrial Insulation NV; Koolphen K.
   2. Block insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type II, Grade 1.
   3. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
   4. Factory-Applied Jacket: all service jacket (ASJ).
   5. Minimum of 5lb/ft3 density.
   6. Minimum 95% closed cell content.
   7. Maximum of 0.21 Btu-in/hr-ft2-F Thermal Conductivity at 50F.

2.02 INSULATING CEMENTS

A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.

C. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449.

2.03 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Adhesives shall comply with South Coast Air Quality Management District (SCAQMD) Rule 1168. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Design Polymerics
      b. Foster Products Corporation
      c. Or equal.

D. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Aeroflex USA, Inc.; Aeroseal.
      b. Armacell LLC; Armaflex 520 Adhesive.
      c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
      d. K-Flex USA; R-373 Contact Adhesive.
      e. Or approved equal.

E. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Childers Brand.
      b. Foster Brand.

F. Phenolic Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Childers Brand.
      b. Foster Brand.

2.04 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.

B. Mastics shall comply with South Coast Air Quality Management District (SCAQMD) Rule 1168. Mastics shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Foster Brand.
      b. Knauf Insulation.
      c. Vimasco Corporation.
   2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm at 43-mil dry film thickness.
   3. Service Temperature Range: Minus 20 to plus 180 deg F.
   4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
   5. Color: White.

2.05 SEALANTS

A. Joint Sealants:
   1. Materials shall be compatible with insulation materials, jackets, and substrates.

2. Permanently flexible, elastomeric sealant.
3. Service Temperature Range: Minus 100 to plus 300 deg F.
4. Color: White or gray.

B. FSK and Metal Jacket Flashing Sealants:
1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F.
4. Color: Aluminum.

C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F.
4. Color: White.

2.06 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Products: Subject to compliance with requirements, provide one of the following:
a. Johns Manville; Zeston.
b. Proto Corporation; LoSmoke.
c. Speedline Corporation; SmokeSafe.
2. Adhesive: As recommended by jacket material manufacturer.
3. Color: White
4. Factory-fabricated tank heads and tank side panels.

C. Metal Jacket:
1. Products: Subject to compliance with requirements, provide one of the following:
a. Childers Brand
b. ITW Insulation Systems
c. RPR Products, Inc.; Insul-Mate.
2. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
a. Sheet and roll stock ready for shop or field sizing.
b. Finish and thickness are indicated in field-applied jacket schedules.
c. Moisture Barrier for Indoor Applications: 1-mil thick, heat-bonded polyethylene and kraft paper.
d. Moisture Barrier for Outdoor Applications: 3-mil thick, heat-bonded polyethylene and kraft paper.
e. Factory-Fabricated Fitting Covers:
1) Same material, finish, and thickness as jacket.
2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
3) Tee covers.
4) Flange and union covers.
5) End caps.
6) Beveled collars.
7) Valve covers.
8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

2.07 SECUREMENTS

A. Bands:
1. Products: Subject to compliance with requirements, provide one of the following:
a. ITW Insulation Systems

b. RPR Products, Inc.

2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304; 0.015 inch thick, 3/4 inch wide with wing seal.

B. Wire: 0.062-inch soft-annealed, stainless steel.

1. Products: Subject to compliance with requirements, provide one of the following:

a. C&F Wire.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.

1. Verify that systems and equipment to be insulated have been tested and are free of defects.
2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.03 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Keep insulation materials dry during application and finishing.

G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

H. Install insulation with least number of joints practical.

I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.
2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
4. Cover inserts with jacket material matching adjacent insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

K. Install insulation with factory-applied jackets as follows:

1. Draw jacket tight and smooth.

2. Cover circumferential joints with 3-inch wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches on center.
3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches on center.
4. For below ambient services, apply vapor-barrier mastic over staples.
5. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
6. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints.

L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

O. For above ambient services, do not install insulation to the following:
1. Vibration-control devices.
2. Testing agency labels and stamps.
3. Nameplates and data plates.
4. Manholes.
5. Handholes.
6. Cleanouts.

3.04 INSTALLATION OF EQUIPMENT, TANK, AND VESSEL INSULATION

A. Mineral-Fiber, Blanket Insulation Installation for Tanks and Vessels: Secure insulation with adhesive and anchor pins and speed washers.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of tank and vessel surfaces.
2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
3. Protect exposed corners with secured corner angles.
4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
    a. Do not weld anchor pins to ASME-labeled pressure vessels.
    b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
    c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches o.c. in both directions.
    d. Do not over-compress insulation during installation.
    e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
    f. Impale insulation over anchor pins and attach speed washers.
    g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
5. Secure each layer of insulation with stainless-steel bands.
6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches o.c. Install a wire ring around each end and around outer periphery

of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches o.c. Use this network for securing insulation with tie wire or bands.

7. Stagger joints between insulation layers at least 3 inches.
8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.

B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.

Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive. Seal longitudinal seams and end joints.

3.05 INSTALLATION OF PHENOLIC INSULATION

A. Secure single-layer insulation with stainless-steel bands at 12-inch intervals and tighten bands without deforming insulation materials.

B. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with 0.062-inch wire spaced at 12-inch intervals. Secure outer layer with stainless-steel bands at 12-inch intervals.

3.06 FIELD-APPLIED JACKET INSTALLATION

A. Where FSK jackets are indicated, install as follows:
1. Draw jacket material smooth and tight.
2. Install lap or joint strips with same material as jacket.
3. Secure jacket to insulation with manufacturer's recommended adhesive.
4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

B. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

C. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.07 EQUIPMENT INSULATION SCHEDULE

A. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials list shall be submitted to Engineer of Record for review.

B. Insulate indoor and outdoor equipment that is not factory insulated.
1. Mineral-Fiber Pipe and Tank: 1 inch thick.
2. Phenolic: 1 inch thick.

C. Condenser-water pump insulation shall be one of the following:
1. Cellular Glass: 3 inches thick.
2. Flexible Elastomeric: 1 inch thick.
3. Phenolic: 2 inches thick.

D. Heating-hot-water pump insulation shall be one of the following:
   1. Cellular Glass: 3 inches thick.
   2. Flexible Elastomeric: 2 inch thick.
   3. Mineral-Fiber Board: 2 inches thick and 2-lb/cu. ft. nominal density.

E. Tank insulation, up to 200 deg F, shall be one of the following:
   1. Cellular Glass: 2 inches thick.
   2. Mineral-Fiber Board: 1 inch thick and 2-lb/cu. ft. nominal density.
   3. Mineral-Fiber Pipe and Tank: 1 inch thick.

3.08 INDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. Equipment, Concealed: None.

C. Equipment, Exposed:
   1. PVC, Color-Coded by System: 20 mils thick.
   2. Painted Aluminum, Stucco Embossed: 0.020 inch thick if exposed to damage.

3.09 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. Equipment, Concealed: None.

C. Equipment, Exposed:
   1. Painted Aluminum, Stucco Embossed with Z-Shaped Locking Seam: 0.032 inch thick.

END OF SECTION 23 07 16

This page intentionally left blank

SECTION 23 07 19
HVAC PIPING INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Insulating the following HVAC piping systems:
   1. Condensate drain piping.
   2. Heating hot-water piping.

1.02 RELATED REQUIREMENTS

A. Section 23 07 13 "Duct Insulation."

B. Section 23 07 16 "HVAC Equipment Insulation."

C. Section 23 21 13.13 "Underground Hydronic Piping" for pre-insulated pipe insulation in underground piping outside the building.

1.03 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.04 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance, thickness, and jackets (both factory and field applied, if any). Clearly mark the materials being provided and its intended use of each product

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
   2. Detail attachment and covering of heat tracing inside insulation.
   3. Detail insulation application at pipe expansion joints for each type of insulation.
   4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
   5. Detail removable insulation at piping specialties.
   6. Detail application of field-applied jackets.
   7. Detail application at linkages of control devices.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

C. Field quality-control reports if requested by the Contracting Agency.

1.06 QUALITY ASSURANCE

A. Insulation materials shall be manufactured at facilities certified and registered with an approved registrar to conform to the ISO 9001 Quality Standard.

B. All work shall conform to accepted industry and trade standards for commercial and industrial insulations and shall conform with manufacturer’s recommendations.

C. Installation shall be by licensed applicators.

D. Insulation materials that have become wet or contaminated shall not be installed.

E. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

F. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
   1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
   2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver all materials (insulation, coverings, tapes, cements, adhesives, coatings, etc.) to the jobsite in factory containers with manufacturer's label showing manufacturer, product name and product hazard information.

B. Insulation shall be delivered to the job site in original, unopened manufacturer's containers.

C. Insulation shall be stored in a dry location and kept dry throughout construction. Wet or damaged insulation shall be removed and replaced by the Contractor at no additional cost.

1.08 COORDINATION

A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 23 05 29 "Hangers and Supports for HVAC Systems."

B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

1.09 SCHEDULING

A. Schedule insulation application after pressure testing systems. Insulation application may begin on segments that have satisfactory test results.

PART 2 PRODUCTS

2.01 INSULATION MATERIALS

A. Products shall not contain CFC, asbestos, lead, mercury, or mercury compounds.

B. Insulation shall meet fire and smoke hazard ratings as tested under procedure ASTM E-84, NFPA 255, and UL 723 and shall not exceed flame spread rating of 25 and maximum smoke developed rating of 50.

C. Mineral-Fiber, Preformed Pipe Insulation:
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Johns Manville's Micro-Lok *HP* all-service (ASJ) vapor-retarder jacket with a self-sealing longitudinal closure lap (SSL) and butt strips.
      b. Owens Corning; ASJ Fiberglas Pipe Insulation.
   2. Preformed mineral fiber pipe insulation with factory applied all-service vapor-retarder jacket (ASJ) jacket with a self-sealing longitudinal closure lap (SSL) and butt strips or approved alternate to seal butt joints. Preformed mineral fiber pipe insulation shall conform to ASTM C547. The ASJ facing shall conform to ASTM C1136 Type I.
   3. Preformed mineral fiber pipe insulation with factory applied all-service vapor-retarder jacket (ASJ) jacket shall have a flame spread rating not greater than 25 and a smoke developed rating not greater than 50 when tested as in accordance with ASTM E84, UL 723.
   4. Thermal conductivity (k-value): 0.23 Btu-in/hr-ft^2-°F at 75°F

5. Preformed mineral fiber pipe insulation shall have a water vapor sorption of less than 5% by weight as tested in accordance ASTM C 547.
6. All service jacket (ASJ) shall have a water vapor permeance of 0.02 perms or less as tested in accordance to ASTM E96, procedure “A”.
7. When a vapor mastic is required, a water vapor permeance of 0.02 per ASTM E-96 Procedure B must be achieved.
8. All accessory materials such as field installed jackets, mastics, coatings, tapes, fasteners shall be recommended by each component manufacturer for the specified application or as listed in the NAIMA Guide to Insulating Chilled Water Systems with Mineral Fiber Pipe Insulation.
9. Fittings, valves, tees, etc. shall be insulated with fiberglass insulation inserts covered with white PVC insulated fitting covers.

2.02 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated. Adhesives shall contain no flammable solvents if that option is available.

B. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Design Polymerics DP 2590-CA
      b. ITW TACC, Division of Illinois Tool Works; SP80, T1080
      c. Marathon Industries, Inc.
   2. For indoor applications use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Design Polymerics DD2590-CA.
      b. ITW TACC, Division of Illinois Tool Works; SP80, T1080
      c. Marathon Industries, Inc.
   2. For indoor applications use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.03 MASTICS

A. Materials shall water based and be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
   1. For indoor applications, use mastics that have a VOC content of 40 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Childers Products, Division of ITW; CP-35.
      b. Design Polymerics 3040 with zero VOC’s.
      c. Foster Products Corporation, H. B. Fuller Company; 30-90.
   2. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm at 43-mil dry film thickness.
   3. Service Temperature Range: Minus 20 to plus 180 deg F.
   4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
   5. Color: White.

2.04 SEALANTS

A. Joint Sealants:
   1. Joint Sealants for Cellular-Glass Products: Subject to compliance with requirements, provide one of the following:
      a. Childers Products, Division of ITW; CP-76.

b. Foster Products Corporation, H. B. Fuller Company; 30-45.
c. Marathon Industries, Inc.; 405.

2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Permanently flexible, elastomeric sealant.
4. Service Temperature Range: Minus 100 to plus 300 deg F.
5. Color: White or gray.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. FSK and Metal Jacket Flashing Sealants:
1. Products: Subject to compliance with requirements, provide one of the following:
a. Childers Products, Division of ITW; CP-76-8.
b. Foster Products Corporation, H. B. Fuller Company; 95-44.
c. Marathon Industries, Inc.; 405.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: Aluminum.
6. For indoor applications use sealants that have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. ASJ Flashing Sealants:
1. Products: Subject to compliance with requirements, provide one of the following:
a. Childers Products, Division of ITW; CP-76.
b. Or equal.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: White.
6. For indoor applications and use sealants that have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.05 FACTORY-APPLIED JACKETS

A. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.

2.06 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Products: Subject to compliance with requirements, provide one of the following:
a. Johns Manville; Zeston.
b. P.I.C. Plastics, Inc.; FG Series.
c. Proto Corporation; LoSmoke.
d. Speedline Corporation; SmokeSafe.
2. Adhesive: As recommended by jacket material manufacturer.
3. PVC Jacket Color:
a. Heating Hot Water Piping:
1) Heating Hot Water Supply: Dark Red
2) Heating Hot Water Return: Light Red

4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
    a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

2.07 REMOVABLE INSULATION JACKETS

A. Manufacturers:
    1. ThermaXX LLC.
    2. INSULTECH.
    3. Firwin.

B. Insulation:
    1. Glass mat, type E needled fiber, 1" at 11.3 LB/CF.
    2. Maximum Use Temperature 400 deg F.

C. Jacket:
    1. Hot Side
        a. PTFE Fiberglass Composite Jacketing, 16.5 oz/sq. yd. minimum
        b. Estimation of Maximum Use Temperature 550 deg F.
    2. Cold Side
        a. PTFE Fiberglass Composite Jacketing, 16.5 oz/sq. yd. minimum
        b. Estimation of Maximum Use Temperature 600 deg F.

D. Thread:
    1. Does not decompose below 800 deg F.
    2. Does not melt.
    3. Diameter: 0.0114
    4. Break Point: 35 Lbs.

E. Construction:
    1. Double sewn lock stitch with a minimum 4 to 6 stitches per inch. Jackets shall be sewn with two (2) parallel rows of stitching. The thread must be able to withstand the skin temperatures without degradation.
    2. Hog rings, staples, and wire are not are not acceptable methods of closure.
    3. No raw cut jacket edges shall be exposed.
    4. Jackets shall be fastened using hook and loop (Velcro) straps and 1” slide buckles.
    5. Provide a permanently attached aluminum or stainless-steel nameplate on each jacket to identify its location, size, and tag number.
    6. Provide a stainless steel or brass grommet at the low point of each jacket, in wet areas for moisture drain (on horizontal jackets as required).
    7. The insulation shall be designed to minimize the convection current in the space between the hot metal surface and the inner layer of insulation. To this end, during jacket fabrication, the layers of insulating mat shall be placed in an overlapping pattern.
    8. All jacket pieces which match mating seams must include an extended 2" flap constructed from the exterior fabric and shall be secured using hook & loop closure (Velcro) parallel to the seam.
    9. Insulation must be sewn as integral part of the jacket to prevent shifting of the insulation.

2.08 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
    1. Products: Subject to compliance with requirements, provide one of the following:
        a. ABI, Ideal Tape Division; 428 AWF ASJ.
        b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
        c. Compac Corporation; 104 and 105.
        d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
    2. Width: 3 inches.
    3. Thickness: 11.5 mils

4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, provide one of the following:
   a. ABI, Ideal Tape Division; 491 AWF FSK.
   b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
   c. Compac Corporation; 110 and 111.
   d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.
2. Width: 3 inches.
3. Thickness: 6.5 mils.
4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive. Suitable for indoor and outdoor applications.
1. Products: Subject to compliance with requirements, provide one of the following:
   a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0555.
   b. Compac Corp.; 130.
   c. Ideal Tape Co., Inc., an American Biltrite Company; 370 White PVC tape.
   d. Venture Tape; 1506 CW NS.
2. Width: 2 inches.
3. Thickness: 6 mils.
4. Adhesion: 64 ounces force/inch in width.
5. Elongation: 500 percent.
6. Tensile Strength: 18 lbf/inch in width.

D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide one of the following:
   a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
   b. Compac Corp.; 120.
   c. Ideal Tape Co., Inc., an American Biltrite Company; 488 AWF.
   d. Venture Tape; 1525 CW, 1528 CW, and 1528 CW/SQ.
2. Width: 2 inches.
3. Thickness: 3.7 mils.
4. Adhesion: 100 ounces force/inch in width.
5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch in width.

2.09 SECUREMENTS

A. Aluminum Bands: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020-inch thick, 1/2 inch 3/4 inch wide with closed seal.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. ITW Insulation Systems; Gerrard Strapping and Seals.
   b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.

B. Staples: Outward-clinching insulation staples, nominal 3/4-inch wide, stainless steel or Monel.

C. Wire: 0.062-inch soft-annealed, Monel.
1. Manufacturers: Subject to compliance with requirements, provide product by:
   a. C & F Wire.
   b. Childers Products.

c. PABCO Metals Corporation.
d. RPR Products, Inc.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
   1. Verify all inspection and acceptance testing of the piping as required by the specification has been completed and that the piping is ready for installation of insulation.
   2. Verify that surfaces to be insulated are clean and dry.
   3. Proceed with installation only after unsatisfactory conditions have been corrected.
   4. Verify there is adequate clearance to install the pipe insulation in accordance with the operation performance parameters of the specification, such as access to controls, valves and for maintenance and repair.

3.02 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.03 GENERAL INSTALLATION REQUIREMENTS

A. Insulation shall not be installed until the following have been completed and documentation has been submitted to Contracting Agency for approval and record:
   1. Cleaning and flushing
   2. Pressure testing

B. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.

C. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.

D. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

E. Install insulation with longitudinal seams at top and bottom of horizontal runs.

F. Install multiple layers of insulation with longitudinal and end seams staggered.

G. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

H. Keep insulation materials dry during application and finishing.

I. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

J. Install insulation with least number of joints practical.

K. Install rigid pre-insulated pipe supports to protect from compression of insulation material due to point loads.

L. Provide aluminum sleeves at all pipe support joints, between hanger support and exterior layer of insulating systems, to protect from compression of insulation material due to point loads.

M. Install insulation on piping accessories requiring future reoccuring access and service with factory fabricated insulation covers that are easily removed and reapplied.

N. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
   1. Install insulation continuously through hangers and around anchor attachments.
   2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.

3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

O. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

P. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth.
2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
3. Overlap jacket longitudinal seams at least 1.5 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 4 inches o.c.
   a. For below-ambient services, apply vapor-barrier mastic over staples.
4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.

Q. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

R. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

S. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

T. Existing pipe insulation damaged or affected by the work of this contract shall be repaired to comply with these specifications except that materials and thicknesses may match existing unless otherwise directed by the Contracting Agency.

U. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
2. Testing agency labels and stamps.
3. Nameplates and data plates.
4. Manholes.
5. Handholes.
6. Cleanouts.

3.04 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Underground Exterior Wall Penetrations:
1. Terminate insulation with sleeve seal at wall penetration.
2. Seal terminations with flashing sealant.

C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
   1. Seal penetrations with flashing sealant.
   2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
   3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
   4. Seal jacket to wall flashing with flashing sealant.

D. Insulation Installation at Interior Wall and Partition Penetrations: Install insulation continuously through walls and partitions.

E. Insulation Installation at Floor Penetrations:
   1. Pipe: Install insulation continuously through floor penetrations.
   2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 07 84 13 "Penetration Firestopping."

3.05 GENERAL PIPE INSULATION INSTALLATION

A. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
   1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
   2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
   3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
   4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
   5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
   6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
   7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
   8. For services not specified to receive a field-applied jacket, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
   9. Label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.

B. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

C. Install removable insulation covers at locations indicated. Installation shall conform to the following:
   1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
   2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
   3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
   4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
   5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.06 INSTALLATION OF MINERAL-FIBER INSULATION

A. Insulation Installation on Straight Pipes and Tubes:
   1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
   2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
   3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward-clinched staples at 6 inches o.c.
   4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.
   5. On chilled water systems, the butt end of every fourth pipe insulation section, and the ends or raw edges of insulation terminations at equipment connections, fittings and fire stop systems shall be sealed with vapor retarder mastic per NAIMA Guide to Insulation Chilled Water Systems, 2015.

B. Insulation Installation on Pipe Flanges:
   1. Install preformed pipe insulation to outer diameter of pipe flange.
   2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
   4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:
   1. Install preformed sections of same material as straight segments of pipe insulation when available.
   2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:
   1. Install preformed sections of same material as straight segments of pipe insulation when available.

2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.07 FIELD-APPLIED JACKET INSTALLATION

A. Where FSK jackets are indicated, install as follows:
1. Draw jacket material smooth and tight.
2. Install lap or joint strips with same material as jacket.
3. Secure jacket to insulation with manufacturer's recommended adhesive.
4. Install jacket with 1.5-inch laps at longitudinal seams and 3-inch wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

B. Where PVC jackets are indicated, install as follows:
1. With 1-inch overlap at longitudinal seams and end joints; for horizontal applications.
2. Seal with manufacturer's recommended adhesive.
3. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

C. Where metal jackets are indicated, install as follows:
1. With 2-inch overlap at longitudinal seams and end joints.
2. Overlap longitudinal seams arranged to shed water.
3. Seal end joints with weatherproof sealant recommended by insulation manufacturer.
4. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.08 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.09 PIPING INSULATION SCHEDULE, GENERAL

A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range.

3.10 ABOVEGROUND PIPING INSULATION SCHEDULE

A. Heating Hot Water Supply and Return, 200°F and below:
1. NPS 1.25 inch and smaller: Mineral Fiber, pre-formed pipe insulation, 1.5 inches thick.
2. NPS 1.5 inch and larger: Mineral Fiber, pre-formed pipe insulation, 2 inches thick.

B. Condensate Drain Piping:
1. All Pipe Sizes: Flexible elastomeric, 0.5 inch thick.

3.11 INDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. Piping, Concealed: None.

C. Piping, Exposed: PVC, Color-Coded by system, 30 mils thick for all indoor applications.

3.12 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. Piping, Concealed: None.

C. Piping, Exposed: Aluminum, Stucco Embossed, 0.024 inch thick.

SECTION 23 08 00

COMMISSIONING OF HVAC

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.02 SUMMARY

A. General: Section includes commissioning process requirements for HVAC&R systems, assemblies, and equipment. Project commissioning and completion of mechanical systems detailed and specified by these Contract Drawings and Specifications shall be provided in accordance with requirements of Washington State Energy Code, to include, but not be limited to, the following:

1. Preliminary Commissioning Report: A preliminary report of commissioning test procedures and results shall be completed and provided to the Owner's Representative. The preliminary commissioning report shall identify:
    a. Deficiencies found during testing required by this section that have not been corrected at the time of report preparation and the anticipated date of correction.
    b. Deferred tests that cannot be performed at the time of report preparation due to climatic conditions.
    c. Climatic conditions required for performance of the deferred tests and the anticipated date of each deferred test.
2. Final Commissioning Report: A complete report of test procedures and results shall be prepared and filed with the Owner's Representative. The final commissioning report shall identify:
    a. Results of all functional performance tests.
    b. Disposition of all deficiencies found during testing, including details of corrective measures used or proposed.
    c. All functional performance test procedures used during the commissioning process including measurable criteria for test acceptance, provided herein for repeatability.

1.03 DEFINITIONS

A. Commissioning Plan: A document that outlines the organization, schedule, allocation of resources, and documentation requirements of the commissioning process.

B. CxA: Commissioning Authority.

C. HVAC&R: Heating, Ventilating, Air Conditioning, and Refrigeration.

D. Systems, Subsystems, Equipment, and Components: Where these terms are used together or separately, they shall mean "as-built" systems, subsystems, equipment, and components.

1.04 INFORMATIONAL SUBMITTALS

A. Certificates of Readiness: Provide.

B. Certificates of Completion of Installation, Prestart, and Startup Activities: Provide.

1.05 ALLOWANCES

A. Labor, Instrumentation, Tools, and Equipment Costs: Labor, instrumentation, tools, and equipment costs for technicians for the performance of commissioning testing are covered by the "Schedule of Allowances," Section 01 21 00 "Allowances."

1.06 CONTRACTOR'S RESPONSIBILITIES

A. Commissioning Tests: Perform commissioning tests at the direction of the CxA.

B. Construction Coordination Meetings: Attend construction phase controls coordination meeting.

C. TAB Coordination Meetings: Attend testing, adjusting, and balancing review and coordination meeting.

D. Component Maintenance Orientation and Inspection: Participate in HVAC&R systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.

E. Commissioning Documentation: Provide information requested by the CxA for final commissioning documentation.

F. Measuring Instruments and Logging Devices: Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.

1.07 CXA'S RESPONSIBILITIES

A. Construction Checklists and Commissioning Process Test Procedures: Provide Project-specific construction checklists and commissioning process test procedures for actual HVAC&R systems, assemblies, equipment, and components to be furnished and installed as part of the construction Contract.

B. Commissioning Testing: Direct commissioning testing.

C. TAB Work: Verify testing, adjusting, and balancing of Work are complete.

D. O&M Manuals: Provide test data, inspection reports, and certificates in Systems Manual.

1.08 COMMISSIONING DOCUMENTATION

A. Commissioning Plan: Provide the following information to the CxA for inclusion in the commissioning plan:
   1. Plan for delivery and review of submittals, systems manuals, and other documents and reports.
   2. Identification of installed systems, assemblies, equipment, and components including design changes that occurred during the construction phase.
   3. Process and schedule for completing construction checklists and manufacturer's prestart and startup checklists for HVAC&R systems, assemblies, equipment, and components to be verified and tested.
   4. Certificate of completion certifying that installation, prestart checks, and startup procedures have been completed.
   5. Certificate of readiness certifying that HVAC&R systems, subsystems, equipment, and associated controls are ready for testing.
   6. Test and inspection reports and certificates.
   7. Corrective action documents.
   8. Verification of testing, adjusting, and balancing reports.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 TESTING PREPARATION

A. Systems Certification: Certify that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.

B. Instrumentation and Control Systems Certification: Certify that HVAC&R instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest setpoints have been recorded.

C. TAB Procedures and Reports: Certify that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective Work reviewed.

D. Systems Operation: Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

E. Inspection: Inspect and verify the position of each device and interlock identified on checklists.

F. Smoke Control and Life Safety Systems: Check safety cutouts, alarms, and interlocks with smoke control and life safety systems during each mode of operation.

G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.02 TESTING AND BALANCING VERIFICATION

A. Documents: Prior to performance of testing and balancing Work, provide copies of reports, sample forms, checklists, and certificates to the CxA.

B. Notification: Notify the CxA at least 10 days in advance of testing and balancing Work, and provide access for the CxA to witness testing and balancing Work.

C. Additional TAB Support: Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.
   1. The CxA will notify Testing and Balancing Contractor 10 days in advance of the date of field verification. Notice will not include data points to be verified.
   2. The Testing and Balancing Contractor shall use the same instruments (by model and serial number) that were used when original data were collected.
   3. Failure of an item includes, other than sound, a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final testing, adjusting, and balancing report. For sound pressure readings, a deviation of 3 dB shall result in rejection of final testing. Variations in background noise must be considered.
   4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.03 GENERAL TESTING REQUIREMENTS

A. Additional Commissioning Support: Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.

B. Scope of HVAC&R Testing: Shall include entire HVAC&R installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space. Testing shall include measuring capacities and effectiveness of operational and control functions.

C. Testing Requirements: Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.

D. Testing Plans, Procedures, and Checklists: The CxA, along with the HVAC&R Contractor, Testing and Balancing Contractor, and HVAC&R Instrumentation and Control Contractor shall prepare detailed testing plans, procedures, and checklists for HVAC&R systems, subsystems, and equipment.

E. Testing Conditions: Tests will be performed using design conditions whenever possible.

F. Simulated Conditions: Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.

G. Setpoints: The CxA may direct that setpoints be altered when simulating conditions is not practical.

H. Testing Deficiencies: The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering setpoints are not practical.

I. Seasonal Testing: If tests cannot be completed because of a deficiency outside the scope of the HVAC&R system, document the deficiency and report it to the Owner’s Representative. After deficiencies are resolved, reschedule tests.

J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.04 HVAC&R SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Boiler Testing and Acceptance Procedures: Testing requirements are specified in HVAC boiler sections. Provide submittals, test data, inspector record, and boiler certification to the CxA.

B. HVAC&R Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Section 23 09 00 “Instrumentation and Control for HVAC” and Section 23 09 93 “Sequence and Operations for HVAC Controls.” Assist the CxA with preparation of testing plans.

C. Cleaning, Flushing, and Hydrostatic Testing Plan: Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment requirements are specified in HVAC piping sections. HVAC&R Contractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include the following:
   1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.
   2. Description of equipment for flushing operations.
   3. Minimum flushing water velocity.
   4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.

D. Energy Supply System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of heat pump and solar systems and equipment at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.

E. Refrigeration System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of chillers, cooling towers, refrigerant compressors and condensers, heat pumps, and other refrigeration systems. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.

F. HVAC&R Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, steam, and hydronic distribution systems; special exhaust; and other distribution systems, including HVAC&R terminal equipment and unitary equipment.

G. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.

END OF SECTION 23 08 00

SECTION 23 09 00

INSTRUMENTATION AND CONTROL FOR HVAC

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Control equipment for HVAC systems and components, including control components for terminal heating and cooling units not supplied with factory-wired controls.

1.02 RELATED REQUIREMENTS

A. Section 23 00 00 "General Mechanical Requirements"

B. Section 23 05 19 "Meters and Gauges for HVAC Piping" for measuring equipment that relates to this section.

C. Section 23 05 49 "Variable Frequency Drives. "

1.03 DEFINITIONS

A. DDC:
Direct digital control.

B. I/O:
Input/output.

C. BACnet, and Tridium:
Control network technology platforms for designing and implementing interoperable control devices and networks.

D. MS/TP:
Master slave/token passing.

E. PC:
Personal computer.

F. PID:
Proportional plus integral plus derivative.

G. RTD:
Resistance temperature detector.

1.04 WORK BY OTHERS

A. General:
Mechanical Contractor installs control valves, taps, and dampers furnished by BAS manufacturer.

B. Electrical Contractor Provides:
1. Power: 120 V power to BAS and/or temperature control panels as shown on Electrical Plans.
2. Wiring: Wiring of power feeds through disconnect starters to electrical motor.
3. Stop/Start Switches: Wiring of remote stop/start switches and manual or automatic motor speed control devices not furnished by BAS manufacturer.
4. Sub-Metering: Wiring of electrical sub-metering devices furnished by BAS manufacturer as shown on Electrical Plans.

1.05 SYSTEM PERFORMANCE

A. Comply with the following performance requirements:
1. Graphic Display: Display graphic with minimum 20 dynamic points with current data within 10 seconds.
2. Graphic Refresh: Update graphic with minimum 20 dynamic points with current data within 8 seconds.
3. Object Command: Reaction time of less than two seconds between operator command of a binary object and device reaction.
4. Object Scan: Transmit change of state and change of analog values to control units or workstation within 6 seconds.

5. Alarm Response Time: Annunciate alarm at workstation within 45 seconds. Multiple workstations must receive alarms within 5 seconds of each other.
6. Program Execution Frequency: Run capability of applications as often as 5 seconds, but selected consistent with mechanical process under control.
7. Performance: Programmable controllers shall execute DDC PID control loops and scan and update process values and outputs at least once per second.
8. Reporting Accuracy and Stability of Control: Report values and maintain measured variables within tolerances as follows:
    a. Water Temperature: Plus or minus 1 degrees F.
    b. Water Flow: Plus or minus 5 percent of full scale.
    c. Water Pressure: Plus or minus 2 percent of full scale.
    d. Space Temperature: Plus or minus 1 degrees F.
    e. Ducted Air Temperature: Plus or minus 1 degrees F.
    f. Outside Air Temperature: Plus or minus 2 degrees F.
    g. Dew Point Temperature: Plus or minus 3 degrees F.
    h. Temperature Differential: Plus or minus 0.25 degrees F.
    i. Relative Humidity: Plus or minus 5 percent.
    j. Airflow (Pressurized Spaces): Plus or minus 3 percent of full scale.
    k. Airflow (Measuring Stations): Plus or minus 5 percent of full scale.
    l. Airflow (Terminal): Plus or minus 10 percent of full scale.
    m. Air Pressure (Space): Plus or minus 0.01-inch w.g.
    n. Air Pressure (Ducts): Plus or minus 0.1-inch w.g.
    o. Carbon Monoxide: Plus or minus 5 percent of reading.
    p. Carbon Dioxide: Plus or minus 50 ppm.
    q. Electrical: Plus or minus 5 percent of reading.

1.06 SEQUENCE OF OPERATION

A. General:
See Drawings for control sequences.

1.07 ACTION SUBMITTALS

A. Product Data:
Include manufacturer's technical literature for each control device. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated.
    1. DDC System Hardware: Bill of materials of equipment indicating quantity, manufacturer, and model number. Include technical data for operator workstation equipment, interface equipment, control units, transducers/transmitters, sensors, actuators, valves, relays/switches, control panels, and operator interface equipment.
    2. Control System Software: Include technical data for operating system software, operator interface, color graphics, and other third-party applications.
    3. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.

B. Shop Drawings:
Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
    1. Bill of materials of equipment indicating quantity, manufacturer, and model number.
    2. Schematic flow diagrams showing fans, pumps, coils, dampers, valves, and control devices.
    3. Wiring Diagrams: Power, signal, and control wiring.
    4. Details of control panel faces, including controls, instruments, and labeling.
    5. Written description of sequence of operation.
    6. Schedule of dampers including size, leakage, and flow characteristics.
    7. Schedule of valves including flow characteristics.

8. DDC System Hardware:
   a. Wiring diagrams for control units with termination numbers.
   b. Schematic diagrams and floor plans for field sensors and control hardware.
   c. Schematic diagrams for control, communication, and power wiring, showing trunk data conductors and wiring between operator workstation and control unit locations.
9. Controlled Systems:
   a. Schematic diagrams of each controlled system with control points labeled and control elements graphically shown, with wiring.
   b. Scaled drawings showing mounting, routing, and wiring of elements including bases and special construction.
   c. Written description of sequence of operation including schematic diagram.
   d. Points list.

C. Samples for Initial Selection:
For each color required, of each type of thermostat or sensor cover with factory-applied color finishes.

D. Samples for Verification:
For each color required, of each type of thermostat or sensor cover.

1.08 INFORMATIONAL SUBMITTALS

A. Data Communications Protocol Certificates:
Certify that each proposed DDC system component complies with ASHRAE 135.

B. Qualification Data:
For Installer and manufacturer.

C. Software Upgrade Kit:
For Owner to use in modifying software to suit future systems revisions or monitoring and control revisions.

D. Field quality control test reports.
Provide.

1.09 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data:
For HVAC instrumentation and control system to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 01 78 23 “Operation and Maintenance Data,” include the following:
1. Maintenance instructions and lists of spare parts for each type of control device and compressed air station.
2. Interconnection wiring diagrams with identified and numbered system components and devices.
3. Keyboard illustrations and step-by-step procedures indexed for each operator function.
4. Inspection period, cleaning methods, cleaning materials recommended, and calibration tolerances.
5. Calibration records and list of setpoints.

B. Software and Firmware Operational Documentation:
Include the following:
1. Software operating and upgrade manuals.
2. Program Software Backup: On compact disc or electronically, complete with data files.
3. Device address list.
4. Printout of software application.
5. Software license required by and installed for DDC workstations and control systems.

1.10 QUALITY ASSURANCE

A. Installer Qualifications:
Automatic control system manufacturer’s authorized representative who is trained and approved for installation of system components required for this Project.

B. Electrical Components, Devices, and Accessories:
Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with ASHRAE 135 for DDC system components.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Factory-Mounted Components:
Where control devices specified in this section are indicated to be factory-mounted on equipment, arrange for shipping of control devices to equipment manufacturer.

B. System Software:
Update to latest version of software at Project completion.

1.12 COORDINATION

A. Coordinate location of thermostats, humidistats, and other exposed control sensors with plans and room details before installation.

B. Coordinate equipment with Section 28 16 00 “Intrusion Detection” to achieve compatibility with equipment that interfaces with that system and with building master clock.

C. Coordinate equipment with Section 28 13 00 “Access Control” to achieve compatibility with equipment that interfaces with that system.

D. Coordinate equipment with Section 26 09 43.13 “Addressable-Fixture Lighting Controls” and Section 26 09 43.23 “Relay-Based Lighting Controls” to achieve compatibility with equipment that interfaces with that system.

E. Coordinate equipment with Section 28 46 11 “Digital, Addressable Fire-Alarm System” and Section 28 31 12 “Zoned (DC Loop) Fire-Alarm System” to achieve compatibility with equipment that interfaces with that system.

F. Coordinate supply of conditioned electrical branch circuits for control units and operator workstation.

G. Coordinate equipment with Section 26 09 13 “Electrical Power Monitoring and Control” to achieve compatibility of communication interfaces.

H. Coordinate equipment with Section 26 24 16 “Panelboards” to achieve compatibility with starter coils and annunciation devices.

I. Coordinate size and location of concrete bases. Cast anchor bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 03 30 00 “Cast-in-Place Concrete.”

PART 2 PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. BAS Software Manufacturers:
System software graphics and programming shall be as manufactured by:
1. Alerton BACnet or Tridium Niagara (provided by ATS Automation)
2. Johnson Controls BACnet or Tridium Niagara
3. Siemens BACnet or Tridium Niagara (provided by local Siemens factory office)
4. Distech BACnet or Tridium Niagara (provided by Long Building Controls)
5. Honeywell BACnet or Tridium Niagara

B. BAS Hardware Manufacturers:
System components, except where specified otherwise, shall be as manufactured by:
1. Alerton BACnet (provided by ATS Automation)
2. Johnson Controls BACnet
3. Siemens BACnet (provided by local Siemens factory office)
4. Distech BACnet (provided by Long Building Controls
5. Honeywell BACnet or LonTalk (provided by Sound Energy Systems)

C. System Requirements:
System components shall be, to greatest extent possible, manufactured by a single manufacturer. Local branch (or company) engineers and technicians shall directly supervise installation and point-to-point checkout of installing subcontractor. This local branch (or company) shall maintain a service organization that stocks, and has direct factory access to, manufacturer's standard parts and shall be capable of system inspection, troubleshooting, maintenance, and service.

2.02 SYSTEM DESCRIPTION

A. General:
1. Distributed Logic BAS: Provide complete with software and hardware functions. This system shall control mechanical equipment including unitary equipment such as VAV boxes, heat pumps, fan coils, AC units, and air handlers as detailed in this Specification.
2. BAS: Provide a fully distributed processing, online, real-time, direct digital control building controls subsystem as an integral part of BAS, in compliance with applicable codes and as reviewed by authorities having jurisdiction at Project site. Communication between nodes shall be digital only.
3. Auto Communications: Network shall support internet access via Owner's internet provider for e-mailed alarm access.
4. Remote Access Software: Provide remote access software. Workstation shall function as a host to remote users via internet connectivity through an Owner-provided network and secured through the Owner's firewall. VPN access shall be required and provided by the Owner.
5. Open Architecture at field controller levels: Network shall utilize an open architecture capable of one or more of following:
    a. Connectivity via BACnet as per ANSI/ASHRAE Standard 135.
6. Additional Requirements: BAS shall interact with equipment such as heat pumps, Lighting control or local controllers that are provided by other trades. BAS Contractor shall provide equipment and connections to integrate these devices.

B. BAS Software BACnet or Tridium Niagara 4.0
Operator's workstation software shall be Microsoft Windows, most current version supported by BAS manufacturer. Software shall include password protection, alarming, logging of historical data, graphics including animation, suite of field engineering tools including graphical programming, and applications.
1. Building Controllers: Include complete energy management software, including scheduling building control strategies and logging routines. Energy management software and firmware shall be resident in field hardware and shall not be dependent on operator's terminal. Operator's terminal software shall be used for access to field-based energy management function only. Provide zone-by-zone direct digital logic control of space temperature, scheduling, run-time accumulation, equipment alarm reporting, and override timers for after-hours usage.
2. Central Plant and Air Handler Controller:
    a. Expandable application controller shall be capable of providing custom control strategies to meet the sequence of operation. Any systems utilizing factory pre-programmed global strategies that cannot be modified by field personnel on-site though simple download are not acceptable. Changing global strategies using firmware changes is also unacceptable. Program execution of controller shall be a minimum of once per second.
    b. Controller shall have adequate data storage to ensure high performance and data reliability. Battery shall retain static RAM memory and real-time clock functions for a minimum of 1.5 years (cumulative). Battery shall be a field-replaceable (non-rechargeable) lithium type. Unused battery life shall be 10 years.
    c. The on-board, battery-backed real-time clock must support schedule operations and trend logs.

d. Controller shall include both onboard 10Base-T/100Base-TX Ethernet BACnet communication over UTP and shall include BACnet IP communication. In addition, controller shall include BACnet point-to-point (PTP) connection port.
e. The base unit of the controller shall host up to eight expansion modules with various I/O combinations. These inputs and outputs shall include universal 12-bit inputs, binary triac outputs, and 8-bit switch-selectable analog outputs (0–10V or 0–20mA). Inputs shall support 3K and 10K thermistors, 0–5VDC, 0–10VDC, 4–20mA, dry contacts, and pulse inputs directly.
f. All outputs must have onboard hand-off-auto (HOA) switches and a status indicator light. HOA switch position shall be monitored. Each analog output shall include a potentiometer for manually adjusting the output when the HOA switch is in the Hand position.
g. The position of each and every HOA switch shall be available system wide as a BACnet object.

3. Application Controllers: Provide for every terminal unit (HP), air handler, central plant equipment, and other programmable controlled equipment. Application controllers shall be mounted next to controlled equipment and communicate with building controller via LAN.

2.03 NETWORK

A. First Tier Communications:
First tier network shall provide communications between operator workstations and first tier network controllers. It shall be based on PC industry standard Ethernet TC/IP and shall use BACnet or Tridium Niagara as first tier network communication protocol. First tier network shall operate at a minimum communication speed of 10 Base-T or 100 Base-TX, with full peer-to-peer network communication. Workstation and network controller LAN cards shall be standard “off-the-shelf” products available through normal PC vendor channels.

B. First Tier Network:
First tier network shall be provided on its own dedicated cable as a private network, unless otherwise noted on Drawings, Specifications, or by prior review. BAS network shall support both copper and optical fiber communication media to comply with applicable codes, ordinances, and regulations and authorities having jurisdiction. It shall be color coded and labeled with BAS manufacturer’s name.

C. Interconnecting Devices:
Provide gateways, routers, repeaters, transceivers, hubs, and other devices to interconnect operator workstations and network controllers. Equipment shall comply with IEEE 802.3 or Ethernet Version 2 (V2.0) specifications.

D. Telephone Lines:
Owner shall provide private and public telephone lines, ISDN lines, and Internet Service Provider connections for Contractor to complete BAS work as specified, at Owner’s cost. Contractor shall identify specific BAS requirements in a Shop Drawing submittal.

E. IT Interface Equipment:
Provide IT interfacing equipment and coordinate on configuration and interfacing arrangements with Data Cabling System Contractor.

F. Second Tier Networks:
Second tier networks shall provide either peer-to-peer, master-slave, or supervised token passing communications, and shall operate at a minimum communication speed of 9.6 to 76.8 Kbps. Application-specific controllers shall reside on second tier. Communication protocol can be BACnet or LonTalk.

G. Third Party Interface:
1. BAS Contractor:
a. Shall integrate real-time data from building systems and databases originating from others.
b. Shall not be responsible for execution of scheduling of Work of other trades.

2. Contractors Supplying other Associated Systems and Equipment: Contractors shall provide hardware and software and cooperate fully with BAS Contractor at their cost to ensure complete data integration.
3. BAS: BAS hardware equipment and software shall allow data communications between BAS building systems supplied by others, utilizing standard protocols of LonWorks, BACnet, and/or Modbus. See sequence of operation for details.
4. Integration: Third-party interfaces shall extend to operator's workstation software, which shall support user interaction with all control system components. Methods of integration shall include industry standard protocols such as BACnet, LonMark/LonTalk, OLE for Process Control (OPC), Modbus, or integrator interfaces between cooperating manufacturer's systems.

2.04 WEB INTERFACE

A. BAS Supplier:
BAS supplier shall provide graphical interface that allows users to access real-time BAS data, configure data, archive data, monitor, command, commission, edit, and perform system diagnostics via Internet or Intranet from devices with Web browser software as a part of standard installation. Interface shall use HTML-based ASP pages or Hypertext Transfer Protocol (HTTP), Internet Protocol (IP), Simple Network Time Protocol (SNTP), Simple Mail Transfer Protocol (SMTP), Simple Network Management Protocol (SNMP), and Extensible Markup Language (XML) to send and receive data from DDC system to a Web browser. Web software shall be included that allows unlimited simultaneous users to access DDC system, with ability to expand system to accommodate an unlimited number of users. Web browser shall tie into network via Owner-supplied Ethernet network connection. BAS supplier shall not utilize Owner's existing server as a platform for Web- based interface.

B. Browser:
Browser shall be standard version of Microsoft IE latest release, Google Chrome, or Mozilla Firefox latest release. No special vendor- supplied software shall be needed on computers running browser. BAS data shall be accessed from standard Web browser devices (desktop or laptop computer) connected to network, including remote users connected by an Internet Service Provider. Displays shall be viewable and Web server shall directly access real-time data from BAS network. Data shall be displayed in real time and update automatically without user interaction. User shall be able to change data on displays if logged in with user name and password.

2.05 BUILDING CONTROLLER

A. General:
Building controller shall be capable of providing building-wide network control strategies for system based on information from a system object regardless of whether object is directly monitored by controller or by another controller. Program that implements these strategies shall be completely flexible and user definable. Systems utilizing factory pre-programmed strategies that cannot be modified by field personnel on site or downloaded via remote communications are not acceptable. Changing Building Controller strategies via firmware changes is also unacceptable.

B. Programming:
Programming shall be object-oriented using control function blocks, supporting DDC functions, with analog and binary values to accomplish sequences. Flowcharts shall be generated and automatically downloaded to controller. Programming tool shall be resident on workstation. Contractor shall provide programming tools for controllers.

C. Graphical View:
Provide means to graphically view inputs and outputs to each program block in real time as program is executing. This function shall be performed via operator's workstation or field computer.

D. Real Time:
Building controller shall provide battery backup real-time (hardware) clock functions.

E. Memory:
Controller shall have memory needed to ensure high performance and data reliability. Battery shall retain static RAM memory for a minimum of 1.5 years, cumulative. Battery backup shall provide real time clock functions for a minimum of 72 hours.

F. Control Functions:
Global control algorithms and automated control functions shall execute via a 64-bit processor.

G. Battery:
Controller installation shall include memory-free gel-cell battery providing ongoing power conditioning and noise filtering for operation data integrity. It shall provide a minimum of five minutes of powerless operation.

H. Schedules:
Each building controller shall support schedule and calendar objects for number of zones of control connected to building controller.

I. Logging Capabilities:
1. Trend Logs: Each building controller shall log points (real or calculated) located in building controller. Objects in system (real or calculated) shall be logged. Sample time interval shall be adjustable at operator's workstation.
2. Points: Points, physical or calculated, may be designated for trending. Trending may be triggered on a defined time interval, upon a change in value, or when a value exceeds a range.
3. Remote Locations: Logs shall be viewed either on site or off site via remote communication.
4. Building Controller: Controller shall periodically upload trended data to networked operator's workstation for long-term archiving if desired.
5. Archived Data: Data stored in database format shall be available for use in third-party spreadsheet or database programs.

J. Alarm Generation:
1. Alarms:
   a. Alarms shall be generated within system for object change of value or state, either real or calculated. This includes things such as analog object value changes, binary object state changes, and various controller communication failures.
   b. Each alarm shall be distributed via text, phone, or e-mail as noted above.
2. Alarm Log: Provide for alarm viewing. Log shall be viewed on site at operator's terminal or off-site via remote communications.
3. Alarm Messages: In addition to point's descriptor and time and date, user shall be able to print, display, or store a minimum 65-character alarm message to more fully describe alarm condition or direct operator response. Each standalone building controller shall be capable of storing a library of alarm messages sufficient for number of alarm points in building controller. Each message may be assignable to number of points in panel.

2.06 CENTRAL PLANT AND AIR HANDLER APPLICATION CONTROLLERS

A. General:
Provide one controller for each air handler and for central plant control that covers objects listed in object list. Controllers shall include input, output, and self-contained logic program needed for complete control of units. Controllers shall be fully programmable. Programming tool shall be resident on operator workstation.

B. Application Controllers:
Application controllers shall include analog and binary inputs with 10-bit resolution that accepts 3K or 10K thermistors, 1,000 Ohm RTD temperature elements, NI, SI, PT, 0 to 10 VDC, 0 to 5 VDC, 4 to 20 mA, and dry contact signals. Controller shall include binary and analog outputs on board. Analog outputs shall be either 0 to 10 VDC or 0 to 20 mA. Software shall include scaling features for analog outputs. Include 24 VDC voltage supply for use as power supply to external sensors.

C. Programming Sequences:
Program sequences shall be stored on board application controller in flash RAM. No batteries shall be needed to retain logic program during normal operations. Programming of application controller shall be completely modifiable in field over provided LANs or remotely via modem interface. Application controller shall be programmed using programming tools as described in operator's terminal section.

D. Base Unit:
Base unit of controller shall host expansion modules with various I/O combinations. These inputs and outputs shall include several combinations of binary inputs and outputs and analog inputs and outputs. Inputs shall support thermistors, dry contacts, or pulse inputs directly.

E. Time Clock:
Each controller shall support its own real-time operating system. Provide a time clock with battery backup to allow standalone operation and ensure protection during power outages. Clock operation shall be overridden by Universal Network controller time clock to ensure network continuity.

F. Storage:
Databases and programs shall be stored in non-volatile flash RAM or a minimum of 100-hour battery backup shall be provided. Upon transfer from normal to emergency power and back to normal power, DDC controlled setpoints, proportional bands, control algorithms, and other programmable parameters shall be maintained such that a normal power failure does not necessitate reprogramming or rebooting of controller and control functions shall proceed as if no interruption of normal power occurred. Programs shall be field-customized to meet user's exact control strategy requirements.

G. Certifications:
Controller shall be listed for UL 916

H. Manual Overrides:
1. Manual Override Switches: Provide for binary outputs. Switches shall be mounted within system controller key accessed enclosure or adjacent local control panel.
2. Switches for Analog Outputs: Switches shall be rotary gradual position, providing full analog signal range of associated analog output, and shall be operable whether panel processor is operational or not.

2.07 TERMINAL UNIT APPLICATION CONTROLLERS (HEAT PUMPS, FAN COILS)

A. General:
Provide one unitary controller for each piece of unitary mechanical equipment that covers objects listed in object list for unit. Controllers shall interface to building controller via LAN. Controllers shall include input, output, and self-contained logic program as needed for complete control of unit. Each unitary controller shall operate as a standalone controller capable of performing its specified control responsibilities independently of other controllers in network. Each unitary controller shall be a microprocessor based, multi-tasking, real-time digital control processor.

B. Unitary Controllers:
Unitary controllers shall include analog and binary inputs that accept 3K or 10K thermistors, 1,000 Ohm RTD temperature elements NI, SI, or PT, 0 to 10 VDC, 0 to 5 VDC, 4 to 20 mA, and dry contact signals. Controller shall include binary and analog outputs onboard as needed. Analog outputs shall be either 0 to 10 VDC or 0 to 20 mA. Software shall include scaling features for analog outputs. Provide 24 VDC voltage supply for use as power supply to external sensors.

C. Storage:
Program sequences shall be stored on board controller in flash RAM. No batteries shall be needed to retain logic program.

D. Power Fail Protection:
System setpoints, proportional bands, control algorithms, and other programmable parameters

shall be stored such that a power failure does not necessitate reprogramming controller. Programming of application controller shall be completely modifiable in field over provided LANs or remotely via modem interface. Unitary controllers shall directly support temporary use of a portable service terminal that can be connected via zone temperature sensor or directly at controller. Vendor-specific programming tools shall be provided as part of system (other than a standard laptop).

E. Certifications:
UL 916,

2.08 WORKSTATION OPERATOR INTERFACE

A. General:
General structure of workstation interaction shall be a standard client/server relationship. Server shall be used to archive data and store system database. Clients shall access server for archived data. Each client shall include flexibility to access graphics from server or local drive. Provide software licenses for server and each client.

B. Displays:
1. Operator's Workstation (OWS): Displays data associated with projects as called out on Drawings and/or object type list supplied. Graphic files shall be created using depictions of system installation, AutoCAD or Visio drawing files of field installation drawings, and wiring diagrams from as-built drawings. OWS shall display data using 3-dimensional graphic representations of mechanical equipment. System shall be capable of displaying graphic file, text, and dynamic object data together on each display and shall include animation. Information shall be labeled with descriptors and shall be shown with engineering units. Information on display shall be dynamically updated without action by user. Workstation shall allow user to change field resident EMCS function associated with Project, such as setpoints, weekly schedules, and exception schedules, regardless of whether a particular screen shows text or a complete graphic display. This shall be done without reference to object addresses or other numeric/mnemonic indicators.
2. Programming: Displays and programming shall be generated and customized by local BAS supplier and installer. BAS graphics programmer shall meet with Owner and consultants prior to creating graphical displays, to discuss graphical format, point naming conventions, what information is to be displayed, customizing screens to comply with Owner needs, and how graphic screens shall appear. Systems requiring factory programming for graphics or DDC logic are specifically prohibited.
3. BAS Operator Interface: Interface shall be user friendly, readily understood, and shall make maximum use of colors, graphics, icons, embedded images, animation, text-based information, and data visualization techniques to enhance and simplify use and understanding of BAS by authorized users at OWS.
4. Passwords: User access to BAS shall be protected by a flexible and Owner- redefinable software-based password access protection. Password protection shall be multi-level and partitionable to accommodate varied access requirements of different user groups. Provide means to define unique access privileges for each individual authorized user. Provide means to manage online password access control under control of a master password.
5. Supported Functions: Operator interface shall incorporate comprehensive support for functions including, but not necessarily limited to, following:
    a. User access for selective information retrieval and control command execution.
    b. Monitoring and reporting.
    c. Alarm and non-normal condition annunciation.
    d. Selective operator override and other control actions.
    e. Information archiving, manipulation, formatting, display, and reporting.
    f. BAS internal performance supervision and diagnostics.
    g. Online access to user help menus.
    h. Online access to current BAS as-built records and documentation.

i. Means for controlled reprogramming, reconfiguration of BAS operation, and for manipulation of BAS database information in compliance with prevailing codes, approvals, and regulations for individual BAS applications.
j. Provide BAS reports and displays making maximized use of simple English language descriptions and readily understood acronyms and abbreviations to assist user understanding and interpretation. Text naming conventions shall be consistent in their use and application throughout BAS.
k. PC-based configurations shall operate on Microsoft Windows 7 or most current version supported by BAS manufacturer.

6. Alarms:
   a. Designated OWS shall annunciate alarms generated by BAS. Alarm management portion of OWS software shall, at minimum, provide following functions:
      1) Log date and time of alarm occurrence.
      2) Generate a “pop-up” window with audible alarm, informing a user that an alarm has been received.
      3) Allow a user with appropriate security level to acknowledge or disable an alarm.
      4) Provide an audit trail on hard drive for alarms by recording user acknowledgement, deletion, or disabling of alarm. Audit trail shall include name of user, alarm, action taken on alarm, and time/date stamp.
   b. BAS shall annunciate diagnostic alarms indicating system failures and non-normal operating conditions.
   c. BAS shall annunciate application alarms.
7. Reports:
   a. Reports shall be generated and directed to one or more of following: OWS display, printer, or archive at user’s option. As a minimum, system shall provide following reports:
      1) Points in BAS.
      2) Points in each BAS application.
      3) Points in a user-defined group of points.
      4) Points currently in alarm.
      5) Points locked out in a BAS application.
      6) BAS schedules.
      7) User defined and adjustable variables, schedules, and interlocks.
8. Dynamic Color Graphics:
   a. An unlimited number of graphic displays shall be able to be generated and executed.
   b. Graphic displays shall be able to display and provide animation based on real-time BAS data that is acquired, derived, or entered.
   c. User shall be able to change values (setpoints) and states in system-controlled equipment.
   d. Provide a graphic editing tool that allows for creation and editing of graphic files.
   e. BAS system shall be provided with a complete user expandable symbol library containing basic symbols used to represent components of this BAS system.
9. Schedules:
   a. Provide a spreadsheet style schedule input form for automatic BAS time-of-day scheduling and override scheduling of BAS operations. At a minimum, following spreadsheet types shall be accommodated:
      1) Weekly schedules.
      2) Temporary override schedules.
      3) Special “Only Active if Today is a Holiday” schedules.
   b. Schedules shall be provided for each system or sub-system in BAS. Each schedule shall include commandable points residing within system. Each point may have a unique schedule of operation relative to system schedule, allowing for sequential starting and control of equipment within system. Scheduling and rescheduling of points shall be accomplished easily via system schedule spreadsheets.

c. Monthly calendars for a 12-month period that allow for simplified scheduling of holidays and special days in advance shall be provided. Holidays and special days shall be user selected with pointing device or keyboard, and shall automatically reschedule equipment operation as previously defined on weekly schedules.

10. Internet/Intranet Browser:
    a. Multi-user color graphics, textual interface, and server shall be provided that allows customers to access their BAS data via Internet and Intranet. This interface shall use HTML-based pages to send and receive data from a BAS to a Web browser:
    b. Browser shall:
        1) Automatically reflect changes made to BAS without additional programming.
        2) When provided behind a corporate firewall, work in conjunction with other security measures that have been implemented.
        3) Allow user to navigate and command BAS using same format as OWS.
        4) Be an industry standard browser.
        5) Provide user password access control.
        6) Provide means by which user can create, edit, and view groups of BAS data points.
        7) Provide navigation tools for moving between views. In addition, it shall provide tools for gaining access to help and for logging out of system.
11. Remote Alarm Notification:
    a. Provide a flexible alarm notification for communicating critical conditions of BAS to a minimum of 300 different devices and destinations.
    b. Building operators shall be able to monitor and respond to critical BAS conditions via workstation, a separate personal computer (PC) on a connected internet protocol (IP) network, phone, or other mobile, electronic devices.
    c. Provide software program to facilitate productivity of Owner's maintenance staff by helping Owner filter alarms that need to be sent, define alarm actions to be performed, and configure communication details for selected notification options.
    d. Schedules shall allow Owner to send alarm messages only if a particular user is available according to a defined schedule. Schedule set-up shall allow alarm notification for groups or individuals.
    e. Provide following notification options:
        1) Pager Option: Sends messages to pagers using Tele Alphanumeric Protocol (TAP) and to Simple Message System (SMS) pagers using Universal Network System for Mobile Communications (GSM). BAS supplier shall be responsible for providing a modem for connection to paging service.
        2) Email Option: Sends e-mail messages to one or several e-mail recipients.
        3) Texting: Sends a message using Owner's phone provider's system for texting.
        4) Sound/Text-to-Speech Option: Plays a prerecorded sound file or a speech converted from a text file on a local computer or remotely over network.
        5) Phone Callout Option: Calls a defined phone number and either plays a prerecorded sound file or a defined text file that is automatically converted to speech.

C. Password Protection:
Provide security system that prevents unauthorized use unless operator is logged on. Access shall be limited to operator's assigned functions when user is logged on. This includes displays as outlined above.

D. Operator Activity Log:
1. General: System shall include an activity log that tracks operator changes and activities. Activity log shall track what is changed in system, who performed this change, date and time of system activity, and value of change before and after operator activity. Operator shall be able to display activities and sort changes by user and by operation.

2. Data Management: Log shall be gathered and archived to hard drive on operator workstation as needed. Operator shall be able to export data for display and sorting in a spreadsheet.
3. Displayed Data: Any displayed data that is changeable by operator shall be selected and operator activity log shall then be selectable on screen. Selection of operator activity log using this method shall show operator changes of just that displayed data.

E. Trend Log:
1. General: System server shall periodically gather historically recorded data stored in building controllers and field controllers and archive information gathered. Archived files shall be appended with new sample data, allowing samples to be accumulated. Systems that write over archived data shall not be allowed, unless limited file size is specified. Samples shall be viewed at operator's workstation. Operator shall be able to scroll through trended data. Trend log information shall be displayed in standard engineering units.
2. Graphs: Software shall be capable of graphing trend logged object data and creating two-axis (x and y) graphs that display up to 10 object types at same time in different colors. Graphs shall show object values relative to time.
3. Setup: Operator shall be able to change trend log setup information. This includes information to be logged as well as interval at which it is to be logged. Input, output, and value object types in system shall be logged. Operations shall be password protected. Setup and viewing shall be accessed directly from graphics on which object is displayed.
4. Trend Scheduler: System shall include a trend scheduler for setup of logs. Scheduler shall walk user through steps. Scheduler shall have its own pull down selection for startup, or shall be started by clicking on value displayed on graphic, and then selecting trend logs from displayed menu.

F. Energy Log:
1. General: System server shall be capable of periodically gathering energy log data stored in field equipment and archiving information. Archive files shall be appended with new data, allowing data to be accumulated. Systems that write over archived data shall not be allowed unless limited file size is specified. Display energy log information in standard engineering units.
2. Data: All data shall be stored in database file format for direct use by third-party programs. Operation system shall stay completely online during graphing operations.
3. Setup: Operator shall be able to change energy log setup information as well. This includes meters to be logged, meter pulse value, and type of energy units to be logged. Meters monitored by system shall be logged. System shall support using flow and temperature sensors for Btu monitoring.
4. Display: System shall display archived data in tabular format form for both consumption and peak values. Data shall be shown in hourly, daily, weekly, monthly, and yearly formats. In each format, user shall be able to select a specific period of data to view.

G. Configuration/Setup:
Provide means for operator to display and change system configuration. This shall include, but not be limited to, system time, day of week, date of daylight savings set forward/set back, printer termination, port addresses, and modem port and speed. Items shall be monitored using understandable terminology with simple mouse/cursor key movements.

H. Field Engineering Tools:
Operator's workstation software shall include field engineering tools for programming controllers supplied.
1. Zoom: Provide zoom in and zoom out capabilities.
2. Real-Time Operation: Programming tools shall include a real-time operation mode.
3. Applications: Field engineering tools shall include a database manager of applications that includes logic files for controllers and associated graphics. Operator shall be able to select unit type, input/output configuration, and other items that define unit to be controlled. Supply applications as part of workstation software.

I. Software:
At conclusion of project, Contractor shall leave with Owner an electronic media copy that includes complete software operation system and project graphics, setpoints, and system parameters. This backup shall allow Owner to completely restore system in case of a computer malfunction.

2.09 WORKSTATION HARDWARE REQUIREMENTS

A. General:
Provide hardware and operating system software, drivers, and miscellaneous components to following minimum configuration:
1. Minimum Requirement: Intel Core i7 Processor, or faster.
2. Input Devices: USB optical mouse, keyboard.
3. Monitor: 24.00-inch flat screen monitor.
4. RAM: 16 GB RAM.
5. Hard Disk: 1 TB
6. Graphics: High-performance graphics adapter.
7. Network Card: Ethernet 10/100 network interface card, wireless Ethernet card.
8. Software: Microsoft Windows, most current version supported by BAS manufacturer.
9. USB Ports: Six.

2.10 PORTABLE LAPTOP HARDWARE REQUIREMENTS

A. General:
Provide hardware, operating system software, BAS software, drivers, and miscellaneous components to meet following minimum configuration.
1. Minimum Requirement: Intel I7, or equivalent.
2. Screen: 15.00 inch.
3. RAM: 16 GB RAM minimum.
4. Hard Disk: 1 TB.
5. Network Card: Wireless Ethernet 10/100 network interface card.
6. Software: Microsoft Windows or most current compatible version.
7. USB Ports: Two.

2.11 FIELD DEVICES

A. Temperature Sensors:
1. General:
   a. Room temperature sensors shall be provided where indicated on Drawings. Temperature sensors shall be solid-state electronic, factory calibrated. Sensor accuracy shall be 0.36 degrees F over range of 40 to 100 degrees F. Mount centerline of sensor 48.00 inches above finished floor unless otherwise indicated on Architectural room elevations.
   b. Duct sensors shall be rigid or flexible probe. Sensors in mixed air stream shall be averaging type with sensor element length for complete duct coverage (provide at least 1.00 feet of element length per 2.00 square feet of duct cross sectional area) arranged to cover entire duct area evenly. Sensor accuracy shall be 0.5 degrees F over range of 40 to 180 degrees F.
   c. Control Contractor shall provide immersion sensors to Mechanical Contractor. Mechanical Contractor shall provide immersion sensors in wells filled with thermal compound before installation of immersion sensors. Sensor accuracy shall be 0.5 degrees F over range of 40 to 200 degrees F.
   d. Outside air sensors shall be provided away from exhaust or relief vents, not in an outside air intake and in location that is in shade most of day. Provide outside air temperature sensors with watertight inlet fitting and sunlight shield. Sensor accuracy shall be 0.5 degrees F over range of minus 40 to 120 degrees F.
2. Intelligent Room Sensor with LCD Readout:
   a. Sensor shall contain a backlit LCD digital display and user function keys along with temperature sensor. Controller shall function as room control unit, shall allow

occupant to raise and lower setpoint, and activate terminal unit for override use – all within limits as programmed by building operator. Sensor shall also allow service technician access to hidden functions as described in Sequence of Operation.

b. Sensor shall display room temperature. Unit shall be programmable. Unit shall have capability to show temperatures in Fahrenheit or Centigrade.
c. Override time shall be set and viewed. Override time countdown shall be automatic, but shall be reset to zero from sensor by occupant.
d. Allow fan speed selection based upon fan operation allowed by controller.
e. See Sequence of Operation for specific operation of LCD displays and function keys in field service mode and in normal occupant mode.
f. Field service mode shall be customizable to fit different applications.

3. Wall Sensor with Adjustable Setpoint: Standard wall sensor shall use solid-state sensor identical to intelligent room sensor and shall be packaged in aesthetically pleasing enclosure. Sensor shall provide override function, warmer/cooler lever for setpoint adjustment, and port for plug-in of laptop or field service tool for field adjustments. Override time shall be stored and be adjustable on a zone-by-zone basis. Adjustment range for warmer/cooler lever shall also be stored in non-volatile RAM on controller. Programmable variables shall be available to field service tool or laptop through wall sensor port (RJ-11 jack).
4. Wall Sensor with Nonadjustable Setpoint: Room sensors shall be architecturally pleasing with blank cover, sense temperature, and allow tenant to override system. Setpoints shall be adjustable from operator workstation, laptop, or field service tool.
5. Guards: Heavy-duty plastic coated metal type with secure backing plate, removable with a Phillips screwdriver. Provide protective metal guards on room sensors located in public lobbies, corridors, or where sensors are subject to damage.
6. Freeze Thermostat: Electric low temperature switch with manual reset, adjustable setpoint 15 to 55 degrees F, and sensing element. A 20.00-foot-long non-averaging sensing element shall activate switch whenever 1.00-foot section or more of section senses a temperature as low as thermostat setpoint. Provide two contacts, one for fan shutdown and one for control system alarm.

B. Humidity Sensors:
1. General: Relative humidity (RH) sensors shall use bulk polymer or thin film capacitive type non-saturating sensing elements capable of withstanding a saturated condition without permanently affecting calibration or sustaining damage. Sensors shall include removable protective membrane filters. Sensors shall have an accuracy of plus or minus 2 percent of full scale with a temperature dependence of less than plus or minus 2 percent from 20 to 100 degrees F. A transmitter located at sensor shall be provided to convert sensor output to a linear 4 to 20 mA DC output corresponding to humidity span. Transmitter shall include non-interacting zero and span adjustments. Sensor and transmitter shall be wall mount or duct mount type as indicated on Contract Drawings. Where required for exterior installation, sensors shall be capable of surviving below freezing temperatures and direct contact with salt laden air without affecting sensor calibration.
2. Humidistat (Duct Mounted): Humidistat shall consist of a polymer sensor to provide accurate sensing with increased resistance to chemical corrosion. Contact shall open when setpoint is reached and shall not close until humidity in duct falls 5 percent below setpoint. Relay contact shall be rated 4 amps at 24 VAC.
3. Space Humidistat: Humidistat shall have positive ON-OFF settings to allow manual operation of controlled equipment. Device shall have an impact-resistant, molded plastic cover and shall be capable of being mounted on wall. Full enclosed SPDT; snap acting switch shall be rated for 2 amps at 24 VDC. Sensing element shall consist of a thin, moisture-sensitive nylon ribbon that provides operation even when ambient temperature conditions change.

C. Electric Damper Actuators:
1. General: Damper actuators shall be Brushless DC Motor Technology with stall protection, bi-directional, fail-safe spring return. Provide spring return actuators where damper is in

direct contact with outside air and where applicable for spring return. Damper actuators shall have metal housing, manual override (on actuators except VAV boxes, heat pumps, with independently adjustable dual auxiliary switch.

2. Electric Control Actuation: Direct coupled actuators shall be utilized for electric control actuation. Siemens, Johnson Controls, Invensys, or Belimo.
3. Assembly: Actuator assembly shall include hardware for mounting and connection to a standard 0.50-inch-diameter shaft or damper blade. Actuators shall be designed for mounting directly to damper shaft without need for connecting linkages.
4. Self-Centering Capability: Actuators having more than 100-lb-in torque output shall have a self-centering damper shaft clamp that guarantees concentric alignment of actuator's output coupling with damper shaft. Self-centering clamp shall have a pair of opposed "V" shaped toothed cradles, each having two rows of teeth to maximize holding strength. A single clamping bolt shall simultaneously drive both cradles into contact with damper shaft.
5. Shaft Size: Actuators having more than a 100-lb-in torque output shall accept a 1.00-inch-diameter shaft directly, without need for auxiliary adapters.
6. Certifications: Actuators shall be designed and manufactured using ISO 9000 registered procedures, and shall be listed under Standards UL 873 and CSA C22.2 No. 24-93 1.
7. Failure: Unless otherwise required or indicated by control sequence, damper actuator shall fail in place.

D. Automatic Control Valves:
   1. Modulating Type:
      a. Valves shall be provided with equal percentage contoured throttling plugs. Three-way valves shall be provided with linear throttling plugs such that total flow through valve remains constant regardless of valve position.
      b. Unless otherwise specified, control valves 1.00 inch and smaller shall be ball type and control valves over 1.50 inches shall be globe type. Control valves 2.00 inches and smaller shall be brass or bronze, with threaded ends. Bodies for valves 2.50 inches and larger shall have flanged end connections and body material shall be cast iron or carbon steel. Grooved end valves may be used in grooved piping systems.
      c. Valve Cv shall be within 100 to 125 percent of calculated Cv. Valves shall provide effective control at pressure differential at full pump head psig. Pressure drop shall not exceed 5 psig at maximum flow rate for hydronic systems.
      d. Valves shall be capable of withstanding maximum operating pressures and temperatures of controlled medium with tight shut-off capability. Minimum valve body pressure rating shall be 125 psig or 150 percent of system operating pressure, whichever is greater. Valve leakage rating shall be a maximum of 0.01 percent of rated Cv at a differential pressure of 50 psig or 125 percent of that expected for application, whichever is greater.
      e. Valves controlling steam with an inlet pressure of 25 psig or greater shall be equipped with stainless steel trim.
      f. Actuators shall be selected to close valve under flow conditions against 150 percent of normal control medium operating pressure differential.
      g. Unless specified to fail to "normally open," "normally closed," or as otherwise indicated by control sequence, electric control valve actuators shall fail in place. "Normally open" and "normally closed" designations on Drawings refer to fail-safe valve position whenever normal control power is interrupted. Valves larger than 6.00 inches shall have electric actuators provided with battery back-up to return or maintain valve to specified fail-safe (normally open or normally closed) position as shown or specified, whenever normal control power is interrupted.
   2. Modulating Ball Valves:
      a. Modulating ball valves are acceptable for valves 1.00 inch or less. Valve body shall be forged brass with 300 Series stainless steel ball, NPT end connections, blowout-proof stem with 300 Series stainless steel. Actuators shall be selected to

close valve under flow conditions against 150 percent of normal control medium operating pressure differential.

b. Provide valve seats with graphite reinforced PTFE and EPDM O-ring backing, stem seals with EPDM double O-rings, and bubble-tight leakage rating per ISO-5208.

c. Valve assembly shall be maintenance free with no packings to adjust, no periodic rebuilding, and performance rating in excess of 200,000 full stroke cycles in iron oxide contaminated water without failure.

3. Modulating High Performance Butterfly Valve (HPBV):
   a. Valves shall be of eccentric disk design with near linear flow characteristics.
   b. Valve bodies shall be carbon steel; Class 150 temperature and pressure ratings per ASME B16.34.
   c. Seals shall be polytetrafluoroethylene (PTFE).
   d. Flow coefficient ratio 100:1.
   e. Diaphragm actuator with positioner and indicator.
   f. Horizontal mount with shaft downstream of disk.
   g. Manufacturer and model number: Fisher 8560.
4. Valves for Chilled Water and Condenser Water: Internal valve trim shall be bronze, except that valve stems may be Type 316 stainless steel.
5. Valves for Hot Water Service Below 210 degrees F: Internal trim shall be brass or bronze.
6. Valves for Hot Water Service Above 210 degrees F: Internal trim (including seats, seat rings, modulating plugs, and springs) shall be Type 316 stainless steel.
7. Valves for Steam Service: Bodies for valves 4.00 inches and larger shall be iron. Internal valve trim shall be Type 316 stainless steel. Steam valves shall have linear characteristics.
8. Butterfly Valve Assembly: Assembly shall be threaded lug type for dead-end service and shall shut to fully closed position. Valves shall have carbon steel bodies and non-corrosive discs, stainless steel shafts supported by bearings, and elastomeric renewable seats for temperatures from minus 20 to plus 250 degrees F. Valves shall have a manual means of operation independent of actuator. Provide butterfly valves for applications such as cooling tower bypass, isolation, and diverting.
9. Electric Valve Actuators:
   a. Valves larger than 0.75 inches shall be provided with valve stem travel indicators as a means of indicating position of valve.
   b. Reheat terminal control valves shall be normally open.
10. Two-Position Type: Full line size threaded lug type butterfly valve, full line size two-piece ball valve, or modulating type valve as specified above with a maximum pressure drop at design flow of 1 psig. Valves shall be capable of withstanding maximum operating pressures and temperatures of controlled medium with tight shut-off capability. Minimum valve body pressure rating shall be 125 psig. Actuators shall be selected to close valve under flow conditions against 150 percent of normal control medium operating pressure differential. Valves shall be provided with an externally visible means of position indication. Normally open and normally closed designations on Drawings refer to valve position under normal operating conditions.
11. Thermostatic Radiator Valves: Valves shall be straight pattern type with temperature rating of 250 degrees F. Valve shall have maximum/minimum temperature limit lock and operator. Temperature sensing element shall be either self-contained for use inside of buildings or remote with capillary tube for use in utilidors. Capillary tube length shall be a minimum of 10.00 feet. Knob type dial shall be provided for temperature setting. Temperature graduation shall be manufacturer's standard. Minimum adjustable temperature differential shall be 15 degrees F. Valve body shall be nickel-plated brass or stainless steel. Connection shall be screwed NPT type. Operator body and other parts materials shall be compatible for application temperature, pressure, and fluid environment.
12. Manufacturer: Valves shall be manufactured by Belimo, Johnson Controls, Siemens, or Invensys.

E. Automatic Control Dampers (ACD):
   1. General: Individual damper blades shall be a maximum of 6.00 inches wide and/or 4.00 feet long. Edge seals for 0 to 180 degrees F operating temperatures. Blade linkages shall be attached at midpoint of blade length. Provide actuators for application. Provide one actuator for every 20.00 square feet of damper. Actuators shall utilize spring return on outside air applications. Provide positioning relays on pneumatic actuators to stroke damper(s) properly (i.e., sufficient power, sequencing, repeatability, or speed of response). Standard dampers shall be Ruskin CD36, butterfly dampers shall be Ruskin CDRS25, and low-leakage dampers shall be Vent Products 5900, or reviewed products provided by Vent Products, Air Balance, Johnson Controls, or Honeywell. Actuators shall be manufactured by Johnson Controls, Belimo, Siemens, or Invensys.
   2. ACD – Standard Modulating Type: Opposed blade type unless indicated otherwise. Blades and internally braced frames shall be constructed of 16 gauge-galvanized steel. Blades shall be equipped with 0.50-inch minimum thickness axles, molded synthetic bearings, EDPM or vinyl edge seals, and a flexible aluminum or stainless steel compression type jamb seal. Leakage shall not be greater than 7 CFM per square foot at 1.00-inch static pressure difference, regardless of damper size. Damper shall have a maximum operating static pressure differential of 2.00 inches. Unless indicated otherwise, dampers shall be sized for a maximum pressure drop of 0.10 inches at maximum design airflow.
   3. ACD – Standard Two-Position Type: Parallel blade type with construction and performance same as specified for modulating type. Unless indicated otherwise, dampers shall be same size as duct. Where dampers are not provided in a duct, dampers shall be sized for a maximum pressure drop of 0.05 inches at maximum design airflow.
   4. ACD – Butterfly Two-Position Type: Single round butterfly blade consisting of two layers of galvanized steel with a neoprene edge seal sandwiched between them. Frame shall be constructed of 20-gauge galvanized sheet steel and have a smooth interior air stream surface with no projections. Frames shall have rolled stiffener beads to facilitate sealing of a slip on a duct connection. Blade shall be equipped with a 0.50-inch minimum diameter axle with stainless steel sleeves for bearings. Leakage shall not be greater than 0.15 CFM per inch of blade circumference at 4.00-inch static pressure difference. Unless indicated otherwise, dampers shall be same size as duct. Where dampers are not provided in a duct, dampers shall be sized for a maximum pressure drop of 0.05 inches at maximum design airflow.
   5. ACD – Low-Leakage Modulating Type: Opposed blade type unless indicated otherwise. Internally braced frames shall be constructed of 16-gauge galvanized steel. Airfoil blades shall be equipped with 0.50-inch minimum thickness axles, stainless steel or bronze sleeve bearings, field replaceable EDPM or vinyl edge seals, and a flexible aluminum or stainless steel compression type jamb seal. Leakage shall not be greater than 10.5 CFM per sq ft at 4.00-inch static pressure difference, regardless of damper size. Damper shall have a maximum operating static pressure differential of 6.00 inches and be capable of operating with face velocities up to 3,000 fpm. Unless indicated otherwise, dampers shall be sized for a maximum pressure drop of 0.10 inches at maximum design airflow.
   6. ACD – Low-Leakage Two-Position Type: Parallel blade type with construction and performance same as specified for low-leakage modulating type. Unless otherwise indicated, dampers shall be same size as duct; where dampers are not provided in a duct, dampers shall be sized for a maximum pressure drop of 0.05 inches at maximum design airflow.
   7. Damper End Switches: Damper end switches shall be momentary type limit switches for monitoring motion of damper at a prescribed arc of rotation. Switch shall be hermetically sealed mercury contacts that operate by way of a trip lever. Switch shall be mounted on exterior of duct so that trip lever is aligned with damper vane. Mechanical adjustments in switch case shall permit lever action for tripping mercury switch contacts. Switch shall have a SPDT contact arrangement that exceeds load requirements for both voltage and current.

F. Pressure Sensors:
   1. Air Differential Pressure Switches: Diaphragm actuated switch with adjustable setpoint fixed differential, automatic reset, and angle tipped static pressure probes. Range of switch to accommodate operating range of system being monitored plus and minus 20 percent, 12.00-inch maximum operating differential.
   2. Filter Differential Pressure Sensors: Provide a differential pressure sensor that shall sense a change in differential pressure drop as airflow across filter changes. Provide adjustable software setpoint for alarm.
   3. Pressure Safety Switches: Provide static pressure high limit and low limit switches as required by sequence of operation to sense duct over-pressure or under-pressure condition. Provide with adjustable setpoint. Provide with spare contacts for monitoring by control system. Provide switch for duct mounting. Dwyer or Ashcroft.
   4. Fluid Differential Pressure Switch:
      a. Pipe in parallel across water circuit pumps for positive indication of flow. Diaphragm operated snap action SPDT switches shall operate from a neoprene slack diaphragm, corrosion-resistant stainless diaphragm, or copper diaphragm capable of being adjusted through total pressure range. Switches shall withstand at least twice system working pressure, including standing head, and have a temperature range exceeding worst-case liquid and ambient conditions. Provide a NEMA 4 enclosure for switch assembly. For ease of service and maintenance, provide switch with a three-valve manifold piped in copper to pressure taps in liquid lines. Provide with spare contacts for monitoring by control system.
      b. Manufacturer: Penn P74.
   5. Water Differential Pressure Transmitters:
      a. Provide water differential pressure transmitters constructed to withstand 100 percent pressure over range without damage, and to hold calibrated accuracy when subject to a momentary 40 percent over range input.
      b. Pressure transmitters shall transmit a 0 to 5 VDC, 0 to 10 VDC, or 4 to 20 mA linear output signal proportional to change in pressure. Provide NEMA 4 housing for transmitter.
      c. Parts in contact with water shall be stainless steel and elastomer seals. Provide a three-valve manifold assembly to protect against excessive differential overpressure. Transmitters shall be located in accessible local control panels wherever possible. Zero and span adjustment. Operating range of 0 to 25 psig. Accuracy of plus or minus 2 percent or full-scale reading.
   6. Building Differential Pressure Transmitters:
      a. Building differential pressure transmitters shall be of industrial quality and transmit a linear, 4 to 20 mA output in response to variation of differential pressure or air pressuring sensing points. Differential pressure transmitter shall have non-interactive zero and span adjustments that are adjustable from outside cover and meet following performance specifications:
         1) Minus 1.00 to plus 1.00 w.c. input differential pressure ranges. (Select range for system application.)
         2) 4 to 20 mA output.
         3) Maintain accuracy up to 20 to 1 ratio turndown.
         4) Reference Accuracy: Plus or minus 0.25 percent of full span.
      b. Manufacturer: Veris or Setra.
   7. Duct Differential Pressure Transmitters:
      a. Duct differential pressure transmitters shall be of industrial quality and transmit a linear, 4 to 20 mA output in response to variation of differential pressure or air pressure sensing points. Differential pressure transmitter shall have non-interactive zero and span adjustments that are adjustable from outside cover and meet following performance specifications:
         1) 1.00 inch to 5.00 inches w.c. input differential pressure ranges. (Select range for system application.)

2) 4 to 20 mA output.
3) Maintain accuracy up to 20 to 1 ratio turndown.
4) Reference Accuracy: Plus or minus 0.25 percent of full span.

b. Manufacturer: Veris or Setra.

8. Velocity Sensors: Velocity sensor shall be used to measure differential pressure to determine air velocity for calculating airflow in VAV terminal units. Sensor shall measure differential pressure and generate a proportional voltage signal. Voltage signal shall be read by VAV controller and converted to airflow in cubic feet per minute (CFM). Calibration shall be performed within controller. Pressure range 0 to 1.50 inches w.c. maximum overpressure limit 15.00 inches w.c. Accuracy linearity 1.0 percent full span maximum. Repeatability/ hysteresis 0.05 percent full span maximum. UL 916 listed.
9. Pressure Electric (PE) Switches: Provide with adjustable setpoint and differential range.
10. Liquid Flow Switch:
    a. Paddle type, 150 psig maximum working pressure, and flow actuation sensitivity for application.
    b. Manufacturer: Johnson Controls or Penn F61 Series.

G. Gas Sensors:
1. CO2 Sensors: Provide an electronic sensor to monitor amount of CO2 in air in range of 0 to 2,000 parts per million (ppm) for duct or wall mounting. Measuring principal shall be based on infrared spectroscopy or non-dispersive CO2 sensing technology. Internal electronics shall require a 24 VAC power supply and shall calculate CO2 concentration in return air or space. Provide 0 to 10 VDC or 4 to 20 mA output signal, which corresponds linearly to 0 to 2,000 ppm of CO2 for use in optimization of mixing dampers and economizer control. Provide activation of an adjustable contact closure relay when user defined CO2 levels are reached for alarm. CO2 sensors shall be certified by manufacturer to have an accuracy of no less than 75 ppm, factory calibrated or calibrated at startup, and certified by manufacturer to require calibration no more frequently than once every five years.
2. Air Quality Sensors:
    a. Provide full spectrum air quality sensors with filters utilizing hot wire element based on Taguchi principle. Sensors monitor a wide range of gaseous organic materials, which are common components of indoor air contaminants. These gaseous materials include paints and solvents, cooking and cigarette smoke, and car exhaust.
    b. Sensors shall compensate for temperature and humidity, have span and calibration potentiometers, operate on 24 VDC power with output of 0 to 10 VDC, and operate between 32 and 140 degrees F and 5 to 95 percent RH. Provide isolation power supply for each sensor.
3. CO Sensors:
    a. Provide sensors with tamper-proof steel housing for mounting in parking garage area where indicated on Drawings. Sensing element shall be solid state with metal oxide semiconductor element. Signal from element shall be measured by a built-in microprocessor, preprogrammed with a Time Weighted Average/Threshold Limit Value (TWA/TLV) to energize fan and alarm relays. TWA/TLV shall be set at 35 ppm of CO averaged over five minutes for fan activation and 100 ppm after 30 minutes or 200 ppm after 10 minutes for alarm relay activation. Unit shall be self-calibrating and have a self-test cycle of at least 2.5 minutes. Unit shall also have ability to operate fans for a minimum of 2.5 minutes when main power is restored after a power failure. Unit shall have internal continuous monitoring for malfunction and upon detecting a malfunction, fan shall be activated to ensure a safe environment. Unit shall have display indicating system status. Sensor shall be powered by 24 VAC.
    b. Manufacturer: Macurco Model CM-21A.
4. Oxygen Depletion Sensor: Oxygen sensor shall monitor oxygen levels and report alarm in event of oxygen depletion due to a refrigerant leak. Provide 4 to 20 mA or minus 10 VDC output and an SPDT relay output to ATCS. Range 0 to 25 percent oxygen, 12-second response time.

5. Power Metering:
    a. Provide electric utility meter 3-phase monitoring, diagnostics, and energy reports of consumption, demand, and power quality.
    b. Meter shall include input primary voltage of 120 to 480 VAC, Single and 3-phase monitoring, maximum primary current of 2,400 amps per phase, split core current transformer, and accuracy of IEC 62053-22 Class 0.5S, ANSI C12.20 0.5%.
    c. Power monitoring data shall include:
        1) kWH consumption.
        2) kW demand.
        3) VAR reactive power.
        4) VA apparent power.
        5) Power factor.
        6) Average, minimum, and maximum demand.
        7) Voltage, line-to-line and line-to-neutral.
        8) Amps, average current.
        9) kW demand (each phase).
        10) Power factor (each phase).
        11) Voltage (each phase).
        12) Amps (each phase).
    d. The power meter shall communicate using the BACnet MS/TP protocol at speeds from 9600 to 76,800 baud (no parity). The meter shall provide a BACnet Device object, a set of writable Analog_Value objects for remote configuration, a set of Analog_Input objects to provide access to scaled 32-bit measurement values and their unit types, and a set of Binary_Input objects for indicating individual alarm conditions.
    e. The meter shall be UL/CUL listed to the latest applicable safety standards.
    f. The power meter shall accept either 0 to 0.333VAC or 0 to 1VAC input from up to three current transducers to 5,000 amps.
    g. The power meter shall be configurable for operation on Single Phase (AN or AB), Split Phase (ABN), Delta (ABC), and Wye (ABCN) systems.
    h. Products
        1) Veris E50 Series
        2) Setra Power Patrol
        3) Or Reviewed
6. Energy Metering Data:
    a. The energy metering system shall monitor the following Total Building Energy Sources:
        1) Electric
        2) District Energy
        3) Site-Generated Renewable Energy
    b. The energy metering system shall monitor the following End Use Categories:
        1) HVAC System Energy
        2) Water Heating Energy
        3) Lighting Energy
        4) Plug Load Energy
        5) Process Load
7. Energy Metering Data Acquisition System
    a. The energy meter data shall be stored for a minimum of 36 months.
    b. The energy metering data acquisition system shall provide real-time energy consumption data and logged data for any hour, day, month, or year.
    c. A readily accessible and visible display, or a web page, or other electronic document accessible to the building management or to a third-party energy data analysis service shall be provided in the building accessible by building operation and management personnel.

d. The energy display shall graphically provide the current energy consumption rate for each Total Building Energy Source and each End Use Category.
e. The energy display shall display the average and peak values for any day, week, or year.

8. Current Sensing Relay: Provide 100 percent solid state with adjustable range (plus or minus 1 percent of range) trip setpoint to monitor AC current. Provide with contact transfer with no calibration drift, complete with LED status indicator. Limit off state leakage to 2 mA or less. Rating (200-ampere minimum) shall exceed equipment being monitored.
9. Current Sensors: Sensors shall vary output voltage proportional to change in sensed current. Multiple range units shall be provided to allow for varying site conditions. Low range units shall offer ranges of 10, 20, and 50 amps. High range units shall offer ranges of 50, 100, and 200 amps. Provide actual analog current indication for status of motors 1 horsepower and larger. Provide switch points to determine motor status in software.
10. Occupancy Sensors: Provide ceiling- or wall-mounted passive infrared occupancy sensor as shown on Drawings. Provide isolated relay for input to BAS, user adjustable time delay (30 seconds to 30 minutes), user adjustable sensitivity, 360-degree coverage up to 1,200 square feet, and red LED to indicate occupancy detection. Include power supply, power packs, relays, and enclosures.
11. Photo Sensor: Provide photo sensor to indicate presence or absence of light at sensor location. Provide with 4 to 20 mA transmitter for input to BAS. Include weatherproof enclosure, power supply, and accessories.
12. Window Proximity Sensor: Provide sensor designed to detect open/close status of operable windows. Sensor shall contain a hermetically sealed magnetic read switch. Switch shall be low profile surface mount terminal, 2.00 inches long by 0.375-inch maximum height. Magnet shall be rare earth washer type, maximum height of 0.125 inch. Maximum operational distance between magnet and proximity switch shall be 2.00 inches. Switch shall be mounted on inside face of stationary mullion. Magnet shall be mounted on inside of operable window mullion. Magnet shall be aligned with either end of proximity switch. Sentrol Model 1138T or equivalent.
13. Three-Phase Voltage Monitor:
    a. Provide voltage monitor to protect against phase loss, phase unbalance, phase reversal, and undervoltage conditions. Relays shall be provided with components for a complete installation including control relays, control transformers, and NEMA enclosures.
    b. In event of an electrical power phase loss, phase unbalance, under or overvoltage, or phase reversal, connected mechanical equipment shall be shut down within a 15-second period and an alarm requiring acknowledgement shall be generated at operator’s terminal.
    c. Signal is provided to EMCS system from a power system monitor relay connected to main distribution switchboards. Voltage monitor relay shall include adjustable time delay and visual trip indicators, and shall be automatically reset. Following restoration of power and a one-minute time delay, mechanical equipment shall be sequentially started to avoid power surges. Date and time of occurrence and restoration shall be printed on EMCS printer. Voltage sensing taps shall be ahead of branch disconnects and shall be individually fused with current limiting fuses. Coordinate installation with Electrical Contractor.
14. Natural Gas Meter Monitoring: Provide hardware, software, and wiring for interfacing with gas company building natural gas meter.
15. BTU Meter:
    a. Provide BTU meter in hot water supply for computing thermal energy use and sub-metering applications. BTU meter shall measure liquid flow rate and hot water supply and return temperatures, and calculate energy being consumed. Provide local wall-mounted display of energy rate, temperature, energy total, or flow rate. Provide

material for hot tap installation. Display following information at operator workstation in a dedicated graphic display:
1) Real-time flow rate.
2) Flow total.
3) Hot water supply and return temperatures.
4) Energy rate.
5) Total energy.

16. Electromagnetic Flow Meter:
    a. General: Sensor shall be an electromagnetic flow meter that utilizes Faraday's Law to measure volumetric fluid flow through a pipe.
    b. Flow meter shall consist of two elements, sensor and electronics. Sensor shall generate a measuring signal proportional to flow velocity in pipe. Electronics shall convert an EMF into a standard current output.
    c. Manufacturer and Model Number: Siemens Model MAG 3100 electromagnetic meter with Model MAG 5000 electronic transmitter and display.
17. Pitot Tube Flow Sensor: Provide pitot tube type flow sensor with accuracy of plus or minus 1 percent over a 10 to 1 turndown. Dieterich Standard Annubar Flow Sensor Models DNT and DCR with eagle eye gpm gauge.

H. Airflow Measuring Unit:
1. General: Airflow and temperature measuring unit (AMU) indicated on plans shall be capable of monitoring airflow and temperature rates at each measurement location. System shall be factory tested prior to shipment and shall not require calibration or adjustment over life of equipment when provided in accordance with manufacturer's guidelines. Each sensor probe shall be provided with a UL plenum-rated connecting cable. Connecting cable shall be a minimum of 10.00 feet in length for each probe. No additional devices or transducers shall be required to interface with host controls.
2. Sensors: Sensors shall be calibrated to NIST-traceable standards for both airflow and temperature. Each sensing point shall independently measure airflow and temperature prior to averaging. Provided accuracy shall be percent of reading and demonstrated at both maximum and minimum airflow rates for each measurement location.
3. Transmitter and Electronics Enclosure: Transmitter shall operate on 24 VAC. Transmitter shall have a minimum 16-character alphanumeric LCD display for airflow, temperature, and system diagnostics. Analog output signals shall be user selectable (0 to 10 VDC or 2 to 20 mA). When required, a serial RS-485 interface shall be made available with network protocols of either N2 or Modbus RTU, as required by DDC control equipment. Inputs and outputs shall be fused, protected, and internally isolated from 24 VAC power supply. Transmitter shall have a non-drifting adjustment for output signal offset/gain. Transmitter display shall be capable of being configured in either I.P. or S.I. units. Transmitter shall accept a user-defined area to display volumetric flow rates in CFM or LPS. Enclosure shall be aluminum alloy for indoor use and capable of operating over a temperature range of 30 to 120 degrees F. Where electronics are provided in locations subject to weather or high humidity (above 75 percent), provide in a NEMA 4 enclosure.
4. Duct- and Plenum-Mounted Sensor Probes:
    a. Sensor probes shall be constructed of anodized aluminum alloy tube with stainless steel mounting brackets. Probes shall be constructed to provide insertion, internal, or standoff mounting, depending on applications and field installation requirements.
    b. Sensor accuracy for airflow shall be no more than plus or minus 2 percent of reading over sensor probe operating ranges. Provided total accuracy for airflow shall be better than plus or minus 3 percent of reading over sensor probe operating ranges when provided in accordance with manufacturer's guidelines. Sensor accuracy for temperature shall be better than plus or minus 0.15 degrees F over entire operating range. Each sensing point shall independently measure airflow and temperature prior to averaging.

c. Number of independent sensing points shall be distributed per duct face area, at a minimum quantity as indicated below:

A□□□ (□□ □)	**A□□□ (□□ □)**	**S□□□□□**
≤ 1	≤ 0.093	2
1 to 4	0.093 to 0.372	4
4 to 8	0.372 to 0.743	6
8 to 12	0.743 to 1.115	8
12 to 16	1.115 to 1.486	12
≥ 16	≥ 1.486	16

d. Probe Operating Ranges:
   1) Airflow: 0 to 5,000 fpm.
   2) Temperature: Minus 20 to plus 160 degrees F.
   3) Relative Humidity: 0 to 99 percent (non-condensing).

5. Fan Inlet Velocity Sensors: Sensors shall be totally constructed from non-corrosive materials, with stainless steel sensor bodies, stainless steel mounting brackets, and adjustable cadmium-plated mounting rods.
   a. Fan Inlet Performance Requirements: Individual sensor accuracy for airflow shall be better than plus or minus 3 percent of reading over sensor probe operating ranges when provided in accordance with manufacturer's guidelines. Provided accuracy for temperature shall be better than plus or minus 0.15 degrees F over entire operating range.
   b. Fan Inlet Sensor Operating Ranges:
      1) Airflow: 0 to 10,000 fpm.
      2) Temperature: Minus 20 to plus 160 degrees F.
      3) Relative Humidity: 0 to 99 percent (non-condensing).
6. Dynamic Pressure "Bleed Flow" Sensors: Each sensing point shall independently measure bleed airflow rates and direction, or dynamic differential pressure, plus temperature.
   a. DP Sensor Performance Requirements: Provided total accuracy for airflow shall be better than plus or minus 2 percent of reading and plus or minus 4 percent of reading for pressure over sensor operating range when provided in accordance with manufacturer's guidelines. Provided accuracy for temperature shall be better than plus or minus 0.15 degrees F over entire operating ranges. Sensors shall be calibrated to NIST-traceable standards for airflow and temperature.
   b. DP Sensor Operating Ranges:
      1) Bleed Airflow: Minus 2,000 fpm to plus 2,000 fpm.
      2) Differential Pressure: Minus 0.25-inch w.g. to plus 0.25-inch w.g.
      3) Temperature: Minus 20 to plus 160 degrees F.
      4) Relative Humidity: 0 to 99 percent (non-condensing).
7. Manufacturers and Equipment:
   a. EBTRON Gold Series probes, combination airflow/temperature sensors plus associated transmitters.
   b. Tek-Air Model Vortek, vortex shedding probes and matching electronics with display, mated with conforming multi-point temperature sensors.
   c. Air Monitor VoluProbe, supplied with Veltron II (0.1 percent FS) transmitters and mated with conforming multi-point temperature sensors.

I. Air Static Pressure Sensing Probe:
Provide full width duct traverse, extruded aluminum probe, with multiple sensing ports. Air Monitor Model Stat-Probe/1. Outside air static pressure sensing probe shall consist of two circular, parallel, 10-gauge anodized aluminum plates with a 2.00-inch FPT connection. Sensor shall be accurate to within 2 percent of actual ambient pressure when subject to radial wind velocities up to 80 miles per hour with approach angles up to 30 degrees to horizontal. Air Monitor model S.O.A.P.

J. Airflow Switch:
For control and monitoring of airflow in ducts and designed for duct mounting. Airflow switch shall have following characteristics:
1. Rating: NEMA 1 construction.
2. Construction: Stainless steel paddle.
3. Switch: On/Off single stage micro switch.
4. Voltage: 24 VAC.
5. Adjustability: Adjustable for sensitivity and flow rate.
6. Manufacturer/Model: Intec Controls, Model DBSL.

K. Damper Position Indicator Switch:
Designed for use with a control damper, smoke damper, or fire/smoke damper to remotely indicate blade position of a two-position damper (open or closed). Switch shall positively communicate position of damper blades when interfaced with an associated device, control point, or operating equipment. Ruskin Model SP100.

L. Miscellaneous Devices:
1. Bypass Timer: 0- to 6-hour dial type electromechanical timed switch. Intermatic.
2. Duct Smoke Detector: Standalone, sampling photoelectric type for sensing of products of combustion within air stream of ducted fan systems. Devices shall include sampling tube extensions and sensitivity adjustments for detecting products of combustion across width of duct. Device shall function uniformly in air velocities of 400 fpm through 3,000 fpm. Voltage shall be 24 VDC or 120 VAC. Include two sets of auxiliary contacts rated for 12 amps resistive with manual reset. Visual indication of normal and alarm/trouble conditions shall be incorporated into exposed surface of device.
3. Control Power Transformers:
    a. BAS Contractor shall be responsible for providing control power sources and wiring for specified sequence of operation.
    b. Transformers shall be UL listed, provided with primary and secondary overcurrent protection, and sized in accordance with NEC Article 725. Control power transformers shall be sized to accommodate an additional 25 percent load (minimum) for future devices.
    c. Where packaged mechanical equipment is specified to be provided with a control power transformer, this power source shall not be utilized for devices added under this scope of work unless prior review, in writing, is obtained from Owner's Representative.
    d. Provide each transformer with a resettable circuit breaker. Circuit breakers shall be trip-free.
4. Control Relays: Rated for application with a minimum of two sets of Form C contacts enclosed in a dustproof enclosure. Relays shall be rated for a minimum life of one million operations. Operating time shall be 20 milliseconds or less, with release time of 10 milliseconds or less. Relays shall be equipped with coil transient suppression devices to limit transients to 150 percent of rated coil voltage.
5. Control Panels and Enclosures:
    a. Control panels for controls and instruments shall be UL listed NEMA enclosure rate for application, surface or flush-mounted panel as indicated, with key locked continuous-hinge door. Panel assemblies shall be UL 508 listed.
    b. Provide enclosures for auxiliary control devices such as relays, transformers, solenoid valves, etc. Enclosures shall be hinged and key locked.
    c. Keys shall be same keys used for other panels and enclosures on Project. Manufacturer's standard baked enamel finish.
6. Electronic/Pneumatic Transducers:
    a. Provide electronic to pneumatic pressure transducers to convert digital analog signal to variable-to-variable pneumatic air pressure signal. Units to have following characteristics:
        1) Output: 3 to 15 psig.

2) Input: 4 to 20 mA or 0 to 10 VDC.
3) Manual output adjustment knob.
4) Pressure gauge.
5) External replaceable supply air filter.

7. Horns: Horns shall be electromechanical vibration of diaphragm type. Diaphragm material shall be stainless steel. Area audible alarm shall provide at least 85 dB at 10.00 feet from device. Provide exterior devices for area classification where they are located. Minimum enclosure shall be watertight/dust tight. Horn shall be operated with 120 VAC power supply.
8. Warning Lights: Visual warning devices shall be incandescent indicating lights of at least 123 candlepower. Exterior devices shall be designed for wet locations or rated weatherproof unless indicated otherwise. Warning lights shall be operated with 120 VAC power supply. Lens shall be yellow.
9. Manual Start/Stop Station:
   a. Key-operated three-position toggle switch in flush enclosure with stainless steel cover. 3 amperes at 25 VAC.
   b. 120 V Solid State Speed Controller: Lutron Nova Series variable speed fan control.
   c. Manual Toggle Switch: Line voltage 120 V manual starter with pilot light and flush mount enclosure.
10. Terminal Unit Transformers (VAV, CV, and CAV Terminals):
    a. Provide Class II, 24 V transformers within a standalone control cabinet for providing power to terminal units. Each control cabinet to house a maximum of six transformers. Each transformer to provide 24 V control power to a maximum of five terminal units. Contractor to determine number of control cabinets and transformers required based on terminal unit schedules.
    b. Contractor to provide 24 V wiring between transformers and terminal units. See terminal unit schedule on Drawings.
    c. Manufacturer and Model:
       1) Control Power Transformers: Equivalent to Core Components, Inc. LE 120.
       2) Control Cabinets: Equivalent to Siemens Powers Controls CP 567.

PART 3 EXECUTION

3.01 PROJECT MANAGEMENT

A. General:
Provide a designated Project Manager who shall be responsible for following:
1. Schedule: Construct and maintain Project schedule.
2. Onsite Coordination: Coordinate with trades, subcontractors, and other integration vendors authorized to accept and execute orders or instructions from Owner’s Representative.
3. Project Meetings: Attend Project meetings to avoid conflicts and delays.
4. Field Work: Make field decisions relating to this scope of work.
5. Contact Person: Provide coordination/single point of contact.

3.02 SEQUENCE OF OPERATION

A. General:
Provide a complete and operational temperature control and building automation system. System shall have complete sequences and standard control practices. Point list is minimum amount of points that are to be provided. If additional points are required to meet sequence of operation, they shall be provided.

B. Sequence of Operations:
See sequence of operations on Drawings.

3.03 STARTUP AND COMMISSIONING

A. General:
When installation of system is complete, calibrate equipment and verify transmission media

operation before system is placed online. Testing, calibrating, adjusting, and final field tests shall be completed by manufacturer. Verify that systems are operable from local controls in specified failure mode upon panel failure or loss of power.

B. System Modifications:
Provide recommendation for system modification in writing to Owner. Do not make system modification, including operating parameters and control settings, without prior review of Owner.

C. Commissioning of Integrated System Segments:
After manufacturer has completed system start-up and commissioning, joint commissioning of integrated system segments shall be completed.

3.04 ELECTRICAL WIRING AND MATERIALS

A. General:
System shall be provided in a neat and competent manner by experienced and trained technicians either in direct employ of system manufacturer or under manufacturer's direct supervision. Provided system shall be delivered to Owner completed and fully operational.
1. Manufacturer's Instructions: Provide equipment in accordance with manufacturer's instructions and published application literature.
2. Electrical Power Wiring: Electrical power wiring provisions for BAS shall be provided to locations indicated on electrical plans by electrical sections of this Project Specification. BAS supplier shall provide additional power requirements for BAS components that are not indicated on electrical plans. Provide control power circuits from electrical panels. Provide additional circuit breakers rated and labeled for service. Unless reviewed by Electrical Engineer, spare breakers shall not be used. Coordinate with Electrical Contractor.
3. Other Electrical Work: All other electrical work for BAS, including power wiring that is not shown on electrical plans, shall be responsibility of this BAS supplier, including interlock wiring described in Sequence of Operation. Control wiring, conduit for control wiring, and miscellaneous accessory equipment for control wiring systems shall be provided by BAS supplier as part of control system. Conform to electrical sections of this Project Specification, NEC, NFPA 70, and local code requirements.

B. Electrical Installation Methods:
1. Wiring: Wiring in or through mechanical rooms, finished spaces, on roofs, in walls, below grade, inside equipment, and in concealed inaccessible locations, shall be provided in conduit and properly supported, unless indicated otherwise. Local area network communication wiring between operation workstations and global controllers shall be in conduit. Label wire groups to match corresponding wiring diagrams. Wiring within control panels may be provided separate from raceway. Wiring above accessible ceilings may be plenum cable provided separate from raceway as described in Paragraph 3.
2. Plenum Cable:
   a. Plenum cable shall be allowed for use only in accessible ceiling spaces for:
      1) Second tier standalone DDC communication trunk serving application-specific controllers within a building.
      2) DDC system sensor wire provided above suspended accessible ceilings.
   b. Plenum cable type, installation methods, and use shall be subject to city and state codes and regulations. Within ceiling space, attach directly to wall or slab on 4.00-foot centers, or support from ceiling suspension wires on 4.00-foot centers. Do not attach cables to pipes or ducts, or lay on ceilings. Cables shall be routed to maximize ceiling space without interfering with equipment, ceiling, lighting access, and removal.
3. Raceways: Raceways shall be run parallel or perpendicular to building structure, ceiling, and floor, and shall be secured and supported. Raceways connected to equipment mounted to or on vibrating machinery (such as fans, ducts, pumps, or pipes) shall be isolated by use of short (1.00 inch or less) pieces of flexible "greenfield" conduit, unless duct or pipe itself is sufficiently vibration isolated to eliminate transmission.

4. Instrumentation and Communication Cable: Cables shall not be run together in same conduit or raceway as power wiring.
5. Communication Cable: Provide communication wiring panels between operator workstation and standalone DDC panels and between standalone DDC panels and application-specific controllers such as AHU, unitary, or VAV digital controllers. Communication cable shall be checked for continuity, grounding, and shielding. Local area network communication wiring between operator workstations and global controllers shall be in conduit.
6. Ethernet: Connect BAS to Owner's Ethernet network. Provide Ethernet fiber, hub, and hub connections.
7. Control and Alarm Wiring: Provide wiring between thermostats, and control and alarm devices.
8. Conduit and Signal Wiring: Provide conduit and signal wiring between motor starters in motor control centers and high and/or low temperature relay contacts and remotes relays in BMS panels located in vicinity of motor control centers.
9. Other Conduit and Wiring: Provide conduit and wiring between PC workstation, electrical panels, metering instrumentation, indicating devices, miscellaneous alarm points, remotely operated contactors, and BMS panels, as shown on Drawings or as specified.
10. Wall-Mounted Devices: Provide electrical wall box and conduit sleeve for wall-mounted devices. Room CO2 sensors shall be provided at same elevation as room thermostat. Confirm location with Architectural elevations.
11. Ceiling Plenum: Provide conduit between wall-mounted wall box and ceiling plenum. Provide 90-degree elbow into ceiling plenum.
12. Interface Control Wiring: Provide interface control wiring for equipment with remote sensors, panels, limits, and components to serve specified control functions. Materials, wiring, and termination shall be provided in accordance with manufacturer's instructions. Provide interface control wiring of following equipment:
    a. Heat pumps: Flow switches, temperature sensors, and remote control panels. Provide and locate refrigerant vapor detection and alarm systems in compliance with Uniform Fire Code Section 53.11.
    b. AC Unit: Temperature and humidity sensors and control panels.
13. Grounding: Ground controllers to a good earth ground. Grounding of green AC ground wire at breaker panel alone is not adequate. Run metal conduit from controller panels to building grounds. Ground sensor drain wire shields at controller end. Associated ground loop problems shall be corrected.

C. Surge Protection:
1. General: Provide surge and transient protection consisting of devices provided externally to operator workstations.
2. Power Line Surge Protection: Surge suppressors external to workstation shall be provided on incoming AC power. Surge suppressor shall be rated by UL 1449 and have clamping voltage ratings below following levels:
    a. Normal Mode (Line to Neutral): 350 V.
    b. Common Mode (Line to Ground): 350 V.
3. Telephone and Communication Line Surge Protection: Metal oxide varistor (MOV) protection or equivalent, rated for application, shall be provided at equipment. Additional protection (gas tubes rated for application) shall be provided within 3.00 feet of building cable entrance or within 3.00 feet of telephone company's network interface.
4. Sensor and Control Wiring Surge Protection: Controllers shall have sensor and control wiring surge protection with optical isolation, MOV, or silicon avalanche devices. Fuses are not permitted for surge protection.

D. Electrical Cabling Materials:
   1. AC Control Wiring:
      a. Control wiring for 24 V circuits shall be insulated copper 18 AWG minimum and shall be rated for 300 VAC service. Low-voltage control wiring and 24 VAC can be run in same conduit.
      b. Control wiring shall be in accordance with National Electrical Code and Local Electrical Codes.
      c. Wiring for 120 VAC shall be 14 AWG minimum and shall be rated for 600 VAC service. Power wiring 120 VAC and greater shall be in a separate conduit. Minimum control wiring conduit size is 0.75 inches EMT.
   2. Analog Input, Analog Output, Binary Input, Binary Output, 24 VAC, and General Purpose Cabling:
      a. Cable shall consist of copper conductors not less than No. 18 AWG stranded.
      b. Cable shall be 2- or 3-conductor twisted cable with a drain wire.
      c. Cable shall have a 100 percent overall shield.
      d. Cable shall be UL Listed and plenum-rated.
      e. Cable shall meet NEC voltage rating of 300 V.
      f. Cable shall be NEC type CMP.
      g. Cable shall meet or exceed UL temperature rating of plus 60 degrees C.
      h. Cable shall be labeled at panel entry with BAS manufacturer's name and type of signal carried within cable, i.e., Analog Input, Analog Output, Binary Input, Binary Output, 24 VAC.
      i. Each cable type specified shall be of a different color coding for easy identification and troubleshooting.
         1) Analog Input Cable.
         2) Analog Output Cable.
         3) Binary Input Cable.
         4) Binary Output Cable.

E. Primary and Secondary Communications Network Cabling:
   1. Cable: Cable shall be of type recommended by BAS manufacturer.
   2. Shielding: 10BaseT cable shall be shielded.
   3. First Tier Network Cable: First tier network cable shall be provided in conduit.
   4. Cable Rating: Cable shall meet or exceed NEC voltage rating of 150 V.
   5. Cable Temperature Rating: Cable shall meet or exceed UL temperature rating of 140 degrees F.
   6. Labeling: Cable shall be labeled at a minimum of every 18.00 inches with BAS manufacturer's name, system name, and communications network name.
   7. Plenum-Rated: Cable shall be plenum-rated.
   8. Color Coding: Each cable type shall be of a different color coding for easy identification and troubleshooting.
   9. Cabling shall be run continuous, splicing is not allowed.

F. Room Sensor Cabling:
   1. Cable: Cable shall consist of copper conductors not less than No. 24 AWG.
   2. Twisted Cable: Twisted cable shall be multi-paired (at least two pairs).
   3. Shielding: Cable shall have a 100 percent overall shield.
   4. Plenum-Rated: Cable shall be UL Listed and plenum-rated.
   5. Cable Rating: Cable shall meet or exceed NEC voltage rating of 300 V.
   6. Cable Type: Cable shall be NEC Type Article 800-CMP.
   7. Cable Temperature Rating: Cable shall meet or exceed UL temperature rating of 165 degrees F.

G. Identification Standards:
   1. Controllers and Local Control Panels: Identify by fastening a plastic engraved nameplate to outside of enclosure.

2. Field Devices: Identify by attaching an engraved or stamped (not handwritten) tag label.
3. Panel Devices: Identify by fastening an engraved or stamped label to backplane of local control panel.

H. Raceway Identification:
Covers to junction and pull boxes of control system raceways shall be painted blue or have identification labels stating “Control System Wiring” affixed to covers. Labels shall be engraved or stamped, not handwritten.

I. Emergency Power:
BAS controllers requiring emergency power shall be connected to emergency power panel circuits. Provide 120 V, single phase, 60-hertz emergency power to every BMS DDC controller panel, HVAC/mechanical equipment controller, PC console power supply, transformer, annunciator, modems, printers, and other devices. Power supplies shall be extended in conduit and wire from emergency circuit breakers.

3.05 PERFORMANCE

A. General:
Unless stated otherwise, control temperatures within plus or minus 2 degrees F humidity within plus or minus 3 percent of setpoint and static pressure within 10 percent of setpoint.

3.06 TEST AND BALANCE REPORT

A. General:
The Controls Contractor shall coordinate with and provide on-site support to the test and balance (TAB) personnel specified under Section 23 05 93 Testing, Adjusting, and Balancing. This support shall include:
1. On-site operation and manipulation of control systems during the testing and balancing.
2. Control setpoint adjustments for balancing all relevant mechanical systems, including VAV boxes.
3. Tuning control loops with setpoints and adjustments determined by TAB personnel.

3.07 COMMISSIONING, TESTING, AND ACCEPTANCE

A. General:
Perform a 3-phase commissioning procedure consisting of field I/O calibration and commissioning, system commissioning, and integrated system program commissioning. Document commissioning information on commissioning data sheets, which shall be submitted prior to acceptance testing. Commissioning work that requires shutdown of system or deviation from normal function shall be performed when operation of system is not required. Commissioning shall be coordinated with Owner and Construction Manager to ensure systems are available when needed. Notify operating personnel in writing of testing schedule so that authorized personnel from Owner and Construction Manager are present throughout commissioning procedure.
1. Prior to System Commissioning: Verify that each control panel has been provided according to plans, Specifications, and reviewed Shop Drawings. Test, calibrate, and bring online each control sensor and device. Commissioning shall include, but not be limited to:
   a. Sensor accuracy at 10, 50, and 90 percent of range.
   b. Sensor range.
   c. Verify analog limit and binary alarm reporting.
   d. Point value reporting.
   e. Binary alarm and switch settings.
   f. Actuator ranges.
   g. Fail-safe operation on loss of control signal, electric power, and network communications.

B. Operational System Demonstration:
After control devices have been commissioned (i.e., calibrated, tested, and signed off), each BAS program shall be put on line and commissioned. Contractor shall, in presence of Owner and Construction Manager, demonstrate each programmed sequence of operation and

compare results in writing. In addition, each control loop shall be tested to verify response and stable control, within specified accuracies. System program test results shall be recorded on commissioning data sheets and submitted for record. Discrepancies between Specification and actual performance shall be immediately rectified and retested.

C. System Performance Verification:
After BAS programs have been commissioned, Contractor shall verify overall system performance as specified. Provide detailed report of tests performed and results, including initial failures and corrective action taken. Tests shall include, but not be limited to:
1. Data Communication: Both normal and failure modes, confirm and demonstrate.
2. Fully Loaded System Response Time: Verify; provide written report.
3. Impact of Component Failures: On system performance and system operation, provide written report.
4. Time/Date Changes: Confirm and demonstrate.
5. End of Month/End of Year Operation: Confirm and demonstrate.
6. Season Changeover: Confirm and demonstrate.
7. Global Application Programs and Point Sharing: Confirm and demonstrate.
8. System Backup and Reloading: Confirm and demonstrate.
9. System Status Displays: Confirm and provide printout.
10. Diagnostic Functions: Confirm and provide printout.
11. Power Failure Routines: Confirm normal to emergency and back to normal; demonstrate.
12. Battery Backup: Confirm continuation, complete operation, and return to normal power; demonstrate.
13. Testing of Electrical and HVAC Systems with Other Divisions of Work: Confirm and provide written report.

D. Acceptance Test Procedure:
Submit for review a detailed acceptance test procedure designed to demonstrate compliance with contractual requirements. This acceptance test procedure shall take place after commissioning procedures but before final acceptance, to verify that sensors and control devices maintain specified accuracies and system performance does not degrade over time. This contractor to include labor to support the formal commissioning team.

E. Performance Period:
After above tests are complete and system is demonstrated to be functioning as specified, a 30-day performance test period shall begin. If system performs as specified throughout test period, requiring only routine maintenance, system shall be accepted. If system fails during test and cannot be fully corrected within eight hours, Owner may request that performance tests be repeated.

3.08 TRAINING

A. Instructor:
Manufacturer shall provide factory-trained instructor to give full instruction to designated personnel in operation of system provided. Instructors shall be thoroughly familiar with subject matter they are to teach. Manufacturer shall provide each student with a student binder containing product-specific training modules for system provided. Training shall be held during normal working hours of 8:00 a.m. to 4:30 p.m. weekdays.

B. Duration:
Provide 8 hrs of training for Owner’s designated operating personnel. Training shall include:
1. General: Explanation of Drawings, O & M Manuals.
2. Walk-Through: Walk-through of job to locate control components, operator workstation, and peripherals.
3. Control: DDC controller and ASC operation/function.
4. Operator Control Functions: Including graphic generation and field panel programming.
5. Portable Terminal: Operation of portable operator’s terminal.
6. Control Technical Support: Explanation of adjustment, calibration, and replacement procedures.

7. Training Material: Student binder with training modules:
    a. System log-on procedures.
    b. Review of sequence of operations.
    c. System troubleshooting.
    d. Emergency service interface.
    e. Fire alarm interface.
    f. System restart after power failure.
    g. System backup and restoration procedures.
    h. Replacement procedures of each system component.
    i. Calibration and initialization procedures.
8. Startup Procedures: Regeneration procedures on provided programming at operator's control stations.
9. Maintenance Programs: Operation of maintenance services programs.

3.09 POINT SCHEDULE MATRIX – I/O SCHEDULE

A. General:
Following points, as defined for each piece of equipment, are designated as follows:
1. Digital Out (DO): Defined as two-state output (i.e., start/stop, enable/disable).
2. Digital In (DI): Defined as two-state input (i.e., alarm, status).
3. Analog In (AI): Defined as variable input (i.e., temperature, position).
4. Analog Out (AO): Defined as electrical variable output. 0 to 20 mA, 4 to 20 mA, and 0 to 10 VDC are only acceptable analog outputs. Driver for analog outputs shall come from both hardware and software resident in controllers. Transducers shall not be acceptable.
5. Points List: See I/O points list on Drawings.

END OF SECTION 23 09 00

SECTION 23 64 33
VERTICAL STORAGE TANK

PART 1 GENERAL

1.01 FURNISHED BY CONTRACTOR INSTALLED BY CONTRACTOR (FCIC)

A. Vertical Storage Tank(s) shall be Furnished by Contractor, Installed by Contractor (FCIC)

1.02 SYSTEM DESCRIPTION

A. Equipment item is listed below by Equipment I.D. Tag.
   1. Vertical Storage Tank and Installation.
      a. Used Oil 1,000 gal. Storage Tank - Equipment I.D. Tag: MB-01 (Qty. 1)
      b. Brine Water 10,000 gal. Storage Tank - Equipment I.D. Tag: BR-03 (Qty. 1)
   2. Vertical Storage Tank system(s)
   3. This section includes the specifications for the Vertical Storage Tank(s) being installed for storage of fluids as noted in the Bid Specifications and Bid Drawing Package.
      a. Vertical Storage Tank – Description of System(s)
         1) The configurations for tire storage are described below.
            (a) Vertical Storage Tank system: Shall be a “stand alone” system.

B. Seismic Calculations
   1. For seismic calculations, Reference general seismic design criteria noted on Sheet S0.1 Division 1 – General, A.9.

C. List of Applicable Forms
   1. The General Conditions, Supplementary Conditions, Instructions to Bidders, Bid Form, all apply to these bid items.

1.03 DESCRIPTION OF WORK

A. List of Work
   1. The extent of the Work is shown on the drawings and is defined to include (but not by way of limitations) all labor, materials, freight, unloading, equipment, taxes, permits and supervision required for the fabrication and installation of the Vertical Storage Tank(s). The Vertical Storage Tank system shall include all materials necessary for the desired performance. Wall ties, column ties, or any other method of affixing storage system to the building walls or structure is not permitted.

B. Coordination
   1. Contractor’s Responsibility: It will be the Contractor's responsibility to verify and establish a detailed installation schedule.
   2. Field Check: ALL BUILDING AND EQUIPMENT LAYOUT DIMENSIONS SHALL BE FIELD CHECKED AND VERIFIED BY CONTRACTOR PRIOR TO START OF INSTALLATION. NOTIFY THE CONSULTANT AND OWNER OF ANY DISCREPANCIES OR CONDITIONS AFFECTING MATERIALS AND/OR INSTALLATION WITHIN TEN (10) DAYS. IF A CONDITION EXISTS AND THE CONSULTANT OR OWNER IS NOT NOTIFIED THE ADDITIONAL COST TO CORRECT THE INSTALLATION IN ACCORDANCE WITH THE REQUIREMENTS OF THE OWNER WILL BE THAT OF THE CONTRACTOR.
   3. Delivery and Unloading: The Vertical Storage Tank Contractor shall be responsible for coordinating the delivery and unloading of the equipment to the job-site with the General Contractor to eliminate demurrage charges, unless authorized by the Owner or the Consultant. In order to eliminate disruption to the ongoing operations and prevent interference of dock access by trucks entering and leaving the site, temporary staging of materials will be provided outside of the building at a location designated by the Owner. The Vertical Storage Tank Contractor shall provide storage facilities (i.e., covers, closed containers) to protect equipment from the elements (i.e., dust, dirt, rain, ice, snow, etc.) as necessary. Interior staging of equipment will be kept to a minimum so as not to disrupt ongoing operations.

1.04 QUALITY ASSURANCE

A. Standards
   1. Equipment Standards: The equipment covered by these Specifications shall be designed, assembled, tested and installed in accordance with the latest applicable standards, including:
      a. American National Standards Institute (ANSI).
      b. American Iron and Steel Institute.
         1) Specification for Design of Cold-Formed Steel Association - "Structural Members" 2015 edition.
   2. International Building Code (IBC)
      a. International Building Code including current Building Code Amendments. (2015 Edition)
   3. Materials
      a. All materials furnished shall be new, free from defects, and UL-Approved where such approval is granted to the equipment to be furnished.
   4. Federal Inspection
      a. Latest published applicable Federal Specifications.
   5. OSHA
      a. Applicable OSHA Specifications.
   6. Building and Safety Codes
      a. Any applicable local building and safety codes pertaining to the Work.

B. Workmanship
   1. Trade Methods: Use the best trade methods throughout. Work evidencing substandard workmanship shall be corrected or replaced by the Contractor at the Contractor's expense, per the General Conditions.
   2. Welding: Areas to be welded shall be free from rust, grease, or other foreign matter for a distance of at least one-half inch (1/2") back from the edge of the weld. Prevent warping in finished product; use jigs, if necessary. Grind welds smooth on exterior exposed surfaces. All Work to standard tolerances, careless template work is not acceptable. All welds to be painted to match factory finish.

C. Touch Up Paint: The method for the touch up of paint shall follow specifications section 3.02 Field Painting.

D. Guarantees
   1. WARRANTY:
      a. Warranty shall be the manufacturer's standard warranty and shall be specified by the Contractor in the contents of the proposal.
      b. The contractor shall provide an extended warranty for a period of three (3) years from Date of Acceptance.
      c. QUALITY OF MATERIALS AND EQUIPMENT: The Contractor guarantees the material and equipment delivered under the Contract to be free from defects in design or workmanship and against damages caused prior to final inspection. Unless otherwise specified, this guarantee extends for a period of three (3) years from the Date of Acceptance for both labor and materials.
      d. REPAIRING DEFECTS: The Contractor shall promptly repair or replace all defective or damaged items delivered under the Contract. The Vertical Storage Tank(s) Contractor may elect to have any replaced item returned to his/her plant at his/her expense.
      e. STRUCTURAL DESIGN: It is the Contractor's responsibility to guarantee a functional and structurally sound Vertical Storage Tank(s) design in accordance with the drawings, specifications, and codes.

1.05 SUBMITTALS

A. Product Data: Submit latest edition of Vertical Storage Tank(s) data sheet and outline drawing with the proposal.

B. Shop Drawings:

1. Shop Drawings, as stated in the General Conditions, shall include, but need not be limited to:
2. Installation Plan: Proposed installation plan of storage tank(s), including location and dimensions of new equipment clearly identified. It will be the Contractor's responsibility to verify and establish a detailed installation schedule per the General Conditions.
3. Storage tank(s) are to be a standalone system.
4. Dimensions: Elevation views showing all component dimensions and all product and aisle clearance dimensions.
5. Bill of Materials: Bill of Materials per the General Conditions.
6. Calculations: Shop drawings, load, and seismic calculations shall be submitted within twenty-one (21) days after receipt of order.
7. Approved Shop Drawings
8. It will be the Contractor's responsibility to obtain approved shop drawings signed by the Consultant and/or Owner per the General Conditions prior to fabrication.

C. Manufacturer’s Reference:
1. Prime Manufacturer: Specifications are based on equipment identified herein by manufacturer's name and model to establish acceptable standards of quality, performance, features, and construction.

Snyder Industries, LLC

6940 O Street, Suite 100

Lincoln, Nebraska 68510 USA

Phone: (402) 467-5221

Website: https://www.syndernet.com/

Vehicle Service Shop – Waste Oil Storage Tank Model: 1,000 gal. 5990102N

Brine Station - Brine Water Storage Tank Model: 10,000 gal. 1006600N43

Household Hazard Waste Collection Facility –

Waste Oil Storage Tank Model: 405 gal. 5990702N

Waste Antifreeze Storage Tank: 360 gal. 5760102N

2. Other manufacturers: Contingent upon compliance with these specifications and documentation requirements set forth in SUBMITTALS, equipment produced by other manufacturers may be considered as equal.

PART 2 PRODUCTS

2.01 INDUSTRIAL STORAGE TANK(S) STORAGE TANK(S) STORAGE SYSTEM GENERAL

A. The Contractor shall provide the following:
1. List of Required Items
a. New Vertical Storage Tank as shown on the drawings, including freight, unloading, installation, touch-up painting, cleaning, and other equipment necessary to complete the system.
b. Systems to include all fittings, hardware, screens and restraints.

B. Quantity and Capacity
1. See drawings for equipment location and configuration.

C. Standard Designs
1. Components shall be of standard design and fabrication by the manufacturer so that all may be replaced or purchased at a future date without special charges or extended deliveries.

D. The Bill of Materials for this Work is to be determined by the Contractor from the bid drawings and contents of the specifications. Storage tank(s) system Contractor to verify all information.

E. Codes
1. The Vertical Storage Tank shall be designed and installed to the exact standards of the manufacturer and in all cases shall conform to applicable codes. The Vertical Storage

Tank contractor will submit manufacturer's certified design calculations for the storage tank(s) system to the Owner or Consultant for review.

F. Loads and Capacity
   1. The Storage tank(s) System shall be designed to handle the Load/Capacity specified in the design criteria.
   2. The Freestanding Storage tank(s) System components shall utilize materials of a sufficient capacity to accept the stated load conditions without infringing upon the published Load Safety Factor of the load bearing members.

G. Finish
   1. Finish will be Manufactured Standard.

H. Erection
   1. All shipments of the Freestanding Storage tank(s), system shall include all components to allow immediate erection upon receipt.

I. Anchoring
   1. All work must be rigid and anchored securely. Method of attachment to be approved prior to installation.
   2. Anchor Holes
   3. All anchor holes are to be vacuum cleaned at time of drilling to prevent dust build up.

J. Touch Up
   1. The Freestanding Storage tank(s) Storage System Contractor shall touch up any other Contractor's work damaged during the process per section 3.02 Field Painting.

2.02 VERTICAL FREESTANDING STORAGE TANK(S) W/LEVEL GAUGE

A. Equipment Tag # MB-10 (Qty. 1) Vehicle Service Shop
   1. General: 1,000 gal. Used Oil Storage Tank.
      a. Description: Stationary, storage tank(s) unit in the Vehicle Maintenance, Repair Bay used for storage of Used Oil.
         1) Physical Data:
            (a) Overall Dimensions:

(1)	Diameter:	78”
(2)	Height:	69”
(3)	Number of Outlets:	1
(4)	Number of Manway:	1
(5)	Lids:	1/integrated with Manway
(6)	Capacity:	1,000 gal.
(7)	Containment %:	120% containment around primary tank.

   2. Features and Construction:
      a. Double Wall Construction
      b. Complies with EPA CFR 40-279.22
      c. 2-year Manufacturer's warranty
      d. Finish: Manufacture Standard

B. Equipment Tag # BR-03 (Qty. 1) Brine Station
   1. General: 10,000 gal. Brine Water Storage Tank.
      a. Description: Stationary, storage tank unit onsite used for storage of brine water.
      b. Physical Data:
         1) Overall Dimensions:

(a)	Diameter:	142”
(b)	Height:	227.3”
(c)	Number of Outlets:	1
(d)	Number of Manway:	1
(e)	Lids:	18” PE Threaded/Vented Manway
(f)	Max. Access:	15”
(g)	Capacity:	10,000 gal.
(h)	Containment %:	120% containment around primary tank.

2. Features and Construction:
   a. Double Wall Construction
   b. Complies with EPA CFR 40-279.22
   c. 2-year Manufacturer's warranty
3. Finish: Manufacture Standard

C. Equipment Tag # WO-01 (Qty. 1) Household Hazard Waste Collection Facility
1. General: 405 gal. Waste Oil Storage Tank.
   a. Description: Stationary, storage tank unit onsite used for storage of waste oil.
   b. Physical Data:
      1) Overall Dimensions:

(a)	Diameter:	45"
(b)	Height:	73.1"
(c)	Number of Outlets:	1
(d)	Number of Manway:	1
(e)	Lids:	18" PE Threaded/Vented Manway
(f)	Max. Access:	15"
(g)	Capacity:	405 gal.
(h)	Containment %:	120% containment around primary tank.

2. Features and Construction:
   a. Double Wall Construction
   b. Complies with EPA CFR 40-279.22
   c. 2-year Manufacturer's warranty
3. Finish: Manufacture Standard

D. Equipment Tag # WA-01 (Qty. 1) Household Hazard Waste Collection Facility
1. General: 360 gal. Waste Antifreeze Storage Tank.
   a. Description: Stationary, storage tank unit onsite used for storage of waste antifreeze.
   b. Physical Data:
      1) Overall Dimensions:

(a)	Diameter:	49"
(b)	Height:	67.2"
(c)	Number of Outlets:	1
(d)	Number of Manway:	1
(e)	Lids:	18" PE Threaded/Vented Manway
(f)	Max. Access:	15"
(g)	Capacity:	360 gal.
(h)	Containment %:	120% containment around primary tank.

2. Features and Construction:
   a. Double Wall Construction
   b. Complies with EPA CFR 40-279.22
   c. 2-year Manufacturer's warranty
3. Finish: Manufacture Standard

PART 3 EXECUTION

3.01 EXAMINATION

A. Coordination
1. Each Contractor must give careful consideration to the ongoing facility operations and the work of other contractors during the entire project and shall organize his/her work so that it will not interfere with ongoing operations or interfere with or delay the work of others. Minimal disruption to ongoing operations is a priority. It is imperative that the schedule be maintained with any changes coordinated promptly with the General Contractor, Owner, and Consultant.

B. General Description

1. The Storage tank System shall be installed true and properly aligned complete in all details and in accordance with the specifications, manufacturer's recommendations, and the drawings.

C. Installation Routine
1. Installation shall include unloading, checking and security of equipment prior to erection, complete anchoring, touch up and cleaning. The Contractor shall provide storage facilities (i.e., covers, closed containers) to protect equipment from the elements (i.e., dust, dirt, rain, snow, etc.). Contractor to ensure no damage to the floor, facility or equipment.

D. Tools and Equipment
1. The Contractor shall be responsible to provide all tools and equipment necessary for a complete and satisfactory installation. All wheeled and rolling equipment used in the building during construction (after slab on grade has been poured) must use wheel wraps as drip diapers or similar to protect floor from rubber marking and equipment spillage of oil or other substances.

E. Construction, lifts, man Lifts and Vehicles
1. All wheeled and rolling equipment used in the building during construction (after slab on grade has been poured) must use wheel wraps as drip diapers or similar to protect floor from rubber marking and equipment spillage of oil or other substances.

F. Permits and Inspection
1. Contractor shall obtain, and pay for, all necessary permit fees and inspections required by the State or local municipalities.

G. Damaged Materials
1. Claims, due to freight damage, are the responsibility of Vertical Storage Tank Contractor. This includes any damage that is not evident at the time of the unloading of the equipment (i.e., concealed damage). Should such damage be uncovered, the Contractor must act promptly to repair/replace damaged equipment to minimize any delay to the schedule. Any added cost due to a delay is the responsibility of the Contractor.

H. Debris Disposal
1. It shall be the responsibility of the Vertical Storage Tank Contractor to remove any debris resulting from his/her work on each and every workday to a pre-designated disposal area. This shall include all waste generated by the installer or any of his/her personnel, shipping containers, and/or construction materials. The Contractor shall broom clean the area each work day to leave the work area clean. This will include organizing the materials not yet incorporated in the Work. At the completion of the work the Contractor shall remove all of his/her waste materials and rubbish from and about the project, as well as all his/her tools, construction equipment, machinery and surplus materials.

I. Clearance
1. The Contractor shall be responsible for maintaining all clearances specified on the drawings.

J. Modifications
1. The Contractor shall be responsible for the suitability of any Vertical Storage Tank component modifications required after installation begins. All modifications must be submitted and approved by the Owner and Consultant prior to beginning Work. Modifications done by others must be approved by the Contractor prior to modification. The Contractor shall be responsible for such a modification by others.

K. Contractor’s Survey of Damage
1. The Contractor shall conduct a survey of his/her work each and every workday morning and note any and all damages observed. Any damages must be reported to the General Contractor and the Owner by 9:00 a.m. Damages not reported within this time frame will be the contractor’s responsibility.

L. Marking Restrictions
1. Under no circumstances will a magic marker, sharpie or any other permanent marking device, which will absorb into concrete, paint or decking, be used for marking equipment

locations. All markings must be water soluble and removable. The contractor is responsible to remove these markings prior to completing the Punch List

M. Installation
   1. The Owner shall have the option of performing his/her own Storage Tank System installation.

3.02 FIELD PAINTING

A. Cleaning
   1. All surfaces to be thoroughly cleaned of rust, scale, oil, grease, dirt, welding flash and all other forms of dirt detrimental to clean finish.

B. Touch-Ups
   1. After the erection and installation are complete, the Contractor shall touch-up any scratches on the Storage tank(s) Storage system. Finish to match factory finish.

END OF SECTION 23 13 23. 16

This page intentionally left blank

SECTION 23 21 13
HYDRONIC PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Pipe and fitting materials and joining methods for the following:
   1. Copper tube and fittings.
   2. Steel pipe and fittings.
   3. Joining materials.
   4. Transition fittings.
   5. Dielectric fittings.

1.02 RELATED REQUIREMENTS

A. Section 23 21 23 "Hydronic Pumps" for pumps, motors, and accessories for hydronic piping.

B. Section 23 07 19 “HVAC Piping Insulation” for piping insulation.

1.03 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.04 DEFINITIONS

A. PTFE: Polytetrafluoroethylene.

1.05 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of the following:
   1. Piping, tubing and fittings data. Submit data indicating that pipe, tube and fittings are manufactured exclusively in the United States.
   2. Fittings.
   3. Joining materials.
   4. Coating data. Include product information and coating procedures.

C. Shop Drawings: Detail, at 1/4 scale, the piping layout, fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

1.06 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Welding certificates.

C. Welding (WPS) and Brazing (BPS) Procedure Specifications.

D. Field quality-control reports.

1.07 QUALITY ASSURANCE

A. Installer Qualifications:
   1. Installers of Pressure-Sealed Joints: Installers shall be certified by pressure-seal joint manufacturer as having been trained and qualified to join piping with pressure-seal pipe couplings and fittings.

B. Steel Support Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Pipe Welding: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
   1. Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation.
   2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

1.08 COORDINATION

A. Coordinate layout and installation of hydronic piping and suspension system components with other construction, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

B. Coordinate pipe sleeve installations or coring of foundation wall penetrations.

C. Coordinate piping installation with roof curbs, equipment supports, and roof penetrations.

D. Coordinate pipe fitting pressure classes with products specified in related Sections.

E. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into base.

F. Coordinate installation of pipe sleeves or coring of existing walls for penetrations through exterior walls and floor assemblies. Coordinate with requirements for firestopping specified in Division 07 Section "Penetration Firestopping" for fire and smoke wall and floor assemblies.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature unless otherwise indicated:
   1. Hot-Water Heating Piping: 150 psig at 200 deg F.
   2. Condenser-Water Piping: 100 psig at 150 deg F.

2.02 COPPER TUBE AND FITTINGS

A. Drawn-Temper Copper Tubing: ASTM B 88, Type L, ASTM B 88 Type K.

B. Annealed-Temper Copper Tubing: ASTM B 88, Type K.

C. Copper or Bronze Pressure-Seal Fittings:
   1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Viega, LLC.
      b. NIBCO, INC.
   2. Housing: Copper.
   3. O-Rings and Pipe Stops: EPDM.
   4. Tools: Manufacturer's special tools.
   5. Minimum 200-psig working-pressure rating at 250 deg F

D. Wrought-Copper Fittings: ASME B16.22.
   1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Anvil International, Inc.
      b. S. P. Fittings; a division of Star Pipe Products.

2.03 STEEL PIPE AND FITTINGS

A. Piping and fittings shall be manufactured exclusively in the United States.

B. Steel Pipe, NPS □ through NPS 1□: ASTM A53, Type S (seamless) Grade A, Schedule 40, black steel, plain ends.

C. Steel Pipe, NPS 2 through NPS 10: ASTM A53, Type S (seamless) and Type ERW (welded) Grade A or B, Schedule 40, black steel, plain ends.

D. Steel Pipe, NPS 12 and larger: ASTM A53, Type S and Type ERW (welded) Grade B, 0.375 inch wall thickness, black steel, plain ends.

E. Steel Pipe Nipples: ASTM A733 made of ASTM A53, Schedule 40, black steel; seamless.

F. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300.

G. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300.

H. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
   1. Material Group: 1.1.
   2. End Connections: Butt welding.
   3. Facings: Raised face.

I. Welding Materials: Comply with Section II, Part C, of the ASME Boiler and Pressure Vessel Code for welding materials appropriate for wall thickness and for chemical analysis of pipe being welded.

J. Gasket Material: Thickness, material, and type suitable for fluid to be handled; and design temperatures and pressures.

K. Grooved Mechanical-Joint Fittings and Couplings:
   1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Victaulic Company
      b. Anvil International
   2. Joint Fittings: ASTM A 536, Grade 65-45-12 ductile iron; ASTM A 47/A 47M, Grade 32510 malleable iron; ASTM A 53/A 53M, Type F, E, or S, Grade B fabricated steel; or ASTM A 106/A 106M, Grade B steel fittings with grooves or shoulders constructed to accept grooved-end couplings; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.
   3. Couplings: Ductile- or malleable-iron housing and EPDM gasket of central cavity pressure-responsive design; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.

2.04 JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
   1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless otherwise indicated.
      a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
      b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel if unexposed, 316 stainless steel if flange is exposed.

C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.

D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.

F. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

G. Solvent Cements for Joining Plastic Piping
   1. CPVC Piping: ASTM F 493.
      a. CPVC solvent cement shall have a VOC content of 490 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

b. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
c. Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.05 TRANSITION FITTINGS

A. Plastic-to-Metal Transition Fittings:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. NIBCO INC
b. IPEX USA
c. Charlotte Pipe and Foundry
d. Wilkins; a Zurn company
2. One-piece fitting with one threaded brass or copper insert and one solvent-cement-joint end of material and wall thickness to match plastic pipe material.

B. Plastic-to-Metal Transition Unions:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. NIBCO INC
b. IPEX USA
c. Charlotte Pipe and Foundry
2. Brass or copper end, solvent-cement-joint end of material and wall thickness to match plastic pipe material, rubber gasket, and threaded union.

2.06 DIELECTRIC FITTINGS

A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

B. Dielectric Unions:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Capitol Manufacturing Company.
b. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
c. Wilkins; a Zurn company.
2. Description:
a. Standard: ASSE 1079.
b. Pressure Rating: 125 psig minimum at 180 deg F
c. End Connections: Solder-joint copper alloy and threaded ferrous.

C. Dielectric Flanges:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Capitol Manufacturing Company.
b. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
c. Wilkins; a Zurn company.
2. Description:
a. Standard: ASSE 1079.
b. Factory-fabricated, bolted, companion-flange assembly.
c. Pressure Rating: 175 psig.
d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

D. Dielectric-Flange Insulating Kits:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Advance Products & Systems, Inc.
      b. Calpico, Inc.
      c. Central Plastics Company
      d. Pipeline Seal and Insulator, Inc.
   2. Description:
      a. Nonconducting materials for field assembly of companion flanges.
      b. Pressure Rating: 150 psig
      c. Gasket: Neoprene or phenolic.
      d. Bolt Sleeves: Phenolic or polyethylene.
      e. Washers: Phenolic with steel backing washers.

E. Dielectric Nipples:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Elster Perfection
      b. Grinnell Mechanical Products
      c. Matco-Norca, Inc.
      d. Precision Plumbing Products, Inc.
      e. Victaulic Company
   2. Description:
      a. Standard: IAPMO PS 66.
      b. Electroplated steel nipple, complying with ASTM F 1545.
      c. Pressure Rating: 300 psig at 225 deg F.
      d. End Connections: Male threaded or grooved.
      e. Lining: Inert and noncorrosive, propylene.

PART 3 EXECUTION

3.01 PIPING APPLICATIONS

A. Hot-water heating piping, aboveground, NPS 2-1/2 and smaller, shall be the following:
   1. Type L drawn-temper copper tubing, with 95-5 soldered wrought-copper fittings.
   2. Insulated per Section 23 07 19 HVAC Piping Insulation.

B. Hot-water heating piping, aboveground concealed areas, NPS 3 and larger, shall be the following:
   1. Black steel pipe, ASTM A53, Type S (seamless) or Type ERW (welded); with standard weight ASTM A234 forged steel fittings for butt-weld connection and flanged joints.
   2. Insulated per Section 23 07 19 HVAC Piping Insulation.

C. Hot-water heating water piping, aboveground exposed areas and mechanical rooms, NPS 2-1/2 and larger, shall be any the following:
   1. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
   2. Schedule 40 steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.
   3. Insulated per Section 23 07 19 HVAC Piping Insulation.

D. Condenser-water piping, aboveground concealed areas, NPS 2 and smaller, shall be the following:
   1. Type L drawn-temper copper tubing, with 95-5 soldered wrought-copper fittings.
   2. Insulated per Section 23 07 19 HVAC Piping Insulation.

E. Condenser-water piping, aboveground concealed areas, NPS 2-1/2 and larger, shall be the following:
   1. Black steel pipe, ASTM A53, Type S (seamless) or Type ERW (welded); with standard weight ASTM A234 forged steel fittings for butt-weld connection and flanged joints.

2. Insulated per Section 23 07 19 HVAC Piping Insulation.

F. Condensate-Drain Piping: Type L drawn-temper copper tubing, with 95-5 soldered wrought-copper fittings

3.02 PIPING INSTALLATIONS

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Install piping as indicated unless deviations to layout are approved on Shop Drawings.

B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping to permit valve servicing.

F. Install piping at indicated slopes.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Install piping to allow application of insulation.

J. Select system components with pressure rating equal to or greater than system operating pressure.

K. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.

L. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.

M. Install piping at a uniform grade of 0.2 percent upward in direction of flow.

N. Reduce pipe sizes using eccentric reducer fitting installed with level side up.

O. Install branch connections to mains using mechanically formed tee fittings or integrally reinforced forged branch outlet fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.

P. Install valves according to the following:
   1. Section 23 05 23.12 "Ball Valves for HVAC Piping."
   2. Section 23 05 23.14 "Check Valves for HVAC Piping."

Q. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.

R. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.

S. Install shutoff valve immediately upstream of each dielectric fitting.

T. Comply with requirements in Section 23 05 16 "Expansion Fittings and Loops for HVAC Piping" for installation of expansion loops, expansion joints, anchors, and pipe alignment guides.

U. Comply with requirements in Section 23 05 53 "Identification for HVAC Piping and Equipment" for identifying piping.

V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 23 05 17 "Sleeves and Sleeve Seals for HVAC Piping."

W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 23 05 17 "Sleeves and Sleeve Seals for HVAC Piping."

X. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 23 05 18 "Escutcheons for HVAC Piping."

3.03 DIELECTRIC FITTING INSTALLATION

A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.

B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric unions.

C. Dielectric Fittings for NPS 2-1/2 and Larger: Use dielectric flange kits.

3.04 HANGERS AND SUPPORTS

A. Comply with requirements in Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment" for hanger, support, and anchor devices. Comply with the following requirements for maximum spacing of supports.

B. Comply with requirements in Section 23 05 48 "Vibration and Seismic Controls for HVAC" for seismic restraints.

C. Install the following pipe attachments:
   1. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet long
   2. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet or longer.
   3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
   4. Spring hangers to support vertical runs.
   5. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
   6. On plastic pipe, install pads or cushions on bearing surfaces to prevent hanger from scratching pipe.

D. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:
   1. NPS 3/4: Maximum span, 7 feet.
   2. NPS 1: Maximum span, 7 feet.
   3. NPS 1-1/2: Maximum span, 9 feet.
   4. NPS 2: Maximum span, 10 feet.
   5. NPS 2-1/2: Maximum span, 11 feet.
   6. NPS 3 and Larger: Maximum span, 12 feet.

E. Install hangers for drawn-temper copper piping with the following maximum spacing and minimum rod sizes:
   1. NPS 3/4: Maximum span, 5 feet; minimum rod size, 1/4 inch.
   2. NPS 1: Maximum span, 6 feet; minimum rod size, 1/4 inch.
   3. NPS 1-1/4: Maximum span, 7 feet; minimum rod size, 3/8 inch.
   4. NPS 1-1/2: Maximum span, 8 feet; minimum rod size, 3/8 inch.
   5. NPS 2: Maximum span, 8 feet; minimum rod size, 3/8 inch.
   6. NPS 2-1/2: Maximum span, 9 feet; minimum rod size, 3/8 inch.
   7. NPS 3 and Larger: Maximum span, 10 feet; minimum rod size, 3/8 inch.

3.05 PIPE JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.

D. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8/A5.8M.

E. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

F. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.

G. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

H. Grooved Joints: Assemble joints with coupling and gasket, lubricant, and bolts. Cut or roll grooves in ends of pipe based on pipe and coupling manufacturer's written instructions for pipe wall thickness. Use grooved-end fittings and rigid, grooved-end-pipe couplings.

I. Mechanically Formed, Copper-Tube-Outlet Joints: Use manufacturer-recommended tool and procedure, and brazed joints.

J. Pressure-Sealed Joints: Use manufacturer-recommended tool and procedure. Leave insertion marks on pipe after assembly.

3.06 TERMINAL EQUIPMENT CONNECTIONS

A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.

B. Install control valves in accessible locations close to connected equipment.

C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.

D. Install ports for pressure gages and thermometers at coil inlet and outlet connections. Comply with requirements in Section 23 05 19 "Meters and Gages for HVAC Piping."

3.07 FIELD QUALITY CONTROL

A. Prepare hydronic piping according to ASME B31.9 and as follows:
1. Leave joints, including welds, uninsulated and exposed for examination during test.
2. Inspect finish of exposed, hydronic piping, including outlets, valves, specialties, and devices, after installation is complete. Remove burrs, dirt, and debris. Repair damaged finishes including chips, scratches, and abrasions.
3. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
4. Flush hydronic piping systems with minimum 5 ft/s velocity clean water; then remove and clean or replace strainer screens. Promptly passivate and chemically treat piping systems after flush per requirements in Section 23 25 13 “Water Treatment for Closed-Loop Hydronic Systems.”
5. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
6. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.

B. Perform the following tests on hydronic piping:
1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
3. Isolate expansion tanks and determine that hydronic system is full of water.
4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times the "SE" value in Appendix A in ASME B31.9, "Building Services Piping."

5. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
6. Prepare written report of testing.

C. Perform the following before operating the system:
1. Open manual valves fully.
2. Inspect pumps for proper rotation.
3. Set makeup pressure-reducing valves for required system pressure.
4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
5. Set temperature controls so all coils are calling for full flow.
6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
7. Verify lubrication of motors and bearings.

3.08 CLEANING AND PROTECTION

A. Remove all packaging, unused fasteners, and other installation materials from the project site.

B. Provide protection as required to leave the work in undamaged condition at the time of completion.

3.09 PAINTING

A. Refer to Section 09 90 00 "Painting and Coating" for additional requirements.

B. Coating system consists of surface prep, base coat of Carbomastic 15 and a top coats of Carbothane 134, or equivalent.
1. Install:
a. Surface Prep - SSPC SP1-3
b. 1st coat – 7.0 to 10.0 mils Carbomastic 15 Aluminum Flake Epoxy Mastic
c. 2nd and 3rd coats - Carbothane 133 satin or 134 Gloss Aliphatic Urethane
2. Manufactured by Carboline.
3. Color shall be white.
4. All manufacturer’s installation instructions, including surface preparation, application methods and equipment, mixing and thinning guidelines, application conditions, and curing schedule shall be adhered to.

END OF SECTION 23 21 13

This page intentionally left blank

SECTION 23 21 13.13

UNDERGROUND HYDRONIC PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Underground pre-insulated PEX pipes and fittings.

1.02 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.03 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For the following:
   1. All piping data. Submit data indicating that pipe, tube and fittings are manufactured exclusively in North America, Germany or Italy.

C. Shop Drawings: For underground hydronic piping. Signed and sealed by a professional engineer.
   1. Calculate requirements for expansion compensation for underground piping.
   2. Show expansion compensators, offsets, and loops with appropriate materials to allow piping movement in the required locations. Show anchors and guides that restrain piping movement with calculated loads.
   3. Show pipe sizes, locations, and elevations. Show piping in trench, conduit, and cased pipe with details showing clearances between piping, and show insulation thickness.
   4. Design calculations and detailed fabrication and assembly of pipe anchors and alignment guides, hangers and supports for multiple pipes, expansion joints and loops, and attachments of the same to the pipe vault structure.
   5. Show locations of pipe anchors and alignment guides and expansion joints and loops.
   6. Show wiring diagram for leak detection system. Clearly mark panel locations and linear footages associated with leak detection monitoring.

1.04 INFORMATIONAL SUBMITTALS

A. Profile Drawings: Show system piping in elevation. Draw profiles at horizontal scale of not less than 1 inch equals 50 feet and at vertical scale of not less than 1 inch equals 5 feet. Indicate manholes and piping. Show types, sizes, materials, and elevations of other utilities crossing hydronic piping.

B. Qualification Data: For qualified Installer.

C. Welding certificates.

D. Material Test Reports: For piping.

E. Source quality-control reports.

F. Field quality-control reports.

G. Butt fusion welding joint reports.

H. HDPE fusion welded joint kit reports.

I. PEX joint reports.

1.05 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX.
   1. Comply with provisions in ASME B31.9, "Building Services Piping."
   2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

B. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation.

PART 2 PRODUCTS

2.01 PREINSULATED CROSSLINKED POLYETHYLENE (PEX) PIPE AND FITTINGS

A. Manufacturers:
   1. Uponor- Ecoflex Pre-insulated PEX
   2. REHAU Construction LLC-Insulpex with RAUPEX ASTM-sized Carrier Pipe

B. Service Tubing:
   1. Material: Crosslinked polyethylene (PEX) manufactured to PEX-a or Engel-method standard
   2. Material Standard: Manufactured in accordance with ASTM F876 and F877
   3. Pressure Ratings: Hydrostatic design and pressure ratings are in accordance with the ASTM standard. Operating limits are as follows.
   4. -58 degrees F to 203 degrees F at 80 psi
   5. The PEX service tubing in the Ecoflex Thermal Single pipe has an oxygen diffusion barrier that does not exceed an oxygen diffusion rate of 0.10 grams per cubic meter per day at 104 degrees F water temperature in accordance with German DIN 4726.
   6. Nominal Inside Diameter: Provide tubing with nominal inside diameter in accordance with ASTM F876, as indicated.
      a. 1 inch
      b. 1.25 inch
      c. 1.5inch

C. Outer Jacket:
   1. Material is corrugated seamless high-density polyethylene (HDPE).
   2. The HDPE jacket completely encompasses and protects the insulation from moisture and damage.
   3. The outer jacket is extruded directly over the insulation and is flexible.
   4. The outer jacket shall contain 2 percent carbon black, finely divided and thoroughly dispersed to provide protection from UV degradation.
   5. Minimum Bend Radius
      a. 1-inch pre-insulated tubing with 5.5-inch jacket has a bend radius of 10 inches.
      b. 1□-inch pre-insulated tubing with 5.5-inch jacket has a bend radius of 12 inches.
      c. 1□-inch pre-insulated tubing with 6.9-inch jacket has a bend radius of 16 inches.

D. Insulation:
   1. The insulation shall be layered, expanded cross-linked water-resistant polyethylene closed-cell foam.
   2. All seams of the insulation shall be sealed.
   3. Insulation shall not be bonded to the service tubing.

E. Straight Run Joints: Shall be insulated to the same thickness as the pipe and jacketed with an electro-fusion welded split sleeve.
   1. The manufacturer shall provide the fusion machine, straps, bands, pressure gauges and closure patches for the pressure testable joint cover.
   2. Heat shrink materials will not be accepted for field joints or the repair of the field joints that do not pass the pressure tests

3. All field joints shall be pressure tested to ensure air tightness at 5 psi for 5 minutes while being soap tested for leaks.

F. Compression Fittings for PEX Service Tubing
   1. For system compatibility, use fittings offered by the tubing manufacturer.
   2. Fittings are to be manufactured from dezincification-resistant brass.
   3. The fitting assembly must comply with performance requirements of ASTM F877.
   4. The fittings will consist of a compression fitting with a coupling sleeve, a fitting body insert with O-ring(s) and a bolt and nut.
   5. All buried fittings will be installed, insulated, and sealed in accordance with the piping manufacturer's instructions.
   6. Male NPT thread for each compression fitting is shown below.
      a. 1-inch PEX compression fitting has 1-inch male NPT thread.
      b. 1.25-inch PEX compression fitting has 1.25-inch male NPT thread.
      c. 1.5-inch PEX compression fitting has 1.5-inch male NPT thread.
   7. All transition fittings connecting to the compression fittings shall be manufactured of dezincification-resistant brass.

G. ACCESSORIES
   1. Use accessories associated with the installation of the pre-insulated PEX-a distribution piping system as recommended by or available from the manufacturer.
   2. Insulation Kits
      a. Insulation kits will be manufactured of ABS shells or HDPE sleeves, will feature equal thickness of closed-cell PEX insulation as the pipe, and sealed watertight.
   3. Connection Vaults
      a. The piping manufacturer will provide the connection vaults when required by the project construction.
      b. Connection vaults shall be constructed of rotationally molded composite polyethylene and PE foam, providing a structurally sound and thermally insulated chamber.
      c. Heat shrink seals as provided by the tubing manufacturer shall be installed to prevent introduction of water into the vault.
   4. Anchors: As detailed on the Drawings.

2.02 LEAK DETECTION

A. The system shall include two wires between the carrier pipe and the HDPE jacket. The piping system manufacturer shall install the wire in a manner that has the wire is incorporated into each piece of pre-insulated pipe and fittings. This wire is to be capable of detection through the entire run including field joints and fittings.

B. The system shall be capable of alarming based upon impedance or resistance and shall consist of two wires for detection.

C. A detector (or multiple detectors if necessary) shall be provided and installed (including routing power to the unit and integration of alarms to the campus EMS system). The detector shall include an integral TDR impulse reflectometer.

D. A web-based interface shall be provided along with any necessary data connections. This shall be provided in addition to the integration with the EMS system called for in paragraph 3.
   1. The web-based interface shall be accessible from any location with internet access.
   2. If the service is fee based a 10-year subscription shall be provided by the contractor.
   3. The system shall be capable of alerting facilities personnel via email or text if an event were to occur.

E. The installed system shall be capable of monitoring the entire piping distribution system being provided as part of this project.

F. During the commissioning of the system a location map shall be provided with the system indicating the "As Installed" system configuration and sensing string layout. Footage along the cable shall be provided as references to locate leaks.

PART 3 EXECUTION

3.01 EARTHWORK

A. See Section 31 20 00 "Earthwork" for excavating, trenching, and backfilling.

3.02 PIPING APPLICATION

A. Hot-Water Heating Piping:
   1. NPS 3 and smaller: Underground pre-insulated factory pre-insulated PEX piping system with 1.3-inch insulation and corrugated LDPE casing.

3.03 SPARE PARTS

A. As it is anticipated that rerouting will be required on the project the procurement of piping above and beyond the quantities required to perform the project according to the Drawings is required. The following quantities of spare parts for heating hot water piping shall be provided (all piping shall be XX” in diameter to match the system being installed):
   1. (XX) 10-feet straight pieces of piping.
   2. (XX) 45-degree fittings.
   3. (XX) 90-degree fittings.
   4. (XX) Joint closure kits.

3.04 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Remove standing water in the bottom of trench.

C. Do not backfill piping trench until field quality-control testing has been completed and results approved.

D. Install piping at uniform grade of 0.2 percent. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points and elsewhere as required for system drainage. Install manual air vents at high points.

E. In conduits, install drain valves at low points and manual air vents at high points.

F. Install components with pressure rating equal to or greater than system operating pressure.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. See Section 23 05 17 "Sleeves and Sleeve Seals for HVAC Piping" for sleeves and mechanical sleeve seals through exterior building walls.

J. Secure anchors with concrete thrust blocks. Concrete is specified in Section 03 30 00 "Cast-in-Place Concrete."

3.05 JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs for HDPE and steel pipe. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.

E. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

F. Pressure-Sealed Joints: Use manufacturer-recommended tool and procedure. Leave insertion marks on pipe after assembly.

G. Conduit and Cased Piping Joints: Assemble sections and finish joints with pourable insulation and exterior jacket sleeve and apply fusion welded seals (shrink-wrap seals are allowable where dictated in Chapter 2).

H. Butt Fusion: The pipe shall be joined by the butt fusion process outlined in ASTM F2620 or PPI TR-33. All fusion joints shall be made in compliance with the pipe or fitting manufacturer's recommendations. Fusion joints shall be made per qualified technicians per PPI TN-42.

I. Butt Fusion joint recording: The critical parameters of each fusion joint shall be recorded by an electronic data logging device. All fusion joint data shall be included in a Fusion Technician's joint report.

3.06 IDENTIFICATION

A. Install continuous plastic underground warning tapes during back filling of trenches for underground hydronic piping. Locate tapes 6 to 8 inches below finished grade, directly over piping. See Section 31 20 00 "Earth Moving" for warning-tape materials and devices and their installation.

3.07 FIELD QUALITY CONTROL

A. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:
   1. Prepare hydronic piping for testing according to ASME B31.9 and as follows:
      a. Leave joints, including welds, uninsulated and exposed for examination during test.
      b. Fill system with water. Where there is risk of freezing, air or a safe, compatible liquid may be used.
      c. Use vents installed at high points to release trapped air while filling system.
   2. Test hydronic piping as follows:
      a. Subject hydronic piping to hydrostatic test pressure that is not less than 100 PSI for chilled water and 150 PSI for heating hot water.
      b. After hydrostatic test pressure has been applied for 10 minutes, examine joints for leakage. Remake leaking joints using new materials and repeat hydrostatic test until no leaks exist.
   3. Test conduit as follows:
      a. Seal vents and drains and subject conduit to 15 psig for four hours with no loss of pressure. Repair leaks and retest as required.

C. Prepare test and inspection reports.

END OF SECTION 23 21 13.13

SECTION 23 21 16
HYDRONIC PIPING SPECIALTIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Hydronic specialty valves.

B. Air-control devices.

C. Strainers.

D. Connectors.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.03 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of product:
   1. Include construction details and material descriptions for hydronic piping specialties.
   2. Include rated capacities, operating characteristics, and furnished specialties and accessories.
   3. Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.

1.04 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For air-control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.

1.05 MAINTENANCE MATERIAL SUBMITTALS

A. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flowmeter, probes, hoses, flow charts, and carrying case.

1.06 QUALITY ASSURANCE

A. Pipe Welding: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.

B. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

PART 2 PRODUCTS

2.01 HYDRONIC SPECIALTY VALVES

A. Bronze, Calibrated-Orifice, Balancing Valves:
   1. Manufacturers:
      a. Bell & Gossett, A Zylem brand.
      b. Arstrong Pumps, Inc.
      c. TACO Comfort Solutions, Inc.
   2. Body: Bronze, ball or plug type with calibrated orifice or venturi.
   3. Ball: Brass or stainless steel.

4. Plug: Resin.
5. Seat: PTFE.
6. End Connections: Threaded or socket.
7. Pressure Gage Connections: Integral seals for portable differential pressure meter.
8. Handle Style: Lever, with memory stop to retain set position.
9. CWP Rating: Minimum 125 psig.
10. Maximum Operating Temperature: 250 deg F.

B. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:
1. Manufacturers:
   a. Bell & Gossett, A Zylem brand.
   b. Arstrong Pumps, Inc.
   c. TACO Comfort Solutions, Inc.
2. Body: Cast-iron or steel body, ball, plug, or globe pattern with calibrated orifice or venturi.
3. Ball: Brass or stainless steel.
4. Stem Seals: EPDM O-rings.
5. Disc: Glass and carbon-filled PTFE.
6. Seat: PTFE.
7. End Connections: Flanged or grooved.
8. Pressure Gage Connections: Integral seals for portable differential pressure meter.
9. Handle Style: Lever, with memory stop to retain set position.
10. CWP Rating: Minimum 125 psig.
11. Maximum Operating Temperature: 250 deg F.

C. Pressure-Independent Flow Control Valves:
1. Manufacturers:
   a. Flow Control Industries DeltaPValve.
   b. Belimo ePIV.
2. All modulating control valves shall be industrial quality and must be fully field-rebuildable. Valves shall be designed to last 100,000+ on/off cycles.
3. Each control valve shall be individually factory flow tested and calibrated to deviate by no more than 5% through the entire operating differential pressure range without the use of additional electronics. All valves shall be tested on a test stand calibrated and verified with traceability to NIST standards.
4. The control valve operating differential pressure range shall be 5 to 70 or 10-90 PSID and shall be equal to or greater than the associated pump's design head pressure.
5. Each control valve shall have a calibrated performance tag listing the measured flow rate in rotation increments of 10 degrees through full stroke. Multi-turn actuators are not acceptable.
6. Control valves shall be factory set not-to-exceed the coil design flow rate.
7. Balancing labor, balancing valves and flow limiting devices are not required.
8. Valve bodies 2" and smaller shall be brass. Valve bodies 3" and larger shall be ductile iron. Internal control surfaces and pressure regulator components shall be brass, stainless steel, carbon steel, EPDM or Teflon.
9. All control valves shall have three (3) factory-installed Pressure/Temperature ports to allow factory and field verification of flow and proper operation. These ports shall be located at the inlet, intermediate, and outlet locations of the valve. The intermediate port must be located between the control surface and pressure regulator.
10. Control valve flow characteristics shall be field-modifiable, and may be modified inline.
11. Control valves shall be warranted by the manufacturer for a full 10 years from the date of purchase.

D. Diaphragm-Operated, Pressure-Reducing Valves: ASME labeled.
1. Manufacturers:
   a. Conbraco Industries, Inc.
   b. Watts Industries, Inc.; Watts Regulators.

c. Zurn-Wilkins.
2. Body: Bronze or brass.
3. Disc: Glass and carbon-filled PTFE.
4. Seat: Brass.
5. Stem Seals: EPDM O-rings.
6. Diaphragm: EPT.
7. Low inlet-pressure check valve.
8. Inlet Strainer: stainless steel removable without system shutdown.
9. Valve Seat and Stem: Noncorrosive.
10. Valve Size, Capacity, and Operating Pressure: Selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

E. Diaphragm-Operated Safety Valves: ASME labeled.
1. Manufacturers:
a. Conbraco Industries, Inc.
b. ITT McDonnell & Miller Div.; ITT Fluid Technology Corp.
c. Kunkle Valve Division.
d. Spence Engineering Company, Inc.
2. Body: Bronze or brass.
3. Disc: Glass and carbon-filled PTFE.
4. Seat: Brass.
5. Stem Seals: EPDM O-rings.
6. Diaphragm: EPT.
7. Wetted, Internal Work Parts: Brass and rubber.
8. Valve Seat and Stem: Noncorrosive.
9. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure Vessel Code: Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

2.02 COIL PIPING PACKAGE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. NuTech Hydronic Specialty Products..
2. Flow Design Inc.
3. Griswold Controls.

B. Coil Piping Package – 1/2" to 2”:
1. Supply Side:
a. Manual air vent with pressure/temperature port.
1) Brass body, EPDM core and O-ring, knurled handle and cap.
2) Side vent with 1/8" hose barb and 1/4" NPT.
3) Extended length.
4) Minimum rating of 250 PSIG at 250°F.
b. Combination Y-strainer with integral pressure/temperature port. Isolation ball valve with extended handle shall be independent from piping package.
1) Forged or cast brass body. EPDM O-ring. Plated steel handle with vinyl grip. Blow out-proof stem. Chrome plated ball with Teflon seats.
2) Strainer with 20 mesh stainless steel screen with removable cap. Strainer shall be fitted with a hose end blow down valve with cap and chain.
3) Minimum rating of 400 PSIG at 250°F.
2. Return Side:
a. Union with pressure/temperature port and manual air vent.
1) Brass O-ring type union. EPDM O-ring. Knurled handle and cap. Blowout-proof stem. Side vent with 1/8" hose barb. 1/4" and 1/2” NPT. Extended length.
2) Minimum Ratings 400 PSIG at 250°F.

b. Integral union with pressure/temperature port. Isolation ball valve with extended handle shall be independent from piping package.
   1) Forged or cast brass body. EPDM O-ring. Plated steel handle with vinyl grip. Blow out-proof stem. Chrome plated ball with Teflon seats.
   2) Minimum rating of 400 PSIG at 250°F.
c. No manual or automatic balancing valves required on main pipe.

C. Coil Piping Package 2-1/2” to 12”:
1. Supply Side:
   a. Manual air vent with pressure/temperature port.
      1) Brass body, EPDM core and O-ring, knurled handle and cap.
      2) Side vent with 1/8" hose barb and 1/4" NPT.
      3) Extended length.
      4) Minimum rating of 250 PSIG at 250°F.
   b. Combination flange end Y-strainer with integral pressure/temperature port. Isolation high performance butterfly valve with extended handle shall be independent from piping package.
      1) Y-strainer shall have cast iron body. Fiber gasket. Stainless steel strainer screen. ANSI 125# Flanged. Strainer shall include pressure/temperature port and drain valve.
      2) High performance butterfly valve shall be lug type with ductile iron body, designed to be installed at inlet of strainer. Resilient seat for bubble tight shut off. Blowout proof stem with pinned disc. Universal mounting flange conforms to ISO-5211. 2.5”-6” supplied with adjustable flow positioning plate. Sizes 8”- 12” provided with a gear operator.
      3) Minimum rating of 175 PSIG at 250°F.
2. Return Side:
   a. Union with pressure/temperature port and manual air vent.
      1) Brass O-ring type union. EPDM O-ring. Knurled handle and cap. Blowout-proof stem. Side vent with 1/8" hose barb. 1/4" and 1/2” NPT. Extended length.
      2) Minimum Ratings 600 PSIG at 250°F.
   b. Integral union with pressure/temperature port. Isolation high performance butterfly valve with extended handle shall be independent from piping package.
      1) High performance butterfly valve shall be lug type with ductile iron body, designed to be installed between all types of ANSI 125/150 flanges. Resilient seat for bubble tight shut off. Blowout proof stem with pinned disc. Universal mounting flange conforms to ISO-5211. 2.5”-6” supplied with adjustable flow positioning plate. Sizes 8”- 12” provided with a gear operator.
      2) Minimum rating of 175 PSIG at 250°F.

D. Flange end pressure/temperature port and manual air vent:
1. Pressure/temperature and manual air vent port.
2. Minimum rating of 175 PSIG at 250°F.

E. Automatic Balancing Valves:
1. Provide automatic balancing valves at pot feeder to maintain minimum flow.
2. Flowrate shall be factory set and shall valve shall automatically limit the rate of flow to within 5% of the specified GPM over at least 95% of the control range.
3. For 3/4” valve, the flow cartridge shall be removable from the Y-body housing without the use of special tools to provide access for cartridge change-out, inspection and cleaning without breaking the main piping.
4. Valve pressure loss shall not exceed seven feet.
5. Valve shall have 2 pressure and temperature ports.
6. The valve handle shall be fitted with a fine tuning memory stop handle to allow for adjusting the control range.

7. The differential pressure across the automatic balancing valve shall be measured for flow verification and to determine the amount of system over heading or under pumping.
8. Provide pressure and temperature test kit with the ability to read differential pressure from 0 to 75 PSIG, and temperature from -10 to 230°F.

2.03 AIR-CONTROL DEVICES

A. Manual Air Vents:
   1. Body: Bronze body ball valve with stainless steel ball, NPS 1/2.
   2. CWP Rating: 150 psig.
   3. Maximum Operating Temperature: 225 deg F.

B. Automatic Air Vents:
   1. Manufacturers:
      a. Bell & Gossett No. 87.
      b. Spirotherm Spirotap Model VTP.
   2. Body: Brass or bronze.
   3. Internal Parts: Nonferrous.
   4. Operator: Noncorrosive metal float.
   5. Inlet Connection: NPS 1/2.
   6. Discharge Connection: NPS 1/4 or 1/2.
   7. CWP Rating: 150 psig.
   8. Maximum Operating Temperature: 240 deg F.

C. Multi-Purpose Tank – buffer tank, air separator, and hydraulic decoupler:
   1. Manufacturers:
      a. Taco Inc.
      b. Bell & Gossett Series B.
      c. Wessels Tank Company Type NLA.
      d. Amtrol L Series.
   2. Tank: Welded steel, rated for 125-psig working pressure and 270 deg F maximum operating temperature. Factory test after taps are fabricated and supports installed and are labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
   3. Provide with seismic restraint.
   4. Provide four system connections that are arranged on the tank in a manner that hydraulically decouples the central plant from the secondary distribution system.
   5. Provide 3/4" sensing port on shell and four 3/4" system connection sensing ports for system pressure and temperature monitoring.
   6. Air Removal Device: brass air venting chamber to minimize system fluid from fouling venting assembly and allow flushing and purging of dirt without dirt passing thru vent on initial system fill.
   7. Fast-Fill Cock: brass flushing cock to facilitate system fast-fill and removal of the floating impurities from the air system interface withing the separator.
   8. Blow-Down Valve: a full port blow-down valve on bottom of unitto allow blow down and cleaning.

D. Bladder-Type ASME Expansion Tanks:
   1. Manufacturers:
      a. Bell & Gossett Series B.
      b. Wessels Tank Company Type NLA.
      c. Amtrol L Series.
   2. Tank: Welded steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature. Factory test after taps are fabricated and supports installed and are labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
   3. Provide with seismic restraint.
   4. Bladder: Heavy duty Butyl securely sealed into tank to separate air charge from system water to maintain required expansion capacity.

5. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

E. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

F. Coalescing-Type Air and Dirt Separators:
1. Manufacturers:
a. Bell & Gossett Model CRS.
b. Armstrong Model DAS.
c. Amtrol.
2. Tank: Fabricated steel tank; ASME constructed and stamped for 125-psig working pressure and 450 deg F maximum operating temperature.
3. Coalescing Medium: Stainless steel.
4. Air Vent: Threaded to the top of the separator.
5. Inline Inlet and Outlet Connections: Threaded for NPS 2 and smaller; Class 150 flanged connections for NPS 2-1/2 and larger.
6. Blowdown Connection: Threaded to the bottom of the separator.
7. Size: Match system flow capacity.

2.04 STRAINERS

A. Y-Pattern Strainers up to NPS 1.5:
1. Manufacturers:
a. The Metraflex Company.
b. Keckley.
c. Mueller Steam Specialty.
2. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
3. End Connections: Threaded.
4. Strainer Screen: 40 mesh stainless-steel screen.
5. CWP Rating: 125 psig.

B. Y-Pattern Strainers NPS 2 and Larger:
1. Manufacturers:
a. The Metraflex Company Model LPD.
b. Or Engineer approved equal.
2. Y-strainer shall be of low pressure drop design with the following Cv values:
a. 2” Pipe 120
b. 2.5” Pipe 160
c. 3” Pipe 236
d. 4” Pipe 460
e. 6” Pipe 952
f. 8” Pipe 1,580
g. 10” Pipe2,424
h. 12” Pipe3,200
3. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection. Strainer shall be suitable for horizontal and vertical mounting.
4. End Connections: Flanged ends.
5. Strainer Screen: Stainless-steel, screen perforations shall be:
a. For liquid service for NPS 2 – 3, perforation shall be 0.045”
b. For liquid service for NPS 4 – 12, perforation shall be 0.125”
6. Pressure Taps: Provide with inlet and outlet pressure plugs.
7. CWP Rating: 125 psig.

C. Basket Strainers:
1. Manufacturers:
a. The Metraflex Company.
b. Keckley.
c. Mueller Steam Specialty.

2. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
3. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
4. Strainer Basket: Stainless steel material with perforated sides and solid bottom. Basket to be provided with an integral handle for removal and size of perforations to be appropriate for the media. For water service, 2" thru 3" sizes to have .045 perforations, 4" thru 16" to have .125 perforations.
5. CWP Rating: 125 psig.

2.05 CONNECTORS

A. Spherical, Rubber, Flexible Connectors:
   1. Manufacturers:
      a. The Metraflex Company.
      b. Keckley.
      c. Mueller Steam Specialty.
   2. Body: Fiber-reinforced rubber body.
   3. End Connections: Steel flanges drilled to align with Classes 150 and 300 steel flanges.
   4. Performance: Capable of misalignment.
   5. CWP Rating: 150 psig.
   6. Maximum Operating Temperature: 250 deg F.

B. Pump Suction Diffusers:
   1. Manufacturers:
      a. The Metraflex Company Suction Diffuser Flex.
      b. Or Engineer approved equal.
   2. Stainless hose, flexible braid, integral rotational vanes, 90° reducing elbow and flanged connection.
      a. Flexible hose section to be 304 stainless steel, close pitch, annular corrugated hose with a type 304 braided outer covering.
      b. End connections to be ANSI class 150 carbon steel plate flanges.
      c. Overall length to allow for a minimum of 6" intermittent flexing.
   3. Connectors shall be located upstream of the inlet elbow, and incorporate specially designed stationary vanes that impart a rotational motion as the fluid enters the elbow. Vanes to be capable of counteracting elbow induced turbulence, enabling the fluid to negotiate the turn uniformly, and exit with a flat velocity profile.

C. Pump Discharge Connections:
   1. Manufacturers:
      a. The Metraflex Company Vane Flex.
      b. Or Engineer approved equal.
   2. Stainless hose, flexible braid, integral straightening vanes and flanged connection.
      a. Flexible hose section to be 304 stainless steel, close pitch, annular corrugated hose with a type 304 braided outer covering.
      b. End connections to be ANSI class 150 carbon steel plate flanges.
      c. Overall length to allow for a minimum of 6" intermittent flexing.
   3. Connectors shall incorporate internal flow straightening vanes to reduce turbulence prior to the balancing valve. Vanes to be capable of reducing discharge turbulence equal to 5-10 pipe diameters of straight pipe, while allowing full rated movement of the connector.

PART 3 EXECUTION

3.01 VALVE APPLICATIONS

A. Install shutoff-duty valves at each branch connection to supply mains and at supply connection to each piece of equipment.

B. Install pressure independent control valves in the return water line of each cooling element.

C. Install calibrated-orifice, balancing valves in the return pipe of each heating or cooling terminal.

D. Install check valves at each pump discharge and elsewhere as required to control flow direction.

E. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

F. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

3.02 HYDRONIC SPECIALTIES INSTALLATION

A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.

B. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Install manual vents at heat-transfer coils and elsewhere as required for air venting.

C. Install pump suction diffusers at all suction pump connections and pump discharge flexible connections with straightening vanes to relieve pump and piping stresses and straighten flow.

D. Install piping from boiler air separator to expansion tank with a 2 percent upward slope toward tank.

E. Install one coalescing-type air and dirt separator per system. Install blowdown piping with gate or full-port ball valve; extend full size to nearest floor drain.

F. Install expansion tanks on the floor. Vent and purge air from hydronic system, and ensure that tank is properly charged with air to suit system Project requirements.

3.03 TERMINAL EQUIPMENT CONNECTIONS

A. Provide flexible pipe connection to and from terminal, VAV or lab boxes.

B. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.

C. Install control valves in accessible locations close to connected equipment.

D. Install ports for pressure gages and thermometers at coil inlet and outlet connections according to Section 23 05 19 "Meters and Gages for HVAC Piping."

END OF SECTION 23 21 16

SECTION 23 21 23
HYDRONIC PUMPS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Close-coupled, in-line centrifugal pumps.

B. Separately coupled, base-mounted, end-suction centrifugal pumps.

1.02 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.03 DEFINITIONS

A. Buna-N: Nitrile rubber.

B. EPT: Ethylene propylene terpolymer.

1.04 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of pump. Include certified performance curves and rated capacities, operating characteristics, furnished specialties, final impeller dimensions, and accessories for each type of product indicated. Indicate pump's operating point on curves.

C. Shop Drawings: For each pump.
   1. Show pump layout and connections.
   2. Include setting drawings with templates for installing foundation, anchor bolts and other anchorages.
   3. Include diagrams for power, signal, and control wiring.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For pumps to include in emergency, operation, and maintenance manuals.

1.06 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Mechanical Seals: One mechanical seal for each pump.

PART 2 PRODUCTS

2.01 CLOSE-COUPLED, IN-LINE CENTRIFUGAL PUMPS (P-1A, 1B, 3, 4A, 4B AND 6)

A. Manufacturers:
   1. Taco Inc.
   2. Armstrong Pumps, Inc.
   3. Aurora Pumps.
   4. ITT Corporation; Bell & Gossett.
   5. Paco Pumps.

B. Description: Factory-assembled and tested, centrifugal, overhung-impeller, close-coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally or vertically.

C. Pump Construction:
   1. Casing: Radially split, cast iron, with threaded gage tappings at inlet and outlet, replaceable bronze wear rings, and threaded companion-flange connections.
   2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For constant-speed pumps, trim impeller to match specified performance.
   3. Pump Shaft: Steel, with copper-alloy shaft sleeve.
   4. Seal: Packing seal consisting of stuffing box with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
   5. Pump Bearings: Permanently lubricated ball bearings.

D. Motor: Single speed and rigidly mounted to pump casing.
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."
   3. Capacities and Characteristics: Shown in Pump Schedule on Drawings.

2.02 SEPARATELY COUPLED, BASE-MOUNTED, END-SUCTION CENTRIFUGAL PUMPS (P-2 AND P-5)

A. Manufacturers:
   1. Taco Inc.
   2. Armstrong Pumps, Inc.
   3. Aurora Pumps.
   4. ITT Corporation; Bell & Gossett.
   5. Paco Pumps.

B. Description: Factory-assembled and tested, centrifugal, overhung-impeller, separately coupled, end-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for base mounting, with pump and motor shafts horizontal.

C. Pump Construction:
   1. Casing: Radially split, cast iron, with replaceable bronze wear rings, threaded gage tappings at inlet and outlet, drain plug at bottom and air vent at top of volute, and flanged connections. Provide integral mount on volute to support the casing, and provide attached piping to allow removal and replacement of impeller without disconnecting piping or requiring the realignment of pump and motor shaft.
   2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For pumps not frequency-drive controlled, trim impeller to match specified performance.
   3. Pump Shaft: Steel, with copper-alloy shaft sleeve.
   4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless-steel spring, and EPT bellows and gasket.
   5. Seal: Packing seal consisting of stuffing box with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
   6. Pump Bearings: Grease-lubricated ball bearings in cast-iron housing with grease fittings.

D. Shaft Coupling: Molded-rubber insert and interlocking spider capable of absorbing vibration. EPDM coupling sleeve for variable-speed applications.

E. Coupling Guard: Dual rated; ANSI B15.1, Section 8; OSHA 1910.219 approved; steel; removable; attached to mounting frame.

F. Mounting Frame: Welded-steel frame and cross members, factory fabricated from ASTM A 36/A 36M channels and angles. Fabricate to mount pump casing, coupling guard, and motor.

G. Motor: Single speed and rigidly mounted to pump casing.
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."

H. Capacities and Characteristics: Shown in Pump Schedule on Drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine all pumps before installation. Reject pumps that are damaged.

B. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

C. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.

D. Examine foundations and inertia bases for suitable conditions where pumps are to be installed.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PUMP INSTALLATION

A. Comply with HI 1.4.

B. Install pumps to provide access for periodic maintenance including removing motors, impellers, couplings, and accessories.

C. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.

D. Equipment Mounting:
   1. Install base-mounted pumps on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 03 30 00 "Cast-in-Place Concrete."
   2. Comply with requirements for vibration isolation and seismic control devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
   3. Comply with requirements for vibration isolation devices specified in Section 23 05 48.13 "Vibration Controls for HVAC."

E. Equipment Mounting: Install in-line pumps with continuous-thread hanger rods and spring hangers with vertical-limit stop of size required to support weight of in-line pumps.
   1. Comply with requirements for seismic-restraint devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
   2. Comply with requirements for hangers and supports specified in Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment."

3.03 ALIGNMENT

A. Engage a factory-authorized service representative to perform alignment service.

B. Comply with requirements in Hydronics Institute standards for alignment of pump and motor shaft. Add shims to the motor feet and bolt motor to base frame. Do not use grout between motor feet and base frame.

C. Comply with pump and coupling manufacturers' written instructions.

D. Adjust pump and motor shafts for angular and offset alignment by methods specified in HI 1.1-1.5, "Centrifugal Pumps for Nomenclature, Definitions, Application and Operation."
   1. Alignment shall be reverse dial indicator or laser method.
   2. Indicated run-out shall not exceed 0.001 inches.
   3. Angular and offset misalignment shall be as follows:

	Maximum Angularity	Maximum Offset
1200 rpm	0.0015”	0.001”

	Maximum Angularity	Maximum Offset
1800 rpm	0.0010”	0.001”
3600 rpm	0.0005”	0.001”

E. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill baseplate with nonshrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

3.04 CONNECTIONS

A. Comply with requirements for piping specified in Section 23 21 13 "Hydronic Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to pump, allow space for service and maintenance.

C. Connect piping to pumps. Install valves that are same size as piping connected to pumps.

D. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.

E. Install check and shutoff valves on discharge side of pumps. A check valve is not required in a single pump configuration.

F. Install strainer or suction diffuser and shutoff valve on suction side of pumps.

G. Install flexible connectors with vane straighteners on suction and discharge sides of base-mounted pumps between pump casing and valves.

H. Install pressure gages on pump suction and discharge or at integral pressure-gage tapping.

I. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

J. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.05 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. Check piping connections for tightness.
   3. Clean strainers on suction piping.
   4. Perform the following startup checks for each pump before starting:
      a. Verify bearing lubrication.
      b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
      c. Verify that pump is rotating in the correct direction.
   5. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
   6. Start motor.
   7. Open discharge valve slowly.

3.06 DEMONSTRATION

A. Engage a factory-authorized service representative to train Contracting Agency's maintenance personnel to adjust, operate, and maintain hydronic pumps as specified below:
   1. Train University's maintenance personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining pumps.
   2. Review data in maintenance manuals.
   3. Schedule training with Contracting Agency.

END OF SECTION 23 21 23

SECTION 23 25 13

WATER TREATMENT FOR CLOSED-LOOP HYDRONIC SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. The following water treatment for closed-loop hydronic systems:
   1. Automatic chemical-feed equipment.
   2. Chemicals.

1.02 RELATED REQUIREMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.03 DEFINITIONS

A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

B. RO: Reverse osmosis.

C. TSS: Total suspended solids are solid materials, including organic and inorganic, that are suspended in the water. These solids may include silt, plankton, and industrial wastes.

D. MSDS: Material Safety Data Sheets.

1.04 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: Include rated capacities, operating characteristics, and furnished specialties and accessories for the following products:
   1. Bypass feeders.
   2. Water meters.
   3. Inhibitor injection timers.
   4. pH controllers.
   5. TSS controllers.
   6. Chemical solution tanks.
   7. Injection pumps.
   8. Chemical test equipment.
   9. Chemical MSDS.

C. Shop Drawings: Pretreatment and chemical treatment equipment showing tanks, maintenance space required, and piping connections to hydronic systems.
   1. Include plans, elevations, sections, and attachment details.
   2. Include diagrams for power, signal, and control wiring.

1.05 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For components, from manufacturer. (Not needed if provided by SEOR)
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Water Analysis Provider Qualifications: Verification of experience and capability of HVAC water-treatment service provider.

C. Field quality-control reports.

D. Other Informational Submittals:
1. Water-Treatment Program: Written sequence of operation on an annual basis for the application and equipment required to achieve water quality defined in "Performance Requirements" Article.
2. Water Analysis: Illustrate water quality available at Project site.

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For sensors, injection pumps, and controllers to include in emergency, operation, and maintenance manuals.

1.07 QUALITY ASSURANCE

A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.

B. HVAC Water-Treatment Service Provider shall provide 10 years of documented experience if requested.

1.08 MAINTENANCE SERVICE

A. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above to inhibit corrosion and scale formation for hydronic piping and equipment. Services and chemicals shall be provided for a period of one year from date of Substantial Completion and shall include the following:
1. Initial water analysis and HVAC water-treatment recommendations.
2. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.
3. Periodic field service and consultation.
4. Customer report charts and log sheets.
5. Laboratory technical analysis.
6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Nalco.

B. Trident Water Technologies.

C. McKinstry.

D. Garratt-Callahan.

E. Mt. Hood Solutions (formerly CHEMCOA).

2.02 PERFORMANCE REQUIREMENTS

A. Water quality for hydronic systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of hydronic equipment without creating a hazard to operating personnel or the environment.

B. The water treatment program shall include:
1. Pre-treatment clean and flush.
2. Passivation.
3. Inhibitor.

4. For remodel project where only a portion of the building is being renovate, the new supply and return piping shall be isolated from the rest of the facility, pre-treated and flushed and passivated. Once passivation is complete the new piping shall be opened to the existing facility loop to be treated with inhibitor.
    a. Provide temporary chemical feed equipment, piping, valves tanks etc. as required to introduce cleaning, degreasing and chemicals for passivation of the piping system.
    b. Provide temporary pump to circulate the water at a minimum of 5 feet per second.
    c. Coordinate supply and return point of connections indicated on the plans with the mechanical contractor.

C. Design HVAC water treatment program on quality of water available at Project site, hydronic system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.

D. Closed hydronic systems, including heating water and condenser water, shall have the following water qualities:
1. pH: Maintain a value within 9.0 to 10.5.
2. "P" Alkalinity: Maintain a value within 100 to 500 ppm.
3. Boron: Maintain a value within 100 to 200 ppm.
4. Chemical Oxygen Demand: Maintain a maximum value of 100 ppm.
5. Soluble Copper: Maintain a maximum value of 0.20 ppm.
6. TSS: Maintain a maximum value of 10 ppm.
7. Ammonia: Maintain a maximum value of 20 ppm.
8. Free Caustic Alkalinity: Maintain a maximum value of 20 ppm.
9. Microbiological Limits:
    a. Total Aerobic Plate Count: Maintain a maximum value of 1000 organisms/mL.
    b. Total Anaerobic Plate Count: Maintain a maximum value of 100 organisms/mL.
    c. Nitrate Reducers: Maintain a maximum value of 100 organisms/mL.
    d. Sulfate Reducers: Maintain a maximum value of zero organisms/mL.
    e. Iron Bacteria: Maintain a maximum value of zero organisms/mL.

2.03 MANUAL CHEMICAL-FEED EQUIPMENT

A. Bypass Feeders: Steel, with corrosion-resistant exterior coating, minimum 3-1/2-inch fill opening in the top, and NPS 3/4 bottom inlet and top side outlet. Quarter turn or threaded fill cap with gasket seal and diaphragm to lock the top on the feeder when exposed to system pressure in the vessel.
1. Capacity: 5 gal.
2. Minimum Working Pressure: 125 psig.

2.04 AUTOMATIC CHEMICAL-FEED EQUIPMENT

A. Water Meter:
1. AWWA C700, oscillating-piston, magnetic-drive, totalization meter.
2. Body: Bronze.
3. Minimum Working-Pressure Rating: 150 psig.
4. Maximum Pressure Loss at Design Flow: 3 psig.
5. Registration: Gallons.
6. End Connections: Threaded.
7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac; and that will close at adjustable increments of total flow.
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Water Meter:
1. AWWA C701, turbine-type, totalization meter.
2. Body: Bronze.
3. Minimum Working-Pressure Rating: 150 psig.

4. Maximum Pressure Loss at Design Flow: 3 psig.
5. Registration: Gallons.
6. End Connections: Flanged.
7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac; and that will close at adjustable increments of total flow.
8. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Chemical Solution Tanks:
1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.
2. Molded cover with recess for mounting pump.
3. Capacity: 50 gal.

D. Chemical Solution Injection Pumps:
1. Self-priming, positive displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.
2. Adjustable flow rate.
3. Metal and thermoplastic construction.
4. Built-in relief valve.
5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."
6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints except ASTM A 269, Type 304, stainless steel for steam boiler injection assemblies.

F. Injection Assembly:
1. Quill: Minimum NPS 1/2 with insertion length sufficient to discharge into at least 25 percent of pipe diameter.
2. Ball Valve: Two-piece, stainless steel; selected to fit quill.
3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.
4. Assembly Pressure/Temperature Rating: Minimum 600 psig at 200 deg F.

2.05 CHEMICALS

A. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment and that can attain water quality specified in "Performance Requirements" Article.

B. All chemicals and cleaners used shall NOT contain any ammonia-based chemicals, nor any phosphates or phosphorous-based chemicals.
1. Pre-treatment Clean and Flush:
a. Neutral pH product to maintain a pH of 7.0-8.0 in the new piping and coil system. It should not contain any ammonia or phosphate products.
b. Or approved equal
2. Passivator:
a. Chilled Water:
1) pH 8.5 to 10.5.
2) Nitrite at 1,000-1200 ppm.
3) Molybdate at 400 ppm +/- 100-120 ppm.
4) Azole at 40 ppm +/- 10-20 ppm.
5) Or approved equal.
b. Hot Water.
1) pH 8.5 to 10.5.
2) Sodium Nitrite 1,000-1200ppm.

3) Azole at 40 ppm +/- 10-20 ppm.
4) Or approved equal.

3. Inhibitor:
   a. Nitrite based closed circuit corrosion and scale inhibitor.

C. If tied into a thermal energy storage (TES) system, use molybdenum based closed circuit corrosion and scale inhibitor.

PART 3 EXECUTION

3.01 GENERAL

A. If the system is hydrotested before being cleaned and passivated, the hydrotest water shall be city water or its equivalent, and the system shall be cleaned and passivated within three (3) calendar days.

B. The hydronic piping systems must be protected by 30% propylene glycol.

3.02 WATER ANALYSIS

A. Perform an analysis of supply water to determine quality of water available at Project site.

B. Water samples taken during each step shall be analyzed, at least, for the pH, conductivity, copper, iron, total alkalinity, phosphate, total hardness, and chlorides. Additional tests shall be taken as noted in this procedure.

3.03 PREPARATION

A. Hydronic piping test for leaks and defects shall be completed prior to the HVAC water treatment is to begin. If testing is performed in segments, submit separate pressure test report for each segment, complete with diagram of portion of piping tested.

B. Do not enclose, cover, or put piping into operation until it is tested, and satisfactory test results are achieved.

3.04 INSTALLATION

A. Install in accordance with the HVAC Water Treatment Providers recommendations.
   1. Temporary Circulation Pumps
      a. Coordinate with the Mechanical Contractor the configuration of any temporary pumps, chemical feed equipment, valves and piping for the chemical cleaning and passivation.
      b. Provide pumps, piping connections and shut-off valves between HVAC water-treatment equipment and the piping to allow for the circulation of the water treatment at minimum of 5 FPS velocities.
      c. Provide backflow preventers as required for temporary makeup-water fill connections to potable-water systems.
      d. The temporary system shall be operational, filled, started and vented prior to cleaning.
      e. Mechanical Contractor shall coordinate with the Contracting Agency and the Contracting Agency’s existing HVAC Water-Treatment Service Provider to schedule the water treatment and final fill requirements.

B. Install chemical treatment equipment on 4” thick minimum concrete housekeeping pads, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate.

C. Install seismic restraints for equipment and floor-mounting accessories and anchor to building structure. Comply with requirements in Section 23 05 48 "Vibration and Seismic Controls for HVAC" for seismic restraints.

D. Install water testing equipment on wall near water chemical application equipment.

E. Install interconnecting control wiring for chemical treatment controls and sensors.

F. Mount sensors and injectors in piping circuits. Coordinate with mechanical contractor.

3.05 PIPING CONNECTIONS

A. Piping installation requirement are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to equipment, allow space for service and maintenance.

C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified in Section 23 21 13 "Hydronic Piping."

D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Section 23 05 23.11 "Globe Valves for HVAC Piping," Section 23 05 23.12 "Ball Valves for HVAC Piping," Section 23 05 23.13 "Butterfly Valves for HVAC Piping," and Section 23 05 23.15 "Gate Valves for HVAC Piping."

E. Comply with requirements in Section 22 11 19 "Domestic Water Piping Specialties" for backflow preventers required in makeup-water connections to potable-water systems.

3.06 ELECTRICAL CONNECTIONS

A. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.

B. Ground equipment in accordance with Section 26 05 26 "Grounding and Bonding for Electrical Systems."

C. Connect wiring in accordance with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.07 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
   1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
   2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
   3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of hydronic systems' startup procedures.
   4. Do not enclose, cover, or put piping into operation until it is tested, and satisfactory test results are achieved.
   5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
   6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
   7. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
   8. Repair leaks and defects with new materials and retest piping until no leaks exist.

C. Equipment will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

E. At four-week intervals following Substantial Completion, perform separate water analyses on hydronic systems to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water

analysis advising Contracting Agency of changes necessary to adhere to "Performance Requirements" Article.

F. Comply with ASTM D 3370 and with the following standards:
   1. Silica: ASTM D 859.
   2. Acidity and Alkalinity: ASTM D 1067.
   3. Iron: ASTM D 1068.
   4. Water Hardness: ASTM D 1126.

3.08 WATER TREATMENT SEQUENCE

A. Pre-Treatment and Flush
   1. This step should be done within 24-hours of the disinfection procedure.
   2. Isolate existing piping from new piping so as to circulate solution in the newly installed pipe system ONLY.
   3. Contractor shall provide valves and piping as necessary to bypass the existing water systems.
   4. Add sufficient neutral-based cleaner, as recommended by the manufacturer, to the system and/or coils water, and circulate for 24-36 hours at full flow.
   5. Drain and refill and flush the system with city water for at least one (1) hour or until the rinse water is clean of any particulates or oil. Continue the flushing procedure until the water is equivalent to city water.
   6. At the end of the cleaning, take and analyze water samples as noted in the notes section above.

B. Passivation
   1. Start passivation at the end of the cleaning cycle, no longer than six (6) hours later.
   2. Add the passivation chemical to the system and circulate for six (6) hours, but test after two (2) hours for nitrate or molybdate and azole levels to ensure the required levels are reached, as shown in the notes section above. If the levels are below the required levels, then add additional chemicals and retest in another two (2) hours. Repeat until the proper levels are reached. Once the proper levels are reached, circulate for six (6) hours.
   3. At the end of passivation, take and test water samples for the nitrate or molybdate and azole levels.
   4. Once approved, the new system and/or coils may be tied into the campus TES chilled water and/or heating hot water system.

C. Inhibitor
   1. Start inhibitors at the end of the cleaning cycle, no longer than six (6) hours later.
   2. Add the inhibitors chemical to the system and circulate for six (6) hours, but test after two (2) hours inhibitor levels. If the levels are below the required levels, then add additional chemicals and retest in another two (2) hours. Repeat until the proper levels are reached.
   3. After adding inhibitor, take and test water samples for the nitrate or molybdate and azole levels.

D. Once approved, the new system and/or coils may be tied into the campus chilled water and/or heating hot water system.

3.09 RECORDS MANAGEMENT

A. A copy of this procedure shall be kept in the Procedures Manual maintained by the FM Director’s Assistant.

3.10 DEMONSTRATION

A. Engage a factory-authorized service representative to train Contracting Agency's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment.

B. Provide (8) hours of training for the Contracting Agency’s maintenance personnel and video record the training. Provide three DVD copies of the training to the Contracting Agency.

END OF SECTION 23 25 13

This page intentionally left blank

SECTION 23 31 13
METAL DUCTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Single-wall rectangular ducts and fittings.

B. Single-wall round and flat-oval ducts and fittings.

C. Sheet metal materials.

D. Duct liner.

E. Sealant and gaskets.

F. Hangers and supports.

G. Seismic-restraint devices.

1.02 RELATED REQUIREMENTS

A. Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.

B. Section 23 33 00 "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.

1.03 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.04 PERFORMANCE REQUIREMENTS

A. Delegated Duct Design: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, shall comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and performance requirements and design criteria indicated in "Duct Schedule" Article.

B. Structural Performance: Duct hangers and supports and seismic restraints shall withstand the effects of gravity and seismic loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems."
   1. Seismic Hazard Level A: Seismic force to weight ratio, 0.48.

C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

1.05 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of the following products:
   1. Liners and adhesives.
   2. Sealants and gaskets.
   3. Seismic-restraint devices.

C. Shop Drawings:
   1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
   2. Factory- and shop-fabricated ducts and fittings.

3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
4. Elevation of top of ducts.
5. Dimensions of main duct runs from building grid lines.
6. Fittings.
7. Reinforcement and spacing.
8. Seam and joint construction.
9. Penetrations through fire-rated and other partitions.
10. Equipment installation based on equipment being used on Project.
11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
12. Hangers and supports, including methods for duct and building attachment, seismic restraints, and vibration isolation.

D. Delegated-Design Submittal:
1. Sheet metal thicknesses.
2. Joint and seam construction and sealing.
3. Reinforcement details and spacing.
4. Materials, fabrication, assembly, and spacing of hangers and supports.
5. Design Calculations: Calculations, including analysis data signed and sealed by the licensed structural engineer responsible for their preparation for selecting hangers and supports and seismic restraints.

1.06 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
2. Suspended ceiling components.
3. Structural members to which duct will be attached.
4. Size and location of initial access modules for acoustical tile.
5. Penetrations of smoke barriers and fire-rated construction.
6. Items penetrating finished ceiling including the following:
a. Lighting fixtures.
b. Air outlets and inlets.
c. Speakers.
d. Sprinklers.
e. Access panels.
f. Perimeter moldings.

B. Welding certificates.

C. Field quality-control reports.

1.07 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
3. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-up."

C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."

D. Exhaust system shall comply with IMC Chapter 5.

E. ASHRAE/IESNA 90.1 requires leakage testing for representative sections totaling no less than 25 percent of installed duct area for ducts designated to operate at a static-pressure class in excess of 3-inch wg . Consider building a mockup of typical portions of the system that can be tested early in the construction process. This standard, as enforced by some authorities having jurisdiction, requires duct systems with static-pressure classes in excess of 3-inch wg to be identified on Drawings.

PART 2 PRODUCTS

2.01 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS

A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.

B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.02 SINGLE-WALL ROUND AND FLAT-OVAL DUCTS AND FITTINGS

A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.
   1. Factory- or shop-fabricated spiral lock seam duct:
      a. No snap lock.
      b. Factory-fabricated longitudinal seam acceptable for ducts larger than standard factory sizes.
   2. Manufacturers:
      a. United Sheet Metal Division, United McGill.
      b. Semco Manufacturing, Inc.
      c. Or equal.

B. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).

C. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
   1. Transverse Joints in Ducts Larger Than 60 Inches in Diameter: Flanged.

D. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

1. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
2. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.

E. Fittings:
1. Same material and construction as duct in which installed
2. For ductwork exposed to occupant view, do not use fabricated fittings at taps to terminal units and outlets. Instead use saddle tap cut into continuous spiral duct. Intent is for spiral duct to be continuous for aesthetic reasons. Saddle tap flange width shall be 0.5 inches or less.

F. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.03 SHEET METAL MATERIALS

A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
1. General Applications (except as noted below): G60 Galvanized Coating.
2. Plenum Walls and Blank-Offs Where in Contact with Cooling Coil: G90 Galvanized Coating.
3. Exterior Applications: G90 Galvanized Coating.
4. Finishes for Surfaces Exposed to View: Mill phosphatized.

C. PVC-Coated, Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
1. Galvanized Coating Designation: G90
2. Minimum Thickness for Factory-Applied PVC Coating: 4 mils thick on sheet metal surface of ducts and fittings, and minimum 1 mil thick on opposite surface.
3. Coating Materials: Acceptable to authorities having jurisdiction for use on ducts listed and labeled by an NRTL for compliance with UL 181, Class 1.

D. Carbon-Steel Sheets: Comply with ASTM A 1008/A 1008M, with oiled, matte finish for exposed ducts.

E. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304L or 316L, as indicated in the "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish shall be No. 2B, No. 2D, No. 3, or No. 4 as indicated in the "Duct Schedule" Article.

F. Aluminum Sheets: Comply with ASTM B 209 Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.

G. Factory- or Shop-Applied Antimicrobial Coating:
1. Apply to the surface of sheet metal that will form the interior surface of the duct. An untreated clear coating shall be applied to the exterior surface.
2. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
3. Coating containing the antimicrobial compound shall have a hardness of 2H, minimum, when tested according to ASTM D 3363.
4. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
5. Antimicrobial coating on sheet metal is not required for duct containing liner treated with antimicrobial coating.

H. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
   1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.

I. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.04 DUCT LINER

A. Fibrous-Glass Duct Liner: Comply with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      a. CertainTeed Corporation; Insulation Group.
      b. Johns Manville.
      c. Knauf Insulation.
      d. Maximum Thermal Conductivity:
         1) Type I, Flexible: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
         2) Type II, Rigid: 0.23 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
   2. Antimicrobial Erosion-Resistant Coating: Apply to the surface of the liner that will form the interior surface of the duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
   3. Water-Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C 916.
      a. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
      b. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. Flexible Elastomeric Duct Liner: Preformed, cellular, closed-cell, sheet materials complying with ASTM C 534, Type II, Grade 1; and with NFPA 90A or NFPA 90B.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      a. Armacell LLC.
      b. Aeroflex USA Inc.
      c. Rubatex International, LLC.
   2. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
   3. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
      a. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
      b. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Insulation Pins and Washers:
   1. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch-diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.

2. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick stainless steel; with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

D. Shop Application of Duct Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 7-11, "Flexible Duct Liner Installation."
   1. Adhere a single layer of indicated thickness of duct liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
   2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
   3. Butt transverse joints without gaps, and coat joint with adhesive.
   4. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.
   5. Do not apply liner in rectangular ducts with longitudinal joints, except at corners of ducts, unless duct size and dimensions of standard liner make longitudinal joints necessary.
   6. Apply adhesive coating on longitudinal seams in ducts with air velocity of 2500 fpm.
   7. Secure liner with mechanical fasteners 4 inches from corners and at intervals not exceeding 12 inches transversely; at 3 inches from transverse joints and at intervals not exceeding 18 inches longitudinally.
   8. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:
      a. Fan discharges.
      b. Intervals of lined duct preceding unlined duct.
      c. Upstream edges of transverse joints in ducts where air velocities are higher than 2500 fpm or where indicated.
   9. Secure insulation between perforated sheet metal inner duct of same thickness as specified for outer shell. Use mechanical fasteners that maintain inner duct at uniform distance from outer shell without compressing insulation.
      a. Sheet Metal Inner Duct Perforations: 3/32-inch diameter, with an overall open area of 23 percent.
   10. Terminate inner ducts with buildouts attached to fire-damper sleeves, dampers, turning vane assemblies, or other devices. Fabricated buildouts (metal hat sections) or other buildout means are optional; when used, secure buildouts to duct walls with bolts, screws, rivets, or welds.

2.05 SEALANT AND GASKETS

A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.

B. Two-Part Tape Sealing System:
   1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
   2. Tape Width: 3 inches.
   3. Sealant: Modified styrene acrylic.
   4. Water resistant.
   5. Mold and mildew resistant.
   6. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
   7. Service: Indoor and outdoor.
   8. Service Temperature: Minus 40 to plus 200 deg F.
   9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.

10. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
11. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Water-Based Joint and Seam Sealant:
1. Application Method: Brush on.
2. Solids Content: Minimum 65 percent.
3. Shore A Hardness: Minimum 20.
4. Water resistant.
5. Mold and mildew resistant.
6. VOC: Maximum 75 g/L (less water).
7. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
8. Service: Indoor or outdoor.
9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

D. Solvent-Based Joint and Seam Sealant:
1. Application Method: Brush on.
2. Base: Synthetic rubber resin.
3. Solvent: Toluene and heptane.
4. Solids Content: Minimum 60 percent.
5. Shore A Hardness: Minimum 60.
6. Water resistant.
7. Mold and mildew resistant.
8. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
9. VOC: Maximum 395 g/L.
10. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
11. Maximum Static-Pressure Class: 10-inch wg, positive or negative.
12. Service: Indoor or outdoor.
13. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

E. Flanged Joint Sealant: Comply with ASTM C 920.
1. General: Single-component, acid-curing, silicone, elastomeric.
2. Type: S.
3. Grade: NS.
4. Class: 25.
5. Use: O.
6. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

F. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

G. Round Duct Joint O-Ring Seals:
1. Seal shall provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg and shall be rated for 10-inch wg static-pressure class, positive or negative.
2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.

3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

2.06 HANGERS AND SUPPORTS

A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.

B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.

C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."

D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.

E. Steel Cables for Stainless-Steel Ducts: Stainless steel complying with ASTM A 492.

F. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.

G. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

H. Trapeze and Riser Supports:
1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
2. Supports for Stainless-Steel Ducts: Stainless-steel shapes and plates.
3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

2.07 SEISMIC-RESTRAINT DEVICES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
1. Hilti Corp.
2. TOLCO; a brand of NIBCO Inc.
3. Unistrut Corporation; Tyco International, Ltd.

B. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by the Office of Statewide Health Planning and Development for the State of California.

C. Channel Support System: Shop- or field-fabricated support assembly made of slotted steel channels rated in tension, compression, and torsion forces and with accessories for attachment to braced component at one end and to building structure at the other end. Include matching components and corrosion-resistant coating.

D. Restraint Cables: ASTM A 603, galvanized-steel cables with end connections made of cadmium-plated steel assemblies with brackets, swivel, and bolts designed for restraining cable service; and with an automatic-locking and clamping device or double-cable clips.

E. Hanger Rod Stiffener: Reinforcing steel angle or channel unistrut clamped to hanger rod.

F. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

PART 3 EXECUTION

3.01 DUCT INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.

B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.

C. Install round and flat-oval ducts in maximum practical lengths.

D. Install ducts with fewest possible joints.

E. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.

F. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.

G. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.

H. Install ducts with a clearance of 1 inch, plus allowance for insulation thickness.

I. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.

J. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.

K. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers as required by NFPA 90A. Comply with requirements in Section 23 33 00 "Air Duct Accessories" for fire and smoke dampers.

L. Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA's "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."

3.02 INSTALLATION OF EXPOSED DUCTWORK

A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.

B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.

C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.

D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.

E. Repair or replace damaged sections and finished work that does not comply with these requirements.

F. Seal ductwork with clear sealant in office areas.

3.03 DUCT SEALING

A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

B. Seal ducts to the following seal classes according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":
   1. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
   2. Outdoor, Supply-Air Ducts: Seal Class A.
   3. Outdoor, Exhaust Ducts: Seal Class B.
   4. Outdoor, Return-Air Ducts: Seal Class A.
   5. Unconditioned Space, Supply-Air Ducts in Pressure Classes 1-Inch wg and Lower: Seal Class B.
   6. Unconditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 1-Inch wg: Seal Class A.
   7. Unconditioned Space, Exhaust Ducts: Seal Class B.
   8. Unconditioned Space, Return-Air Ducts: Seal Class A.

9. Conditioned Space, Supply-Air Ducts in Pressure Classes 1-Inch wg and Lower: Seal Class B.
10. Conditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 1-Inch wg: Seal Class A.
11. Conditioned Space, Exhaust Ducts: Seal Class A.
12. Conditioned Space, Return-Air Ducts: Seal Class A.

3.04 HANGER AND SUPPORT INSTALLATION

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."

B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
   1. Where practical, install concrete inserts before placing concrete.
   2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
   3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches thick.
   4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
   5. Do not use powder-actuated concrete fasteners for seismic restraints.

C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.

D. Hangers Exposed to View: Threaded rod and angle or channel supports.

E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum interval of 16 feet.

F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.05 SEISMIC-RESTRAINT-DEVICE INSTALLATION

A. Install ducts with hangers and braces designed to support the duct and to restrain against seismic forces required by applicable building codes. Comply with SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems."
   1. Space lateral supports a maximum of 40 feet o.c., and longitudinal supports a maximum of 80 feet o.c.
   2. Brace a change of direction longer than 12 feet.

B. Select seismic-restraint devices with capacities adequate to carry present and future static and seismic loads.

C. Install cables so they do not bend across edges of adjacent equipment or building structure.

D. Install cable restraints on ducts that are suspended with vibration isolators.

E. Install seismic-restraint devices using methods approved by an evaluation service member of the ICC Evaluation Service.

F. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure, to flanges of beams, to upper truss chords of bar joists, or to concrete members.

G. Drilling for and Setting Anchors:
   1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcement or embedded items during drilling. Notify the Architect if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.

2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Set anchors to manufacturer's recommended torque, using a torque wrench.
5. Install zinc-coated steel anchors for interior applications and stainless-steel anchors for applications exposed to weather.

3.06 CONNECTIONS

A. Make connections to equipment with flexible connectors complying with Section 23 33 00 "Air Duct Accessories."

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.07 PAINTING

A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Section 09 90 00 "Painting and Coating."

3.08 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Leakage Tests:
   1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test.
   2. Test the following systems:
      a. Ducts with a Pressure Class Higher Than 3-Inch wg: Test representative duct sections, selected by Engineer from sections installed, totaling no less than 25 percent of total installed duct area for each designated pressure class.
   3. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
   4. Test for leaks before applying external insulation.
   5. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
   6. Give seven days advance notice for testing.

C. Duct System Cleanliness Tests:
   1. Visually inspect duct system to ensure that no visible contaminants are present.

D. Contractor shall develop and implement an IAQ Management Plan for the construction and pre-occupancy phases of the building as follows:
   1. During construction meet or exceed the recommended control measures of the Sheet Metal and Air Conditioning National Contractors Association (SMACNA) IAQ Guidelines for Occupied Buildings Under Construction, and Edition 2007, ANSI/SMACNA 008-2008 (Chapter 3).
   2. Protect stored materials on-site and installed absorptive materials from moisture damage.
   3. If permanently installed air handlers are used during construction, then filtration media with a minimum efficiency reporting value (MERV) of 8 must be used at each return air grille, as determined by ASHRAE Standard 52.2-2012 (with errata, but without addenda). Replace air filtration media immediately prior to occupancy.

E. Duct system will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.09 DUCT CLEANING

A. Clean new duct system(s) before testing, adjusting, and balancing.

B. Use service openings for entry and inspection.
   1. Create new openings and install access panels appropriate for duct static-pressure class if required for cleaning access. Provide insulated panels for insulated or lined duct. Patch insulation and liner as recommended by duct liner manufacturer. Comply with Section 23 33 00 "Air Duct Accessories" for access panels and doors.
   2. Disconnect and reconnect flexible ducts as needed for cleaning and inspection.
   3. Remove and reinstall ceiling to gain access during the cleaning process.

C. Particulate Collection and Odor Control:
   1. When venting vacuuming system inside the building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron-size (or larger) particles.
   2. When venting vacuuming system to outdoors, use filter to collect debris removed from HVAC system, and locate exhaust downwind and away from air intakes and other points of entry into building.

D. Clean the following components by removing surface contaminants and deposits:
   1. Air outlets and inlets (registers, grilles, and diffusers).
   2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
   3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
   4. Coils and related components.
   5. Return-air ducts, dampers, actuators, and turning vanes except in ceiling plenums and mechanical equipment rooms.
   6. Supply-air ducts, dampers, actuators, and turning vanes.
   7. Dedicated exhaust and ventilation components and makeup air systems.

E. Mechanical Cleaning Methodology:
   1. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
   2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
   3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
   4. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
   5. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
   6. Provide drainage and cleanup for wash-down procedures.
   7. Antimicrobial Agents and Coatings: Apply EPA-registered antimicrobial agents if fungus is present. Apply antimicrobial agents according to manufacturer's written instructions after removal of surface deposits and debris.

3.10 START UP

A. Air Balance: Comply with requirements in Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC."

3.11 DUCT SCHEDULE

A. Fabricate ducts with galvanized sheet steel except as otherwise indicated.

B. Supply Ducts:
   1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:
      a. Pressure Class: Positive 1-inch wg.
      b. Minimum SMACNA Seal Class: B.
      c. SMACNA Leakage Class for Rectangular: 8.
      d. SMACNA Leakage Class for Round and Flat Oval: 4.
   2. Ducts Connected to Constant-Volume Air-Handling Units:
      a. Pressure Class: Positive 3-inch wg.
      b. Minimum SMACNA Seal Class: A.
      c. SMACNA Leakage Class for Rectangular: 4.
      d. SMACNA Leakage Class for Round and Flat Oval: 2.
   3. Ducts Connected to Equipment Not Listed Above:
      a. Pressure Class: Positive 2-inch wg.
      b. Minimum SMACNA Seal Class: A.
      c. SMACNA Leakage Class for Rectangular: 4.
      d. SMACNA Leakage Class for Round and Flat Oval: 2.

C. Return Ducts:
   1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:
      a. Pressure Class: Positive or negative 1-inch wg.
      b. Minimum SMACNA Seal Class: B.
      c. SMACNA Leakage Class for Rectangular: 8.
      d. SMACNA Leakage Class for Round and Flat Oval: 4.
   2. Ducts Connected to Air-Handling Units:
      a. Pressure Class: Positive or negative 3-inch wg.
      b. Minimum SMACNA Seal Class: A.
      c. SMACNA Leakage Class for Rectangular: 4.
      d. SMACNA Leakage Class for Round and Flat Oval: 2.
   3. Ducts Connected to Equipment Not Listed Above:
      a. Pressure Class: Positive or negative 2-inch wg.
      b. Minimum SMACNA Seal Class: A.
      c. SMACNA Leakage Class for Rectangular: 4.
      d. SMACNA Leakage Class for Round and Flat Oval: 2.

D. Exhaust Ducts:
   1. Ducts Connected to Fans Exhausting (ASHRAE 62.1, Class 1 and 2) Air:
      a. Pressure Class: Negative 2-inch wg.
      b. Minimum SMACNA Seal Class: B if negative pressure, and A if positive pressure.
      c. SMACNA Leakage Class for Rectangular: 4.
      d. SMACNA Leakage Class for Round and Flat Oval: 2.
   2. Ducts Connected to Air-Handling Units:
      a. Pressure Class: Positive or negative 3-inch wg.
      b. Minimum SMACNA Seal Class: A.
      c. SMACNA Leakage Class for Rectangular: 4.
      d. SMACNA Leakage Class for Round and Flat Oval: 2.
   3. Ducts Connected to Fans Exhausting Laboratory and Process (ASHRAE 62.1, Class 3 and 4) Air:
      a. Type 316L, stainless-steel sheet.
         1) Exposed to View: No. 4 finish.
         2) Concealed: No. 2D finish.
      b. PVC-coated, galvanized sheet steel with thicker coating on duct interior.

c. Pressure Class: Positive or negative 4-inch wg.
d. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
e. SMACNA Leakage Class: 3.

4. Ducts Connected to Equipment Not Listed Above:
a. Pressure Class: Positive or negative 3-inch wg.
b. Minimum SMACNA Seal Class: A if positive pressure.
c. SMACNA Leakage Class for Rectangular: 4.
d. SMACNA Leakage Class for Round and Flat Oval: 2.

E. Outdoor-Air (Not Filtered, Heated, or Cooled) Ducts:
1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:
a. Pressure Class: Positive or negative 2-inch wg.
b. Minimum SMACNA Seal Class: A.
c. SMACNA Leakage Class for Rectangular: 4.
d. SMACNA Leakage Class for Round and Flat Oval: 2.
2. Ducts Connected to Air-Handling Units:
a. Pressure Class: Positive or negative 2-inch wg.
b. Minimum SMACNA Seal Class: A.
c. SMACNA Leakage Class for Rectangular: 4.
d. SMACNA Leakage Class for Round and Flat Oval: 2.
3. Ducts Connected to Equipment Not Listed Above:
a. Pressure Class: Positive or negative 2-inch wg.
b. Minimum SMACNA Seal Class: A.
c. SMACNA Leakage Class for Rectangular: 4.
d. SMACNA Leakage Class for Round and Flat Oval: 2.

F. Liner:
1. Supply Air Ducts: Fibrous glass, Type I, 1-1/2 inches thick.
2. Return Air Ducts: Fibrous glass, Type I, 1 inch thick.
3. Transfer Ducts: Fibrous glass, Type I, 1 inch thick.

G. Double-Wall Duct Interstitial Insulation:
1. Supply Air Ducts: 2 inches thick.
2. Return Air Ducts: 2 inches thick.
3. Exhaust Air Ducts: 2 inches thick.

H. Elbow Configuration:
1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
a. Velocity 1000 fpm or Lower:
1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
2) Mitered Type RE 4 with single-thickness turning vanes.
b. Velocity 1000 to 1500 fpm:
1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
2) Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and single-thickness turning vanes.
3) Mitered Type RE 2 with single-thickness vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
c. Velocity 1500 fpm or Higher:
1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
2) Radius Type RE 3 with minimum 1.5 radius-to-diameter ratio and single-thickness turning vanes.

3) Mitered Type RE 2 with single-thickness vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."

2. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
   a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
   b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and single-thickness turning vanes.
   c. Mitered Type RE 2 with single-thickness vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
3. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
   a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
      1) Velocity 1000 fpm or Lower: 1.0 radius-to-diameter ratio and three segments for 90-degree elbow.
      2) Velocity 1000 to 1500 fpm: 1.5 radius-to-diameter ratio and four segments for 90-degree elbow.
      3) Velocity 1500 fpm or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow.
      4) Radius-to Diameter Ratio: 1.5.
   b. Round Elbows, 10 Inches and Smaller in Diameter: Stamped or pleated.
   c. Round Elbows, 12 Inches and Larger in Diameter: Welded.

I. Branch Configuration:
   1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."
      a. Rectangular Main to Rectangular Branch: 45-degree entry.
      b. Rectangular Main to Round Branch: Spin in.
   2. Taps shall be the more stringent of what is shown on the mechanical drawings and the criteria listed below. Round and Flat Oval: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees." Saddle taps are permitted in existing duct.
      a. Velocity 900 fpm or Lower: 90-degree tap.
      b. Velocity 901 to 1500 fpm: Conical tap.
      c. Velocity 1501 fpm or Higher: 45-degree lateral.

END OF SECTION 23 31 13

This page intentionally left blank

SECTION 23 33 00
AIR DUCT ACCESSORIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Backdraft and pressure relief dampers.

B. Barometric relief dampers.

C. Manual volume dampers.

D. Combination fire and smoke dampers.

E. Flange connectors.

F. Remote damper operators.

G. Duct-mounted access doors.

H. Flexible connectors.

I. Duct accessory hardware.

1.02 RELATED REQUIREMENTS

A. Section 23 33 46 "Flexible Ducts" for insulated and non-insulated flexible ducts.

B. Section 23 37 23 "HVAC Gravity Ventilators" for roof-mounted ventilator caps.

C. Section 28 46 21.11 "Addressable Fire-Alarm Systems" for duct-mounted fire and smoke detectors.

1.03 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.04 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of product.
   1. For duct silencers, include pressure drop and dynamic insertion loss data. Include breakout noise calculations for high transmission loss casings.

C. Sustainable Design Submittals:
   1. Product data showing compliance with ASHRAE 62.1.

D. Shop Drawings: For duct accessories. Include plans, elevations, sections, details and attachments to other work.
   1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
      a. Special fittings.
      b. Manual volume damper installations.
      c. Combination fire- and smoke-damper, including sleeves; and duct-mounted access doors and remote damper operators.

1.05 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from Installers of the items involved.

B. Source quality-control reports.

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.

1.07 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Fusible Links: Furnish quantity equal to 10 percent of amount installed.

PART 2 PRODUCTS

2.01 ASSEMBLY DESCRIPTION

A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

2.02 MATERIALS

A. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
   1. Galvanized Coating Designation: G60.
   2. Exposed-Surface Finish: Mill phosphatized.

B. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304, and having a No. 2D finish for concealed ducts and No. 4 finish for exposed ducts.

C. Aluminum Sheets: Comply with ASTM B 209, Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.

D. Extruded Aluminum: Comply with ASTM B 221, Alloy 6063, Temper T6.

E. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.

F. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.03 BACKDRAFT AND PRESSURE RELIEF DAMPERS

1. Manufactures shall be Ruskin, Greenheck or equal.

B. Frame: 8 inches x minimum 0.125 inch 6063-T5 extruded aluminum channel with front flange and galvanized steel braces at mitered corners.

C. Blades:
   1. Style: 2V.
   2. Action: Parallel.
   3. Orientation: Horizontal.
   4. Material: Minimum 0.070 inch 6063-T5 extruded aluminum.
   5. Width: Maximum 6 inches.

D. Bearings: Galvanized Steel Ball Axle Bearings.

E. Blade Seals: Extruded vinyl, mechanically attached to blade edge.

F. Linkage: External heavy duty type with steel clevis arms and plated steel tie bars & pivot pins with nylon pivot bearings.

G. Axles: Galvanized steel.

H. Counterbalances: Adjustable externally mounted counterbalance weights mechanically attached to blade enabling damper to operate over wide range of pressures.

I. Finish: Mill aluminum.

J. Performance Data:
   1. Temperature Rating: Withstand -20° to 180°F.
   2. Capacity: Demonstrate capacity of damper to withstand HVAC system operating conditions.
      a. Closed Position: Maximum differential pressure of 5 inches w.g..
      b. Open Position: Maximum air velocity of 3,900 feet per minute.
   3. Pressure Drop: Maximum 0.3 inch w.g. at 10,000 CFM through 36 inch x 36 inch damper.

2.04 BAROMETRIC RELIEF DAMPERS

A. Manufactures shall be Ruskin, Greenheck or equal.

B. Construction:
   1. Frame: Damper frame shall be 16 ga. Galvanized steel. Aluminum or 304 stainless steel is an option.
   2. Blades: Damper blades shall be a minimum 0.063 inch thick aluminum.
   3. Blade Stops: Each blade stop (at top and bottom of damper frame) shall occupy no more than 3 1/2” of the damper opening area to allow for maximum free area and to minimize pressure loss across the damper.
   4. Seals:
   5. Blade Edge: Vinyl is standard. None is an option.
   6. Jamb: None is standard. EPDM is an option.
   7. Linkage: External, steel tie bars
   8. Axles: Plated steel stub axles are standard. Stainless steel is optional.
   9. Bearings: Galvanized steel press fit. Acetal with stainless steel ball is optional
   10. Finish: Mill finish. Paint coatings are optional.
   11. Counterbalance: Blade mounted with adjustable weights.

2.05 MANUAL VOLUME DAMPERS

A. Fabricate in accordance with SMACNA Low Pressure Duct Construction Standards, and as indicated.

B. Fabricate splitter dampers of material same gage as duct to 24 inches size in either direction, and two gages heavier for sizes over 24 inches.

C. Fabricate splitter dampers of single thickness sheet metal to streamline shape. Secure blade with continuous hinge or rod. Operate with minimum 1/4 inch diameter rod in self aligning, universal joint action flanged bushing with set screw.

D. Fabricate single blade dampers for duct sizes to 12 x 48 inch.

E. Fabricate multi-blade damper of opposed blade pattern with maximum blade sizes 12 x 72 inch. Assemble center and edge crimped blades in prime coated or galvanized channel frame with suitable hardware.

F. Except in round ductwork 12 inches and smaller, provide end bearings. On multiple blade dampers, provide oil-impregnated nylon or sintered bronze bearings.

G. Provide locking, indicating quadrant regulators on single and multi-blade dampers. Where rod lengths exceed 30 inches provide regulator at both ends.

H. On insulated ducts mount quadrant regulators on stand-off mounting brackets, bases, or adapters.

2.06 COMBINATION FIRE AND SMOKE DAMPERS

A. Manufacturers:
   1. Greenheck Type FSD-212 or equal for 1500 feet per minute and below.
   2. Greenheck Type FSD-311 or equal for above 1500 feet per minute.
   3. Or equal by Ruskin or Pottoff.

B. Combination Smoke/Fire Dampers shall be furnished and installed at all locations shown on the plans and/or as described on the drawing details and suitable for closure against duct operating pressure up to Design Static Pressure class.

C. Damper shall meet the requirements of NFPA 90A, 92A, and 92B and further shall be tested, rated and labeled in accordance with the latest edition on UL Standard 555 and 555S. Dampers shall be UL rated per the CBC 717.3.1.

D. Damper shall be of low leakage design qualified to UL 555S Leakage Class II.
   1. Damper actuator combination shall have a UL 555S elevated temperature rating of 350 degrees Fahrenheit minimum and shall be operational and dynamic rated to operate at maximum design airflow rate at its installed location.
   2. Damper shall be supplied with an appropriate actuator installed by the damper manufacturer at the time of damper fabrication. Damper actuator shall be electric type for 120-volt operation.
   3. Damper blades shall be 16-gauge galvanized steel 3 Vee type with three longitudinal grooves for reinforcement. Damper frame shall be galvanized steel formed into a structural hat channel shape with reinforced corners. Bearing shall be sintered bronze sleeve type rotating in extruded holes in the damper frame. Blade seals shall be silicone rubber designed to inflate and provide a tighter seal against leakage as pressure on either side of the damper increases. Jamb seals shall be stainless steel compression type with silicone rubber backing. Blades shall be completely symmetrical relative to their axle pivot point, presenting identical resistance to airflow in either direction or pressure on either side of the damper.
   4. Damper must be rated for mounting vertically (with blades running horizontally) or horizontally and be UL 555S rated for leakage and airflow in either direction through the damper.
   5. Damper shall be supplied with a 165-degree Fahrenheit fusible link. Provide access doors at either side of the combination smoke/fire damper for viewing of the fusible links.
   6. The specified combination smoke/fire damper shall meet the requirements for fire dampers, smoke dampers and combination fire smoke dampers established by:
   7. National Fire Protection Association NFPA Standard 90A, 92A, 92B and 101
   8. Underwriters Laboratories Standard 555 Listing #R-13317
   9. Underwriters Laboratories Standard 555S Listing #R-13447
   10. California State Fire Marshall CSFM Fire Damper Listing #3225-0981:103
   11. California State Fire Marshall CSFM Leakage Smoke Damper Listing #3230-0981:104
   12. Smoke Detector will be provided by the electrical contractor to be compatible with the fire alarm system. Mechanical contractor shall install all duct-mounted smoke detectors. Electrical contractor shall connect smoke detector to smoke dampers and fire alarm panel. After installation is complete, electrical contractor shall test and verify that smoke detectors are active and functional.

2.07 FLANGE CONNECTORS

A. Manufacturer shall be Ductmate, CL WARD, or equal.

B. Description: Add-on or roll-formed, factory-fabricated, slide-on transverse flange connectors, gaskets, and components.

C. Material: Galvanized steel.

D. Gage and Shape: Match connecting ductwork.

2.08 REMOTE DAMPER OPERATORS

A. Manufacturer shall be Young Regulator, Pottorff or equal.

B. Description: Cable system designed for remote manual damper adjustment.

C. Tubing: Brass.

D. Cable: Stainless steel.

E. Wall-Box Mounting: Recessed.

F. Wall-Box Cover Plate Material: Stainless Steel.

2.09 DUCT-MOUNTED ACCESS DOORS

A. Manufacturers shall be Ventfrabrics, Ductmate, Pottorf Company or equal.

B. Fabricate in accordance with SMACNA Low Pressure Duct Construction Standards and as indicated.

C. Review locations prior to fabrication.

D. Fabricate rigid and close-fitting doors of galvanized steel with sealing gaskets and quick fastening locking devices. For insulated ductwork, install minimum one inch thick insulation with sheet metal cover.

E. Access doors smaller than 12 inches square may be secured with sash locks.

F. Provide two hinges and two sash locks for sizes up to 18 inches square, three hinges and two compression latches with outside and inside handles for sizes up to 24 x 48 inches. Provide an additional hinge for larger sizes.

G. Access doors with sheet metal screw fasteners are not acceptable.

2.10 FLEXIBLE CONNECTORS

A. Manufacturer: Ventfrabrics, Duro Dyne or equal.

B. Materials: Flame-retardant or noncombustible fabrics.

C. Coatings and Adhesives: Comply with UL 181, Class 1.

D. Metal-Edged Connectors: Factory fabricated with a fabric strip 3-1/2 inches wide attached to two strips of 2-3/4-inch- wide, 0.028-inch- thick, galvanized sheet steel or 0.032-inch thick aluminum sheets. Provide metal compatible with connected ducts.

E. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.
   1. Minimum Weight: 26 oz./sq. yd.
   2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
   3. Service Temperature: Minus 40 to plus 200 deg F.

F. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.
   1. Minimum Weight: 24 oz./sq. yd.
   2. Tensile Strength: 530 lbf/inch in the warp and 440 lbf/inch in the filling.
   3. Service Temperature: Minus 50 to plus 250 deg F.

G. High-Corrosive-Environment System, Flexible Connectors: Glass fabric with chemical-resistant coating.
   1. Minimum Weight: 14 oz./sq. yd.
   2. Tensile Strength: 450 lbf/inch in the warp and 340 lbf/inch in the filling.
   3. Service Temperature: Minus 67 to plus 500 deg F.

H. Thrust Limits: Combination coil spring and elastomeric insert with spring and insert in compression, and with a load stop. Include rod and angle-iron brackets for attaching to fan discharge and duct.
   1. Frame: Steel, fabricated for connection to threaded rods and to allow for a maximum of 30 degrees of angular rod misalignment without binding or reducing isolation efficiency.

2. Outdoor Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
7. Coil Spring: Factory set and field adjustable for a maximum of 1/4-inch movement at start and stop.

2.11 DUCT ACCESSORY HARDWARE

A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.

B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.

B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.

C. Compliance with ASHRAE/IESNA 90.1-2004 includes Section 6.4.3.3.3 - "Shutoff Damper Controls," restricts the use of backdraft dampers, and requires control dampers for certain applications. Install control dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.

D. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
   1. Install steel volume dampers in steel ducts.
   2. Install aluminum volume dampers in aluminum ducts.

E. Set dampers to fully open position before testing, adjusting, and balancing.

F. Install test holes at fan inlets and outlets and elsewhere as indicated.

G. Install fire and smoke dampers according to UL listing.

H. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
   1. On both sides of duct coils.
   2. At outdoor-air intakes and mixed-air plenums.
   3. At drain pans and seals.
   4. Downstream from backdraft dampers.
   5. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
   6. At each change in direction and at maximum 50-foot spacing.
   7. Upstream or downstream from duct silencers.
   8. Control devices requiring inspection.
   9. Elsewhere as indicated.

I. Install access doors with swing against duct static pressure.

J. Access Door Sizes:
   1. One-Hand or Inspection Access: 8 by 5 inches
   2. Two-Hand Access: 12 by 6 inches
   3. Head and Hand Access: 18 by 10 inches
   4. Head and Shoulders Access: 21 by 14 inches
   5. Body Access: 25 by 14 inches
   6. Body plus Ladder Access: 25 by 17 inches

K. Label access doors according to Section 23 05 53 "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.

L. Install flexible connectors to connect ducts to equipment.

M. For fans developing static pressures of 5-inch wg and more, cover flexible connectors with loaded vinyl sheet held in place with metal straps.

N. Where indicated on Drawings, connect diffusers or light troffer boots to ducts directly or with maximum 60-inch lengths of flexible duct clamped or strapped in place.

O. Connect flexible ducts to metal ducts with draw bands.

P. Install duct test holes where required for testing and balancing purposes.

Q. Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of 1/4-inch movement during start and stop of fans.

3.02 FIELD QUALITY CONTROL

A. Tests and Inspections:
   1. Operate dampers to verify full range of movement.
   2. Inspect locations of access doors and verify that purpose of access door can be performed.
   3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
   4. Inspect turning vanes for proper and secure installation.
   5. Operate remote damper operators to verify full range of movement of operator and damper.

END OF SECTION 23 33 00

This page intentionally left blank

SECTION 23 34 23
HVAC FANS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Utility set fans.

B. Centrifugal roof ventilators.

C. Centrifugal wall ventilators.

1.02 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.03 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Also include the following:
   1. Certified fan performance curves with system operating conditions indicated.
   2. Certified fan sound-power ratings.
   3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
   4. Material thickness and finishes, including color charts.
   5. Dampers, including housings, linkages, and operators.
   6. Roof curbs.
   7. Fan speed controllers.

C. Shop Drawings:
   1. Include plans, elevations, sections, and attachment details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include diagrams for power, signal, and control wiring.

1.04 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For HVAC fans to include in emergency, operation, and maintenance manuals.

1.06 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Belts: One set(s) for each belt-driven unit.

1.07 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. AMCA Compliance: Fans shall have AMCA-Certified performance ratings and shall bear the AMCA-Certified Ratings Seal.

C. UL Standards: HVAC fans shall comply with UL 705. HVAC fans for use for restaurant kitchen exhaust shall also comply with UL 762.

1.08 COORDINATION

A. Coordinate size and location of structural-steel support members.

B. Coordinate sizes and locations of concrete bases with actual equipment provided.

C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

D. Provide access around equipment as specified on plans and/or according to manufacturer’s requirements.

1.09 WARRANTY

A. Manufacturer's Warranty: Submit, for Contracting Agency's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to, and not a limitation of, other rights Contracting Agency may have under Contract Documents

B. The warranty of this equipment is to be free from defects in material and workmanship for a period of one year from the purchase date. Any units or parts which prove defective during the warranty period will be replaced at the Manufacturers option when returned to Manufacturer, transportation prepaid.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Unusual Service Conditions
   1. Base fan-performance ratings on the following:
      a. Ambient Temperature: 70 deg F.
      b. Altitude: 0 feet above sea level.

B. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design vibration isolation and seismic restraints, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

C. Seismic Performance: HVAC power ventilators shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
   2. Component Importance Factor: 1.0.

2.02 UTILITY SET FANS

A. Manufacturers:
   1. Greenheck Fan Company.
   2. Loren Cook Company.
   3. PennBarry
   4. Twin City Fans

B. Housing: Fabricated of galvanized steel with side sheets fastened with a deep lock seam or welded to scroll sheets.
   1. Housing Discharge Arrangement: Adjustable to eight standard positions.

C. Fan Wheels: Single-width, single inlet; welded to cast-iron or cast-steel hub and spun-steel inlet cone, with hub keyed to shaft.
   1. Blade Materials: Steel.
   2. Blade Type: Backward inclined.
   3. Spark-Resistant Construction: AMCA 99, Type B.

D. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.

E. Shaft Bearings: Prelubricated and sealed, self-aligning, pillow-block-type ball bearings with ABMA 9, L_{50} of 200,000 hours.
   1. Extend grease fitting to accessible location outside of unit.

F. Belt Drives:
   1. Factory mounted, with final alignment and belt adjustment made after installation
   2. Service Factor Based on Fan Motor Size: 1.5.
   3. Motor Pulleys: Adjustable pitch for use with motors through 5 hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
   4. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
   5. Belt Guards: Fabricate of steel for motors mounted on outside of fan cabinet.

G. Accessories:
   1. Inlet and Outlet: Flanged.
   2. Companion Flanges: Rolled flanges for duct connections of same material as housing.
   3. Access Door: Gasketed door in scroll with latch-type handles.
   4. Drain Connections: NPS 3/4 threaded coupling drain connection installed at lowest point of housing.
   5. Weather Hoods: Weather resistant with stamped vents over motor and drive compartment.

2.03 CENTRIFUGAL VENTILATORS - ROOF DOWNBLAST

A. Manufacturers:
   1. Greenheck Fan Company.
   2. Loren Cook Company.
   3. PennBarry
   4. Twin City Fans

B. Housing: Downblast; removable spun aluminum square, one-piece aluminum base with venturi inlet cone.

C. Fan Wheels: Aluminum hub and wheel with backward-inclined blades.

D. Accessories:
   1. Direct Drive Motor: Provide ECM motor to reduce speed from 100 to less than 50 percent.
   2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
   3. Bird Screens: Removable, 1/2-inch mesh, aluminum or brass wire.
   4. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.

E. Prefabricated Roof Curbs: Galvanized steel; mitered and welded corners; 1-1/2-inch- thick, rigid, fiberglass insulation adhered to inside walls; and 1-1/2-inch wood nailer. Size as required to suit roof opening and fan base.
   1. Overall Height: 18 inches.
   2. Pitch Mounting: Manufacture curb for roof slope.

2.04 CENTRIFUGAL VENTILATORS - SIDEWALL

A. Manufacturers:
   1. Greenheck Fan Company.
   2. Loren Cook Company.
   3. PennBarry
   4. Twin City Fans

B. Configuration: Centrifugal sidewall ventilator.

C. Housing: Removable spun aluminum; square, one-piece aluminum base with venturi inlet cone.

D. Fan Wheels: Aluminum hub and wheel with backward-inclined blades.

E. Accessories:
   1. Direct Drive Motor: Provide ECM motor to reduce speed from 100 to less than 50 percent.
   2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
   3. Bird Screens: Removable, 1/2-inch mesh, aluminum or brass wire.
   4. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.
   5. Wall Mount Adapter: Attach wall-mounted fan to wall.

2.05 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."
   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

2.06 SOURCE QUALITY CONTROL

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.

B. AMCA Certification: Fans shall comply with AMCA 11 and bear the AMCA-Certified Ratings Seal.

C. Fan Sound Ratings: Comply with AMCA 311, and label fans with the AMCA-Certified Ratings Seal. Sound ratings shall comply with AMCA 301. The fans shall be tested according to AMCA 300.

D. Fan Performance Ratings: Comply with AMCA 211 and label fans with AMCA-Certified Rating Seal. The fans shall be tested for air performance - flow rate, fan pressure, power, fan efficiency, air density, speed of rotation, and fan efficiency - according to AMCA 210/ASHRAE 51.

E. Operating Limits: Classify according to AMCA 99.

F. UL Standards: Power ventilators shall comply with UL 705. Power ventilators for use for restaurant kitchen exhaust shall also comply with UL 762.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install HVAC fans level and plumb.

B. Equipment Mounting:
   1. Comply with requirements for vibration isolation and seismic control devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."

C. Secure roof-mounted fans to roof curbs with cadmium-plated hardware. See Section 07 72 00 "Roof Accessories" for installation of roof curbs.

D. Install units with clearances for service and maintenance of fans, motors and all other components that may need access

E. Label units according to requirements specified in Section 23 05 53 "Identification for HVAC Piping and Equipment."

3.02 CONNECTIONS

A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 23 33 00 "Air Duct Accessories."

B. Install ducts adjacent to HVAC fans to allow service and maintenance.

C. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

D. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.03 FIELD QUALITY CONTROL

A. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:
   1. Verify that shipping, blocking, and bracing are removed.
   2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
   3. Verify that cleaning and adjusting are complete.
   4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
   5. Adjust belt tension.
   6. Adjust damper linkages for proper damper operation.
   7. Verify lubrication for bearings and other moving parts.
   8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
   9. Disable automatic temperature-control operators, energize motor and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
   10. Shut unit down and reconnect automatic temperature-control operators.
   11. Remove and replace malfunctioning units and retest as specified above.

C. Test and adjust controls and sawfeties. Replace damaged and malfunctioning controls and equipment.

D. Prepare test and inspection reports.

3.04 ADJUSTING

A. Adjust damper linkages for proper damper operation.

B. Adjust belt tension.

C. Comply with requirements in Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing procedures.

D. Replace fan and motor pulleys as required to achieve design airflow.

E. Lubricate bearings.

END OF SECTION 23 34 23

This page intentionally left blank

SECTION 23 35 16
HOSE REEL EQUIPMENT

PART 1 GENERAL

1.01 FURNISHED BY CONTRACTOR INSTALLED BY CONTRACTOR (FCIC)

A. Hose Reel Equipment shall be Furnished by Contractor, Installed by Contractor (FCIC)

1.02 SYSTEM DESCRIPTION

A. Equipment item is listed below by Equipment I.D. Tag.
   1. Wall Mounted Exhaust Hose Reel.
      a. Equipment I.D. Tag: MB-01 (Qty. 4)
   2. Diesel Cane Exhaust Adapter.
      a. Equipment I.D. Tag: MB-01a (Qty. 1)
   3. Wall/Stand Mounted Air Hose Reel.
      a. Equipment I.D. Tag: MB-02 (Qty. 5)
   4. Wall/Stand Mounted Oil Hose Reel.
      a. Equipment I.D. Tag: MB-06 (Qty. 8)

B. Hose Reel Equipment
   1. This section includes the specifications for Hose Reel Equipment that are being installed for the servicing of vehicles of various sizes and weights, as noted in the Bid Specifications and Bid Drawing Package.
      a. Hose Reel Equipment – Description of System(s)
         1) The configurations for Hose Reel are described below.
            (a) Standalone equipment for the servicing of vehicles on an assortment of Cars and Light / Heavy Duty Trucks.

C. Seismic Calculations
   1. For seismic calculations, Reference general seismic design criteria noted on Sheet S0.1 Division 1 – General, A.9.

D. List of Applicable Forms
   1. The General Conditions, Supplementary Conditions, Instructions to Bidders, Bid Form, all apply to these bid items.

1.03 DESCRIPTION OF WORK

A. List of Work
   1. The extent of the Work is shown on the drawings and is defined to include (but not by way of limitations) all labor, materials, freight, unloading, equipment, taxes, permits and supervision required for equipment and installation.

B. Coordination
   1. Contractor’s Responsibility: It will be the Contractor's responsibility to verify and establish a detailed installation schedule.
   2. Field Check: ALL BUILDING AND EQUIPMENT LAYOUT DIMENSIONS SHALL BE FIELD CHECKED AND VERIFIED BY CONTRACTOR PRIOR TO START OF INSTALLATION. NOTIFY THE CONSULTANT AND OWNER OF ANY DISCREPANCIES OR CONDITIONS AFFECTING MATERIALS AND/OR INSTALLATION WITHIN TEN (10) DAYS. IF A CONDITION EXISTS AND THE CONSULTANT OR OWNER IS NOT NOTIFIED THE ADDITIONAL COST TO CORRECT THE INSTALLATION IN ACCORDANCE WITH THE REQUIREMENTS OF THE OWNER WILL BE THAT OF THE CONTRACTOR.
   3. Delivery and Unloading: The Hose Reel Contractor shall be responsible for coordinating the delivery and unloading of the equipment to the job-site with the General Contractor to eliminate demurrage charges, unless authorized by the Owner or the Consultant. In order to eliminate disruption to the ongoing operations and prevent interference of dock access by trucks entering and leaving the site, temporary staging of materials will be provided outside of the building at a location designated by the Owner. The Hose Reel Contractor shall provide storage facilities (i.e. covers, closed containers) to protect equipment from

the elements (i.e. dust, dirt, rain, ice, snow, etc.) as necessary. Interior staging of equipment will be kept to a minimum so as not to disrupt ongoing operations.

1.04 QUALITY ASSURANCE

A. Standards
   1. Equipment Standards: The equipment covered by these Specifications shall be designed, assembled, tested and installed in accordance with the latest applicable standards, including:
      a. American National Standards Institute (ANSI).
      b. American Iron and Steel Institute.
         1) Specification for Design of Cold-Formed Steel Association - "Structural Members" 2015 edition.
      c. International Building Code (IBC)
         1) International Building Code including current Building Code Amendments. (2015 Edition)
      d. Seismic Zone
         1) The seismic zone for the project is Seismic Zone 3 with near source distance factors applied.
      e. Materials
         1) All materials furnished shall be new, free from defects, and UL-Approved where such approval is granted to the equipment to be furnished.
      f. Federal Inspection
         1) Latest published applicable Federal Specifications.
      g. OSHA
         1) Applicable OSHA Specifications.
      h. Building and Safety Codes
         1) Any applicable local building and safety codes pertaining to the Work.

B. Workmanship
   1. Trade Methods: Use the best trade methods throughout. Work evidencing substandard workmanship shall be corrected or replaced by the Contractor at the Contractor's expense, per the General Conditions.

C. Touch Up Paint: The method for the touch up of paint shall follow specifications section 3.02 Field Painting.

D. Guarantees
   1. WARRANTY:
      a. Warranty shall be the manufacturer's standard warranty and shall be specified by the Contractor in the contents of the proposal.
      b. The contractor shall provide an extended warranty for a period of three (3) years from Date of Acceptance.
      c. QUALITY OF MATERIALS AND EQUIPMENT: The Contractor guarantees the material and equipment delivered under the Contract to be free from defects in design or workmanship and against damages caused prior to final inspection. Unless otherwise specified, this guarantee extends for a period of three (3) years from the Date of Acceptance for both labor and materials.
      d. REPAIRING DEFECTS: The Contractor shall promptly repair or replace all defective or damaged items delivered under the Contract. The Hose Reel Contractor may elect to have any replaced item returned to his/her plant at his/her expense.

1.05 SUBMITTALS

A. Product Data: Submit latest edition of Hose Reel data sheet and outline drawing with the proposal.
   1. Shop Drawings:
      a. Shop Drawings, as stated in the General Conditions, shall include, but need not be limited to:
      b. Installation Plan: Proposed installation plan of equipment, including location and dimensions of new equipment clearly identified. It will be the Contractor's

responsibility to verify and establish a detailed installation schedule per the General Conditions.

c. Dimensions: Plan views showing all equipment dimensions along with any aisle clearance dimensions.
d. Bill of Materials: Bill of Materials per the General Conditions.
e. Approved Shop Drawings
f. It will be the Contractor's responsibility to obtain approved shop drawings signed by the Consultant and/or Owner per the General Conditions prior to fabrication.

2. Manufacturer's Reference:
   a. Prime Manufacturer: Specifications are based on equipment identified herein by manufacturer's name and model to establish acceptable standards of quality, performance, features, and construction.

      JohnDow EuroVent
      151 Snyder Ave.
      Barberton, OH 44203

      2842 E. Business Hwy. 30
      Columbia City, IN 46725
      Phone: (800) 444-3134
      Website: https://www.skf/alemite.com/
      Odometer-Style Mechanical Meter: 33685-B

3. Other manufacturers: Contingent upon compliance with these specifications and documentation requirements set forth in SUBMITTALS, equipment produced by other manufacturers may be considered as equal.

PART 2 PRODUCTS

2.01 HOSE REEL EQUIPMENT GENERAL

A. The Contractor shall provide the following:
   1. List of Required Items
      a. New Hose Reel as shown on the drawings, including freight, unloading, installation, touch-up painting, cleaning, and other equipment necessary to complete the system.

B. Quantity and Capacity
   1. See drawings for equipment location and configuration.

C. Standard Designs
   1. Components shall be of standard design and fabrication by the manufacturer so that all may be replaced or purchased at a future date without special charges or extended deliveries.
   2. The Bill of Materials for this Work is to be determined by the Contractor from the bid drawings and contents of the Specifications. Hose Reel Contractor to verify all information.

D. Codes
   1. The Hose Reel shall be designed and installed to the exact standards of the manufacturer and in all cases shall conform to applicable codes.

E. Loads and Capacity
   1. The Hose Reel shall be designed to handle specified loads.

F. Install
   1. The shipment of the Hose Reel shall include all components to allow immediate install upon receipt.

G. Anchoring
   1. All work must be rigid and anchored securely. Method of attachment to be approved prior to installation.

H. Touch Up
   1. The Hose Reel Contractor shall touch up any other Contractor's work damaged during the process per section 3.02 Field Painting.

2.02 HOSE REEL

A. General: Equipment Tag # MB-01 Hose Reel (Qty. 4)
   a. Description: Heavy Duty Hose Exhaust Reel typically used in commercial Vehicle Maintenance and Repair Shops.
   b. Physical Data:
   c. Overall Dimensions:
      1) Width: 38 3/4"
      2) Depth: 2'-5 3/16"
      3) Height: 23 5/8"
   d. Duct Size: 6"
   e. Duct length: 25'-0"
   2. Features and Construction:
      a. 2-year Manufacturer's warranty
   3. Finish: Manufactures Standard

B. General: Equipment Tag # MB-01 Exhaust Fan with SS hose Adapter (Qty. 4)
   1. Description: Heavy Duty Hose Exhaust Reel Fan typically used in commercial Vehicle Maintenance and Repair Shops.
   2. Physical Data:
      a. Overall Dimensions:
         1) Width: 17 1/4"
         2) Depth: 18 1/8"
         3) Height: 20"
      b. Inlet Duct Size: 6"
      c. Output Duct Size: 7"

d. Motor Size: .50 HP
e. Power Requirements: 460V, 1.1 FLA 60 Hz 3ph

3. Features and Construction:
   a. 2-year Manufacturer's warranty
4. Finish: Manufactures Standard

C. General: Equipment Tag # MB-01a Diesel Cane Adapter (Qty. 1)
1. Description: Heavy Duty Diesel Cane Adapter typically used in commercial Vehicle Maintenance and Repair Shops.
2. Physical Data:
   a. Overall Dimensions:
      1) Diameter: 6"
      2) Height: 8'-0"
3. Features and Construction:
   a. Integrated Stack Stop
   b. Wide Inlet hood, 20-gauge Aluminum
   c. Rigid Pipe: 26-gauge reinforced Aluminum
   d. Lifting Handles Qty. Two Minimum
   e. 2-year Manufacturer's warranty
4. Finish: Manufactures Standard

D. General: Equipment Tag # MB-05 Heavy-Duty Low-Pressure Spring Retractable Hose Reel (Compressed Air) (Qty. 5)

E. General: Equipment Tag # MB-05 Heavy-Duty Medium-Pressure Spring Retractable Hose Reel (Lubrication Fluids) (Qty. 8)
1. Description: Heavy Duty Retractable Hose Reel typically used in commercial Vehicle Maintenance and Repair Shops.
2. Physical Data:
   a. Overall Dimensions:
      1) Width: 10.5"
      2) Depth: 24"
      3) Height: 25 3/8"
3. Features and Construction:
   a. Hose Anti Latch-Out
   b. Guide Arm
   c. Structurally Reinforced Guide Arm and Pedestal Base
   d. Containerized Spring Assembly
   e. Dual Sealed Ball bearings
   f. 2-year Manufacturer's warranty
4. Finish: Manufactures Standard

F. General: Equipment Tag # MB-05a Odometer-Style Mechanical Meter (Lubrication Fluids) (Qty. 8)
1. Description: Odometer-Style Mechanical Meter typically used in commercial Vehicle Maintenance and Repair Shops.
2. Physical Data:
   a. Overall Dimensions:
      1) Weight: 5lbs.
3. Features and Construction:
   a. Large, easy to read dial face
   b. Ability to keep lifetime record of fluid dispensed
   c. Internal Filter Screen
   d. 1,000 psi (69 bar) max. operating pressure
   e. ½" NPT Inlet
   f. Compatibility – Oil, Gear Oil
   g. 2-year Manufacturer's warranty
4. Finish: Manufactures Standard

PART 3 EXECUTION

3.01 EXAMINATION

A. Coordination
   1. Each Contractor must give careful consideration to the ongoing facility operations and the work of other contractors during the entire project and shall organize his/her work so that it will not interfere with ongoing operations or interfere with or delay the work of others. Minimal disruption to ongoing operations is a priority. It is imperative that the schedule be maintained with any changes coordinated promptly with the General Contractor, Owner, and Consultant.

B. General Description
   1. The Hose Reel shall be installed true and properly aligned complete in all details and in accordance with the specifications, manufacturer's recommendations, and the drawings.

C. Installation Routine
   1. Installation shall include unloading, checking and security of equipment prior to erection, shimming, complete anchoring, touch up and cleaning. The Contractor shall provide storage facilities (i.e. covers, closed containers) to protect equipment from the elements (i.e. dust, dirt, rain, snow, etc.). Contractor shall use a transfer system to bring materials inside the building that is supplied by the Contractor. Contractor to ensure no damage to the overhead door, floor, facility or equipment.

D. Tools and Equipment
   1. The Contractor shall be responsible to provide all tools and equipment necessary for a complete and satisfactory installation. All wheeled and rolling equipment used in the building during construction (after slab on grade has been poured) must use wheel wraps as drip diapers or similar to protect floor from rubber marking and equipment spillage of oil or other substances.

E. Construction, lifts, man Lifts and Vehicles
   1. All wheeled and rolling equipment used in the building during construction (after slab on grade has been poured) must use wheel wraps as drip diapers or similar to protect floor from rubber marking and equipment spillage of oil or other substances.

F. Permits and Inspection
   1. Contractor shall obtain, and pay for, all necessary permit fees and inspections required by the State or local municipalities.

G. Damaged Materials
   1. Claims, due to freight damage, are the responsibility of Hose Reel Contractor. This includes any damage that is not evident at the time of the unloading of the equipment (i.e. concealed damage). Should such damage be uncovered, the Contractor must act promptly to repair/replace damaged equipment to minimize any delay to the schedule. Any added cost due to a delay is the responsibility of the Contractor.

H. Debris Disposal
   1. It shall be the responsibility of the Hose Reel Contractor to remove any debris resulting from his/her work on each and every workday to a pre-designated disposal area. This shall include all waste generated by the installer or any of his/her personnel, shipping containers, and/or construction materials. The Contractor shall broom clean the area each work day to leave the work area clean and allow the Owner access to scrub the floor. This will include organizing the materials not yet incorporated in the Work. At the completion of the work the Contractor shall remove all of his/her waste materials and rubbish from and about the project, as well as all his/her tools, construction equipment, machinery.

I. Clearance
   1. The Contractor shall be responsible for maintaining all clearances specified on the drawings.

J. Modifications
   1. The Contractor shall be responsible for the suitability of any Hose Reel component modifications required after installation begins. All modifications must be submitted and

approved by the Owner and Consultant prior to beginning Work. Modifications done by others must be approved by the Contractor prior to modification. The Contractor shall be responsible for such a modification by others.

K. Contractor's Survey of Damage
   1. The Contractor shall conduct a survey of his/her work each and every workday morning and note any and all damages observed. Any damages must be reported to the General Contractor and the Owner by 9:00 a.m. Damages not reported within this time frame will be the contractor's responsibility.

L. Marking Restrictions
   1. Under no circumstances will a magic marker, sharpie or any other permanent marking device, which will absorb into concrete, paint or decking, be used for marking equipment locations. All markings must be water soluble and removable. The contractor is responsible to remove these markings prior to completing the Punch List

M. Installation
   1. The Owner shall have the option of performing his/her own Hose Reel installation.

3.02 FIELD PAINTING

A. Cleaning
   1. All surfaces to be painted must be thoroughly cleansed of rust, scale, oil, grease, dirt, welding flash and all other forms of dirt detrimental to good painting practices.

B. Touch-Ups
   1. After the installations are complete, the Contractor shall touch-up any components that were damaged but only with owners/representative approval. Finish to match factory finish.

END OF SECTION 23 35 16

This page intentionally left blank

SECTION 23 37 13

DIFFUSERS, REGISTERS, AND GRILLES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Round ceiling diffusers.

B. Modular-core supply grille diffusers.

C. Adjustable blade face grilles.

D. Fixed face grilles.

1.02 RELATED REQUIREMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.03 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of product.
   1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
   2. Diffuser and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.

1.04 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
   2. Duct access panels.

B. Source quality-control reports.

PART 2 PRODUCTS

2.01 ROUND CEILING DIFFUSERS

A. Manufacturers:
   1. Titus TMRA .
   2. Krueger.
   3. Price Industries.

B. Devices shall be specifically designed for variable-air-volume flows.

C. Material: Steel.

D. Finish: Baked enamel, white

E. Face Style: Three cone.

F. Mounting: Duct connection.

G. Pattern: Fully adjustable.

H. Accessories:
   1. Equalizing grid.
   2. Plaster ring.

3. Safety chain.
4. Wire guard.
5. Sectorizing baffles.
6. Operating rod extension.

2.02 MODULAR-CORE SUPPLY GRILLE DIFFUSERS

A. Manufacturers:
   1. Titus MCD.
   2. Krueger.
   3. Price Industries.

B. Material: Steel.

C. Face Style: Exposed modular core.

D. Discharge Pattern: Four-way.

E. Finish: White baked acrylic.

F. Border: 1-1/2-inch width with countersunk screw holes.

G. Blades:
   1. Airfoil, individually adjustable horizontally.
   2. Double deflection.
   3. Set in modules.

H. Modules: Removable; rotatable.

I. Mounting: Surface.

2.03 GRILLES

A. Manufacturers:
   1. Titus.
   2. Krueger.
   3. Price Industries.

B. Adjustable Blade Face Grille(SG-1):
   1. Material: Steel.
   2. Finish: Baked enamel, white.
   3. Face Blade Arrangement: Horizontal spaced 3/4 inch apart.
   4. Core Construction: Integral.
   5. Rear-Blade Arrangement: Vertical spaced 3/4 inch apart.
   6. Frame: 1-1/4 inches wide.

C. Fixed Face Grille(EG-1, EG-2, RG-1, RG-2):
   1. Material: See schedule on drawings.
   2. Finish: Baked enamel, white.
   3. Face Arrangement: See schedule on drawings.
   4. Core Construction: Integral.
   5. Frame: 1-1/4 inches wide.
   6. Mounting Frame: See schedule on drawings.

2.04 ACCESSORIES

A. Flexible Duct Support
   1. Manufacturers: Titus FlexRight (no known equal)
      a. Radius forming brace to support 4-inch through 16-inch diameter flexible air ducts.
      b. Provide nylon cable ties to secure flex duct to FlexRight brace.

2.05 SOURCE QUALITY CONTROL

A. Verification of Performance: Rate diffusers according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas where diffusers are installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install diffusers level and plumb.

B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.

C. Install diffusers with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

D. Install Titus FlexRight brace at all flexible duct-to-diffuser connections.

3.03 ADJUSTING

A. After installation, adjust diffusers to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 23 37 13

This page intentionally left blank

SECTION 23 37 23
HVAC GRAVITY VENTILATORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Roof hoods.

1.02 RELATED REQUIREMENTS

A. Water Entrainment: Limit water penetration through unit to comply with ASHRAE 62.1.

1.03 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.04 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of product indicated.

C. Shop Drawings: For gravity ventilators. Include plans, elevations, sections, details, ventilator attachments to curbs, and curb attachments to roof structure.

1.05 COORDINATION

A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

PART 2 PRODUCTS

2.01 MATERIALS

A. Aluminum Extrusions: ASTM B 221, Alloy 6063-T5 or T-52.

B. Aluminum Sheet: ASTM B 209, Alloy 3003 or 5005 with temper as required for forming or as otherwise recommended by metal producer for required finish.

C. Galvanized-Steel Sheet: ASTM A 653/A 653M, G90 zinc coating, mill phosphatized.

D. Stainless-Steel Sheet: ASTM A 666, Type 304, with No. 4 finish.

E. Fasteners: Same basic metal and alloy as fastened metal or 300 Series stainless steel unless otherwise indicated. Do not use metals that are incompatible with joined materials.
   1. Use types and sizes to suit unit installation conditions.
   2. Use Phillips flat-head screws for exposed fasteners unless otherwise indicated.

F. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.02 FABRICATION, GENERAL

A. Factory or shop fabricate gravity ventilators to minimize field splicing and assembly. Disassemble units to the minimum extent as necessary for shipping and handling. Clearly mark units for reassembly and coordinated installation.

B. Fabricate frames, including integral bases, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.

C. Fabricate units with closely fitted joints and exposed connections accurately located and secured.

D. Fabricate supports, anchorages, and accessories required for complete assembly.

E. Perform shop welding by AWS-certified procedures and personnel.

2.03 ROOF HOODS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Greenheck Fan Corporation.
   2. Loren Cook Company.
   3. Twin City

B. Factory or shop fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figures 6-6 and 6-7.

C. Materials: Aluminum sheet, minimum 0.063-inch-thick base and 0.050-inch- thick hood; suitably reinforced.

D. Roof Curbs: Galvanized-steel sheet; with mitered and welded corners; 1-1/2-inch-thick, rigid fiberglass insulation adhered to inside walls; and 1-1/2-inch wood nailer. Size as required to fit roof opening and ventilator base.
   1. Configuration: Self-flashing without a cant strip, with mounting flange.

E. Bird Screening: Stainless-steel, 1/2-inch- square mesh, 0.047-inch wire.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install gravity ventilators level, plumb, and at indicated alignment with adjacent work.

B. Install gravity ventilators with clearances for service and maintenance.

C. Install perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

D. Install concealed gaskets, flashings, joint fillers, and insulation as installation progresses. Comply with Section 07 92 00 "Joint Sealants" for sealants applied during installation.

E. Label gravity ventilators according to requirements specified in Section 23 05 53 "Identification for HVAC Piping and Equipment."

F. Protect galvanized and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.

G. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.

3.02 CONNECTIONS

A. Duct installation and connection requirements are specified in Section 23 31 13 "Metal Ducts." Drawings indicate general arrangement of ducts and duct accessories.

3.03 ADJUSTING

A. Adjust damper linkages for proper damper operation.

END OF SECTION 23 37 23

SECTION 23 64 33

AIR HEATED MODULAR WATER HEATER

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Air to Water Heat Pump Boiler.

1.02 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.03 DEFINITIONS

A. BAS: Building automation system.

B. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.

C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.

D. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by AHRI 550/590 and referenced to AHRI standard rating conditions.

E. kW/Ton: The ratio of total power input of the heater in kilowatts to the net refrigerating capacity in tons at any given set of rating conditions.

F. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by AHRI 550/590 and intended for operating conditions other than AHRI standard rating conditions.

1.04 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Scroll water heaters shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
   1. The term "withstand" means, "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified.

1.05 ACTION SUBMITTALS

A. Product Data: Include refrigerant, rated capacities, operating characteristics, furnished specialties, and accessories.
   1. Performance at AHRI standard conditions and at conditions indicated on Drawings.
   2. Performance at AHRI standard unloading conditions.
   3. Minimum evaporator flow rate.
   4. Refrigerant capacity.
   5. Oil capacity of water heater.
   6. Fluid capacity of evaporator.
   7. Fluid capacity of condenser.
   8. Characteristics of safety relief valves.
   9. Minimum entering condenser-air temperature.

B. Shop Drawings: Complete set of manufacturer's prints of water heater assemblies, control panels, sections and elevations, and unit isolation. Include the following:
   1. Assembled unit dimensions.
   2. Weight and load distribution.
   3. Required clearances for maintenance and operation.
   4. Size and location of piping and wiring connections.
   5. Wiring Diagrams: For power, signal, and control wiring.

1.06 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Structural supports.
   2. Piping roughing-in requirements.
   3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
   4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.

B. Certificates: For certification required in “Quality Assurance” Specification.

C. Seismic Qualification Certificates: For water heaters, accessories, and components from manufacturers.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Source Quality Control Test Reports: Provide.

E. Startup Service Reports: Provide.

F. Warranty: Sample of special warranty.

1.07 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each water heater to include in emergency, operation, and maintenance manuals.

1.08 QUALITY ASSURANCE

A. AHRI Certification: Certify heater according to AHRI 590 certification program.

B. AHRI Rating: Rate water heater performance according to requirements in AHRI 550/590, “Water Chilling Packages Using the Vapor Compression Cycle.”

C. ASHRAE Compliance: ASHRAE 15 for safety code for mechanical refrigeration.

D. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - “Heating, Ventilating, and Air-Conditioning.”

E. ASME Compliance: Fabricate and stamp water heater heat exchangers to comply with ASME Boiler and Pressure Vessel Code.

F. NFPA 70: Comply with NFPA 70.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Shipping: Ship water heaters from the factory fully charged with refrigerant and filled with oil.

1.10 COORDINATION

A. Structural Attachments: Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

B. Equipment Mounted on Roof: Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.11 WARRANTY

A. Special Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components of water heaters that fails in materials or workmanship within specified period.
   1. Compressor Warranty Period: Five years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 AIR TO WATER HEAT PUMP BOILER (HPB-1X)

A. Manufacturers:
   1. AERMEC.
   2. AIRSTACK.
   3. Jetson.

B. System Description: Outdoor air-to-water heat pump boiler capable of providing central heating hot water. Heater shall incorporate Scroll type compressors and can consist of multiple modules. There are two heat pumps, each with three compressors. This is to provide a total heating plant with six stages and a turn down to 1/6. Each refrigerant circuit shall consist of a tandem compressor set, crankcase heater, evaporator, refrigerant to hot water heat exchanger, air to refrigerant heat exchanger, electronic expansion valves, liquid line solenoid valves, filter driers, and control system. Each circuit shall be constructed to be independent of other circuits from a refrigeration and electrical stand-point. The multi-module unit must be able to produce hot water even in the event of a failure of one or more refrigerant circuits. Controls shall include a head pressure/suction pressure controlled, variable flow defrost cycle. The heat pumps have dedicated pumps.

C. General:
   1. Modules shall be ETL listed in accordance with UL Standard 1995, CSA certified per Standard C22.2#23. Modules shall ship wired and charged with refrigerant. All modules shall be factory run tested prior to shipment on an AHRI certified or 3rd party verified test stand.
   2. Compressors, heat exchangers, condenser fans, piping and controls shall be mounted on a heavy gauge galvanized steel frame with 3 mil powder coat paint. Electrical controls, contactors, and relays for each module shall be mounted within that module. Module shall be provided within a steel enclosure suitable for outdoor use. Exposed steel surfaces shall be provided with 3 mil powder coat paint. Module must have base with cutouts for forklift or pallet jack.

D. Pumps and Piping:
   1. Pumps: each heat pump has a dedicated pump, sized for the flow by the manufacturer, and wired/controlled directly by the heat pump. Refer to Section 23 21 23 Hydronic Pumps for specifications.
   2. Hot Water Mains: Each module shall include supply and return mains for hot water. Cut grooved end connections are provided for interconnection to four six inch standard piping with grooved type couplings. Rolled grooved shall be unacceptable.

E. Heat Exchangers:
   1. Evaporator: Each evaporator shall be a brazed plate heat exchanger constructed of 316 stainless steel; designed, tested, and stamped in accordance with UL 1995 code for 650 psig working pressure. The evaporator heat exchanger shall not be mounted above the compressor, to eliminate the effect of migration of refrigerant to the cold evaporator with consequent liquid slugging on start-up.
   2. Condenser: Each condenser shall be a brazed plate heat exchanger constructed of 316 stainless steel; designed, tested, and stamped in accordance with UL 1995 code for 650 psig working pressure.
   3. Air side heated coil shall have aluminum fins mechanically bonded to copper tubes and be factory leak tested.

F. Compressor: Each module shall contain two hermetic scroll compressors in a tandem piping arrangement mounted to the module with rubber-in-shear isolators. Each system also includes high discharge pressure and low suction pressure safety cut-outs.

G. Source Fans: Each module shall contain dual fans for each refrigerant circuit. Module shall utilize ECM. Blades are aluminum construction owlet design 7-blade axial fan with integral EC motor (direct drives with external VFD driven motors are not acceptable). Efficiency exceeds

criteria set out in the ErP 2015 directive. Individual fans are factory tested. Encapsulation required. Encapsulation is a process of filling a complete electronic assembly with a solid compound for resistance to shock and vibration, and for exclusion of moisture and corrosive agents. Sound pressure reductions at 30 feet, as compared to standard fan option, ranges from 3-6 dBA.

H. Central Control System:
   1. Scheduling of the various compressors shall be performed by a microprocessor based control system. A new lead compressor is selected every 24 hours to assure even distribution of compressor run time.
   2. The Master Controller shall monitor and report the following on each refrigeration system:
      a. Discharge Pressure Fault.
      b. Suction Pressure Fault.
      c. Compressor Winding Temperature.
      d. Refrigerant Temperature.
      e. Water Entering and Leaving Temperature.
      f. Proof of Water Flow.
   3. An out of tolerance indication from these controls or sensors shall cause a “fault” indication at the Master Controller and shutdown of that compressor with the transfer of load requirements to the next available compressor. In the case of a System Fault the entire unit will be shut down. When a fault occurs, the Master Controller shall record conditions at the time of the fault and store the data for recall. This information shall be capable of being recalled through the keypad of the Master Controller and displayed on the Master Controller’s 2 line by 40 character back-lit LCD. A history of faults shall be maintained including date and time of day of each fault (up to the last 20 occurrences).
   4. Individual monitoring of leaving water temperatures from each refrigeration system shall be programmed to protect against freeze-up. Individual monitoring of leaving hot water temperatures from each refrigeration system shall be programmed to protect against hi head pressure conditions.
   5. Operation:
      a. The control system shall monitor water temperatures to determine hot water system demand. The control system will use the demand to make staging mode decisions and select the number of compressor circuits required to operate. Mode decisions shall be available from the controller as well as via remote input. Response times and set points shall be adjustable. The system shall provide for variable time between compressor sequencing and temperature sensing, so as to optimize the performance to different existing building loads.
   6. Interoperability:
      a. The unit shall interface to the building automation system. Interface shall be accomplished using communication over BACNet.

I. Unit shall have external inputs and outputs to be compatible with the building management system to include Remote Start/Stop capability and Alarm output.

J. Single Point Power Connection:
   1. Unit shall be provided with a single point power connection at a 5,000 amp SCCR. This will include pre-engineered wiring for field installation and connection to a factory mounted junction box. Junction box shall include branch circuit protection for each module and provide a single point of connection to building power. This includes the dedicated hydronic pump.

K. LIFTING FRAME
   1. Painted steel frame will be provided with all modules mounted upon it. Typically, all water and wiring connections will be made between the modules at the factory.

2.02 SAFETIES, CONTROLS AND OPERATION

A. The unit safety controls shall be provided (minimum) as follows:

1. Low evaporator refrigerant pressure.
2. Loss of water flow.
3. High condenser refrigerant pressure.
4. High compressor motor temperature.
5. Low suction gas temperature.
6. Low leaving evaporator water temperature.

B. The heat pump shall be provided with internal heat tracing and insulation on water piping and water side heat exchangers. This shall provide freeze protection when the unit is exposed to freezing temperatures and not in operation. See specification Section 23 07 19 HVAC Piping Insulation for heat trace. Provide a dedicated 120-volt electrical connection.

C. Failure of unit to start or shutdown due to any of the above safety cutouts shall be annunciated by display of the appropriate diagnostic description at the unit control panel. This annunciation will be in plain English. Alphanumeric codes shall be unacceptable.

D. The unit shall be furnished with a Master Controller as an integral portion of the control circuitry to provide the following functions:
1. Provide automatic shutdown during periods when the load level decreases below the normal operating requirements. Upon an increase in load, the unit shall automatically restart.
2. Provisions for connection to automatically enable the unit from a remote energy management system.
3. The control panel shall provide alphanumeric display showing all system parameters in the English language with numeric data in English units.

E. Normal Operation
1. When unit is enabled, the factory supplied controller modulates the capacity from minimum to maximum as required by building load.
2. The control system shall respond to Entering Water Temperature and will have an integral reset based on entering water temperature to provide for efficient operation at part-load conditions.

PART 3 EXECUTION

3.01 EXAMINATION

A. General: Before water heater installation, examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting water heater performance, maintenance, and operations.
1. Water heater locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.

B. Corrections: Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 WATER HEATER INSTALLATION

A. Heater Support: Install water heaters on support structure indicated.

B. Equipment Mounting: Install water heater using restrained spring isolators. Comply with requirements for vibration isolation devices specified in Section 23 05 48 “Vibration and Seismic Controls for HVAC Piping and Equipment.”
1. Minimum Deflection: 1.00 inch.

C. Refrigerant Charge and Oil Fill: Charge water heater with refrigerant if not factory charged and fill with oil if not factory installed.

D. Devices Shipped Loose: Install separate devices furnished by manufacturer and not factory installed.

3.03 CONNECTIONS

A. Hydronic Piping: Comply with requirements in Section 23 21 13 “Hydronic Piping.” Drawings indicate general arrangement of piping, fittings, and specialties.

B. Service and Maintenance: Install piping adjacent to heater to allow service and maintenance.

C. Drain: Connect each drain connection with a union and drain pipe and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection if required.

D. Flow Switches: Provide and wire water flow switches per manufacturer's requirements. Locate switches between heater and isolation valves.

E. Air Vent Locations: Where not specifically indicated, provide automatic air vents at high point(s) of system.

3.04 STARTUP SERVICE

A. Startup Service: Engage a factory-authorized service representative to perform startup service.

B. Final Inspection: Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.

C. Startup: Complete installation and startup checks according to manufacturer's written instructions and perform the following:
   1. Verify that refrigerant charge is sufficient and water heater has been leak tested.
   2. Verify that pumps are installed and functional.
   3. Verify that thermometers and gauges are installed.
   4. Operate water heater for run-in period.
   5. Check bearing lubrication and oil levels.
   6. Verify that refrigerant pressure relief device for heaters installed indoors are vented outside.
   7. Verify proper motor rotation.
   8. Verify static deflection of vibration isolators, including deflection during water heater startup and shutdown.
   9. Verify and record performance of water heater protection devices.
   10. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.

D. Startup Report: Prepare a written startup report that records results of tests and inspections.

3.05 DEMONSTRATION

A. Training: Engage a factory-authorized service representative to train Contracting Agency's maintenance personnel to adjust, operate, and maintain water heaters. Video record the training sessions.

END OF SECTION 23 64 33

SECTION 23 74 33
DEDICATED OUTDOOR-AIR UNITS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes factory-packaged units capable of supplying up to 100 percent outdoor air and providing cooling and heating.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Include plans, elevations, sections, and attachment details.

C. Delegated-Design Submittal: For design of vibration isolation, seismic restraints and wind restraints, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.03 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Roof-curb mounting details, drawn to scale, and coordinated with each other, using input from installers of the items involved:

B. Seismic Qualification Certificates: For dedicated outdoor-air units, accessories, and components, from manufacturer.

C. Startup service reports.

D. Sample warranty.

1.04 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.05 WARRANTY

A. Special Warranty: Manufacturer agrees to replace components of units that fail in materials or workmanship within specified warranty period.
   1. Warranty Period for Compressors: Five years from date of Substantial Completion.
   2. Warranty Period for Heat Exchangers: Five years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Aaon.

B. Ventacity

C. Desert Aire.

D. Trane.

E. Innovent.

F. Daiken.

2.02 PERFORMANCE REQUIREMENTS

A. General Fabrication Requirements: Comply with requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment," and Section 7 - "Construction and System Start-up."

B. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design vibration isolation, seismic restraints and wind restraints.

C. Seismic Performance: Units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified."

D. Wind-Restraint Performance:
   1. Building Classification Category: II.
   2. Minimum 10 lb/sq. ft multiplied by the maximum area of unit projected on a vertical plane that is normal to the wind direction and 45 degrees either side of normal.

E. Cabinet Thermal Performance:
   1. Maximum Overall U-Value: Comply with requirements in ASHRAE/IESNA 90.1.
   2. Include effects of metal-to-metal contact and thermal bridges in the calculations.

F. Cabinet Surface Condensation:
   1. Cabinet shall have additional insulation and vapor seals if required to prevent condensation on the interior and exterior of the cabinet.
   2. Portions of cabinet located downstream from the cooling coil shall have a thermal break at each thermal bridge between the exterior and interior casing to prevent condensation from occurring on the interior and exterior surfaces. The thermal break shall not compromise the structural integrity of the cabinet.

G. Maximum Cabinet Leakage: SMACNA leakage class rating of 5.0.

H. Electrical components, devices, and accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.03 CABINET

A. Construction: double wall.

B. Exterior Casing Material: Galvanized steel with paint finish.

C. Interior Casing Material: Galvanized steel.

D. Lifting and Handling Provisions: Factory-installed shipping skids and lifting lugs.

E. Base Rails: Galvanized-steel rails for mounting on roof curb or pad as indicated.

F. Access for Inspection, Cleaning, and Maintenance: Comply with requirements in ASHRAE 62.1.
   1. Service Doors: Hinged access doors with gaskets. Material and construction of doors shall match material and construction of cabinet in which doors are installed.

G. Roof: Standing seam or membrane; sloped to drain water.

H. Floor: Reinforced, metal surface; reinforced to limit deflection when walked on by service personnel. Insulation shall be below metal walking surface.

I. Cabinet Insulation:
   1. Type: rigid polyurethane foam.
   2. Thickness: 2 inches.
   3. Insulation Adhesive: Comply with ASTM C916, Type I.
   4. Mechanical Fasteners: Suitable for adhesive, mechanical, or welding attachment to casing without damaging liner and without causing air leakage when applied as recommended by manufacturer.

J. Condensate Drain Pans:
   1. Shape: Rectangular, with 1 percent slope in at least two planes to direct water toward drain connection.
   2. Size: Large enough to collect condensate from cooling coils including coil piping connections, coil headers, and return bends.
      a. Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
      b. Depth: A minimum of 2 inches deep.
   3. Configuration: Single wall.
   4. Configuration: Double wall, with space between walls filled with foam insulation and moisture-tight seal.
   5. Material: Galvanized-steel sheet with asphaltic waterproofing compound coating on pan top surface.
   6. Material: Stainless-steel sheet.

7. Drain Connection:
    a. Located on one end of pan, at lowest point of pan.
    b. Terminated with threaded nipple.
    c. Minimum Connection Size: NPS 1.
8. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.

K. Surfaces in Contact with Airstream: Comply with requirements in ASHRAE 62.1 for resistance to mold and erosion.

L. Roof Custom Seismic Curb: Full-perimeter curb of sheet metal, minimum 24 inches high, with wood nailer, neoprene sealing strip, and welded Z-bar flashing.
1. Comply with requirements in "The NRCA Roofing Manual."
2. Provide Seismic certification of roof curb.

2.04 SUPPLY FAN

A. Plenum Fan Type: Single width, non-overloading, with backward-inclined or airfoil blades.
1. Fan Wheel Material: Aluminum; attached directly to motor shaft.
2. Fan Wheel Drive and Arrangement: Direct drive, AMCA Arrangement 4.
3. Fan panel and frame Material: Powder-coated steel, stainless steel, or aluminum.
4. Fan Enclosure: Easily removable enclosure around rotating parts.
5. Fan Balance: Precision balance fan below 0.08 inch/s at design speed with filter in.

B. Motors:
1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."
2. Enclosure: Totally enclosed.
3. Enclosure Materials: Cast iron.
4. Efficiency: Premium efficient.
5. NEMA Design: Premium efficiency.
6. Service Factor: 1.15.

C. Mounting: Fan wheel, motor, and drives shall be mounted to fan casing with restrained spring isolators.

2.05 COOLING COILS (HRV-1 AND 6)

A. Capacity Ratings: Comply with ASHRAE 33 and ARI 410.

B. Coil Casing Material: Aluminum.

C. Tube Material: Copper.

D. Tube Header Material: Copper.

E. Fin Material: Aluminum.

F. Fin and Tube Joints: Mechanical bond.

G. Leak Test: Coils shall be leak tested with air underwater.

H. Refrigerant Coil Capacity Reduction: Circuit coils for interleaved control.

I. Refrigerant Coil Suction and Distributor Header Materials: Seamless copper tube with brazed joints.

J. Coating: Corrosion-resistant coating after assembly.

2.06 REFRIGERATION SYSTEM (HRV-1 AND 6)

A. Comply with requirements in ASHRAE 15, "Safety Standard for Refrigeration Systems."

B. Refrigerant Charge: Factory charged with refrigerant and filled with oil.

C. Compressors: Scroll compressors with integral vibration isolators, internal overcurrent and overtemperature protection, internal pressure relief.

D. Refrigerant: R-410A.
   1. Classified as Safety Group A1 according to ASHRAE 34.
   2. Provide unit with operating charge of refrigerant.

E. Refrigeration System Specialties:
   1. Expansion valve with replaceable thermostatic element.
   2. Refrigerant dryer.
   3. High-pressure switch.
   4. Low-pressure switch.
   5. Thermostat for coil freeze-up protection during low ambient temperature operation or loss of air.
   6. Brass service valves installed in discharge and liquid lines.

F. Capacity Control:
   1. Hot-gas bypass refrigerant control for capacity control with continuous dehumidification on a single compressor.
   2. Patented, Rawal APR control with zero to 100 percent modulating capacity control using hot-gas bypass. Evaporator coil shall be continuously active for dehumidification.
   3. Single compressor with evaporator and condenser coil within the refrigerant section to provide initial pre-cooling and to reheat for humidity control.
   4. Heat-pipe heat exchanger wrapped around the evaporator coil to pre-cool the air entering the evaporator coil and reheat the air leaving the evaporator coil to control humidity.

G. Refrigerant condenser coils:
   1. Capacity Ratings: Complying with ASHRAE 33 and ARI 410.
   2. Tube Material: Copper.
   3. Fin Material: Aluminum.
   4. Fin and Tube Joint: Mechanical bond.
   5. Leak Test: Coils shall be leak tested with air underwater.
   6. Coating: Corrosion-resistant coating after assembly.

H. Condenser Fan Assembly:
   1. Fans: Direct-drive propeller type with statically and dynamically balanced fan blades.
   2. Fan Motors:
      a. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."
      b. Motor Enclosure: Totally enclosed non-ventilating (TENV) or totally enclosed air over (TEAO) enclosure.
      c. Enclosure Materials: Cast iron.
      d. Motor Bearings: Permanently lubricated bearings
      e. Built-in overcurrent and thermal-overload protection.
      f. Efficiency: Premium efficient.
      g. NEMA Design: Premium efficiency
      h. Service Factor:1.15.
   3. Fan Safety Guards: Steel with corrosion-resistant coating.

I. Safety Controls:
   1. Compressor motor and condenser coil fan motor low ambient lockout.
   2. Overcurrent protection for compressor motor.

2.07 ELECTRIC-RESISTANCE HEATING COIL (HRV-1 AND 6)

A. UL Compliance: Comply with requirements in UL 1995, "Heating and Cooling Equipment."

B. Electric-Resistance Heating Elements:
   1. Coiled Resistance Wire: 80 percent nickel and 20 percent chromium.
   2. Tubular-Steel Sheath: Compacted magnesium oxide powder.
   3. Fins: Spiral-wound, copper-plated, steel fins continuously brazed to sheath.

4. Heating Capacity: Low density 35 W per sq. in., factory wired for single-point wiring connection; with time delay for element staging and overcurrent- and overheat-protection devices.
5. Safety Controls:
   a. Blower-motor interlock, air-pressure switch.
   b. Quiet mercury contactors.
   c. Time delay between steps.
   d. Integral, nonfused power disconnect switch.

C. Electric-Resistance Heating Elements:
1. Open-Coil Resistance Wire: 80 percent nickel and 20 percent chromium.
2. Supports and Insulation: Floating ceramic bushings recessed into casing openings; fastened to supporting brackets and mounted in galvanized-steel frame.
3. Heating Capacity: Low density 35 W per sq. in., factory wired for single-point wiring connection; with time delay for element staging and overcurrent- and overheat-protection devices.
4. Safety Controls:
   a. Blower-motor interlock, air-pressure switch.
   b. Quiet mercury contactors.
   c. Time delay between steps.
   d. Integral, nonfused power disconnect switch.

2.08 OUTDOOR-AIR INTAKE HOOD

A. Type: Manufacturer's standard hood or louver.

B. Materials: Match cabinet.

C. Bird Screen: Comply with requirements in ASHRAE 62.1.

D. Configuration: Designed to inhibit wind-driven rain and snow from entering unit.

2.09 FILTERS

A. Disposable Panel Filters:
1. Comply with NFPA 90A.
2. Factory-fabricated, viscous-coated, flat-panel type.
3. Thickness: See schedule on drawings.
4. Initial Resistance: See schedule on drawings.
5. Recommended Final Resistance: See schedule on drawings.
6. Minimum MERV: according to ASHRAE 52.2. See schedule on drawings.
7. Media: Interlaced glass fibers sprayed with nonflammable adhesive.

B. Extended-Surface, Disposable Panel Filters:
1. Comply with NFPA 90A.
2. Factory-fabricated, dry, extended-surface type.
3. Thickness: See schedule on drawings.
4. Initial Resistance: See schedule on drawings.
5. Recommended Final Resistance: See schedule on drawings.
6. Minimum MERV: according to ASHRAE 52.2. See schedule on drawings.
7. Media: Fibrous material formed into deep-V-shaped pleats and held by self-supporting wire grid.

2.10 HEAT AND ENERGY RECOVERY EXCHANGER

A. ALUMINUM sensible HEAT RECOVERY wheel (HRU-1 AND 6):
1. Integral purge section limiting carryover of exhaust air to 1%.
2. segmented wheel strengthened with radial spokes impregnated with non-migrating, water-selective, molecular-sieve desiccant coating.
3. Fractional horsepower motor and gear reducer , with speed changed by variable frequency controller and self-adjusting multilink belt around outside of rotor.
4. Aluminum frame; stainless steel drain pan.

5. Outside air bypass.
6. Aluminum Plate Heat Recovery Exchangers (HRU-2, 3, 4 and 5):
7. Aluminum, sensible, parallel counter flow, flat plate, heat exchanger.
8. Smooth aluminum plates separated by formed ribs; aluminum frame; stainless steel drain pan.
9. Outside air bypass.

2.11 ELECTRICAL POWER CONNECTIONS

A. General Electrical Power Connection Requirements: Factory-installed and -wired switches, motor controllers, transformers, and other necessary electrical devices shall provide a single-point field power connection to unit.

B. Enclosure: NEMA 250, Type 4X, mounted in unit with hinged access door in unit cabinet having a lock and key or padlock and key,

C. Wiring: Numbered and color-coded to match wiring diagram.

D. Wiring Location: Install factory wiring outside an enclosure in a raceway.

E. Power Interface: Field power interface shall be to NEMA KS 1, heavy-duty, nonfused disconnect switch.

F. Factory Wiring: Branch power circuit to each motor and to controls with one of the following disconnecting means:
   1. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
   2. NEMA KS 1, heavy-duty, nonfusible switch.
   3. UL 489, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

G. Factory-Mounted, Overcurrent-Protection Service: For each motor.

H. Transformer: Factory mounted with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.

I. Controls: Factory wire unit-mounted controls where indicated.

J. Lights: Factory wire unit-mounted lights.

K. Receptacle: Factory wire unit-mounted, ground fault interrupt (GFI) duplex receptacle.

L. Control Relays: Auxiliary and adjustable time-delay relays.

2.12 CONTROLS

A. Control equipment and sequence of operation are specified in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC" and Section 23 09 93.11 "Sequence of Operations for HVAC DDC."

B. Control Valves: Comply with requirements in Section 23 09 23.11 "Control Valves."

C. Control Wiring: Factory wire connection for controls' power supply.

D. Control Devices: Sensors, transmitters, relays, switches, detectors, operators, actuators, and valves shall be manufacturer's standard items to accomplish indicated control functions.

E. Control Dampers:
   1. Damper Location: Factory installed inside unit for ease of blade axle and bushing service. Arrange dampers located in a mixing box to achieve convergent airflow to minimize stratification.
   2. Damper Leakage: Comply with requirements in AMCA 500-D. Leakage shall not exceed 6.5 cfm per sq. ft. at a static-pressure differential of 4.0 inches water column when a torque of 5 in./lb per sq. ft. is applied to the damper jackshaft.
   3. Damper Rating: Rated for close-off pressure equal to the fan shutoff pressure.
   4. Damper Label: Bear the AMCA seal for both air leakage and performance.

5. Blade Configuration: Unless otherwise indicated, use parallel blade configuration for two-position control and equipment isolation service and use modulating control when mixing two airstreams. For other applications, use an opposed-blade configuration.
6. Damper Frame Material: Extruded aluminum, galvanized steel or stainless steel.
7. Blade Type: hollow-shaped airfoil.
8. Blade Material: Extruded aluminum.
9. Maximum Blade Width: 6 inches.
10. Maximum Blade Length: 48 inches.
11. Blade Seals: Replaceable, continuous perimeter vinyl seals and jambs with stainless-steel compression-type seals.
12. Bearings: Thrust bearings for vertical blade axles.
13. Airflow Measurement (HRV-1 and 6):
    a. Monitoring System: Complete and functioning system of airflow monitoring as an integral part of the damper assembly where indicated.
    b. Remote Monitoring Signal: 0-10 volt or 4-20 mA scaled signal.
    c. Accuracy of flow measurement: Within 5 percent of the actual flow rate between the range of the scheduled minimum and maximum airflow. For units with a large range between minimum and maximum airflow, configure the damper sections and flow measurement assembly as necessary to comply with accuracy.
    d. Straightening Device: Integral to the flow measurement assembly if required to achieve the specified accuracy as installed.
    e. Flow measuring device: Suitable for operation in untreated and unfiltered outdoor air. If necessary, include temperature and altitude compensation and correction to maintain the accuracy.

F. Damper Operators:
1. Factory-installed electric operator for each damper assembly with one operator for each damper assembly mounted to the damper frame.
2. Operator capable of shutoff against fan pressure and able to operate the damper with sufficient reserve power to achieve smooth modulating action and proper speed of response at the velocity and pressure conditions to which the damper is subjected.
3. Maximum Operating Time: Open or close damper 90 degrees in 60 seconds.
4. Adjustable Stops: For both maximum and minimum positions.
5. Position Indicator and Graduated Scale: Factory installed on each actuator with words "OPEN" and "CLOSED," or similar identification, at travel limits.
6. Spring-return operator to fail-safe; either closed or open as required by application.
7. Operator Type: Direct coupled, designed for minimum 60,000 full-stroke cycles at rated torque.
8. Position feedback Signal: For remote monitoring of damper position.
9. Coupling: V-bolt and V-shaped, toothed cradle.
10. Circuitry: Electronic overload or digital rotation-sensing circuitry.

G. Electric-Resistance Heat Controls:
1. Remote sensor for field installation in supply-air duct with sensor adjustment located in control panel to control electric coil to maintain temperature.
2. Capacity Controls: Modulating.

H. Damper Controls: See control sequence on drawings.

I. Integral Smoke Alarm: Smoke detector installed in supply air.

J. DDC Temperature Control: Standalone control module for link between unit controls and DDC temperature-control system. Control module shall be compatible with control system specified in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC." Links shall include the following:
1. Start/stop interface relay, and relay to notify DDC temperature-control system alarm condition.
2. Hardware interface or additional sensors for the following:
    a. Discharge-air temperature.

b. Refrigeration system operating.
c. Furnace operating.
d. Constant and variable motor loads.
e. Variable-frequency-controller operation.
f. Cooling load.
g. Economizer cycles.
h. Air-distribution static pressure and ventilation-air volumes.

K. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display unit status and alarms.
1. Hardwired Points:
a. Monitoring: On-off status, common trouble alarm.
b. Control: On-off operation, supply temperature set-point adjustment, space pressure set-point adjustment.
2. ASHRAE 135 (BACnet) communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the unit from an operator workstation. Control features and monitoring points displayed locally at unit control panel shall be available through the DDC system for HVAC.

2.13 ACCESSORIES

A. Service Lights and Switch: Factory installed in each accessible section with weatherproof cover. Factory wire lights to a single-point field connection.

B. Duplex Receptacle: Factory mounted in unit supply-fan section and refrigeration section, with 20 amp 120 V GFI duplex receptacle and weatherproof cover.

PART 3 EXECUTION

3.01 INSTALLATION

A. Comply with manufacturer's rigging and installation instructions for unloading units and moving to final locations.

B. Curb Support: Install roof curb on roof structure according to "The NRCA Roofing Manual."
1. Install and secure units on curbs and coordinate roof penetrations and flashing with roof construction.
2. Coordinate size, installation, and structural capacity of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 07 72 00 "Roof Accessories."
3. Coordinate size, location, and installation of unit manufacturer's roof curbs and equipment supports with roof Installer.

C. Restrained Curb Support: Install restrained vibration isolation roof-curb rails on roof structure according to "The NRCA Roofing Manual."

D. Equipment Mounting:
1. Comply with requirements for vibration isolation and seismic control devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
2. Comply with requirements for vibration isolation devices specified in Section 23 05 48.13 "Vibration Controls for HVAC."

E. Suspended Units: Suspend and brace units from structural-steel support frame using threaded steel rods and spring hangers. Comply with requirements for vibration isolation devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."

F. Install wall- and duct-mounted sensors furnished by manufacturer for field installation. Install control wiring and make final connections to control devices and unit control panel.

G. Install separate devices furnished by manufacturer and not factory installed.

H. Install new filters at completion of equipment installation and before testing, adjusting, and balancing.

I. Install drain pipes from unit drain pans to sanitary drain.
1. Drain Piping: Schedule 40 PVC pipe complying with ASTM D1785, with solvent-welded fittings.

2. Pipe Size: Same size as condensate drain pan connection.

3.02 CONNECTIONS

A. Where installing piping adjacent to units, allow space for service and maintenance.

B. Duct Connections:
   1. Comply with requirements in Section 23 31 13 "Metal Ducts."
   2. Drawings indicate the general arrangement of ducts.
   3. Connect ducts to units with flexible duct connectors. Comply with requirements for flexible duct connectors in Section 23 33 00 "Air Duct Accessories."

C. Electrical Connections: Comply with requirements for power wiring, switches, and motor controls in electrical Sections.
   1. Install electrical devices furnished by unit manufacturer but not factory mounted.

3.03 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. Verify operation of remote panel including pilot-light operation and failure modes. Inspect the following:
      a. High-limit heat exchanger.
      b. Alarms.
   3. Inspect units for visible damage to refrigerant compressor, condenser and evaporator coils, and fans.
   4. Start refrigeration system when outdoor-air temperature is within normal operating limits and measure and record the following:
      a. Cooling coil leaving-air, dry- and wet-bulb temperatures.
      b. Cooling coil entering-air, dry- and wet-bulb temperatures.
      c. Condenser coil entering-air dry-bulb temperature.
      d. Condenser coil leaving-air dry-bulb temperature.
   5. Simulate maximum cooling demand and inspect the following:
      a. Compressor refrigerant suction and hot-gas pressures.
      b. Short-circuiting of air through outside coil or from outside coil to outdoor-air intake.
   6. Inspect casing insulation for integrity, moisture content, and adhesion.
   7. Verify that clearances have been provided for servicing.
   8. Verify that controls are connected and operable.
   9. Verify that filters are installed.
   10. Clean coils and inspect for construction debris.
   11. Inspect and adjust vibration isolators and seismic restraints.
   12. Verify bearing lubrication.
   13. Clean fans and inspect fan-wheel rotation for movement in correct direction without vibration and binding.
   14. Adjust fan belts to proper alignment and tension.
   15. Start unit.
   16. Inspect and record performance of interlocks and protective devices including response to smoke detectors by fan controls and fire alarm.
   17. Operate unit for run-in period.
   18. Calibrate controls.
   19. Adjust and inspect high-temperature limits.
   20. Inspect outdoor-air dampers for proper stroke.
   21. Verify operational sequence of controls.
   22. Measure and record the following airflows. Plot fan volumes on fan curve.
      a. Supply-air volume.
      b. Return-air flow.
      c. Outdoor-air flow.

B. After startup, change filters, verify bearing lubrication, and adjust belt tension.

C. Remove and replace components that do not properly operate and repeat startup procedures as specified above.

D. Prepare written report of the results of startup services.

3.04 ADJUSTING

A. Adjust initial temperature and humidity set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

END OF SECTION 23 74 33

SECTION 23 81 26

SPLIT-SYSTEM AIR-CONDITIONERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Split-system air-conditioning and heat-pump units consisting of separate evaporator-fan and compressor-condenser components.

1.02 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.03 ACTION SUBMITTALS

A. Submittals shall be formatted per Section 23 00 00 “General Mechanical Requirements”. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section. All exceptions shall be clearly identified by referencing respective paragraph and other requirements. Next to each specification item, indicate the following:
   1. “No Exception Taken”.
   2. “Exception”. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

B. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.

C. LEED Submittals:
   1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.

D. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Wiring Diagrams: For power, signal, and control wiring.

E. Samples for Initial Selection: For units with factory-applied color finishes.

1.04 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

~~B.~~ Warranty: Sample of special warranty.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For split-system air-conditioning units to include in emergency, operation, and maintenance manuals.

B. Warranty

C. Start-up reports

1.06 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Filters: One extra set for each air-handling unit.
   2. Fan Belts: One extra set for each air-handling unit fan.

1.07 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE Compliance:
   1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
   2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - " Procedures," and Section 7 - "Construction and System Start-up."

C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

1.08 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Section 03 30 00 "Cast-in-Place Concrete."

B. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.09 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.
   1. Warranty Period:
      a. For Compressor: Five year(s) from date of Substantial Completion.
      b. For Parts: One year(s) from date of Substantial Completion.
      c. For Labor: One year(s) from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Trane
   2. Carrier
   3. Daikin
   4. Mitsubishi

2.02 INDOOR UNITS

A. Concealed Evaporator-Fan Components:
   1. Chassis: Galvanized steel with flanged edges, removable panels for servicing, and insulation on back of panel.
   2. Insulation: Faced, glass-fiber duct liner.
   3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
   4. Fan: Forward-curved, double-width wheel of galvanized steel; directly connected to motor.
   5. Fan Motors:
      a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."
      b. ECM, or multispeed with internal thermal protection and permanent lubrication.
      c. Wiring Terminations: Connect motor to chassis wiring with plug connection.
   6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
   7. Condensate Drain Pans:
      a. Fabricated with one percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.

1) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
2) Depth: A minimum of 2 inches deep.

b. Single-wall, stainless-steel sheet.
c. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
1) Minimum Connection Size: NPS 3/4

B. Floor-Mounted, Evaporator-Fan Components:
1. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect.
a. Discharge Grille: Steel with surface-mounted frame.
b. Insulation: Faced, glass-fiber duct liner.
c. Drain Pans: Galvanized steel, with connection for drain; insulated.
2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
3. Fan: Direct drive, centrifugal
4. Fan Motors:
a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."
b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
5. Air Filtration Section:
a. General Requirements for Air Filtration Section:
1) Comply with NFPA 90A.
2) Minimum Arrestance: According to ASHRAE 52.1 and MERV according to ASHRAE 52.2.
3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
b. Disposable Panel Filters:
1) Factory-fabricated, viscous-coated, flat-panel type.
2) Thickness: 2 inches. (
3) Arrestance according to ASHRAE 52.1: 80
4) MERV according to ASHRAE 52.2: 13
5) Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial agent.

C. Wall-Mounted, Evaporator-Fan Components:
1. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect, and discharge drain pans with drain connection.
2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
3. Fan: Direct drive, centrifugal.
4. Fan Motors:
a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."
b. ECM or Multitapped, multispeed with internal thermal protection and permanent lubrication.
c. Enclosure Type: Totally enclosed, fan cooled.
d. NEMA Premium (TM) efficient motors as defined in NEMA MG 1.
e. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

f. Mount unit-mounted disconnect switches on exterior of unit.

5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
6. Condensate Drain Pans:
   a. Fabricated with one percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.
      1) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
      2) Depth: A minimum of 1 inch deep.
   b. Single-wall, stainless-steel sheet.
   c. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
      1) Minimum Connection Size: NPS 3/4
7. Air Filtration Section:
   a. General Requirements for Air Filtration Section:
      1) Comply with NFPA 90A.
      2) Minimum Arrestance: According to ASHRAE 52.1 and MERV according to ASHRAE 52.2.
      3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
   b. Disposable Panel Filters:
      1) Factory-fabricated, viscous-coated, flat-panel type.
      2) Thickness: 2 inches.
      3) Arrestance according to ASHRAE 52.1: 80
      4) MERV according to ASHRAE 52.2: 13
      5) Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial agent.

2.03 OUTDOOR UNITS

A. Air-Cooled, Compressor-Condenser Components:
   1. Casing: Steel, finished with baked enamel, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
   2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
      a. Compressor Type: Scroll.
      b. Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.
      c. Refrigerant Charge: R-410A
      d. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 206/110.
   3. Heat-Pump Components: Reversing valve and low-temperature-air cutoff thermostat.
   4. Fan: Aluminum-propeller type, directly connected to motor.
   5. Motor: Permanently lubricated, with integral thermal-overload protection.
   6. Low Ambient Kit: Permits operation down to 45 deg F.
   7. Mounting Base: Polyethylene.

2.04 ACCESSORIES

A. Control equipment and sequence of operation are specified in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC" and Section 23 09 93.11 "Sequence of Operations for HVAC DDC."

B. Thermostat: Low voltage with subbase to control compressor and evaporator fan. Thermostat: (Wireless infrared functioning) to remotely control compressor and evaporator fan, with the following features:
   1. Compressor time delay.
   2. 24-hour time control of system stop and start.
   3. Liquid-crystal display indicating temperature, set-point temperature, time setting, operating mode, and fan speed.
   4. Fan-speed selection including auto setting.

D. Automatic-reset timer to prevent rapid cycling of compressor.

E. Refrigerant Line Kits: Type ACR, Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.

F. Drain Hose: For condensate.

G. Additional Monitoring:
   1. Monitor constant and variable motor loads.
   2. Monitor variable-frequency-drive operation.
   3. Monitor economizer cycle.
   4. Monitor cooling load.
   5. Monitor air distribution static pressure and ventilation air volumes.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install units level and plumb.

B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure as detailed on the drawings.

C. Install roof-mounted, compressor-condenser components on equipment supports as detailed on the drawings.

D. Equipment Mounting:
   1. Install ground-mounted, compressor-condenser components on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 03 30 00 "Cast-in-Place Concrete."
   2. Install ground-mounted, compressor-condenser components on polyethylene mounting base.
   3. Comply with requirements for vibration isolation and seismic control devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
   4. Comply with requirements for vibration isolation devices specified in Section 23 05 48.13 "Vibration Controls for HVAC."

E. Install and connect (pre-charged) refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.02 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where piping is installed adjacent to unit, allow space for service and maintenance of unit.

C. Duct Connections: Duct installation requirements are specified in Section 23 31 13 "Metal Ducts." Drawings indicate the general arrangement of ducts. Connect supply and return ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in Section 23 33 00 "Air Duct Accessories."

3.03 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:
   1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Remove and replace malfunctioning units and retest as specified above.

E. Prepare test and inspection reports.

3.04 STARTUP SERVICE

A. Perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.

3.06 DEMONSTRATION

A. Train Contracting Agency's maintenance personnel to adjust, operate, and maintain units.

END OF SECTION 23 81 26

SECTION 23 81 46

WATER-SOURCE UNITARY HEAT PUMPS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Unitary heat pumps with refrigerant-to-water heat exchangers, refrigeration circuits, and refrigerant compressor(s).

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:
   1. Include plans, elevations, sections, and mounting and attachment details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include diagrams for power, signal, and control wiring.

1.03 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For water-source unitary heat pumps, accessories, and components, from manufacturer.

B. Field quality-control reports.

C. Sample Warranty: For manufacturer's warranty.

1.04 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.05 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of water-source unitary heat pumps that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, refrigeration components.
   2. Warranty Period: Four years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. ASHRAE Compliance:
   1. ASHRAE 15.

B. Comply with NFPA 70.

C. Comply with safety requirements in UL 484 for assembly of free-delivery, water-source heat pumps.

2.02 WATER-SOURCE UNITARY HEAT PUMPS, 6 TONS AND SMALLER

A. Manufacturers:

B. Subject to compliance with requirements, provide products by one of the following:

C. Bosch (Basis of Design)

D. Carrier.

E. ClimateMaster.

F. Florida Heat Pump

G. Trane.

H. Description: Packaged water-source unitary heat pump with temperature controls; factory assembled, piped, wired, tested, and rated according to ASHRAE/ARI/ISO-13256-1.
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

I. Cabinet and Chassis: Galvanized-steel casing with the following features:
   1. Access panel for access and maintenance of internal components.
   2. Knockouts for electrical and piping connections.
   3. Cabinet Insulation: Glass-fiber liner, minimum 1/2 inch thick, complying with UL 181, ASTM C1071, and ASTM G21.

J. Water Circuits:
   1. Refrigerant-to-Water Heat Exchangers:
      a. Source-side coaxial heat exchangers with copper water tube, with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to 450 psig on refrigerant side and 400 psig on water side.
      b. Load-side coaxial heat exchangers with copper water tube, with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to 450 psig on refrigerant side and 400 psig on water side.

K. Refrigerant Circuit Components:
   1. Sealed Refrigerant Circuit: Charge with R-410A refrigerant.
   2. Filter-Dryer: Factory installed to clean and dehydrate the refrigerant circuit.
   3. Charging Connections: Service fittings on suction and liquid for charging and testing on each circuit.
   4. Reversing Valve: Four-way, solenoid-activated valve designed to be fail-safe in heating position with replaceable magnetic coil.
   5. Compressor:
      a. Scroll.
      b. Single stage.
      c. Installed on vibration isolators and mounted on a structural steel base plate and full-length channel stiffeners.
      d. Exterior of compressor shall be wrapped with a high-density sound-attenuating blanket and housed in an acoustically treated enclosure.
      e. Factory-Installed Safeties:
         1) Antirecycle timer.
         2) High-pressure cutout.
         3) Low-pressure cutout or loss of charge switch.
         4) Internal thermal-overload protection.
         5) Freezestat to stop compressor if water-loop temperature in refrigerant-to-water heat exchanger falls below 35 deg F.
         6) Water-coil, low-temperature switch.
   6. Refrigerant Piping Materials: ASTM B743 copper tube with wrought-copper fittings and brazed joints.
   7. Pipe Insulation: Refrigerant minimum 3/8-inch- thick, flexible elastomeric insulation on piping exposed to airflow through the unit. Maximum 25/50 flame-spread/smoke-developed indexes according to ASTM E84.
   8. Refrigerant Metering Device: Thermal-expansion valve.
   9. Refrigerant Metering Device: Dual-port, thermal-expansion valve to allow specified operation with entering-water temperatures from 25 to 125 deg F.

L. Controls: Control equipment and sequence of operation are specified in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC" and Section 23 09 93.11 "Sequence of Operations for HVAC DDC."

M. Controls:
   1. Basic Unit Control Modes and Devices:
      a. Unit shutdown on high or low refrigerant pressures.
      b. Unit shutdown on low water temperature.
      c. Low- and high-voltage protection.
      d. Overcurrent protection for compressor.
      e. Random time delay, three to 10 seconds, start on power-up.

f. Time delay override for servicing.
g. Control voltage transformer.
h. Water-coil freeze protection (selectable for water or antifreeze).
i. Automatic intelligent reset. Unit shall automatically reset five minutes after trip if the fault has cleared. Should a fault reoccur three times sequentially, lockout requiring manual reset occurs.
j. Ability to defeat time delays for servicing.
k. Digital display to indicate high pressure, low pressure, low voltage, and high voltage.
l. The low-pressure switch shall not be monitored for the first 90 seconds after a compressor start command to prevent nuisance safety trips.
m. Remote fault-type indication at thermostat.
n. Selectable 24-V dc or pilot duty dry contact alarm output.
o. 24-V dc output to cycle a motorized water valve with compressor contactor.
p. Service test mode for troubleshooting and service.
q. Unit-performance sentinel warns when heat pump is running inefficiently.
r. Compressor soft start.

2. Thermostat:
   a. Wall-Mounted Thermostat:
      1) Concealed temperature indication.
      2) Deg F indication.
   b. Wall-mounted temperature sensor.
   c. Unoccupied period override push button.
   d. Data entry and access port.
      1) Input data include room temperature and humidity set points for occupied and unoccupied periods.
      2) Output data include room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.
3. Terminal Controller:
   a. Scheduled operation for occupied and unoccupied periods on 365-day clock with minimum of four programmable periods per day.
   b. Two-hour unoccupied override period.
   c. Remote-control panel to contain programmable timer and digital display for fault condition.
   d. Compressor-disable relay to stop compressor operation for demand limiting or switch to unoccupied operation.
   e. Automatic restart after five minutes if fault clears. Lockout after three attempts to restart following fault. Indicate fault for service technician.
   f. Backup for volatile memory.

N. Electrical Connection: Single electrical connection.

O. Capacities and Characteristics: See schedule on plans.

2.03 ACCESSORIES

A. Hose Kits: Tag hose kits to equipment designations.
   1. Minimum Working Pressure: 400 psig.
   2. Operating Temperatures: From 33 to 211 deg F.
   3. Hose Length: 24 inches.
   4. Minimum Hose Diameter: Equal to water-source unitary heat-pump piping connection.
   5. Hose Material: Braided stainless steel with adapters for pipe connections.
   6. Motorized Water Valve: Stop water flow through the unit when compressor is off. Slow-acting, 24-V dc valve with threaded connections is installed between isolation valves and heat exchanger.

PART 3 EXECUTION

3.01 INSTALLATION

A. Equipment Mounting:
   1. Comply with requirements for vibration-isolation and seismic-restraint devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."

B. Suspend water-source, unitary heat pumps from structure with all-thread hanger rods and spring hangers with vertical-limit stop. Hanger rods and attachments to structure are specified in Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment." Vibration hangers are specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."

C. Install wall-mounting thermostats and switch controls in electrical outlet boxes at heights to match lighting controls or as required in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC."

D. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:
   1. Connect supply and return hydronic piping to heat pump with hose kits.

E. Install electrical devices furnished by manufacturer but not specified to be factory mounted.

F. Install piping adjacent to machine to allow space for service and maintenance.

3.02 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections:
   1. After installing water to water heat pumps and after electrical circuitry has been energized, test units for compliance with requirements.
   2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Heat pumps will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 23 81 46

SECTION 23 82 16
AIR COILS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. The following types of air coils that are not an integral part of air handling units:
   1. Electric.

1.02 OTHER REQUIREMENTS

A. See Section 23 00 00 “General Mechanical Requirements” for additional requirements for this Section.

1.03 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each air coil. Include rated capacity and pressure drop for each air coil.

B. Shop Drawings: Diagram power, signal, and control wiring.

1.05 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which coil location and ceiling-mounted access panels are shown and coordinated with each other.

B. Field Quality Control Test Reports: Provide.

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For air coils to include in operation and maintenance manuals.

1.07 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. ASHRAE Compliance:
   1. Comply with ASHRAE 15 for refrigeration system safety.
   2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
   3. Comply with applicable requirements in ASHRAE 62.1, Section 5 - “Systems and Equipment,” and Section 7 - “Construction and Startup.”

PART 2 PRODUCTS

2.01 ELECTRIC COILS (DH-1 TO 4)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Brasch.
   2. Chromalox.
   3. Dunham-Bush.
   4. INDEECO.
   5. Trane.

B. Coil Assembly: Comply with UL 1995.

C. Heating Elements: Open-coil resistance wire of 80 percent nickel and 20 percent chromium, supported and insulated by floating ceramic bushings recessed into casing openings, and fastened to supporting brackets.

D. High-Temperature Coil Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box without removing heater from duct or casing.
   1. Secondary Protection: Load-carrying, manually reset or manually replaceable, thermal cutouts; factory wired in series with each heater stage.

E. Frames: Galvanized-steel channel frame, minimum 0.052 inch thick for slip-in mounting.

F. Control Panel: Unit mounted with disconnecting means and over-current protection. Include the following controls:
   1. Magnetic contactor.
   2. Step controller.
   3. Time-delay relay.
   4. Airflow proving switch.

G. Thermostat: Refer to Section 23 09 00 “Instrumentation and Control for HVAC” for thermostat.

H. Thermostat Temperature Range: Wall-mounted thermostats, with temperature range from 50 to 90 degrees F, and 2.5 degrees F throttling range.

I. Capacities and Characteristics:
   1. Coil Face Dimensions:
      a. Finned Length: See Equipment Schedule on Drawings.
      b. Finned Width: See Equipment Schedule on Drawings.
   2. Mounting: Slip in.
   3. Air Side: See Equipment on Drawings.
   4. Electrical Characteristics: See Equipment on Drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. General: Examine ducts, plenums, and casings to receive air coils for compliance with requirements for installation tolerances and other conditions affecting coil performance.

B. Corrections: Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General: Install coils level and plumb.

B. SMACNA: Install coils in metal ducts and casings constructed according to SMACNA’s “HVAC Duct Construction Standards, Metal, and Flexible.”

C. Cleaning: Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.03 CONNECTIONS

A. General: Piping installation requirements are specified in other sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Service and Maintenance: Install piping adjacent to coils to allow service and maintenance.

C. Grounding: Ground equipment according to Section 26 05 26 “Grounding and Bonding for Electrical Systems.”

D. Low Voltage Wiring: Connect wiring according to Section 26 05 19 “Low-Voltage Electrical Power Conductors and Cables.”

3.04 FIELD QUALITY CONTROL

A. Tests and Inspections: Perform the following field tests and inspections and prepare test reports:
   1. Operational Test: After electrical circuitry has been energized, operate electric coils to confirm proper unit operation.
   2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

END OF SECTION 23 82 16

SECTION 23 82 39.13
CABINET UNIT HEATERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cabinet unit heaters with centrifugal fans and electric-resistance heating coils.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings:
   1. Include plans, elevations, sections, and details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include location and size of each field connection.
   4. Include details of anchorages and attachments to structure and to supported equipment.
   5. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
   6. Indicate location and arrangement of piping valves and specialties.
   7. Indicate location and arrangement of integral controls.
   8. Wiring Diagrams: Power, signal, and control wiring.

1.03 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Structural members to which cabinet unit heaters will be attached.
   2. Method of attaching hangers to building structure.
   3. Perimeter moldings for exposed or partially exposed cabinets.

B. Field quality-control reports.

1.04 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 PRODUCTS (EUH-1 AND 5)

2.01 MANUFACTURERS

A. Manufacturers:

B. Subject to compliance with requirements, provide products by one of the following:

C. King

D. Chromalox.

E. Indeeco.

F. Markel.

G. Trane.

2.02 DESCRIPTION

A. Factory-assembled and -tested unit complying with AHRI 440.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. UL: Comply with UL 2021.

2.03 PERFORMANCE REQUIREMENTS

A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

2.04 CABINETS

A. Material: Steel with factory standard finish.
   1. Horizontal Unit, Exposed Bottom Panels: Minimum 0.0528-inch- thick galvanized sheet steel, removable panels secured with tamperproof cam fasteners and safety chain.
   2. Recessed Flanges: Steel, finished to match cabinet.
   3. Control Access Door: Key operated.

2.05 CONTROLS

A. Fan and Motor Board: Removable.
   1. Fan: Forward curved, double width, centrifugal, directly connected to motor; thermoplastic or painted-steel wheels and aluminum, painted-steel, or galvanized-steel fan scrolls.
   2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."
   3. Wiring Terminations: Connect motor to chassis wiring with plug connection.

B. Control devices and operational sequences are specified in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC" and Section 23 09 93.11 "Sequence of Operations for HVAC DDC."

C. DDC Terminal Controller: See control sequence on drawings.

D. Interface with DDC System for HVAC Requirements: See control sequence on drawings.

E. Electrical Connection: Factory-wired motors and controls for a single field connection.

2.06 CAPACITIES AND CHARACTERISTICS

1. Horizontal, Fully Recessed:
   a. Air Inlet: Front, punched louver.
   b. Air Outlet: Front, punched louver.

B. Fan: See schedule on plans.

C. Heating Capacity: See schedule on plans.

D. Electrical Characteristics for Single-Point Connection: See schedule on plans.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas to receive cabinet unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for electrical connections to verify actual locations before unit-heater installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install wall boxes in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 07 92 00 "Joint Sealants."

B. Install cabinet unit heaters to comply with NFPA 90A.

C. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

3.03 CONNECTIONS

A. Comply with safety requirements in UL 1995.

B. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

C. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.04 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:
   1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 23 82 39.16

This page intentionally left blank

SECTION 23 82 39.19
WALL AND CEILING UNIT HEATERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wall and ceiling heaters with propeller fans and electric-resistance heating coils.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings:
   1. Include plans, elevations, sections, and details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include details of anchorages and attachments to structure and to supported equipment.
   4. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
   5. Wiring Diagrams: Power, signal, and control wiring.

C. Samples: For each exposed product and for each color and texture specified.

1.03 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 PRODUCTS (EUH-2, 3, 4 AND 9)

2.01 MANUFACTURERS

A. Subject to compliance with requirements, provide products by one of the following:
   1. King.
   2. Chromalox.
   3. Indeeco.
   4. Markel.
   5. Trane.

2.02 DESCRIPTION

A. Assembly including chassis, electric heating coil, fan, motor, and controls. Comply with UL 2021.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.03 CABINET

A. Front Panel: Stamped-steel louver, with removable panels fastened with tamperproof fasteners.

B. Finish: Baked enamel over baked-on primer with manufacturer's standard color selected by Architect, applied to factory-assembled and -tested wall and ceiling heaters before shipping.

C. Surface-Mounted Cabinet Enclosure: Steel with finish to match cabinet.

2.04 COIL

A. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and 60-Hz hum, embedded in magnesium oxide refractory and sealed in corrosion-resistant metallic sheath. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware, and limit controls for high-temperature protection

2.05 FAN AND MOTOR

A. Fan: Aluminum propeller directly connected to motor.

B. Motor: Permanently lubricated. Comply with requirements in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."

2.06 CONTROLS

A. Controls: Unit-mounted thermostat. Low-voltage relay with transformer kit.

B. Electrical Connection: Factory wire motors and controls for a single field connection.

2.07 CAPACITIES AND CHARACTERISTICS SEE SCHEDULE ON PLANS

PART 3 EXECUTION

3.01 INSTALLATION

A. Install wall and ceiling unit heaters to comply with NFPA 90A.

B. Install wall and ceiling unit heaters level and plumb.

C. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

D. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

E. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

END OF SECTION 23 82 39.19

SECTION 23 83 16

RADIANT-HEATING HYDRONIC PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Radiant-heating piping, including the following:
   1. PEX pipe and fittings.
   2. Distribution manifolds.
   3. Piping specialties.
   4. Controls.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include data for piping, fittings, manifolds, specialties, and controls; include pressure and temperature ratings, oxygen-barrier performance, fire-performance characteristics, and water-flow and pressure-drop characteristics.

B. Shop Drawings: Show piping layout and details drawn to scale, including valves, manifolds, controls, and support assemblies, and their attachments to building structure.

1.03 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 PRODUCTS

2.01 PEX PIPE AND FITTINGS

A. Manufacturers:

B. Subject to compliance with requirements, provide products by one of the following:
   1. Uponor.
   2. In-floor Radiant Floor Heating.
   3. Watts Radiant.

C. Pipe Material: PEX plastic according to ASTM F876.

D. Oxygen Barrier: Limit oxygen diffusion through the tube to maximum 0.10 mg per cu. m/day at 104 deg F according to DIN 4726.

E. Fittings: ASTM F1807, metal insert and copper crimp rings.

F. Pressure/Temperature Rating: Minimum 100 psig and 180 deg F.

2.02 DISTRIBUTION MANIFOLDS

A. Manifold: Minimum NPS 1, brass or stainless steel.

B. Main Shutoff Valves:
   1. Factory installed on supply and return connections.
   2. Two-piece body.
   3. Body: Brass or bronze.
   4. Ball: Chrome-plated bronze.
   5. Seals: PTFE.
   6. CWP Rating: 150 psig.
   7. Maximum Operating Temperature: 225 deg F.

C. Manual Air Vents:
   1. Body: Bronze.
   2. Internal Parts: Nonferrous.
   3. Operator: Key furnished with valve, or screwdriver bit.
   4. Inlet Connection: NPS 1/2.
   5. Discharge Connection: NPS 1/8.
   6. CWP Rating: 150 psig.

7. Maximum Operating Temperature: 225 deg F.

D. Balancing Valves:
1. Body: Plastic or bronze, ball or plug, or globe cartridge type.
2. Ball or Plug: Brass or stainless steel.
3. Globe Cartridge and Washer: Brass with EPDM composition washer.
4. Seat: PTFE.
5. Visual Flow Indicator: Flowmeter with visible indication in a clear plastic cap at top of valve.
6. Differential Pressure Gage Connections: Integral seals for portable meter to measure loss across calibrated orifice.
7. Handle Style: Lever or knob, with memory stop to retain set position if used for shutoff.
8. CWP Rating: Minimum 125 psig.
9. Maximum Operating Temperature: 250 deg F.

E. Zone Control Valves:
1. Body: Plastic or bronze, ball or plug, or globe cartridge type.
2. Ball or Plug: Brass or stainless steel.
3. Globe Cartridge and Washer: Brass with EPDM composition washer.
4. Seat: PTFE.
5. Actuator: Replaceable electric motor.
6. CWP Rating: Minimum 125 psig.
7. Maximum Operating Temperature: 250 deg F.

F. Thermometers:
1. Mount on supply and return connections.
2. Case: Dry type, metal or plastic, 2-inch diameter.
3. Element: Bourdon tube or other type of pressure element.
4. Movement: Mechanical, connecting element and pointer.
5. Dial: Satin-faced, nonreflective aluminum with permanently etched scale markings.
6. Pointer: Black metal.
7. Window: Plastic.
8. Connector: Rigid, back type.
9. Thermal System: Liquid- or mercury-filled bulb in copper-plated steel, aluminum, or brass stem.
10. Accuracy: Plus or minus 1 percent of range or plus or minus 1 scale division to maximum of 1.5 percent of range.

G. Mounting Brackets: Copper, or plastic- or copper-clad steel, where in contact with manifold.

2.03 PIPING SPECIALTIES

A. Cable Ties:
1. Fungus-inert, self-extinguishing, one-piece, self-locking, Type 6/6 nylon cable ties.
2. Minimum Width: 1/8 inch.
3. Tensile Strength: 20 lb, minimum.
4. Temperature Range: Minus 40 to plus 185 deg F.

PART 3 EXECUTION

3.01 APPLICATIONS

A. Install the following types of radiant-heating piping for the applications described:
1. Piping in Interior Reinforced-Concrete Floors: PEX.

3.02 INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings or coordination drawings.

B. Install radiant-heating piping continuous from the manifold through the heated panel and back to the manifold without piping joints in heated panels.

C. Connect radiant piping to manifold in a reverse-return arrangement.

D. Do not bend pipes in radii smaller than manufacturer's minimum bend radius dimensions.

E. Install manifolds in accessible locations, or install access panels to provide maintenance access as required in Section 08 31 13 "Access Doors and Frames."

F. See Section 23 21 13 "Hydronic Piping" and Section 23 21 16 "Hydronic Piping Specialties" for pipes and connections to hydronic systems and for glycol-solution fill requirements.

G. Fire- and Smoke-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials according to Section 07 84 13 "Penetration Firestopping."

H. Piping in Interior Reinforced-Concrete Floors:
   1. Secure piping in concrete floors by attaching pipes to reinforcement using cable ties.
   2. Space cable ties a maximum of 18 inches o.c. and at center of turns or bends.
   3. Maintain 2-inch minimum cover.
   4. Install a sleeve of 3/8-inch- thick, foam-type insulation or PE pipe around tubing and extending for a minimum of 10 inches on each side of slab joints to protect the tubing passing through expansion or control joints. Anchor sleeve to slab form at control joints to provide maximum clearance for saw cut.
   5. Maintain minimum 40-psig pressure in piping during concrete placement and continue for 24 hours after placement.

I. Revise locations and elevations from those indicated as required to suit field conditions and ensure integrity of piping and as approved by Architect.

J. After system balancing has been completed, mark balancing valves to permanently indicate final position.

K. Perform the following adjustments before operating the system:
   1. Open valves to fully open position.
   2. Check operation of automatic valves.
   3. Set temperature controls so all zones call for full flow.
   4. Purge air from piping.

L. After concrete or plaster heating panel has cured as recommended by concrete or plaster supplier, operate radiant-heating system as follows:
   1. Start system heating at a maximum of 10 deg F above the ambient radiant-panel temperature and increase 10 deg F each following day until design temperature is achieved.
   2. For freeze protection, operate at a minimum of 60 deg F supply-water temperature.

3.03 FIELD QUALITY CONTROL

A. Prepare radiant-heating piping for testing as follows:
   1. Open all isolation valves and close bypass valves.
   2. Open and verify operation of zone control valves.
   3. Flush with clean water and clean strainers.

B. Perform the following tests and inspections:
   1. Leak Test: After installation, charge system and test for leaks. Subject piping to hydrostatic test pressure that is not less than 1.5 times the design pressure but not more than 100 psig. Repair leaks and retest until no leaks exist.
   2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Radiant-heating piping will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

E. Protect hydronic piping system from damage during construction.

END OF SECTION 23 83 16

SECTION 23 83 23
RADIANT-HEATING ELECTRIC PANELS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Prefabricated radiant-heating electric panels.

1.02 RELATED DOCUMENTS

A. Section 23 00 00 "General Mechanical Requirements."

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include rated capacities, operating characteristics, and furnished specialties and accessories.

B. Shop Drawings: For electric heating panels.
   1. Include plans, sections, details, and attachments to other work.
   2. Include diagrams for power, signal, and control wiring.

1.04 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Ceiling suspension assembly members.
   2. Method of attaching hangers to building structure.
   3. Structural members to which heating panels and suspension systems will be attached.
   4. Size and location of initial access modules for acoustical tile.
   5. Items installed in finished ceiling, including the following:
      a. Lighting fixtures.
      b. Sprinklers.

B. Field Quality Control Reports: Provide.

C. Sample Warranty: For special warranty.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For electric heating panels to include in operation and maintenance manuals.

1.06 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace electric heating panels that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Three years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS FOR RADIANT-HEATING ELECTRIC PANELS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.02 PREFABRICATED RADIANT-HEATING ELECTRIC PANELS (EUH-6 TO 8)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Invizatherm
   2. Berko.
   3. QMark.

B. Description: Sheet-metal-enclosed panel with heating element suitable for surface mounting. Comply with UL 2021.
   1. Panel: Minimum 0.0276-inch-thick, galvanized sheet steel back panel riveted to minimum 0.0396-inch-thick, galvanized sheet steel front panel with fused-on crystalline surface.

2. Heating Element: Insulated resistive wires.
3. Electrical Connections: Non-heating, high-temperature, insulated-copper leads, factory connected to heating element.
4. Surface-Mounted Trim: Sheet metal with baked enamel finish in manufacturer's standard paint color as selected by Owner's Representative.

C. Wall Timer: Heavy duty in-wall timer with dial time setting.

D. Capacities and Characteristics:
1. Nominal Panel Size: 24.00 by 48.00 inches.
2. Heating Capacity: See Equipment Schedule on Drawings.
3. Electrical Characteristics for Single-Point Connection:
a. Volts: See Equipment Schedule on Drawings.
b. Phase: See Equipment Schedule on Drawings.
c. Hertz: See Equipment Schedule on Drawings.
d. Full-Load Amperes: See Equipment Schedule on Drawings.
e. Minimum Circuit Ampacity: See Equipment Schedule on Drawings.
f. Maximum Over-current Protection: See Equipment Schedule on Drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. General: Examine surfaces and substrates to receive electric heating panels for compliance with requirements for installation tolerances and other conditions affecting performance.
1. Ensure surfaces in contact with electric heating panels are free of burrs and sharp protrusions.
2. Ensure surfaces and substrates are level and plumb.

B. Corrections: Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General: Install radiant-heating panels level and plumb.
1. Install at least one independent support rod or wire from structure to a tab on panel. Wire or rod shall have breaking strength of the weight of the panel at a safety factor of 3.

B. Timer Locations: Verify locations of timers with Drawings and room details before installation. Install devices 48.00 inches above finished floor.

3.03 CONNECTIONS

A. Grounding: Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections:
1. Operate electric-heating elements through each stage to verify proper operation and electrical connections.
2. Test and adjust controls and safeties.

C. Defective Panels: Radiant-heating electric panels will be considered defective if they do not pass tests and inspections.

D. Test and Inspection Reports: Provide.

3.05 PROTECTION

A. Protection: Protect installed radiant-heating electric panels from damage during construction.

B. Damaged Panels: Remove and replace damaged radiant-heating electric panels.

END OF SECTION 23 83 23

SECTION 26 00 00
GENERAL ELECTRICAL REQUIREMENTS

PART 1 GENERAL

1.01 SCOPE

A. Basic electrical requirements specifically applicable to Division 26 Sections.

B. Work includes but is not necessarily limited to the following:
   1. Labor, materials, services, equipment, and appliances required for completion of tasks as indicated on drawing or in specification or as inherently necessary to provide complete and operational electrical systems including:
      a. All temporary construction power including construction trailer, crane, test power, temporary heat and lighting, or any construction machine will require coordination with utility and obtain temporary power to site;
      b. Contractor shall provide complete pathways for utility to bring the temporary and permanent utility transformer to site for installation.
      c. Incidental items not indicated on the drawings nor mentioned in the Specifications that belong to the work described, or are required to provide complete and operable systems, as though called out here in every detail;
      d. Cleaning, cutting, patching, repairing and painting;
      e. Testing and commissioning;
      f. The Contractor shall coordinate this Section with all other Sections of the Specification.
      g. Solar PV system design, calculations and installation shall be deferred submittal. Provide 99.5kW of rooftop solar PV system as deferred submittal. Contractor shall include 5KW rooftop solar photovoltaics in the base bid contract and remaining 94.5KW shall be alternate bid. Contractor shall include cost of all required balance of systems and accessories to provide a complete functional solar PV system for the building. All building systems shall be installed to accommodate the solar PV system.
      h. Fire alarm system selections, design, calculations and installation will be delegated and deferred submittal.
      i. All structural mounting and anchorages of electrical and fire alarm equipment will be a deferred submittal for contractor to design and install based on EEOR approved equipment for construction.

1.02 DRAWINGS AND SPECIFICATIONS

A. Drawings accompanying these Specifications show intent of Work to be done. Specifications shall identify quality and grade of installation and where equipment and hardware is not particularly specified, Contractor shall provide submittals for all products and install them per manufacturers' recommendations, and in a workmanlike manner.

B. In the event of a conflict or inconsistency between items indicated on the plans and/or specifications or with code requirements, the note, specification or code which prescribes and establishes the more complete job or the higher standard prevail.

C. Plans are intended to show general arrangement and extent of Work contemplated. Exact location and arrangement of parts shall be determined after the Contracting Agency has reviewed equipment, as Work progresses, to conform in best possible manner with surroundings, and as directed by the Contracting Agency.

D. For purposes of clearness and legibility, the electrical drawings are essentially diagrammatic. The size and location of equipment is shown to scale where possible. The contractor shall verify all conditions, data information as indicated on the drawings and in the specification sections where electrical work interfaces with other trades.

E. Contract Documents are intended to show the scope and general arrangement of the Work under this Contract. Drawings are not intended to be scaled for roughing in measurements or to serve as shop drawings. Where job conditions require minor changes or adjustments in the

indicated locations or arrangement of the Work, such changes shall be made without change in the Contract amount.

F. The contractor shall maintain as built drawings to reflect all changes made during construction and any deviations from the electrical drawings. This includes deviations from circuit numbers and any addition, deletion or relocation of fixtures/outlets shown on working drawings.

1.03 UTILITIES

A. Location and sizes of electrical, mechanical and plumbing service facilities are shown in accordance with data secured from existing record drawings and site observations. Data shown are offered as an estimating guide without guarantee of accuracy. Check and verify all data given, and verify exact location of all utility services pertaining to Work prior to excavation or performing Work.

1.04 APPLICABLE REFERENCE STANDARDS, CODES AND REGULATIONS

A. The Washington State:
   1. Current International Building Code
   2. Current International Mechanical Code
   3. Current International Fire Code
   4. Current National Electrical Code, including the adoption and amendment of the National Electrical Code from Department of Labor and Industries.
   5. Current Uniform Plumbing Code
   6. Current Washington State Energy Code

B. Additional Referenced Standards:
   1. ANSI American National Standards Institute
   2. IEEE Institute of Electrical and Electronic Engineers
   3. NEMA National Electrical Manufacturer's Association
   4. NFPA National Fire Protection Association Standards
   5. UL Underwriters Laboratories

C. Codes and ordinances having jurisdiction over Work are minimum requirements; but, if Contract Documents indicate requirements, which are in excess of those minimum requirements, then requirements of the Contract Documents shall be followed. Nothing in these drawings and specifications shall be construed to permit work not conforming to governing codes or regulations. Should there be any conflicts between Contract Documents or codes or any ordinances having jurisdiction, report these to the Contracting Agency.

D. Obtain permits, and request inspections from authority having jurisdiction.

1.05 PROJECT AND SITE CONDITIONS

A. The arrangement of and connection to equipment shown on the Drawings is based upon information available and is not intended to show exact dimensions peculiar to a specific manufacturer. The Drawings are, in part, diagrammatic and some features of the illustrated equipment installations may require revision to meet actual equipment installation requirements. Structural supports, housekeeping pads, piping connections and adjacent equipment may have to be altered to accommodate the equipment provided. No additional payment will be made for such revisions or alterations.

B. Examine all Drawings and Specifications to be fully cognizant of all work required under this Division.

C. Examine site related work and surfaces before starting work of any Section.

D. Install Work in locations shown on approved Drawings, unless prevented by Project conditions.

E. Prepare drawings showing proposed rearrangement of Work to meet Project conditions, including changes to Work specified in other Sections. Obtain permission from the Contracting Agency before proceeding.

1.06 COOPERATION WITH WORK UNDER OTHER DIVISIONS

A. Cooperate with other trades to facilitate general progress of Work. Allow all other trades every reasonable opportunity for installation of their work.

B. Work under this Division shall follow general building construction closely. Set pipe sleeves and inserts and verify that openings for chases and pipes are provided.

C. Work with other trades in determining exact location of outlets, conduits, pipes, and pieces of equipment to avoid interference with lines required to maintain proper installation of Work.

D. Make such progress in the Work to not delay work of other trades.

1.07 DISCREPANCIES

A. The contractor shall check all drawings furnished to him immediately upon their receipt and shall promptly notify the Contracting Agency of any discrepancies. Figures marked on drawings shall in general be followed in preference to scale measurements. Large scale drawings in general govern small scale drawings. The contractor shall compare all drawings and verify the figures before laying out the work and will be responsible for any errors which might have been avoided thereby. Where no figures or notations are given, the plans shall be followed

B. Omissions from the Drawings or Specifications or the erroneous description of details of work which are manifestly necessary to carry out the intent of the Drawings and Specifications, or which are customarily performed, shall not relieve the Contractor from performing such omitted or erroneously described details of the work but they shall be performed as if fully and correctly set forth and described in the drawings and specifications.

C. If any part of the Specifications or Drawings appears unclear or contradictory, apply to Contracting Agency for interpretation and decision as early as possible, including during bidding period. Do not proceed with such work without Contracting Agency Representatives decision. Beginning work of any Section constitutes acceptance of conditions.

1.08 CHANGES

A. The Contractor shall be responsible to make and obtain approval from the Contracting Agency for all necessary adjustments in piping and equipment layouts as required to accommodate the relocations of equipment and/or devices, which are affected by any approved authorized changes or Product substitutions. All changes shall be clearly indicated on the "Record" drawings.

1.09 SUBMITTALS

A. Refer to Section 1-06 for additional requirements.

B. The manufacturer, contractor or supplier shall include a written statement that the submitted equipment, hardware or accessory complies with the requirement of that particular specification section.

C. The manufacturer shall resubmit the specification section showing compliance with each respective paragraphs and specified items and features in that particular specification section.

D. All exceptions shall be clearly identified by referencing respective paragraph and other requirements along with proposed alternative.

E. Note that prior to acceptance of submittals for review, a submittal schedule shall be submitted to the Contracting Agency.

F. Submit all Division 26 shop drawings and product data grouped and referenced by the specification technical section number in one complete submittal package.

G. Shop Drawings:
   1. Include installation details of equipment indicating proposed location, layout and arrangement, accessories, piping, and other items that must be shown to assure a coordinated installation.
   2. Indicate adequate clearance for operation, maintenance, and replacement of operating equipment devices.
   3. If equipment is rejected, revise drawings to show acceptable equipment and resubmit.

4. Whenever more than one (1) manufacturer's product is specified, the first named product is the basis of design used in the Drawings and the use of alternate-named manufacturer's products or substitutes may require modifications to the design.
5. The Contractor shall be responsible for all equipment ordered and/or installed prior to receipt of shop drawings returned from the Contracting Agency bearing the Contracting Agency stamp of "Reviewed". All corrections or modifications to the equipment as noted on the shop drawings shall be performed and equipment removed from the job site at the request of the Contracting Agency without additional compensation.
6. Manufacturer's Data: For each manufactured item, provide current manufacturer's descriptive literature of cataloged products, certified equipment drawings, diagrams, performance and characteristic curves if applicable, and catalog cuts.
7. Standard Compliance: When materials or equipment provided by the Contractor must conform to the standards of organizations such as American National Standards Institute (ANSI) or UL, submit proof of such conformance to the Contracting Agency Representative for approval. If an organization uses a label or listing to indicate compliance with a particular standard, the label or listing will be acceptable evidence, unless otherwise specified. In lieu of the label or listing, submit a certificate from an independent testing organization, which is competent to perform acceptance testing and is approved by the Contracting Agency Representative. The certificate shall state that the item has been tested in accordance with the specified organization's test methods and that the item conforms to the specified organization's standard.
8. Certified Test Reports: Before delivery of materials and equipment, certified copies of all test reports specified in individual sections shall be submitted for approval.
9. Certificates of Compliance or Conformance: Submit manufacturer's certifications as required on products, materials, finish, and equipment indicated in the technical sections. Certifications shall be documents prepared specifically for this Contract. Pre-printed certifications and copies of previously submitted documents will not be acceptable. The manufacturer's certifications shall name the appropriate products, equipment, or materials and the publication specified as controlling the quality of that item. Certification shall not contain statements to imply that the item does not meet requirements specified, such as "as good as"; or "achieve the same end use and results as materials formulated in accordance with the referenced publications"; or "equal or exceed the service and performance of the specified material." Certifications shall simply state that the item conforms to the requirements specified. Certificates shall be printed on the manufacturer's letterhead and shall be signed by the manufacturer's official authorized to sign certificates of compliance or conformance.

H. The Contractor shall submit all passcodes and passwords for any hardware and software required for the operations and troubleshooting in all systems and components no less than fourteen (14) calendar days prior to Final Completion.

1.10 PROJECT RECORD DOCUMENTS

A. Refer to Section 1-5.5(2) for additional requirements.
   1. All changes, deviations and information recorded on the "Project Record Drawings" set during Construction shall be marked on the "Project Record Drawings," in red ink.

1.11 PRODUCT ALTERNATIVES OR SUBSTITUTIONS

A. Refer to Section 1-06.7 for additional requirements.

1.12 OPERATING INSTRUCTIONS

A. Furnish approved operating instructions for systems and equipment indicated in the technical sections for use by operation and maintenance personnel.

1.13 MANUFACTURER S RECOMMENDATIONS

A. Where installation procedures or any part thereof are required to be in accordance with manufacturer's recommendations, furnish printed copies of the recommendations prior to installation. Installation of the item shall not proceed until recommendations are received. Failure to furnish recommendations shall be cause for rejection of the equipment or material.

1.14 DELIVERY AND STORAGE

A. Refer to Section 1-06.4 for additional requirements.

B. Handle, store, and protect equipment and materials in accordance with the manufacturer's recommendations and with the requirements of NFPA 70B P, Appendix I, titled "Equipment Storage and Maintenance During Construction." Replace damaged or defective items with new items.

1.15 GUARANTEE

A. Except as may be specified under other sections in the Specifications, guarantee all equipment furnished under the Specifications for a period of one year from date of project acceptance against defective workmanship and material and improper installation. Upon notification of failure, correct deficiency immediately and without cost to the Contracting Agency.

B. Standard warranty of manufacturer shall apply for replacement of parts after expiration of the above period. Manufacturer shall furnish replacement parts to the Contracting Agency for their service agency as directed.

PART 2 PRODUCTS

2.01 COMPETITIVE PRODUCTS

A. Unless otherwise noted, any reference in the Specification to any article, device, product, material, fixture, form, or type of construction by name, make, or catalog number shall be interpreted as establishing a standard of quality and shall not be construed as limiting competition. The Contractor may at his option propose substitutions for such material in accordance with the substitution procedure outlined in the Contract Documents.

2.02 MATERIALS

A. Provide all new materials and equipment, free from any defects, in first-class condition, and suitable for the space provided. Provide materials and equipment approved by UL authority having jurisdiction approved testing agency, wherever standards have been established by that agency.

B. Where two or more units of the same class of material or equipment are required, provide products of a single manufacturer. Component parts of units or equipment need not be products of the same manufacturer.

C. Unless otherwise indicated, provide materials and equipment which are the standard products of manufacturers regularly engaged in the production of such materials and equipment. Provide the manufacturers' latest standard design that conforms to these Specifications.

D. Provide materials and equipment with manufacturers' standard finish system, except where otherwise specified. Provide manufacturers' standard finish color, except where specific color is indicated. If manufacturer has no standard color, finish equipment with ANSI Number 61, light gray color.

E. Environmental and Seismic Conditions: Material and Equipment shall be designed to insure satisfactory operation and operational life in the environmental and seismic conditions which will prevail where they are being installed. Electrical equipment and enclosures shall be designed, constructed and certified to withstand external loading conditions as prescribed by the Washington State Building Code for the locations of the equipment. Supplied equipment shall either be shake table tested and certified or comprehensive seismic calculations shall be provided. All seismic calculations and structural drawings shall bear the seal of a Structural Professional Engineer currently licensed in the State of Washington.

PART 3 EXECUTION

3.01 GENERAL

A. Obtain and pay for all permits and inspections, including any independent testing required to verify standard compliance, and deliver certificates for same to the Contracting Agency.

3.02 WORK RESPONSIBILITIES

A. The drawings indicate diagrammatically the desired locations or arrangement of piping, equipment, etc., and are to be followed as closely as possible. Proper judgment must be exercised in executing the work to secure the best possible installation in the available space and to overcome local difficulties due to space limitations or interference with structural conditions.

B. The Contractor is responsible for the correct placing of Work and the proper location and connection of Work in relation to the work of other trades. Advise appropriate trade as to locations of access panels.

C. In the event changes in the indicated locations or arrangements are necessary, due to developed conditions in the construction or rearrangement of furnishings or equipment, such changes shall be made without extra cost, providing the change is ordered before the conduit runs, etc. and work directly connected to same is installed and no extra materials are required.

D. Where equipment is furnished by others, verify dimensions and the correct locations of this equipment before proceeding with the roughing-in of connections.

E. All scaled and figured dimensions are approximate of typical equipment of the class indicated. Before proceeding with any work, carefully check and verify all dimensions, sizes, etc. with the drawings to see that the equipment will fit into the spaces provided without violation of applicable codes.

F. Should any changes to the Work indicated on the Drawings or described in the Specifications be necessary in order to comply with the above requirements, notify the Contracting Agency immediately and cease work on all parts of the contract, which are affected until approval for any required modifications to the construction has been obtained from the Contracting Agency.

G. Be responsible for any cooperative work, which must be altered due to lack of proper supervision or failure to make proper provisions in time. Such changes shall be under direction of the Contracting Agency and shall be made to his satisfaction. Perform all Work with competent and skilled personnel.

H. The electrical drawings do not indicate all fittings, hardware, or appurtenances required for a complete operating installation.

I. Wiring diagrams are not intended to indicate the exact course of raceways.

J. One-line and riser diagrams are only schematics and do not show physical arrangements of equipment.

K. All workmanship, including aesthetic as well as electrical aspects of the Work, shall be of the highest quality consistent with the best practices of the trade.

L. Replace or repair, without additional compensation, any Work, which, in the opinion of the Contracting Agency, does not comply with these requirements.

3.03 CLEANING & PAINTING OF EQUIPMENT

A. Refer to Section 09 90 00 for additional requirements.

B. Factory Applied:
   1. Electrical equipment shall have factory-applied painting systems, which shall, as a minimum, meet the requirements of NEMA ICS 6 corrosion-resistance test, except equipment specified to meet requirements of ANSI C37.20 shall have a finish as specified in ANSI C37.20.
   2. Refer to individual sections of this Division for more stringent requirements.

C. Field Applied: Paint electrical equipment as required to touch up, to match finish on other equipment in adjacent spaces, or to meet safety criteria.

D. After installation, all metal finishes shall be polished and cleaned of all dirt, rust, cement, plaster, grease, and paint.

END OF SECTION 26 00 00

SECTION 26 05 19

LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Building wires and cables rated 600 V and less.
   2. Connectors, splices, and terminations rated 600 V and less.

B. Related Requirements:
   1. Section 26 00 00 “WA General Electrical Requirements”
   2. Section 26 05 23 "Control-Voltage Electrical Power Cables" for control systems communications cables and Classes 1, 2 and 3 control cables.
   3. Section 26 05 33 “Raceways and Boxes for Electrical Systems"
   4. Section 26 05 53 "Identification for Electrical Systems."

1.02 DEFINITIONS

A. ASTM: American Society of Testing Materials.

B. ICEA: Insulated Cable Engineers Association.

C. IEEE: Institute of Electrical & Electronics Engineers.

D. NEMA: National Electrical Manufacturers Association.

E. NETA ATS: InterNational Electrical Testing Association - Acceptance Testing Specification.

F. VFD: Variable frequency drive.

1.03 ACTION SUBMITTALS

A. Product Data: Submit manufacturer’s technical data for each type of product, indicating conductor/cable construction, insulation material, thickness of insulation, jacket, cable stranding, and voltage rating of each type of conductor/cable specified, splices and terminations. Indicate date and place of manufacture for each conductor/cable, cable, splice and termination.

B. Manufacturer’s ISO certification.

C. Product Cable Schedule: Indicate type, use, location, and termination locations.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Independent Testing Agency.

B. Field quality-control reports. Perform field testing of cables per para 3.8. Submit six (6) copies of field test reports to Contracting Agency within two (2) weeks of completion of test.

1.05 QUALITY ASSURANCE

A. General Requirements: The low voltage power conductors and cable shall be copper, minimum 600V rated unless otherwise indicated. Aluminum conductors and cables shall not be accepted unless otherwise indicated.

B. Materials and installation shall meet or exceed requirements in the following referenced standards and shall be listed and labelled by UL.
   1. ICEA S-95-658/ NEMA WC 70.
   2. UL 1072.
   3. IEEE.
   4. ASTM.
   5. NEMA.

C. Conductors and cables shall be of the same manufacturer and shipped to the job site in original unbroken reels.

D. Conductors and cables shall be manufactured with in twelve (12) months of installation. Date of manufacture shall be clearly marked on conductors or conductor reels.

E. Manufacturer shall have minimum ten (10) years experience in the manufacturer of conductors and cables similar to those specified on this project.

F. Manufacturer shall have ISO 9001 and ISO 9002 certification.

G. All conductors and cables shall be new and supplied by a local distributor.

H. If alternate manufacturer of products other than what are specified in this section are submitted, all necessary documents not limited to cut sheets, technical information, test reports from recognized testing labs and factory test reports shall be submitted to the satisfaction of the Contracting Agency/engineer to ensure quality and conformance to the specifications. Additional testing shall be undertaken if it is concluded by the Contracting Agency/engineer that the submitted test reports are either insufficient or do not include all tests necessary for product acceptance. The tests shall be conducted by a recognized lab acceptable to the Contracting Agency/engineer and all tests shall be witnessed by Contracting Agency's/engineer's personnel. All testing procedures and test results shall be satisfactory to the Contracting Agency/engineer. Contractor shall be responsible for arranging the tests, for transportation, food and lodging for minimum of one Contracting Agency's/engineer's representative to witness the test at the testing lab. Include all costs for the above in the bid.

I. Testing: Provide the services of an independent qualified testing laboratory to perform the specified field tests. Notify the University's Representative fourteen (14) days in advance of performance of work requiring testing.

J. Conductors, cables, splices and terminations shall be manufactured within twelve (12) months of installation. Each item shall have a permanent marking on the product or the original manufacturers' package indicating the date of manufacture unless otherwise noted.

K. Testing Agency Qualifications:
   1. Testing agency shall be an independent company; shall have been a member of NETA for a minimum of last ten (10) years and has permanent in-house testing engineers and technicians involved with testing of low voltage electrical power conductors and cables similar to those specified on this project.
   2. Testing company shall be located with 50 miles radius of the project.
   3. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.
   4. Field Testing technician and supervisor shall have minimum ten (10) years' experience in field testing of low voltage power conductors and cables of the type and rating similar to the conductors and cables to be tested on this project.

PART 2 PRODUCTS

2.01 CONDUCTORS AND CABLES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:

B. Basis-of-Design Product:
   1. General Cable Technologies Corporation.
   2. Southwire Incorporated.
   3. Alpha Wire.
   4. Belden Inc.
   5. Encore Wire Corporation.

C. Conductor Material: Electrical grade, soft drawn annealed copper, 98 percent conductivity, and fabricated in accordance with ASTM and ICEA standards. Minimum size is number 12 for branch circuits, number 14 stranded for control wiring. Aluminum conductors are not permitted. Copper Conductors: Comply with NEMA WC 70/ICEA S-95-658.

D. Conductor Insulation: Comply with NEMA WC 70/ICEA S-95-658 for Type THHN-2-THWN-2.

E. Multiconductor Cable: Comply with NEMA WC 70/ICEA S-95-658 for metal-clad cable, Type MC with ground wire.

F. VFD Cable:
   1. Comply with UL 1277, UL 1685, and NFPA 70 for Type TC-ER cable.
   2. Type TC-ER with oversized crosslinked polyethylene insulation, spiral-wrapped foil plus 85 percent coverage braided shields and insulated full-size ground wire, and sunlight- and oil-resistant outer PVC jacket.
   3. Comply with UL requirements for cables in Classes I and II, Division 2 hazardous location applications.

G. Provide separate neutral with each branch circuit serving outlets. When dedicated neutrals are provided, use color spiral to match associated phase.

2.02 CONNECTORS AND SPLICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
   1. Ideal Industries, Inc.
   2. Ilsco
   3. NSi Industries LLC.
   4. O-Z/Gedney; a brand of Emerson Industrial Automation.
   5. 3M; Electrical Markets Division.
   6. TE Connectivity - Raychem.

B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

C. Copper conductors shall be terminated in copper or bronze mechanical connectors or lugs or tool applied compression connections made of copper for all connections except those on wiring devices.

D. Splices in wires No. 10 and smaller shall be made with twist-on splicing connector in accordance with UL486-C. Connections in wires No. 8 and larger shall be made with compression type connectors in accordance with UL486-A and wrapped with insulated tape in accordance with UL501. Insulating tape shall be applied in a minimum of two layers of half wrap or built to match the overall insulation of the wire.

E. Splices in underground pull boxes shall be made submersible type and made using “3M” Scotch-cast epoxy kits.

F. Pressure type connectors are not permitted.

2.03 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: UL Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with NFPA 70.

PART 3 EXECUTION

3.01 CONDUCTOR MATERIAL APPLICATIONS

A. Feeders: Copper for feeders No. 4 AWG and larger. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

B. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger, except VFD cable, which shall be extra flexible stranded.

3.02 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

A. Service Entrance: Type THHN-2-THWN-2, single conductors in raceway

B. Exposed Feeders: Type THHN-2-THWN-2, single conductors in raceway

C. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspaces: Type THHN-2-THWN-2, single conductors in raceway.

D. Feeders Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-2-THWN-2, single conductors in raceway.

E. Feeders Installed below Raised Flooring: Type THHN-2-THWN-2, single conductors in raceway

F. Feeders in Cable Tray: TC rated, Type THHN-2-THWN-2, single conductors in raceway.

G. Exposed Branch Circuits, Including in Crawlspaces: Type THHN-2-THWN-2, single conductors in raceway.

H. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN-2-THWN-2, single conductors in raceway.

I. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-2-THWN-2, single conductors in raceway.

J. Branch Circuits Installed Below Raised Flooring: Type THHN-2-THWN-2, single conductors in raceway.

K. Branch Circuits in Cable Tray: TC rated Type THHN-2-THWN-2, single conductors in raceway

L. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless-steel, wire-mesh, strain relief device at terminations to suit application.

M. VFD Output Circuits: Type XHHW-2 in metal conduit.

3.03 INSTALLATION OF CONDUCTORS AND CABLES

A. All conductors and cables shall be installed in a raceway.

B. Before installing conductors and cables in existing conduits, verify the continuity of each conduit; each surface conduit is properly supported per code and clear of any debris.

C. Complete raceway installation between conductor and cable termination points according to Section 26 05 33 "Raceways and Boxes for Electrical Systems" prior to pulling conductors and cables.

D. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

E. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.

F. Install exposed cables parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.

G. Support cables according to Section 26 05 29 "Hangers and Supports for Electrical Systems."

H. Complete cable tray systems installation according to Section 26 05 36 "Cable Trays for Electrical Systems" prior to installing conductors and cables.

3.04 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

B. Make splices, terminations, and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
   1. Use oxide inhibitor in each splice, termination, and tap for aluminum conductors.

C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches (150 mm) of slack.

3.05 IDENTIFICATION

A. Each conductor shall be factory color coded by conductor manufacturer. Identify and color-code conductors and cables according to Section 26 05 53 "Identification for Electrical Systems."

B. Identify each spare conductor at each end with identity number and location of other end of conductor and identify as spare conductor.

3.06 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 26 05 44 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.07 FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Section 07 84 00 " Firestopping."

3.08 FIELD QUALITY CONTROL

A. Testing Agency: Engage an independent qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform the following tests and inspections:
   1. After installing conductors and cables and before electrical circuitry has been energized, test service entrance conductors, feeder conductors and the conductors feeding the following critical equipment and services for compliance with requirements.
   2. Perform each visual and mechanical inspection and electrical tests stated in latest NETA Acceptance Testing Specification section 7.3.2 (Inspection and Test Procedures-Cables, Low Voltage-600V Maximum). Certify compliance with test parameters per NETA tables.
   3. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each splice in conductors No. 3 AWG and larger. Remove box and equipment covers so splices are accessible to portable scanner. Correct deficiencies determined during the scan.
      a. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each splice 11 months after date of Substantial Completion.
      b. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
      c. Record of Infrared Scanning: Prepare a certified report that identifies splices checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

D. Test and Inspection Reports: Prepare a written report to record the following:
   1. Procedures used.
   2. Results that comply with requirements. Include color scan images.
   3. Results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

E. Cables will be considered defective if they do not pass tests and inspections.

SECTION 26 05 26

GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Grounding systems and equipment, plus the following special applications:
   1. Overhead-line grounding.
   2. Underground distribution grounding.
   3. Ground bonding common with lightning protection system.

1.02 DEFINITIONS

A. NETA ATS: InterNational Electrical Testing Association - Acceptance Testing Specification.

B. NETA MTS: InterNational Electrical Testing Association - Maintenance Testing Specification.

C. NFPA : National Fire Protection Association.

D. IEEE: Institute of Electrical and Electronics Engineers

1.03 ACTION SUBMITTALS

A. Product Data: Submit manufacturer's technical catalog cuts for each type of product indicated.

B. Shop Drawings: Site drawings to scale including details showing location and size of each field connection of grounding system.
   1. Wiring Diagrams: Differentiate between manufacturer installed and field installed wiring.

C. Sustainable Design Submittals:
   1. Product Data: For each conductor and cable indicating lead content.

1.04 INFORMATIONAL SUBMITTALS

A. Informational Submittals: Plans drawn to scale (1/4"=1'-0") showing dimensioned locations of grounding features specified in "Field Quality Control" Article, including the following:
   1. Test wells.
   2. Ground rods.
   3. Ground rings.
   4. Grounding conductors, connectors.
   5. Grounding arrangements and connections for separately derived systems.
   6. Grounding for sensitive electronic equipment.

B. Qualification Data: For qualified independent testing agency and testing agency's field supervisor.

C. Field quality-control reports. Submit written test reports including the following:
   1. Test procedures used.
   2. Test results that comply with requirements.
   3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For grounding to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 1-11 "Operation and Maintenance Data," include the following:
   1. Instructions for periodic testing and inspection of grounding features at test wells based on **NFPA 70B**.
      a. Tests shall determine if ground-resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if values do not.
      b. Include recommended testing intervals.

1.06 QUALITY ASSURANCE

A. Testing Agency Qualifications:
   1. Testing agency shall be an independent company; shall have been a member of NETA for a minimum of last ten (10) years and has permanent in-house testing engineers and technicians involved with testing of grounding systems similar to those specified on this project.
   2. Testing company shall be located with 50 miles radius of the project.
   3. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
   4. Field Testing technician and supervisor shall have minimum ten (10) years' experience in field testing of rounding systems of the type and rating similar to the systems to be tested on this project.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with UL 467 for grounding and bonding materials and equipment.

PART 2 PRODUCTS

2.01 GROUNDING ELECTRODES, CONDUCTORS, CONNECTOR, BUS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or equal:
   1. Grounding Connectors, Bars and Rods:
      a. Erico - Pentair Electrical Fastening Solutions
      b. Burndy – A Hubbell Company.
      c. Ideal Industries, Inc.
      d. O-Z/Gedney Co. - A brand of Emerson Industrial Automation.
      e. Thomas & Betts - A Member of the ABB Group.
   2. Grounding Conductors and cables:
      a. Southwire
      b. American Insulated Wire
      c. Okonite

2.02 CONDUCTORS

A. Insulated Conductors: Copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.

B. Bare Copper Conductors:
   1. Solid Conductors: ASTM B 3.
   2. Stranded Conductors: ASTM B 8.
   3. Tinned Conductors: ASTM B 33.
   4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch (6 mm) in diameter.
   5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
   6. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.
   7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.

C. Bare Grounding Conductor and Conductor Protector for Wood Poles:
   1. No. 4 AWG minimum, soft-drawn copper.
   2. Conductor Protector: Half-round PVC or wood molding; if wood, use pressure-treated fir, cypress, or cedar.

D. Grounding Bus: Predrilled rectangular bars of annealed copper, 1/4 by 4 inches (6.3 by 100 mm) in cross section, with 9/32-inch (7.14-mm) holes spaced 1-1/8 inches (28 mm) apart. Stand-off insulators for mounting shall comply with UL 891 for use in switchboards, 600 V. Lexan or PVC, impulse tested at 5000 V.

E. Lead Content: Less than 300 parts per million

2.03 CONNECTORS

A. Listed and labeled by UL for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.

B. Bolted Connectors for Conductors, Rods and Pipes: Copper or copper alloy, pressure type with at least two bolts.
   1. Pipe Connectors: Clamp type, sized for pipe.

C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

D. Bus-bar Connectors: Mechanical type, cast silicon bronze, solderless exothermic type wire terminals, and long-barrel, two-bolt connection to ground bus bar.

E. Lead Content: Less than 300 parts per million

2.04 GROUNDING ELECTRODES

A. Ground Rods: Copper-clad steel; 3/4 inch by 10 feet (19 mm by 3 m) in diameter.

B. Chemical-Enhanced Grounding Electrodes: Copper tube, straight or L-shaped, charged with nonhazardous electrolytic chemical salts
   1. Termination: Factory-attached No. 4/0 AWG bare conductor at least 48 inches (1200 mm) long.
   2. Backfill Material: Electrode manufacturer's recommended material.

PART 3 EXECUTION

3.01 APPLICATIONS

A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger unless otherwise indicated.

B. Underground Grounding Conductors: Install bare tinned copper conductor, No. 2/0 AWG minimum.
   1. Bury at least 24 inches (600 mm) below grade.
   2. Duct-Bank Grounding Conductor: Bury 12 inches (300 mm) above duct bank when indicated as part of duct-bank installation.

C. Isolated Grounding Conductors: Green-colored insulation with continuous yellow stripe. On feeders with isolated ground, identify grounding conductor where visible to normal inspection, with alternating bands of green and yellow tape, with at least three bands of green and two bands of yellow.

D. Grounding Bus: Install in electrical and telephone equipment rooms, in rooms housing service equipment or IT rooms, and elsewhere as indicated.
   1. Install bus on insulated spacers 2 inches (50 mm) minimum from wall, 6 inches (150 mm) above finished floor unless otherwise indicated.
   2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down to specified height above floor; connect to horizontal bus.

E. Conductor Terminations and Connections:
   1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
   2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
   3. Connections to Ground Rods at Test Wells: Bolted connectors.
   4. Connections to Structural Steel: Welded connectors.

3.02 GROUNDING OVERHEAD LINES

A. Comply with IEEE C2 grounding requirements.

B. Install two parallel ground rods if resistance to ground by a single, ground-rod electrode exceeds 25 ohms.

C. Drive ground rods until tops are 12 inches below finished grade in undisturbed earth.

D. Ground-Rod Connections: Install bolted connectors for underground connections and connections to rods.

E. Lightning Arrester Grounding Conductors: Separate from other grounding conductors.

F. Secondary Neutral and Transformer Enclosure: Interconnect and connect to grounding conductor.

G. Protect grounding conductors running on surface of wood poles with molding extended from grade level up to and through communication service and transformer spaces.

3.03 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

A. Comply with IEEE C2 grounding requirements.

B. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches (100 mm) will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches (50 mm) above to 6 inches (150 mm) below concrete. Seal floor opening with waterproof, nonshrink grout.

C. Install #4/0 bare copper ground wire loop around the outside perimeter of the manhole, in soil, 12” above bottom of manhole. Cadweld ground wire loop to #4/0 bare copper ground wire connecting all exposed metal parts inside the manhole through a 1” opening at the top of manhole wall. Seal and waterproof opening after wire installation.

D. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields according to written instructions by manufacturer of splicing and termination kits.

E. Pad-Mounted Transformers and Medium Voltage Switches: Install two ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than No. 1/0 ~~2~~ AWG for ground ring and for taps to equipment grounding terminals. Bury ground ring not less than 6 inches (150 mm) from the foundation.

3.04 EQUIPMENT GROUNDING

A. Install insulated equipment grounding conductors with all feeders and branch circuits in the same conduit containing phase and neutral conductors. Comply with NFPA 70, Article 250, for types, sizes, and quantities of equipment grounding conductors, unless specific types, larger sizes, or more conductors than required by NFPA 70 are indicated.

B. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:
   1. Feeders and branch circuits.
   2. Lighting circuits.
   3. Receptacle circuits.
   4. Single-phase motor and appliance branch circuits.
   5. Three-phase motor and appliance branch circuits.
   6. Flexible raceway runs.
   7. Armored and metal-clad cable runs.
   8. Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in the switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.

9. Computer and Rack-Mounted Electronic Equipment Circuits: Install insulated equipment grounding conductor in branch-circuit runs from equipment-area power panels and power-distribution units.
10. X-Ray Equipment Circuits: Install insulated equipment grounding conductor in circuits supplying x-ray equipment. Verify requirements with X-ray equipment supplier prior to rough-ins.

C. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.

D. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.

E. Isolated Grounding Receptacle Circuits: Install an insulated equipment grounding conductor connected to the receptacle grounding terminal. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service unless otherwise indicated.

F. Isolated Equipment Enclosure Circuits: For designated equipment supplied by a branch circuit or feeder, isolate equipment enclosure from supply circuit raceway with a nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure and install a separate insulated equipment grounding conductor. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service unless otherwise indicated.

G. Signal and Communication Equipment: In addition to grounding and bonding required by NFPA 70, provide a separate grounding system complying with requirements in TIA/ATIS J-STD-607-A.
1. For telephone, alarm, voice and data, and other communication equipment, provide No. 4 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.
2. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a 1/4-by-4-by-12-inch (6.3-by-100-by-300-mm) grounding bus.
3. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.
4. All metallic conduits and cable tray shall be continuously bonded to maintain low resistance ground path and bonded back to the central equipment by the use of bonding jumpers where needed.

H. Metal and Wood Poles Supporting Outdoor Lighting Fixtures: Install grounding electrode next to the pole and a separate insulated equipment grounding conductor in addition to grounding conductor installed with branch-circuit conductors. Provide a handhole for the grounding electrode at each pole.

I. Metallic Fences or Other Metal Structures: Comply with requirements of IEEE C2. Bond metallic fences and other metal structures located within 8 feet (2.5 m) vertically or 16 feet (5 m) horizontally of exposed conductors or equipment.
1. Grounding Conductor: Bare, tinned-copper, not less than No. 8 AWG.
2. Gates: Shall be bonded to the gate support post with a flexible bonding jumper. Bond each gate support post to the grounding electrode system in the area.
3. Provide bond across fence openings with 2 AWG bonding jumper buried 18 inches (460 mm) minimum below finished grade. Extend local grounding electrode system to cover swing of gates.
4. Barbed Wire: Strands shall be bonded to the grounding conductor.

J. Generator (Non-Separately Derived System): Install grounding electrode(s) at the generator location. The electrode shall be connected to the equipment grounding conductor and to the frame of the generator. Maintain separation of neutral and ground. Provide warning sign at neu-

tral to ground bond location: “WARNING: SHOCK HAZARD EXISTS IF GROUNDING ELECTRODE CONDUCTOR OR BONDING JUMPER CONNECTION IN THIS EQUIPMENT IS REMOVED WHILE ALTERNATE SOURCE IS ENERGIZED.”

K. Hospitals and Healthcare Facilities:
   1. Use metal conduits and raceway systems that qualify as a ground return path for feeders and branch circuits serving patient care areas.
   2. Provide a bonded connection at all conduit terminations and junction points for feeders supplying panelboards, switchboards, and switchgear
   3. Bond all panelboards together, serving the same patient care vicinity, with a minimum 10 AWG copper bonding conductor.

L. Isolated ground receptacles are prohibited for use in patient care areas.

3.05 INSTALLATION

A. Grounding Conductors: Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

B. Ground Bonding Common with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor and install in conduit.

C. Ground Rods: Drive rods until tops are 2 inches (50 mm) below finished floor or final grade unless otherwise indicated.
   1. Interconnect ground rods with grounding electrode conductor below grade using exothermic welds, except at test wells and as otherwise indicated. Make connections without exposing steel or damaging coating if any.
   2. For grounding electrode system, install ground rods at least □□□□□ rods (unless otherwise indicated on the drawings), spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.

D. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Section 26 05 43 "Underground Ducts and Raceways for Electrical Systems," and shall be at least 12 inches (300 mm) deep, with cover.
   1. Test Wells: Install at least one test well for each service unless otherwise indicated. Install at the ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.
   2. Test Wells near light poles: Coordinate location with landscape drawings and install one at each pole. Test well shall be open bottom and installed on a 12”H bed of gravel or crushed stone (1” size).

E. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.
   1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
   2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
   3. Use exothermic-welded connectors for outdoor locations; if a disconnect-type connection is required, use a bolted clamp.

F. Grounding and Bonding for Piping:
   1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use a bolted clamp connector or bolt a lug-type connector to a pipe flange by using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding

conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.

2. Separately Derived System (SDS): All multiple branch metal water piping laterals originating from outside the area being served by the SDS and which serve the same area being served by the SDS shall be bonded to the common grounding electrode (GE) or the common grounding electrode conductor (GEC). The bonding connection shall be made at each level that the metal water piping serves. When multiple SDS's are installed or an SDS serves multiple levels of a structure, a copper common GEC shall be installed for the SDS as permitted in NFPA 70 article 250.30 (D)3 and sized per article 250.30 (A) and (B).
3. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
4. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.

G. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install bonding jumper to bond across flexible duct connections to achieve continuity.

H. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet (18 m) apart.

I. Ground Ring: Install a grounding conductor, electrically connected to each building structure ground rod and to each steel column, extending around the perimeter of building or area or item indicated.
1. Install tinned-copper conductor not less than No. 2/0 AWG for ground ring and for taps to building steel.
2. Bury ground ring not less than 24 inches (600 mm) from building's foundation.

J. Ufer Ground (Concrete-Encased Grounding Electrode): Fabricate according to NFPA 70; use a minimum of 20 feet (6 m) of bare copper conductor not smaller than No. 2/0 AWG.
1. If concrete foundation is less than 20 feet (6 m) long, coil excess conductor within base of foundation.
2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building's grounding grid or to grounding electrode external to concrete.

3.06 LABELING

A. Comply with requirements in Section 26 05 53 "Identification for Electrical Systems" for instruction signs. The label or its text shall be green.

B. Install labels at the telecommunications bonding conductor and grounding equalizer and at the grounding electrode conductor where exposed.
1. Label Text: "If this connector or cable is loose or if it must be removed for any reason, notify the facility manager."

3.07 FIELD QUALITY CONTROL

A. Testing Agency: Engage an independent qualified testing agency to perform tests and inspections. Refer to section

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.
1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:
1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.

2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
3. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal , at ground test wells , and at individual ground rods. Make tests at ground rods before any conductors are connected.
    a. Measure ground resistance no fewer than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
    b. Perform tests by fall-of-potential method according to IEEE 81.
4. Prepare dimensioned Drawings locating each test well, ground rod and ground-rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

E. Grounding system will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

G. Report measured ground resistances that exceed the following values:
1. Power and Lighting Equipment or System with Capacity of 500 kVA and Less: 10 ohms.
2. Power and Lighting Equipment or System with Capacity of 500 to 1000 kVA: 5 ohms.
3. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: 3 ohms.
4. Power Distribution Units or Panelboards Serving Electronic Equipment: 3 ohm(s).
5. Substations and Pad-Mounted Equipment: 5 ohms.
6. Manhole Grounds: 10 ohms.

H. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Architect promptly and include recommendations to reduce ground resistance.

END OF SECTION 26 05 26

SECTION 26 05 29

HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Hangers and supports for electrical equipment and systems.

B. Construction requirements for concrete bases.

1.02 RELATED REQUIREMENTS

A. Section 26 05 48.16 "Seismic Controls for Electrical Systems" for products and installation requirements necessary for compliance with seismic criteria.

1.03 DEFINITIONS

A. EMT: Electrical metallic tubing.

B. IMC: Intermediate metal conduit.

C. RMC: Rigid metal conduit.

1.04 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design supports for multiple raceways, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.

C. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

D. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of 5 times the applied force.

1.05 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Steel slotted support systems.
   2. Nonmetallic slotted support systems.

B. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following:
   1. Trapeze hangers. Include Product Data for components.
   2. Steel slotted channel systems. Include Product Data for components.
   3. Nonmetallic slotted channel systems. Include Product Data for components.
   4. Equipment supports.

1.06 INFORMATIONAL SUBMITTALS

A. Welding certificates.

1.07 QUALITY ASSURANCE

A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Comply with NFPA 70.

1.08 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified together with concrete Specifications.

B. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

PART 2 PRODUCTS

2.01 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.
   1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Allied Tube & Conduit: Part of Atkore International
      b. Cooper B-Line, Inc.; a division of Eaton Inc.
      c. ERICO International Corporation.
      d. GS Metals Corp.
      e. Thomas & Betts Corporation: A Member of the ABB Group.
      f. Unistrut; Part of Atkore International,
      g. Wesanco, Inc.
   3. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
   4. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
   5. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
   6. Channel Dimensions: Selected for applicable load criteria.

B. Nonmetallic Slotted Support Systems: Structural-grade, factory-formed, glass-fiber-resin channels and angles with 9/16-inch-diameter holes at a maximum of 8 inches o.c., in at least 1 surface.
   1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Allied Tube & Conduit: a part of Atkore , International.
      b. B-Line, Inc.; an Eaton Business.
      c. Fabco Plastics Wholesale Limited.
      d. Seasafe, Inc.
   3. Fittings and Accessories: Products of channel and angle manufacturer and designed for use with those items.
   4. Fitting and Accessory Materials: Same as channels and angles
   5. Rated Strength: Selected to suit applicable load criteria.

C. Raceway and Cable Supports: As described in NECA 1 and NECA 101.

D. Conduit and Cable Support Devices: Steel and malleable-iron hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

E. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.

F. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

G. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
   1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
      a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      b. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Hilti Inc.
         2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
         3) MKT Fastening, LLC.
         4) Simpson Strong-Tie Co., Inc.; Masterset Fastening Systems Unit.
   2. Mechanical-Expansion Anchors: Insert-wedge-type, stainless steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.
      a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      b. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Cooper B-Line, Inc.; a division of Cooper Industries.
         2) Empire Tool and Manufacturing Co., Inc.
         3) Hilti Inc.
         4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
         5) MKT Fastening, LLC.
   3. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
   4. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
   5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.
   6. Toggle Bolts: All-steel springhead type.
   7. Hanger Rods: Threaded steel.

2.02 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

B. Materials: Comply with requirements in Section 05 50 00 "Metal Fabrications" for steel shapes and plates.

PART 3 EXECUTION

3.01 APPLICATION

A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.

B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, IMC, and RMC as required by NFPA 70. Minimum rod size shall be 1/4 inch in diameter.

C. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted or other support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
   1. Secure raceways and cables to these supports with two-bolt conduit clamps.

D. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

3.02 SUPPORT INSTALLATION

A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.

B. Raceway Support Methods: In addition to methods described in NECA 1, EMT, IMC, and RMC may be supported by openings through structure members, as permitted in NFPA 70.

C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.

D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
   1. To Wood: Fasten with lag screws or through bolts.
   2. To New Concrete: Bolt to concrete inserts.
   3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
   4. To Existing Concrete: Expansion anchor fasteners.
   5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches thick.
   6. To Steel: Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69.
   7. To Light Steel: Sheet metal screws.
   8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate by means that meet seismic-restraint strength and anchorage requirements.

E. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

3.03 INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in Section 05 50 00 "Metal Fabrications" for site-fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

3.04 CONCRETE BASES

A. Construct concrete bases of dimensions indicated but not less than 4 inches larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.

B. Use 3000-psi, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Section 03 30 00 "Cast-in-Place Concrete”

C. Anchor equipment to concrete base.
   1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   2. Install anchor bolts to elevations required for proper attachment to supported equipment.
   3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.05 PAINTING

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.

B. Touchup: Comply with requirements in Section 09 90 00 "Painting and Coating" for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

END OF SECTION 26 05 29

This page intentionally left blank

SECTION 26 05 33
RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal conduits, tubing, and fittings.

B. Nonmetal conduits, tubing, and fittings.

C. Metal wireways and auxiliary gutters.

D. Nonmetal wireways and auxiliary gutters.

E. Surface raceways.

F. Boxes, enclosures, and cabinets.

G. Handholes and boxes for exterior underground cabling.

1.02 RELATED REQUIREMENTS

A. Retain first subparagraph below for underground conduits, handholes, and boxes; delete if incidental exterior underground raceways, handholes, and boxes are specified in this Section.

B. Section 26 05 43 "Underground Ducts and Raceways for Electrical Systems" for exterior ductbanks, manholes, and underground utility construction.

C. Section 27 05 28 "Pathways for Communications Systems" for conduits, wireways, surface pathways, innerduct, boxes, faceplate adapters, enclosures, cabinets, and handholes serving communications systems.

D. Section 28 05 28 "Pathways for Electronic Safety and Security" for conduits, surface pathways, innerduct, boxes, and faceplate adapters serving electronic safety and security.

1.03 DEFINITIONS

A. ARC: Aluminum rigid conduit.

B. EMT: Electrical metal tubing

C. ENT: Electrical non-metallic tubing

D. GRC: Galvanized rigid steel conduit.

E. HDPE: High density polyethylene pipe

F. IMC: Intermediate metal conduit.

G. LFMC: Liquidtite flexible metal conduit

H. LFNC: Liquitite flexible non-metallic conduit.

I. RNC: Rigid non-metallic conduit

J. RTRC: Reinforced thermosetting resin conduit

1.04 QUALITY ASSURANCE

A. Each conduit shall bear manufacturer’s trademark and UL label.

B. Each type of conduit and fittings shall be of a single manufacturer. Multiple manufacturer’s of the same material are not acceptable.

C. Comply with National Electric Code (NEC)

1.05 ACTION SUBMITTALS

A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.

B. LEED Submittals:

1. Product Data for Credit IEQ 4.1: For solvent cements and adhesive primers, documentation including printed statement of VOC content.

2. Laboratory Test Reports for Credit IEQ 4: For solvent cements and adhesive primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.

D. Samples: For wireways nonmetallic wireways and surface raceways and for each color and texture specified, 12 inches long.

1.06 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:
1. Structural members in paths of conduit groups with common supports.
2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.

B. Qualification Data: For professional engineer.

C. Seismic Qualification Certificates: For enclosures, cabinets, and conduit racks and their mounting provisions, including those for internal components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
4. Detailed description of conduit support devices and interconnections on which the certification is based and their installation requirements.

D. Source quality-control reports.

PART 2 PRODUCTS

2.01 METAL CONDUITS, TUBING, AND FITTINGS

A. Manufacturers: Subject to compliance with requirements,
1. Allied Tube & Conduit; a Tyco International Ltd. Co.
2. Electri-Flex Company.
3. O-Z/Gedney; a brand of EGS Electrical Group.
4. Republic Conduit.
5. Robroy Industries.
6. Thomas & Betts Corporation.
7. Western Tube and Conduit Corporation.
8. Wheatland Tube Company; a division of John Maneely Company.

B. Listing and Labeling: Metal conduits, tubing, and fittings shall be UL listed and labeled as defined in NFPA 70 and marked for intended location and application.

C. GRC: Comply with ANSI C80.1 and UL 6.

D. ARC: Comply with ANSI C80.5 and UL 6A.

E. IMC: Comply with ANSI C80.6 and UL 1242.

F. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit
1. Comply with ANSI C80.1 ETL PVC-001,NEMA RN 1 and UL 6.
2. Coating Thickness: 0.040 inch, minimum.
3. A PVC Coated Sealing Locknut shall be used on all exposed male threads transitioning into female NPT threads which do not have sealing sleeves, including transitions from PVC

couplings/female adapters to PVC coated GRC elbows in direct burial applications. PVC Coated Sealing Locknuts are not to be used in place of a conduit hub.

G. EMT: Comply with ANSI C80.3 and UL 797.

H. FMC: Comply with UL 1; zinc-coated steel or aluminum.

I. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.

J. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.
   1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886 and NFPA 70.
   2. Fittings for EMT:
      a. Material: Steel or die cast.
      b. Type: compression.
   3. Expansion Fittings: PVC or steel to match conduit type, complying with UL 651, rated for environmental conditions where installed, and including flexible external bonding jumper.
   4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch, with overlapping sleeves protecting threaded joints.

K. PVC-Coated Fittings:
   1. Fittings shall be Form 8 with a V-Seal tongue-in-groove gasket and supplied with plastic encapsulated stainless steel cover screws. Form 8 fittings shall be UL Type 4X listed and IEC IP69 certified. Fittings shall be from the same manufacturer as the conduit in order to maintain system continuity and warranty. PVC Coated fittings for hazardous locations must be UL 1203 listed.

L. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.02 NONMETALLIC CONDUITS, TUBING, AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following
   1. CANTEX Inc.
   2. Condux International, Inc.
   3. Electri-Flex Company.
   4. Lamson & Sessions; Carlon Electrical Products.
   5. RACO; a Hubbell company.
   6. Thomas & Betts Corporation.

B. Listing and Labeling: Nonmetallic conduits, tubing, and fittings shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. ENT: Comply with NEMA TC 13 and UL 1653.

D. RNC: Type EPC-40-PVC, complying with NEMA TC 2 and UL 651 unless otherwise indicated.

E. LFNC: Comply with UL 1660.

F. Rigid HDPE: Comply with UL 651A.

G. Continuous HDPE: Comply with UL 651B.

H. Coilable HDPE: Preassembled with conductors or cables and complying with ASTM D 3485.

I. RTRC: Comply with UL 1684A and NEMA TC 14.

J. Fittings for ENT and RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.

K. Fittings for LFNC: Comply with UL 514B.

L. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

M. Solvent cements and adhesive primers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.03 METAL WIREWAYS AND AUXILIARY GUTTERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Cooper B-Line, Inc.
   2. Hoffman; a Pentair company.
   3. Mono-Systems, Inc.
   4. Square D; a brand of Schneider Electric.

B. Description: Sheet metal, complying with UL 870 and NEMA 250, Type 1, Type 4, Type 12 unless otherwise indicated, and sized according to NFPA 70.
   1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

D. Wireway Covers: Hinged type or Flanged-and-gasketed type depending on the type of space unless otherwise indicated.

E. Finish: Manufacturer's standard enamel finish.

2.04 NONMETALLIC WIREWAYS AND AUXILIARY GUTTERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Allied Moulded Products, Inc.
   2. Hoffman; a Pentair company.
   3. Lamson & Sessions; Carlon Electrical Products.

B. Listing and Labeling: Nonmetallic wireways and auxiliary gutters shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Description: Fiberglass polyester, extruded and fabricated to required size and shape, without holes or knockouts. Cover shall be gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections shall be flanged and have stainless-steel screws and oil-resistant gaskets.

D. Description: PVC, extruded and fabricated to required size and shape, and having snap-on cover, mechanically coupled connections, and plastic fasteners.

E. Fittings and Accessories: Couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings shall match and mate with wireways as required for complete system.

F. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

G. Solvent cements and adhesive primers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.05 SURFACE RACEWAYS

A. Listing and Labeling: Surface raceways and tele-power poles shall be UL listed and labeled as defined in NFPA 70 and marked for intended location and application.

B. Surface Metal Raceways: Galvanized steel with snap-on covers complying with UL 5. Manufacturer's standard enamel finish in color selected by Architect

C. Retain "Manufacturers" Subparagraph and list of manufacturers below to require products from manufacturers listed or a comparable product from other manufacturers.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
      a. Hubbell Wiring Systems
      b. Wiremold / Legrand.
      c. Mono-Systems, Inc.
      d. Panduit Corp.

D. Surface Nonmetallic Raceways: Two- or three-piece construction, complying with UL 5A, and manufactured of rigid PVC with texture and color selected by Architect from manufacturer's standard colors. Product shall comply with UL 94 V-0 requirements for self-extinguishing characteristics.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Hubbell Incorporated; Wiring Device-Kellems Division.
      b. Wiremold / Legrand.
      c. Mono-Systems, Inc.
      d. Panduit Corp.

E. Tele-Power Poles:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Hubbell Incorporated; Wiring Device-Kellems Division
      b. Wiremold / Legrand.Mono-Systems, Inc.
      c. Panduit Corp.
   2. Material: Galvanized steel with ivory baked-enamel finish.
   3. Fittings and Accessories: Dividers, end caps, covers, cutouts, wiring harnesses, devices, mounting materials, and other fittings shall match and mate with tele-power pole as required for complete system.

2.06 BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers: Subject to compliance with requirements.
   1. Cooper Technologies Company; Cooper Crouse-Hinds.
   2. EGS/Appleton Electric.
   3. Hoffman; a Pentair company.
   4. Hubbell Incorporated; Killark Division.
   5. O-Z/Gedney; a brand of EGS Electrical Group.
   6. RACO; a Hubbell Company.
   7. Robroy Industries.
   8. Thomas & Betts Corporation.
   9. Wiremold / Legrand.

B. General Requirements for Boxes, Enclosures, and Cabinets: Boxes, enclosures, and cabinets installed in wet locations shall be listed for use in wet locations.

C. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

D. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.

E. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.

F. Metal Floor Boxes:
   1. Material: Cast metal.
   2. Type: Fully adjustable.
   3. Shape: Rectangular.
   4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Nonmetallic Floor Boxes: Nonadjustable.
   1. Listing and Labeling: Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

H. Luminaire Outlet Boxes: Nonadjustable, designed for attachment of luminaire weighing 50 lb. Outlet boxes designed for attachment of luminaires weighing more than 50 lb shall be listed and marked for the maximum allowable weight.

I. Paddle Fan Outlet Boxes: Nonadjustable, designed for attachment of paddle fan weighing 70 lb.
   1. Listing and Labeling: Paddle fan outlet boxes shall be NRTL listed and labeled as defined in NFPA 70, and marked for intended location and application.

J. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

K. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, galvanized, cast iron with gasketed cover.

L. Box extensions used to accommodate new building finishes shall be of same material as recessed box.

M. Device Box Dimensions: 4 inches square by 2-1/8 inches deep.

N. Gangable boxes are prohibited.

O. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 1 or 4Xwith continuous-hinge cover with flush latch unless otherwise indicated.
   1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
   2. Nonmetallic Enclosures: Plastic.
   3. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

P. Cabinets:
   1. NEMA 250, Type 1 and 4X galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
   2. Hinged door in front cover with flush latch and concealed hinge.
   3. Key latch to match panelboards.
   4. Metal barriers to separate wiring of different systems and voltage.
   5. Accessory feet where required for freestanding equipment.
   6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.07 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

A. General Requirements for Handholes and Boxes:
   1. Boxes and handholes for use in underground systems shall be designed and identified as defined in NFPA 70, for intended location and application.
   2. Boxes installed in wet areas shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel, fiberglass, or a combination of the two.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
      a. Jensen Precast Inc.
      b. CDR Systems Corporation; Hubbell Power Systems.
      c. Oldcastle Precast, Inc.; Christy Concrete Products.
      d. Synertech Moulded Products; a division of Oldcastle Precast, Inc.
   2. Standard: Comply with SCTE 77.
   3. Configuration: Designed for flush burial with integral closed bottom unless otherwise indicated.

4. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
5. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
6. Cover Legend: Molded lettering, "ELECTRIC.". Boxes containing conductors and cables over 600V, the cover shall include permanently engraved name of the utility company (e.g UCSD), type of utility (e.g. ELECTRIC), DANGER-HIGH VOLTAGE-KEEP OUT" in minimum 1/2" inch size, block letters.
7. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
8. Handholes 12 Inches Wide by 24 Inches Long and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

C. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with frame and covers of polymer concrete.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
   a. CDR Systems Corporation; Hubbell Power Systems.
   b. NewBasis.
   c. Nordic Fiberglass, Inc.
   d. Oldcastle Precast, Inc.; Christy Concrete Products.
   e. Synertech Moulded Products; a division of Oldcastle Precast, Inc.
2. Standard: Comply with SCTE 77.
3. Color of Frame and Cover: Gray.
4. Configuration: Designed for flush burial with open bottom unless otherwise indicated.
5. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
6. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
7. Cover Legend: Molded lettering, "ELECTRIC". Boxes containing conductors and cables over 600V, the cover shall include permanently engraved name of the utility company (e.g UCSD), type of utility (e.g. ELECTRIC), DANGER-HIGH VOLTAGE-KEEP OUT" in minimum 1/2" inch size, block letters.
8. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
9. Handholes 12 Inches Wide by 24 Inches Long and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.08 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
1. Tests of materials shall be performed by an independent testing agency.
2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012 and traceable to NIST standards.

PART 3 EXECUTION

3.01 RACEWAY APPLICATION

A. Outdoors: Apply raceway products as specified below unless otherwise indicated:
1. Exposed Conduit: GRC.
2. Concealed Conduit, Aboveground: EMT. Use EPC-40PVC inside concrete walls and columns only.
3. Underground Conduit: Type EPC-40-PVC.
4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.

5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.

B. Indoors: Apply raceway products as specified below unless otherwise indicated:
   1. Exposed, Not Subject to Physical Damage: EMT.
   2. Exposed, Not Subject to Severe Physical Damage: EMT.
   3. Exposed and Subject to Severe Physical Damage: GRC. Raceway locations include the following:
      a. Loading dock.
      b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
      c. Mechanical rooms.
      d. Gymnasiums.
   4. Concealed in Ceilings and Interior Walls and Partitions: EMT.
   5. Concealed in concrete walls and columns: Type EPC-40-PVC.
   6. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
   7. Damp or Wet Locations: GRC.
   8. Hazardous Area: Use fire resistant conduits RMC and fittings
   9. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 stainless steel in institutional and commercial kitchens and damp or wet locations, use hazardous location compatible for bulking room or any other hazardous area classified space.

C. Minimum Raceway Size: 3/4-inch trade size. 1/2-inch

D. Raceway Fittings: Compatible with raceways and suitable for use and location.
   1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
   2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
   3. EMT: Use compression fittings. Comply with NEMA FB 2.10.
   4. Flexible Conduit: Use only fittings listed for use with flexible conduit. Comply with NEMA FB 2.20.

E. Install nonferrous conduit or tubing for circuits operating above 60 Hz. Where aluminum raceways are installed for such circuits and pass through concrete, install in nonmetallic sleeve.

F. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.

G. Install surface raceways only where indicated on Drawings.

H. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg F

3.02 INSTALLATION

A. Comply with NECA 1 and NECA 101 for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum conduits. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.

B. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.

C. Complete raceway installation before starting conductor installation.

D. Comply with requirements in Section 26 05 29 "Hangers and Supports for Electrical Systems" for hangers and supports.

E. Arrange stub-ups so curved portions of bends are not visible above finished slab.

F. Install no more than the equivalent of three 90-degree bends in any conduit run except for control wiring conduits, for which fewer bends are allowed. Support within 12 inches of changes in direction.

G. Conceal conduit and EMT within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.

H. Support conduit within 12 inches of enclosures to which attached.

I. Raceways Embedded in Slabs:
   1. Run conduit larger than 1-inch trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure raceways to reinforcement at maximum 10-footintervals.
   2. Arrange raceways to cross building expansion joints at right angles with expansion fittings.
   3. Arrange raceways to keep a minimum of 1 inch of concrete cover in all directions.
   4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
   5. Change from ENT to RNC, Type EPC-40-PVC before rising above floor.

J. Stub-ups to Above Recessed Ceilings:
   1. Use EMT, IMC, or RMC for raceways.
   2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

K. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.

L. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes with PVC touch-up compound after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer. Coat field-cut threads on PVC-coated raceway with a corrosion-preventing conductive compound prior to assembly. All installers shall be certified by the manufacturer and be able to present a valid unexpired installer certification card prior to installation beginning.

M. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors including conductors smaller than No. 4 AWG.

N. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to 1-1/4-inch trade size and insulated throat metal bushings on 1-1/2-inch trade size and larger conduits terminated with locknuts. Install insulated throat metal grounding bushings on service conduits.

O. Install raceways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.

P. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.

Q. Cut conduit perpendicular to the length. For conduits 2-inch trade size and larger, use roll cutter or a guide to make cut straight and perpendicular to the length.

R. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 250lbs (113 kgs) tensile strength. Leave at least 12 inches of slack at each end of pull wire. Provide acrylic identification tags (2”X4”) at each end indicating the source. Cap underground raceways designated as spare above grade alongside raceways in use.

S. Surface Raceways:
   1. Install surface raceway with a minimum 2-inchradius control at bend points.
   2. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding 48 inches and with no less than two supports per straight raceway section. Support surface raceway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.

T. Install raceway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a

blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings according to NFPA 70.

U. Install devices to seal raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all raceways at the following points:
   1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
   2. Where an underground service raceway enters a building or structure.
   3. Where otherwise required by NFPA 70.

V. Comply with manufacturer's written instructions for solvent welding RNC and fittings.

W. Expansion-Joint Fittings:
   1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F and that has straight-run length that exceeds 25 feet. Install in each run of aboveground RMC and EMT conduit that is located where environmental temperature change may exceed 100 deg F and that has straight-run length that exceeds 100 feet.
   2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:
      a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
      b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
      c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F temperature change.
      d. Attics: 135 deg F temperature change.
   3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F of temperature change for metal conduits.
   4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
   5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.

X. Flexible Conduit Connections: Comply with NEMA RV 3. Use a maximum of 72 inches of flexible conduit for recessed and semi-recessed luminaires, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
   1. Use LFMC in damp or wet locations

Y. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center of box unless otherwise indicated.

Z. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.

AA. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.

BB. Locate boxes so that cover or plate will not span different building finishes.

CC. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.

DD. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.

EE. Set metal floor boxes level and flush with finished floor surface.

FF. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

3.03 INSTALLATION OF UNDERGROUND CONDUIT

A. Direct-Buried Conduit:
   1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Section 31 20 00 "Earthwork" for pipe less than 6 inches in nominal diameter.
   2. Install backfill as specified in Section 31 20 00 "Earthwork"
   3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Section 31 20 00 "Earthwork."
   4. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through floor unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
   5. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through floor.
      a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete for a minimum of 12 inches on each side of the coupling.
      b. For stub-ups at equipment mounted on outdoor concrete bases and where conduits penetrate building foundations, extend steel conduit horizontally a minimum of 60 inches from edge of foundation or equipment base. Install insulated grounding bushings on terminations at equipment.
   6. Warning Planks: Bury warning planks approximately 12 inches above direct-buried conduits but a minimum of 6 inches below grade. Align planks along centerline of conduit.
   7. Underground Warning Tape: Comply with requirements in Section 26 05 53 "Identification for Electrical Systems."

3.04 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances. Top of conduits inside the handhole/box shall be minimum 3 inches above the bottom of the handhole/box.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel (minimum 6 inch high), graded from 1/2-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch above finished grade.

D. Install handholes with bottom below frost line, 5 inches below grade.

E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables but short enough to preserve adequate working clearances in enclosure.

F. Field-cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3.05 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 26 05 44 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.06 FIRESTOPPING

A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 07 84 00 " Firestopping."

3.07 PROTECTION

A. Protect coatings, finishes, and cabinets from damage and deterioration.
   1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
   2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 26 05 33

SECTION 26 05 43

UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. List below includes the most common products and applications for underground site distribution for electrical power and communications.

B. Conduit, ducts, and duct accessories for direct-buried and concrete-encased duct bank(s)

C. Handholes and boxes.

1.02 PULLBOXRELATED REQUIREMENTS

A. Section 26 05 26 “Grounding and Bonding of Electrical Systems.”

1.03 DEFINITION

A. RNC: Rigid nonmetallic conduit.

B. PVC coated GRS: PVC coated Galvanized rigid steel conduit

C. PVC: Poly Vinyl Chloride

D. NETA: InterNational Testing Association

1.04 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Duct-bank materials, including separators and miscellaneous components.
   2. Ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
   3. Accessories forpullbox handholes, boxes, and other utility structures.
   4. Warning tape.
   5. Warning planks.
   6. Pull ropes.

B. Shop Drawings for Precast or Factory-Fabricated Underground Utility Structures: Include plans, elevations, sections, details, attachments to other work, and accessories, including the following:
   1. Duct entry provisions, including locations and duct sizes.
   2. Reinforcement details.
   3. Frame and cover design and frame support rings.
   4. Ladder details.
   5. Grounding details.
   6. Cable racks, insert. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.
   7. Joint details.

C. Shop Drawings for Factory-FabricatedPullbox Handholes and Boxes Other Than Precast Concrete: Include dimensioned plans, sections, and elevations, and fabrication and installation details, including the following:
   1. Duct entry provisions, including locations and duct sizes.
   2. Cover design. Include details of factory engraved markings as specified.
   3. Grounding details.
   4. Cable racks, inserts. Include dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

1.05 INFORMATIONAL SUBMITTALS

A. Duct-Bank Coordination Drawings: Show duct profiles and coordination with other utilities and underground structures.
   1. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.

2. Drawings shall be signed and sealed by a qualified California registered professional electrical engineer.

B. Product Certificates: For concrete and steel used in precast concrete pullboxpullbox and handholes, as required by ASTM C 858. Certificates shall be signed by manufacturer's structural engineer. Include name and date.

C. Qualification Data: For professional engineer and testing agency.

D. Source quality-control test reports.

E. Field quality-control test reports.

1.06 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Comply with ANSI C2.

C. Comply with NFPA 70.

D. Each conduit shall bear manufacturer's trademark and UL label. Conduits and fittings shall be of a single manufacturer. Multiple manufactures for the same material are not acceptable.

E. Comply with National Electric Code (NEC).

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver ducts to project site with ends capped. Store nonmetallic ducts with supports to prevent bending, warping, and deforming.

B. Deliver precast concrete pullboxpullbox, handholes and other underground utility structures when the site is ready for installation. Store precast concrete and other factory-fabricated underground utility structures at project site (if necessary) as recommended by manufacturer to prevent physical damage. Arrange so identification markings are visible.

C. Lift and support precast concrete units only at designated lifting or supporting points.

1.08 PROJECT CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Contracting Agency or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
   1. Notify Construction Manager and Contracting Agency no fewer than fourteen (14) days in advance of proposed interruption of electrical service.
   2. Do not proceed with interruption of electrical service without Contracting Agency's written permission.
   3. Existing electrical service shall be shut down by Contracting Agency's authorized personnel. Coordinate with Contracting Agency in advance.

1.09 COORDINATION

A. Coordinate layout and installation of ducts, pullboxpullbox, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field.

B. Coordinate elevations of ducts and duct-bank entrances into pullboxpullbox, handholes, and boxes with final locations and profiles of ducts and duct banks as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations from those indicated as required to suit field conditions and to ensure that duct runs drain to pullboxpullbox and handholes, and as approved by Architect.

1.10 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

B. Furnish cable-support stanchions, arms, insulators, and associated fasteners in quantities equal to 5 percent of quantity of each item installed (minimum six of each type).

PART 2 PRODUCTS

2.01 CONDUIT

A. Plastic-Coated Rigid Steel Conduit: Galvanized. Comply with ANSI C80.1. Plastic-Coated Rigid Steel Conduit and Fittings: Rigid steel conduit and fittings with an extruded polyvinyl chloride jacket, minimum 40 mils. The jacket shall have high tensile strength, shall be highly resistant to corrosion and shall not oxidize or deteriorate or shrink when exposed to sunlight and weather. The jacket shall be flame retardant and shall not support combustion. The interior of the conduit shall have a urethane coating, minimum 2 mils.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Allied Tube and Conduit
   2. Republic Conduit
   3. Western Tube

C. RNC: Heavy wall design; NEMA TC 2, Type EPC-40-PVC and Type EPC-80-PVC, UL 651, with matching fittings by same manufacturer as the conduit, complying with NEMA TC 3 and UL 514B. Make all fittings watertight with solvent-weld recommended by the conduit manufacturer and specifically manufactured for the purpose.

D. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Cantex, Inc.
   2. Thomas & Betts-Carlon.
   3. Lamson & Sessions -Carlon Division.
   4. JM Eagle.
   5. Allied Tube and Conduit.

2.02 NONMETALLIC DUCTS AND DUCT ACCESSORIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Allied Tube and Conduit.
   2. Cantex, Inc.
   3. Lamson & Sessions; Carlon Electrical Products.
   4. JM Eagle.

B. Duct Accessories:
   1. Duct Separators: Factory-fabricated rigid PVC interlocking spacers, sized for type and sizes of ducts with which used, and selected to provide minimum duct spacings indicated while supporting ducts during concreting or backfilling.
   2. Warning Tape: Underground-line warning tape specified in Section 26 05 53 "Identification for Electrical Systems."
   3. Concrete Warning Planks: Nominal 12 by 24 by 3 inches (300 by 600 by 76 mm) in size, manufactured from 6000-psi (41-MPa) concrete.
      a. Color: Red dye added to concrete during batching.
      b. Mark each plank with "ELECTRIC" in 2-inch- (50-mm-) high, 3/8-inch- (10-mm-) deep letters.

2.03 FLEXIBLE NONMETALLIC DUCTS

A. HDPE Duct: Type EPEC-40 HDPE, complying with NEMA TC 7 and UL 651A.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Thomas & Betts – Carlon Division.
      b. ARNCO – Dura-Line.
   2. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application

2.04 PRECAST CONCRETE HANDHOLES AND BOXES

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Christy Concrete Products.
   2. Oldcastle Precast Group.

C. Comply with ASTM C 858 for design and manufacturing processes.

D. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have traffic load rating consistent with that of handhole or box.
   1. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
   2. Frame and Cover: Weatherproof steel frame, with steel cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
   3. Coordinate remaining subparagraphs and associated subparagraphs below with Drawings.
   4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
   5. Cover Legend: Molded lettering, ”ELECTRIC”.
   6. Configuration: Units shall be designed for flush burial and have open bottom, unless otherwise indicated.
   7. Extensions and Slabs: Designed to mate with bottom of enclosure. Same material as enclosure.
      a. Extension shall provide increased depth of 12 inches (300 mm).
      b. Slab: Same dimensions as bottom of enclosure, and arranged to provide closure.
   8. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches (300 mm) vertically and horizontally to accommodate alignment variations.
      a. Windows shall be located no less than 6 inches (150 mm) from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.
      b. Window opening shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.
      c. Window openings shall be framed with at least two additional No. 4 steel reinforcing bars in concrete around each opening.
   9. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
      a. Type and size shall match fittings to duct or conduit to be terminated.
      b. Fittings shall align with elevations of approaching ducts and be located near interior corners of handholes to facilitate racking of cable.
   10. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.05 HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Description: Comply with SCTE 77.
   1. Color: Gray.
   2. Configuration: Units shall be designed for flush burial and have open bottom, unless otherwise indicated.
   3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
   4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
   5. Cover Legend: Molded lettering, "ELECTRIC".

6. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.
7. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
8. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have factory-installed inserts for cable racks and pulling-in irons.

B. Polymer Concrete Handholes and Boxes with Polymer Concrete Cover: Molded of sand and aggregate, bound together with a polymer resin, and reinforced with steel or fiberglass or a combination of the two.
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
3. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
   a. Armorcast Products Company.
   b. Carson Industries LLC.
   c. CDR Systems Corporation.
   d. NewBasis.
   e. Oldcastle

C. Fiberglass Handholes and Boxes with Polymer Concrete Frame and Cover: Sheet-molded, fiberglass-reinforced, polyester resin enclosure joined to polymer concrete top ring or frame.
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
3. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
   a. Armorcast Products Company.
   b. Carson Industries LLC.
   c. Christy Concrete Products.
   d. Synertech Moulded Products, Inc.; a division of Oldcastle Precast.
   e. Newbasis

D. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with covers of polymer concrete.
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
3. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
   a. Carson Industries LLC.
   b. Christy Concrete Products.
   c. Nordic Fiberglass, Inc.

E. High-Density Plastic Boxes: Injection molded of high-density polyethylene or copolymer-polypropylene. Cover shall be polymer concrete.
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
3. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
   a. Carson Industries LLC.
   b. Nordic Fiberglass, Inc.
   c. PenCell Plastics.

2.06 PRECAST PULLBOX

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Christy Concrete Products.
   2. Oldcastle Precast Group.
   3. Utility Concrete Products, LLC.
   4. Jensen Precast
   5. Utility Vault Co.

B. Comply with ASTM C 858, with structural design loading as specified in Part 3 "Underground Enclosure Application" Article and with interlocking mating sections, complete with accessories, hardware, and features.
   1. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches (300 mm) vertically and horizontally to accommodate alignment variations.
      a. Windows shall be located no less than 6 inches (150 mm) or from interior surfaces of walls, floors, or roofs of pullboxpullbox, but close enough to corners to facilitate racking of cables on walls. Windows shall be no less than 12 inches (300 mm) from the floor to avoid water intrusion into the underground ducts.
      b. Window opening shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.
      c. Window openings shall be framed with at least two additional No. 4 steel reinforcing bars in concrete around each opening.
   2. Duct Entrances in Manhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
      a. Type and size shall match fittings to duct or conduit to be terminated.
      b. Fittings shall align with elevations of approaching ducts and be located near interior corners of pullboxpullbox to facilitate racking of cable.

C. Concrete Knockout Panels: 1-1/2 to 2 inches (38 to 50 mm) thick, for future conduit entrance and sleeve for ground rod.

D. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

2.07 PULLBOX UTILITY STRUCTURE ACCESSORIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Bilco Company (The).
   2. Christy Concrete Products.
   3. Jensen Precast.
   4. Neenah Foundry Company.
   5. Oldcastle Precast Group.
   6. Underground Devices, Inc.
   7. Utility Concrete Products, LLC.
   8. or equal.

B. Manhole Frames, Covers, and Chimney Components: Comply with structural design loading specified for manhole.

1. Frame and Cover: Weatherproof, gray cast iron complying with ASTM A 48/A 48M, Class 30B.
   a. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
   b. Special Covers: Recess in face of cover designed to accept finish material in paved areas.
2. Cover Legend: Cast in. Selected to suit system.
   a. Legend: "ELECTRIC-LV" for duct systems with power wires and cables for systems operating at 600 V and less.
   b. Legend: “Name of serving utility company”; "ELECTRIC-HV"; “Manhole/Handhole number as indicated on the drawings” for duct systems with medium-voltage cables.
   c. Legend: “Name of serving utility company”; "SIGNAL"; “Manhole/Handhole number as indicated on the drawings” for communications, data, and telephone duct systems.
3. Manhole Chimney Components: Precast concrete rings with dimensions matched to those of roof opening.
   a. Mortar for Chimney Ring and Frame and Cover Joints: Comply with ASTM C 270, Type M, except for quantities less than 2.0 cu. ft. (60 L) where packaged mix complying with ASTM C 387, Type M, may be used.

C. Manhole Sump Frame and Grate: ASTM A 48/A 48M, Class 30B, gray cast iron.

D. Pulling Eyes in Concrete Walls: Eyebolt with reinforcing-bar fastening insert, 2-inch- (50-mm-) diameter eye, and 1-by-4-inch (25-by-100-mm) bolt.
   1. Working Load Embedded in 6-Inch (150-mm), 4000-psi (27.6-MPa) Concrete: 13,000-lbf (58-kN) minimum tension.

E. Pulling Eyes in Nonconcrete Walls: Eyebolt with reinforced fastening, 1-1/4-inch- (32-mm-) diameter eye, rated 2500-lbf (11-kN) minimum tension.

F. Pulling-In and Lifting Irons in Concrete Floors: 7/8-inch- (22-mm-) diameter, hot-dip galvanized, bent steel rod; stress relieved after forming; and fastened to reinforcing rod. Exposed triangular opening.
   1. Ultimate Yield Strength: 40,000-lbf (180-kN) shear and 60,000-lbf (270-kN) tension.

G. Bolting Inserts for Concrete Utility Structure Cable Racks and Other Attachments: Flared, threaded inserts of noncorrosive, chemical-resistant, nonconductive thermoplastic material; 1/2-inch (13-mm) ID by 2-3/4 inches (69 mm) deep, flared to 1-1/4 inches (32 mm) minimum at base.
   1. Tested Ultimate Pullout Strength: 12,000 lbf (53 kN) minimum.

H. Expansion Anchors for Installation after Concrete Is Cast: Zinc-plated, carbon-steel-wedge type with stainless-steel expander clip with 1/2-inch (13-mm) bolt, 5300-lbf (24-kN) rated pullout strength, and minimum 6800-lbf (30-kN) rated shear strength.

I. Cable Rack Assembly: Steel, hot-dip galvanized, except insulators.
   1. Stanchions: T-section or channel; 2-1/4-inch (57-mm) nominal size; punched with 14 holes on 1-1/2-inch (38-mm) centers for cable-arm attachment.
   2. Arms: 1-1/2 inches (38 mm) wide, lengths ranging from 3 inches (75 mm) with 450-lb (204-kg) minimum capacity to 18 inches (460 mm) with 250-lb (114-kg) minimum capacity. Arms shall have slots along full length for cable ties and be arranged for secure mounting in horizontal position at any vertical location on stanchions.
   3. Insulators: High-glaze, wet-process porcelain arranged for mounting on cable arms.

J. Cable Rack Assembly: Nonmetallic. Components fabricated from nonconductive, fiberglass-reinforced polymer.
   1. Stanchions: Nominal 36 inches (900 mm) high by 4 inches (100 mm) wide, with minimum of 9 holes for arm attachment.
   2. Arms: Arranged for secure, drop-in attachment in horizontal position at any location on cable stanchions, and capable of being locked in position. Arms shall be available in lengths ranging from 3 inches (75 mm) with 450-lb (204-kg) minimum capacity to 20 inch-

es (508 mm) with 250-lb (114-kg) minimum capacity. Top of arm shall be nominally 4 inches (100 mm) wide, and arm shall have slots along full length for cable ties.

K. Duct-Sealing Compound: Nonhardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F (2 deg C). Capable of withstanding temperature of 300 deg F (150 deg C) without slump and adhering to clean surfaces of plastic ducts, metallic conduits, conduit coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals.

L. Fixed Manhole Ladders: Arranged for attachment to roof of manhole. Ladder and mounting brackets and braces shall be fabricated from nonconductive, structural-grade, hot-dip galvanized steel. Ladder shall be removable if necessary.

M. Cover Hooks: Two required.

2.08 SOURCE QUALITY CONTROL

A. Test and inspect precast concrete utility structures according to ASTM C 1037.

B. Nonconcrete Handhole and Pull-Box Prototype Test: Test prototypes of pullboxpullbox and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
   1. Tests of materials shall be performed by a independent testing agency.
   2. Strength tests of complete boxes and covers shall be by either an independent testing agency or the manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
   3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 EXECUTION

3.01 UNDERGROUND DUCT APPLICATION

A. Ducts for Electrical Cables Over 600 V: RNC, NEMA Type EPC-40-PVC , in concrete-encased duct bank, unless otherwise indicated.

B. Ducts for Electrical Feeders 600 V and Less: RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank, unless otherwise indicated.

C. Ducts for Electrical Feeders 600 V and Less: RNC, NEMA Type EPC-40-PVC, in direct-buried duct bank, unless otherwise indicated.

D. Ducts for Electrical Branch Circuits: RNC, NEMA Type EPC-40-PVC, in direct-buried duct bank, unless otherwise indicated.

E. Bored Underground Duct: Type EPEC-40-HDPE unless otherwise indicated.

F. Underground Ducts for Telephone, Communications, or Data Utility Service Cables: RNC, NEMA Type EPC-40 PVC, in concrete-encased duct bank, unless otherwise indicated.

G. Underground Ducts for Telephone, Communications, or Data Utility Service Cables: RNC, NEMA Type EPC-40-PVC, installed in concrete-encased duct bank, unless otherwise indicated.

H. Underground Ducts Crossing Roadways; loading docks and Railroads: RNC, NEMA Type EPC-40-PVC, encased in reinforced concrete.

3.02 UNDERGROUND ENCLOSURE APPLICATION

A. Handholes and Boxes for 600 V and Less, Including Telephone, Communications, and Data Wiring:
   1. Units in Roadways and Other Deliberate Traffic Paths: Precast concrete. AASHTO HB 17, H-20 structural load rating.
   2. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Precast concrete, AASHTO HB 17, H-20 structural load rating.
   3. Units in Sidewalk and Similar Applications with a Safety Factor for Nondeliberate Loading by Vehicles: Precast concrete, AASHTO HB 17, H-10 structural load rating.

4. Units Subject to Light-Duty Pedestrian Traffic Only: structurally tested according to SCTE 77 with 3000-lbf (13 345-N) vertical loading.

B. PullboxPullbox: Precast concrete.
   1. Units Located in Roadways and Other Deliberate Traffic Paths by Heavy or Medium Vehicles: H-20 structural load rating according to AASHTO HB 17.

3.03 EARTHWORK

A. Excavation and Backfill: Comply with Section 31 20 00 "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restore surface features at areas disturbed by excavation and reestablish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling is completed.

C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Section 32 92 00 "Turf and Grasses" and Section 32 93 00 "Plants."

D. Cut and patch existing pavement in the path of underground ducts and utility structures according to Section 01 73 29 "Cutting and Patching."

3.04 DUCT INSTALLATION

A. Slope: Pitch ducts a minimum slope of 1:300 down toward pullboxpullbox and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two pullboxpullbox to drain in both directions.

B. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 12.5 feet (4 m), both horizontally and vertically, at other locations, unless otherwise indicated. For underground ducts containing MV and HV cables, use manufactured long sweep bends with a minimum radius 25 feet (7.5 m) both horizontally and vertically. Number of bends on ducts for HV and MV systems, telephone and signal systems shall not exceed two (2) 90 degrees.

C. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in same plane.

D. Duct Entrances to PullboxPullbox and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inches (250 mm) o.c. for 5-inch (125-mm) ducts, and vary proportionately for other duct sizes.
   1. Begin change from regular spacing to end-bell spacing 10 feet (3 m) from the end bell without reducing duct line slope and without forming a trap in the line.
   2. Direct-Buried Duct Banks: Install an expansion and deflection fitting in each conduit in the area of disturbed earth adjacent to manhole or handhole.
   3. Grout end bells into structure walls from both sides to provide watertight entrances.

E. Building Wall Penetrations: Make a transition from underground duct to rigid PVC coated steel conduit at least 10 feet (3 m) outside the building wall without reducing duct line slope away from the building, and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Section 26 05 44 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

F. Do not install conduits underneath a building except where the service/feeder/branch circuit conduits enter the building.

G. Sealing: Provide temporary closure at terminations of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig (1.03-MPa) hydrostatic pressure.

H. Pulling Cord: Install minimum 1/8 inch thick test nylon cord with minimum 250 pounds per foot tensile strength in ducts, including spares.

I. Concrete-Encased Ducts: Support ducts on duct separators.

1. Separator Installation: Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 feet (6 m) of duct. Secure separators to earth and to ducts to prevent floating during concreting. Stagger separators approximately 6 inches (150 mm) between tiers. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
2. Concreting Sequence: Pour each run of envelope between pullboxpullbox or other terminations in one continuous operation.
   a. Start at one end and finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to manufacturer's written recommendations, or use other specific measures to prevent expansion-contraction damage.
   b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch (19-mm) reinforcing rod dowels extending 18 inches (450 mm) into concrete on both sides of joint near corners of envelope.
3. Pouring Concrete: Spade concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Use a plank to direct concrete down sides of bank assembly to trench bottom. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application.
4. Encase all feeder ducts in a 3 inch concrete envelope. Extend envelope with 3 inches beyond all external surfaces of all outer most ducts. Do not over pour the concrete.
5. Concrete encasement shall be minimum 3000 psi. All underground ducts containing MV and HV cables (above 600V) shall be encased in red concrete. Concrete shall be premixed during batching with 1-1/2 lbs of red ocher dye per sack of cement.
6. Reinforcement: Reinforce concrete-encased duct banks where they cross disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
7. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
8. Minimum Space between Ducts: 3 inches (75 mm) between ducts and exterior envelope wall, and 12 inches (300 mm) between power and signal ducts.
9. Depth: Install top of duct bank at least 24 inches (600 mm) below finished grade in areas not subject to deliberate traffic, and at least 30 inches (750 mm) below finished grade in deliberate traffic paths for vehicles, unless otherwise indicated. Minimum depth below grade in all areas shall be 36 inches (900 mm) for underground ducts containing MV and HV ducts.
10. Stub-Ups: Use manufactured PVC coated rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.
    a. Couple PVC coated steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete.
    b. Stub-Ups to Equipment: For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of base. Install insulated grounding bushings on terminations at equipment.
11. Warning Tape: Bury warning tape approximately 12 inches (300 mm) below grade above all concrete-encased ducts and duct banks. Align tape parallel to and within 3 inches (75 mm) of the centerline of duct bank. Provide an additional warning tape for each 12-inch (300-mm) increment of duct-bank width over a nominal 18 inches (450 mm). Space additional tapes 12 inches (300 mm) apart, horizontally.

J. Direct-Buried Duct Banks:
   1. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.
   2. Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 feet (6 m) of duct. Secure separators to earth and to ducts to pre-

vent displacement during backfill and yet permit linear duct movement due to expansion and contraction as temperature changes. Stagger spacers approximately 6 inches (150 mm) between tiers.

3. Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as specified in Section 31 20 00 "Earth Moving" for pipes less than 6 inches (150 mm) in nominal diameter.
4. Install backfill as specified in Section 31 20 00 "Earthwork"
5. After installing first tier of ducts, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand-place backfill to 4 inches (100 mm) over ducts and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction as specified in Section 31 20 00 "Earth Moving."
6. Install ducts with a minimum of 3 inches (75 mm) between ducts for like services and 12 inches (300 mm) between power and signal ducts.
7. Depth: Install top of duct bank at least 36 inches (900 mm) below finished grade, unless otherwise indicated.
8. Set elevation of bottom of duct bank below the frost line.
9. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Encase elbows for stub-up ducts throughout the length of the elbow.
10. Install manufactured PVC coated rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.
    a. Couple PVC coated steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete.
    b. For equipment mounted on outdoor concrete bases, extend PVC coated steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.
11. Warning Planks: Bury warning planks approximately 12 inches (300 mm) above direct-buried ducts and duct banks, placing them 24 inches (600 mm) o.c. Align planks along the width and along the centerline of duct bank. Provide an additional plank for each 12-inch (300-mm) increment of duct-bank width over a nominal 18 inches (450 mm). Space additional planks 12 inches (300 mm) apart, horizontally.

3.05 INSTALLATION OF CONCRETE PULLBOX, HANDHOLES, AND BOXES

A. Precast Concrete Handhole and pullbox Installation:
   1. Comply with ASTM C 891, unless otherwise indicated.
   2. Install units level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances.
   3. Unless otherwise indicated, support units on a level bed of 12 inches thick crushed stone or gravel, graded from 1-inch (25-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

B. Elevations:
   1. Install handholes with bottom below the frost line, 10ft below grade.
   2. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.
   3. Where indicated, cast handhole cover frame integrally with handhole structure.

C. Drainage: Install drains in bottom of pullbox where indicated. Coordinate with drainage provisions indicated.

D. Manhole Access: Circular opening in manhole roof; sized to match cover size.
   1. Pullbox with Fixed Ladders: Offset access opening from pullbox centerlines to align with ladder.

2. Install chimney, constructed of precast concrete collars and rings to support frame and cover and to connect cover with pullbox roof opening. Provide moisture-tight masonry joints and waterproof grouting for cast-iron frame to chimney.

E. Waterproofing: Apply waterproofing to exterior surfaces of pullboxpullbox and handholes after concrete has cured at least three days. Waterproofing materials and installation are specified in Section 07 14 00"Thermoplastic Sheet Waterproofing." After ducts have been connected and grouted, and before backfilling, waterproof joints and connections and touch up abrasions and scars. Waterproof exterior of pullbox chimneys after mortar has cured at least three days.

F. Dampproofing: Apply dampproofing to exterior surfaces of pullboxpullbox and handholes after concrete has cured at least three days. Dampproofing materials and installation are specified in Section 07 11 13 "Bituminous Dampproofing." After ducts have been connected and grouted, and before backfilling, dampproof joints and connections and touch up abrasions and scars. Dampproof exterior of pullbox chimneys after mortar has cured at least three days.

G. Hardware: Install removable hardware, including pulling eyes, cable stanchions, and cable arms, and insulators, as required for installation and support of cables and conductors and as indicated.

H. Fixed Pullbox Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in pullboxpullbox.

I. Field-Installed Bolting Anchors in PullboxPullbox and Concrete Handholes: Do not drill deeper than 3-7/8 inches (98 mm) for pullboxpullbox and 2 inches (50 mm) for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.

J. Warning Sign: Install "Confined Space Hazard" warning sign on the inside surface of each pullbox cover.

3.06 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of ducts, and seal joint between box and extension as recommended by the manufacturer.

B. Unless otherwise indicated, support units on a level bed of 12 inches thick crushed stone or gravel, graded from 1/2-inch (12.7-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas and trafficways, set so cover surface will be flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.

D. Install handholes and boxes with bottom below the frost line, 5 inches below grade.

E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in the enclosure.

F. Field-cut openings for ducts and conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

G. For enclosures installed in asphalt paving and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box cover frame. Bottom of ring shall rest on compacted earth .

1. Dimensions: 10 inches wide by 12 inches deep (250 mm wide by 300 mm deep) .

3.07 GROUNDING

A. Ground underground ducts and utility structures according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

3.08 FIELD QUALITY CONTROL

A. During construction, partially completed duct lines shall be protected from the entrance of debris such as mud, sand and dirt by means of suitable conduit plugs. As each section of a duct line is completed from pullbox to vault, a testing mandrel not less than 12 inches long with a diameter 1/4-inch less than the size of the duct, shall be drawn through each duct, after which a brush having the diameter of the duct, and have stiff bristles shall be drawn through until the conduit is clear of all particles of earth, sand, gravel and other foreign materials. Conduit plugs shall then be immediately installed. Underground conduits, which terminate inside the building below grade, or which slope so that water might flow into building, shall be sealed at termination after installation of wires.

B. Perform the following tests and inspections and prepare test reports:
   1. Demonstrate capability and compliance with requirements on completion of installation of underground ducts and utility structures.
   2. Pull aluminum or wood test mandrel through duct to prove joint integrity and test for out-of-round duct. Provide mandrel equal to 80 percent fill of duct. If obstructions are indicated, remove obstructions and retest.
   3. Test pullbox and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 26 05 26 "Grounding and Bonding for Electrical Systems."

C. Correct deficiencies and retest as specified above to demonstrate compliance.

3.09 CLEANING

A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.

B. Clean internal surfaces of pullbox, including sump. Remove foreign material.

SECTION 26 05 44

SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Sleeves for raceway and cable penetration of non-fire-rated construction walls and floors.

B. Sleeve-seal systems.

C. Sleeve-seal fittings.

D. Grout.

E. Silicone sealants.

1.02 RELATED REQUIREMENTS

A. Section 07 84 00 " Firestopping" for firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:
   1. Product Data for Credit EQ 4.1: For sealants, documentation including printed statement of VOC content.
   2. Laboratory Test Reports for Credit EQ 4: For sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

PART 2 PRODUCTS

2.01 SLEEVES

A. Wall Sleeves:
   1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.
   2. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies: Galvanized-steel sheet; 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.

C. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.

D. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.

E. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

F. Sleeves for Rectangular Openings:
   1. Material: Galvanized sheet steel.
   2. Minimum Metal Thickness:
      a. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and with no side larger than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
      b. For sleeve cross-section rectangle perimeter 50 inches (1270 mm) or more and one or more sides larger than 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

2.02 SLEEVE-SEAL SYSTEMS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
      a. Advance Products & Systems, Inc.
      b. CALPICO, Inc.
      c. Metraflex Company (The).
      d. Pipeline Seal and Insulator, Inc.
      e. Proco Products, Inc.
      f. 3M.
   2. Sealing Elements: Nitrile (Buna N) rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
   3. Pressure Plates: Carbon steel.
   4. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

2.03 SLEEVE-SEAL FITTINGS

A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
      a. Presealed Systems.
      b. Metraflex.

2.04 GROUT

A. Description: Nonshrink; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.

B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

2.05 SILICONE SEALANTS

A. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below.
   1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.
   2. Sealant shall have VOC content of 60 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   3. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

PART 3 EXECUTION

3.01 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

A. Comply with NECA 1.

B. Comply with NEMA VE 2 for cable tray and cable penetrations.

C. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:
   1. Interior Penetrations of Non-Fire-Rated Walls and Floors:
      a. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 07 92 00 "Joint Sealants."
      b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.
   2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
   3. Size pipe sleeves to provide 1/4-inch (6.4-mm) annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed or unless seismic criteria require different clearance.
   4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.
   5. Install sleeves for floor penetrations. Extend sleeves installed in floors 2 inches (50 mm) above finished floor level. Install sleeves during erection of floors.

D. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:
   1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
   2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.

E. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

F. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.

G. Underground, Exterior-Wall and Floor Penetrations: Install PVC Coated cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between raceway or cable and sleeve for installing sleeve-seal system.

3.02 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at raceway entries into building.

B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.03 SLEEVE-SEAL-FITTING INSTALLATION

A. Install sleeve-seal fittings in new walls and slabs as they are constructed.

B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.

C. Secure nailing flanges to concrete forms.

D. Using grout, seal the space around outside of sleeve-seal fittings.

SECTION 26 05 48

VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

1.02 SECTION INCLUDES

A. Isolation pads.

B. Spring isolators.

C. Restrained spring isolators.

D. Channel support systems.

E. Restraint cables.

F. Hanger rod stiffeners.

G. Anchorage bushings and washers.

1.03 RELATED REQUIREMENTS

A. Section 26 05 29 "Hangers and Supports for Electrical Systems" for commonly used electrical supports and installation requirements.

1.04 RELATED DOCUMENTS

A. Section 26 00 00 “General Electrical Requirements.”

1.05 DEFINITIONS

A. The IBC: International Building Code.

B. ICC-ES: ICC-Evaluation Service.

C. OSHPD: Office of Statewide Health Planning and Development for the State of California.

1.06 PERFORMANCE REQUIREMENTS

A. Seismic-Restraint Loading:
   1. Site Class as Defined in the IBC: D.
   2. Assigned Seismic Use Group or Building Category as Defined in the IBC: II.
      a. Component Importance Factor: 1.0.
      b. Component Response Modification Factor: See Drawing S0.1 for Criteria..
      c. Component Amplification Factor: See Drawing S0.1 for Criteria .
   3. Design Spectral Response Acceleration at Short Periods (0.2 Second): See Drawing S0.1 for Criteria
   4. Design Spectral Response Acceleration at 1.0-Second Period: See Drawing S0.1 for Criteria

1.07 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
   2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
      a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated byan agency acceptable to authorities having jurisdiction.
      b. Annotate to indicate application of each product submitted and compliance with requirements.
   3. Restrained-Isolation Devices: Include ratings for horizontal, vertical, and combined loads.

B. Delegated-Design Submittal: For vibration isolation and seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic forces required to select vibration isolators and seismic restraints.
      a. Coordinate design calculations with wind-load calculations required for equipment mounted outdoors. Comply with requirements in other electrical Sections for equipment mounted outdoors.
   2. Indicate materials and dimensions and identify hardware, including attachment and anchorage devices.
   3. Field-fabricated supports.
   4. Seismic-Restraint Details:
      a. Design Analysis: To support selection and arrangement of seismic restraints. Include calculations of combined tensile and shear loads.
      b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
      c. Preapproval and Evaluation Documentation: By an agency acceptable to authorities having jurisdiction, showing maximum ratings of restraint items and the basis for approval (tests or calculations).

1.08 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Show coordination of seismic bracing for electrical components with other systems and equipment in the vicinity, including other supports and seismic restraints.

B. Qualification Data: For professional engineer and testing agency.

C. Welding certificates.

D. Field quality-control test reports.

1.09 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

B. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.

C. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

D. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval OPA number from OSHPD, preapproval by ICC-ES, or preapproval by another agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.

E. Comply with NFPA 70.

PART 2 PRODUCTS

2.01 VIBRATION ISOLATORS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

C. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
   1. Ace Mountings Co., Inc.
   2. Amber/Booth Company, Inc.
   3. California Dynamics Corporation.
   4. Isolation Technology, Inc.
   5. Kinetics Noise Control.
   6. Mason Industries.
   7. Vibration Eliminator Co., Inc.
   8. Vibration Isolation.
   9. Vibration Mountings & Controls, Inc.

D. Pads: Arrange in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
   1. Resilient Material: Oil- and water-resistant neoprene, rubber or hermetically sealed compressed fiberglass.

E. Spring Isolators Freestanding, laterally stable, open-spring isolators.
   1. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
   2. Minimum Additional Travel: 50 percent of the required deflection at rated load.
   3. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
   4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
   5. Baseplates: Factory drilled for bolting to structure and bonded to 1/4-inch- (6-mm-) thick, rubber isolator pad attached to baseplate underside. Baseplates shall limit floor load to 500 psig (3447 kPa).
   6. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.

F. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic or limit-stop restraint.
   1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled baseplate bonded to 1/4-inch- (6-mm-) thick, neoprene or rubber isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
   2. Restraint: Seismic or limit-stop as required for equipment and authorities having jurisdiction.
   3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
   4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
   5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
   6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.02 SEISMIC-RESTRAINT DEVICES

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

C. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawingsor a comparable product by one of the following:
   1. Amber/Booth Company, Inc.
   2. California Dynamics Corporation.
   3. Cooper B-Line, Inc.; a division of Cooper Industries.

4. Hilti Inc.
5. Loos & Co.; Seismic Earthquake Division.
6. Mason Industries.
7. TOLCO Incorporated; a brand of NIBCO INC.
8. Unistrut; Tyco International, Ltd.

D. General Requirements for Restraint Components: Rated strengths, features, and application requirements shall be as defined in reports by an evaluation service member of ICC-ES oror an agency acceptable to authorities having jurisdiction.
   1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least four times the maximum seismic forces to which they will be subjected.

E. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.

F. Restraint Cables: ASTM A 603 galvanized or ASTM A 492 stainless-steel cables with end connections made of steel assemblies with thimbles, brackets, swivels, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.

G. Hanger Rod Stiffener: Steel tube or steel slotted-support-system sleeve with internally bolted connections orReinforcing steel angle clamped to hanger rod. Do not weld stiffeners to rods.

H. Bushings for Floor-Mounted Equipment Anchor: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchors and studs.

I. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices.

J. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

K. Mechanical Anchor: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchors with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.

L. Adhesive Anchor: Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

2.03 FACTORY FINISHES

A. Finish: Manufacturer's standard prime-coat finish ready for field painting.

B. Finish: Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.
   1. Powder coating on springs and housings.
   2. All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
   3. Baked enamel or powder coat for metal components on isolators for interior use.
   4. Color-code or otherwise mark vibration isolation and seismic-control devices to indicate capacity range.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and equipment to receive vibration isolation and seismic-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 APPLICATIONS

A. Multiple Raceways or Cables: Secure raceways and cables to trapeze member with clamps approved for application by an agency acceptable to authorities having jurisdiction.

B. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.

C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.03 SEISMIC-RESTRAINT DEVICE INSTALLATION

A. Equipment and Hanger Restraints:
   1. Install restrained isolators on electrical equipm ent.
   2. Install resilient, bolt-isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
   3. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction providing required submittals for component.

B. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.

C. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

D. Drilled-in Anchors:
   1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
   2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
   3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
   4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
   5. Set anchors to manufacturer's recommended torque, using a torque wrench.
   6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.04 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

A. Install flexible connections in runs of raceways, cables, wireways, cable trays, and busways where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where they terminate with connection to equipment that is anchored to a different structural element from the one supporting them as they approach equipment.

3.05 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven days' advance notice.
3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
4. Test at least fourof each type and size of installed anchors and fasteners selected by Architect.
5. Test to 90 percent of rated proof load of device.
6. Measure isolator restraint clearance.
7. Measure isolator deflection.
8. Verify snubber minimum clearances.
9. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.

D. Remove and replace malfunctioning units and retest as specified above.

E. Prepare test and inspection reports.

3.06 ADJUSTING

A. Adjust isolators after isolated equipment is at operating weight.

B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

C. Adjust active height of spring isolators.

D. Adjust restraints to permit free movement of equipment within normal mode of operation.

END OF SECTION 26 05 48

SECTION 26 05 53
IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Color and legend requirements for raceways, conductors, and warning labels and signs.

B. Labels.

C. Bands and tubes.

D. Tapes and stencils.

E. Tags.

F. Signs.

G. Cable ties.

H. Paint for identification.

I. Fasteners for labels and signs.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for electrical identification products.

B. Samples: For each type of label and sign to illustrate composition, size, colors, lettering style, mounting provisions, and graphic features of identification products.

C. Identification Schedule: For each piece of electrical equipment and electrical system components to be an index of nomenclature for electrical equipment and system components used in identification signs and labels. Use same designations indicated on Drawings.

D. Delegated-Design Submittal: For arc-flash hazard study.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Comply with ASME A13.1and IEEE C2.

B. Comply with NFPA 70.

C. Comply with 29 CFR 1910.144 and 29 CFR 1910.145.

D. Comply with ANSI Z535.4 for safety signs and labels.

E. Comply with NFPA 70E and Section 26 05 73 "Short Circuit, Coordination and Arc-Flash Study" requirements for arc-flash warning labels.

F. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.

G. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
   1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.02 COLOR AND LEGEND REQUIREMENTS

A. Raceways and Cables Carrying Circuits at 600 V or Less:
   1. Black letters on an orange field.
   2. Legend: Indicate voltage and system or service type.

B. Color-Coding for Phase- and Voltage-Level Identification, 600 V or Less: Use colors listed below for ungrounded service' feeder and branch-circuit conductors.
   1. Color shall be factory applied.
   2. Colors for 208/120-V Circuits:
      a. Phase A: Black.
      b. Phase B: Red.

c. Phase C: Blue.
3. Colors for 240-V Circuits:
a. Phase A: Black.
b. Phase B: Red.
4. Colors for 480/277-V Circuits:
a. Phase A: Brown.
b. Phase B: Orange.
c. Phase C: Yellow.
5. Color for Neutral: White.
6. Color for Equipment Grounds: Green.
7. Colors for Isolated Grounds: Green with white stripe.

C. Raceways and Cables Carrying Circuits at More Than 600 V:
1. Black letters on an orange field.
2. Legend: "DANGER - CONCEALED HIGH VOLTAGE WIRING."

D. Warning Label Colors:
1. Identify system voltage with black letters on an orange background.

E. Warning labels and signs shall include, but are not limited to, the following legends:
1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES."

F. Equipment Identification Labels:
1. Black letters on a white field for equipment connected to normal power and Red letters on a white field for equipment connected to emergency/standby power unless otherwise indicated.

2.03 LABELS

A. Vinyl Wraparound Labels: Preprinted, flexible labels laminated with a clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing label ends.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Brady Corporation.
b. HellermannTyton.
c. Marking Services, Inc.
d. Panduit Corp.
e. Seton Identification Products.

B. Snap-around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameters sized to suit diameters and that stay in place by gripping action.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Brady Corporation.
b. HellermannTyton.
c. Marking Services, Inc.
d. Panduit Corp.
e. Seton Identification Products.

C. Self-Adhesive Wraparound Labels: Preprinted, 3-mil-thick, polyesterflexible label with acrylic pressure-sensitive adhesive.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Brady Corporation.
b. Grafoplast Wire Markers.
c. Ideal Industries, Inc.
d. Marking Services, Inc.

e. Panduit Corp.
f. Seton Identification Products.

2. Self-Lamination: Clear; UV-, weather- and chemical-resistant; self-laminating, protective shield over the legend. Labels sized such that the clear shield overlaps the entire printed legend.
3. Marker for Labels: Permanent, waterproof, black ink marker recommended by tag manufacturer.
4. Marker for Labels: Machine-printed, permanent, waterproof, black ink recommended by printer manufacturer.

D. Self-Adhesive Labels: Vinyl, thermal, transfer-printed, 3-mil-thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Brady Corporation.
b. Grafoplast Wire Markers.
c. HellermannTyton.
d. Ideal Industries, Inc.
e. Marking Services, Inc.
f. Panduit Corp.
g. Seton Identification Products.
2. Minimum Nominal Size:
a. 1-1/2 by 6 inches for raceway and conductors.
b. 3-1/2 by 5 inches for equipment.
c. As required by authorities having jurisdiction.

2.04 BANDS AND TUBES

A. Snap-around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inches long, with diameters sized to suit diameters and that stay in place by gripping action.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Brady Corporation.
b. HellermannTyton.
c. Marking Services, Inc.
d. Panduit Corp.

B. Heat-Shrink Preprinted Tubes: Flame-retardant polyolefin tubes with machine-printed identification labels, sized to suit diameter and shrunk to fit firmly. Full shrink recovery occurs at a maximum of 200 deg F. Comply with UL 224.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Brady Corporation.
b. Panduit Corp.

2.05 TAPES AND STENCILS

A. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Carlton Industries, LP.
b. HellermannTyton.
c. Ideal Industries, Inc.
d. Marking Services, Inc.
e. Panduit Corp.

B. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; not less than 3 mils thick by 1 to 2 inches wide; compounded for outdoor use.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Brady Corporation.
      b. Carlton Industries, LP.
      c. emedco.
      d. Marking Services, Inc.

C. Tape and Stencil: 4-inch-wide black stripes on 10-inch centers placed diagonally over orange background and is 12 inches wide. Stop stripes at legends.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. HellermannTyton.
      b. LEM Products Inc.
      c. Marking Services, Inc.
      d. Seton Identification Products.

D. Floor Marking Tape: 2-inch-wide, 5-mil pressure-sensitive vinyl tape, with yellow and black stripes and clear vinyl overlay.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Carlton Industries, LP.
      b. Seton Identification Products.

E. Underground-Line Warning Tape:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Brady Corporation.
      b. Ideal Industries, Inc.
      c. Marking Services, Inc.
      d. Seton Identification Products.
   2. Tape:
      a. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical and communications utility lines.
      b. Printing on tape shall be permanent and shall not be damaged by burial operations.
      c. Tape material and ink shall be chemically inert and not subject to degradation when exposed to acids, alkalis, and other destructive substances commonly found in soils.
   3. Color and Printing:
      a. Comply with ANSI Z535.1, ANSI Z535.2, ANSI Z535.3, ANSI Z535.4, and ANSI Z535.5.
      b. Inscriptions for Red-Colored Tapes: "CAUTION BURIED ELECTRIC LINE, HIGH VOLTAGE" .
      c. Inscriptions for Orange-Colored Tapes: "CAUTION BURIED TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL FIBER CABLE" .
   4. Tag: Type IID:
      a. Reinforced, detectable three-layer laminate, consisting of a printed pigmented woven scrim, a solid aluminum-foil core, and a clear protective film that allows inspection of the continuity of the conductive core; bright-colored, continuous-printed on one side with the inscription of the utility, compounded for direct-burial service.
      b. Width: 6 inches.
      c. Overall Thickness: 5 mils.
      d. Foil Core Thickness: 0.35 mil.
      e. Weight: 34 lb/1000 sq. ft..
      f. Tensile according to ASTM D 882: 300 lbf and 12,500 psi.

F. Stenciled Legend: In nonfading, waterproof, black ink or paint. Minimum letter height shall be inchunless otherwise indicated. If requested by Architect, match Contracting Agency's existing legend type, size etc.

2.06 TAGS

A. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch, with stamped legend, punched for use with self-locking cable tie fastener.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Brady Corporation.
      b. Carlton Industries, LP.
      c. emedco.
      d. Marking Services, Inc.
      e. Seton Identification Products.

2.07 SIGNS

A. Baked-Enamel Signs:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Carlton Industries, LP.
      b. Champion America.
      c. emedco.
      d. Marking Services, Inc.
   2. Preprinted aluminum signs, high-intensity reflective, punched or drilled for fasteners, with colors, legend, and size required for application.
   3. 1/4-inch grommets in corners for mounting.
   4. Nominal Size: 7 by 10 inches.

B. Metal-Backed Butyrate Signs:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Brady Corporation.
      b. Champion America.
      c. emedco.
      d. Marking Services, Inc.
   2. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs, with 0.0396-inch galvanized-steel backing, punched and drilled for fasteners, and with colors, legend, and size required for application.
   3. 1/4-inch grommets in corners for mounting.
   4. Nominal Size: 10 by 14 inches.

C. Laminated Acrylic or Melamine Plastic Signs:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Brady Corporation.
      b. Carlton Industries, LP.
      c. emedco.
      d. Marking Services, Inc.
   2. Engraved legend.
   3. Thickness:
      a. For signs up to 20 sq. in., minimum 1/16 inch thick.
      b. For signs larger than 20 sq. in., 1/8 inch thick.
      c. Engraved legend with black letters on white face background for equipment connected to normal power and red letters on white face background for equipment connected to emergency/standby power. Verify with Architect if legend has to match Contracting Agency's existing signs.

d. Punched or drilled for mechanical fasteners with 1/4-inch grommets in corners for mounting.
e. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.08 CABLE TIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. HellermannTyton.
2. Ideal Industries, Inc.
3. Marking Services, Inc.
4. Panduit Corp.

B. General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.
1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 Deg F according to ASTM D 638: 12,000 psi.
3. Temperature Range: Minus 40 to plus 185 deg F.
4. Color: Black, except where used for color-coding.

C. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.
1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 Deg F according to ASTM D 638: 12,000 psi.
3. Temperature Range: Minus 40 to plus 185 deg F.
4. Color: Black.

D. Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, and self-locking.
1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 Deg F according to ASTM D 638: 7000 psi.
3. UL 94 Flame Rating: 94V-0.
4. Temperature Range: Minus 50 to plus 284 deg F.
5. Color: Black.

2.09 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Retain paint system applicable for surface material and location (exterior or interior).

B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

PART 3 EXECUTION

3.01 PREPARATION

A. Self-Adhesive Identification Products: Before applying electrical identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

3.02 INSTALLATION

A. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.

B. Install identifying devices before installing acoustical ceilings and similar concealment.

C. Verify identity of each item before installing identification products.

D. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.

E. Apply identification devices to surfaces that require finish after completing finish work.

F. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.

G. System Identification for Raceways and Cables under 600 V: Identification shall completely encircle cable or conduit. Place identification of two-color markings in contact, side by side.
   1. Secure tight to surface of conductor, cable, or raceway.

H. System Identification for Raceways and Cables over 600 V: Identification shall completely encircle cable or conduit. Place adjacent identification of two-color markings in contact, side by side.
   1. Secure tight to surface of conductor, cable, or raceway.

I. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.

J. Emergency Operating Instruction Signs: Install instruction signs with white legend on a red background with minimum 3/8-inch-high letters for emergency instructions at equipment used for power transfer. Refer to drawings for additional information.

K. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from the floor.

L. Accessible Fittings for Raceways: Identify the covers of each junction and pull box of the following systems with the wiring system legend and system voltage. System legends shall be as follows:
   1. "EMERGENCY POWER."
   2. "POWER."
   3. "UPS."

M. Vinyl Wraparound Labels:
   1. Secure tight to surface of raceway or cable at a location with high visibility and accessibility.
   2. Attach labels that are not self-adhesive type with clear vinyl tape, with adhesive appropriate to the location and substrate.

N. Snap-around Labels: Secure tight to surface at a location with high visibility and accessibility.

O. Self-Adhesive Wraparound Labels: Secure tight to surface at a location with high visibility and accessibility.

P. Self-Adhesive Labels:
   1. On each item, install unique designation label that is consistent with wiring diagrams, schedules, and operation and maintenance manual.
   2. Unless otherwise indicated, provide a single line of text with 1/2-inch-high letters on 1-1/2-inch-high label; where two lines of text are required, use labels 2 inches high.

Q. Snap-around Color-Coding Bands: Secure tight to surface at a location with high visibility and accessibility.

R. Heat-Shrink, Preprinted Tubes: Secure tight to surface at a location with high visibility and accessibility.

S. Marker Tapes: Secure tight to surface at a location with high visibility and accessibility.

T. Self-Adhesive Vinyl Tape: Secure tight to surface at a location with high visibility and accessibility.
   1. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding.

U. Tape and Stencil: Comply with requirements in painting Sections for surface preparation and paint application.

V. Floor Marking Tape: Apply stripes to finished surfaces following manufacturer's written instructions.

W. Underground Line Warning Tape:
   1. During backfilling of trenches, install continuous underground-line warning tape directly above cable or raceway at 12 inches below finished grade. Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches overall.
   2. Limit use of underground-line warning tape to direct-buried cables.
   3. Install underground-line warning tape for direct-buried cables and cables in raceways.

X. Metal Tags:
   1. Place in a location with high visibility and accessibility.
   2. Secure using general-purpose UV-stabilized cable ties for all area except use plenum-rated cable ties in plenum areas.

Y. Nonmetallic Preprinted Tags:
   1. Place in a location with high visibility and accessibility.
   2. Secure using general-purpose UV-stabilized in all areas except use plenum-rated cable ties in plenum areas.

Z. Baked-Enamel Signs:
   1. Attach signs that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.
   2. Unless otherwise indicated, provide a single line of text with 1/2-inch-high letters on minimum 1-1/2-inch-high sign; where two lines of text are required, use signs minimum 2 inches high.

AA. Metal-Backed Butyrate Signs:
   1. Attach signs that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.
   2. Unless otherwise indicated, provide a single line of text with 1/2-inch-high letters on 1-1/2-inch-high sign; where two lines of text are required, use labels 2 inches high.

BB. Laminated Acrylic or Melamine Plastic Signs:
   1. Attach signs that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.
   2. Unless otherwise indicated, provide a single line of text with 1/2-inch-high letters on 1-1/2-inch-high sign; where two lines of text are required, use labels 2 inches high.

CC. Cable Ties: General purpose, for attaching tags, except as listed below:
   1. Outdoors: UV-stabilized nylon.
   2. In Spaces Handling Environmental Air: Plenum rated.

3.03 IDENTIFICATION SCHEDULE

A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.

B. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

C. Concealed Raceways, Duct Banks, More Than 600 V, within Buildings: Tape and stencil. Stencil legend "DANGER - CONCEALED HIGH-VOLTAGE WIRING" with 3-inch-high, black letters on 20-inch centers.
   1. Locate identification at changes in direction, at penetrations of walls and floors, and at 10-foot maximum intervals unless otherwise indicated.

D. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits, More Than 30 A and 120 V to Ground: Identify with self-adhesive raceway labels.
   1. Locate identification at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.

E. Accessible Fittings for Raceways and Cables within Buildings: Identify the covers of each junction and pull box of the following systems with self-adhesive labels containing the wiring system legend and system voltage. System legends shall be as follows:

1. "EMERGENCY POWER."
2. "POWER."
3. "UPS."

F. Power-Circuit Conductor Identification, 600 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use self-adhesive wraparound labels to identify the phase.
   1. Locate identification at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.

G. Power-Circuit Conductor Identification, More Than 600 V: For conductors in vaults, pull and junction boxes, manholes, and handholes, use nonmetallic preprinted tags colored and marked to indicate phase, and a separate tag with the circuit designation.

H. Control-Circuit Conductor Identification: For conductors and cables in pull and junction boxes, manholes, and handholes, use self-adhesive labels with the conductor or cable designation, origin, and destination.

I. Control-Circuit Conductor Termination Identification: For identification at terminations, provide heat-shrink preprinted tubes with the conductor designation.

J. Conductors to Be Extended in the Future: Attach write-on tags to conductors and list source.

K. Auxiliary Electrical Systems Conductor Identification: Self-adhesive vinyl tape that is uniform and consistent with system used by manufacturer for factory-installed connections.
   1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.

L. Locations of Underground Lines: Underground-line warning tape for power, lighting, communication, and control wiring and optical-fiber cable.

M. Concealed Raceways and Duct Banks, More Than 600 V, within Buildings: Apply floor marking tape to the following finished surfaces:
   1. Floor surface directly above conduits running beneath and within 12 inches of a floor that is in contact with earth or is framed above unexcavated space.
   2. Wall surfaces directly external to raceways concealed within wall.
   3. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in the building, or concealed above suspended ceilings.

N. Workspace Indication: Apply floor marking tape to finished surfaces. Show working clearances in the direction of access to live parts. Workspace shall comply with NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

O. Instructional Signs: Self-adhesive labels, including the color code for grounded and ungrounded conductors.

P. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Metal-backed, butyrate warning signs.
   1. Apply to exterior of door, cover, or other access.
   2. For equipment with multiple power or control sources, apply to door or cover of equipment, including, but not limited to, the following:
      a. Power-transfer switches.
      b. Controls with external control power connections.

Q. Arc Flash Warning Labeling: Self-adhesive labels.

R. Operating Instruction Signs: Laminated acrylic or melamine plastic signs.

S. Emergency Operating Instruction Signs: Laminated acrylic or melamine plastic signs with white legend on a red background with minimum 3/8-inch-high letters for emergency instructions at equipment used for power transfer.

T. Equipment Identification Labels:
   1. Indoor Equipment: Laminated acrylic or melamine plastic sign.

2. Outdoor Equipment: Laminated acrylic or melamine sign. Stenciled legend 4 inches high shall also be provided when requested by Architect.
3. Equipment to Be Labeled:
    a. Panelboards: Typewritten directory of circuits in the location provided by panelboard manufacturer. Panelboard identification shall be in the form of a engraved, laminated acrylic or melamine label.
    b. Enclosures and electrical cabinets.
    c. Access doors and panels for concealed electrical items.
    d. Switchgear.
    e. Switchboards.
    f. Transformers: Label that includes tag designation indicated on Drawings for the transformer, feeder, and panelboards or equipment supplied by the secondary.
    g. Substations.
    h. Emergency system boxes and enclosures.
    i. Motor-control centers.
    j. Enclosed switches.
    k. Enclosed circuit breakers.
    l. Enclosed controllers.
    m. Variable-speed controllers.
    n. Push-button stations.
    o. Power-transfer equipment.
    p. Contactors.
    q. Remote-controlled switches, dimmer modules, and control devices.
    r. Battery-inverter units.
    s. Battery racks.
    t. Power-generating units.
    u. Monitoring and control equipment.
    v. UPS equipment.

END OF SECTION 26 05 53

SECTION 26 05 73

SHORT CIRCUIT, COORDINATION AND ARC FLASH STUDIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Computer-based, fault-current, overcurrent protective device coordination studies and arc flash study. Protective devices shall be set based on results of the protective device coordination study.
   1. Coordination of series-rated devices is permitted where indicated on Drawings.

1.02 DEFINITIONS

A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled. Existing to remain items shall remain functional throughout the construction period.

B. Field Adjusting Agency: An independent electrical testing agency with full-time employees and the capability to adjust devices and conduct testing indicated and that is a member company of NETA.

C. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.

D. Power System Analysis Software Developer: An entity that commercially develops, maintains, and distributes computer software used for power system studies.

E. Power System Analysis Specialist: Professional engineer in charge of performing the study and documenting recommendations, licensed in the state where Project is located.

F. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion of the circuit from the system.

G. SCCR: Short-circuit current rating.

H. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

I. Single-Line Diagram: See "One-Line Diagram."

1.03 ACTION SUBMITTALS

A. Coordination Studies
   1. Product Data: For computer software program to be used for studies.
   2. Other Action Submittals: The following submittals shall be made after the approval process for system protective devices has been completed. Submittals may be in digital form if requested by the architect/engineer.
   3. Coordination-study input data, including completed computer program input data sheets.
   4. Study and Equipment Evaluation Reports.
   5. Coordination-Study Report.

B. Short Curcuit Studies
   1. For computer software program to be used for studies.
   2. Submit the following after the approval of system protective devices submittals. Submittals may be in digital form.
      a. Short-circuit study input data, including completed computer program input data sheets.
      b. Short-circuit study and equipment evaluation report; signed, dated, and sealed by a qualified professional engineer.
      c. Revised one-line diagram, reflecting field investigation results and results of short-circuit study.

C. Arc Flash Studies
   1. Product Data: For computer software program to be used for studies.
   2. Study Submittals: Submit the following submittals after the approval of system protective devices submittals. Submittals may be in digital form:
   3. Arc-flash study input data, including completed computer program input data sheets.
   4. Arc-flash study report; signed, dated, and sealed by Power Systems Analysis Specialist.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For power systems analysis specialist.

B. Product Certificates: For coordination-study, fault-current-study computer software programs, certifying compliance with IEEE 399.

C. Product Certificates: For arc-flash hazard analysis software, certifying compliance with IEEE 1584 and NFPA 70E.

D. Power Systems Analysis Software Developer

E. Qualification Data: For Field Adjusting Agency

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For overcurrent protective devices to include in emergency, operation, and maintenance manuals.
   1. The following are from the Coordination Study Report:
      a. Final one-line diagram.
      b. Final protective device coordination study.
      c. Coordination study data files.
      d. List of all protective device settings.
      e. Time-current coordination curves.
      f. Power system data.
   2. The following are from the Short-Circuit Study Report:
      a. Final one-line diagram.
      b. Final Short-Circuit Study Report.
      c. Short-circuit study data files.
      d. Power system data
   3. The following are from the Arc Flash Hazard Report:
      a. Provide maintenance procedures in equipment manuals according to requirements in NFPA 70E.
      b. Operation and Maintenance Procedures: In addition to items specified in Section 1-11 "Operation and Maintenance Data," provide maintenance procedures for use by Contracting Agency's personnel that comply with requirements in NFPA 70E.

1.06 QUALITY ASSURANCE

A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are not acceptable.

B. Power Systems Analysis Specialist Qualifications: An entity experienced in the application of computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.
   1. Professional engineer, licensed in the state where Project is located, shall be responsible for the study. All elements of the study shall be performed under the direct supervision and control of engineer.

C. Comply with IEEE 242 for short-circuit currents and coordination time intervals.

D. Comply with IEEE 399 for general study procedures.

E. Field Adjusting Agency Qualifications:
   1. Employer of a NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification responsible for all field adjusting of the Work.

2. A member company of NETA.
3. Acceptable to authorities having jurisdiction

PART 2 PRODUCTS

2.01 COMPUTER SOFTWARE DEVELOPERS

A. Available Computer Software Developers: Subject to compliance with requirements, companies offering computer software programs that may be used in the Work include, but are not limited to, the following:

B. Computer Software Developers: Subject to compliance with requirements, provide products by one of the following:

C. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
1. Operation Technology, Inc. (ETAP)
2. SKM Systems Analysis, Inc.(Power Tools)

2.02 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

A. Comply with IEEE 399, IEEE 1584 and NFPA 70E.

B. Analytical features of fault-current-study, device coordination study and arc flash study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.
1. Optional Features:
   a. Arcing faults.
   b. Simultaneous faults.
   c. Explicit negative sequence.
   d. Mutual coupling in zero sequence.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.
1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.02 POWER SYSTEM DATA

A. Gather and tabulate the following input data to support coordination study:
1. Product Data for overcurrent protective devices specified in other electrical Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
2. Impedance of utility service entrance.
3. Electrical Distribution System Diagram: In hard-copy and electronic-copy formats, showing the following:
   a. Circuit-breaker and fuse-current ratings and types.
   b. Relays and associated power and current transformer ratings and ratios.
   c. Transformer kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.
   d. Generator kilovolt amperes, size, voltage, and source impedance.

e. Cables: Indicate conduit material, sizes of conductors, conductor material, insulation, and length.
f. Busway ampacity and impedance.
g. Motor horsepower and code letter designation according to NEMA MG 1.

4. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram, showing the following:
   a. Special load considerations, including starting inrush currents and frequent starting and stopping.
   b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
   c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
   d. Generator thermal-damage curve.
   e. Ratings, types, and settings of utility company's overcurrent protective devices.
   f. Special overcurrent protective device settings or types stipulated by utility company.
   g. Time-current-characteristic curves of devices indicated to be coordinated.
   h. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
   i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
   j. Panelboards, switchboards, motor-control center ampacity, and interrupting rating in amperes rms symmetrical.

3.03 FAULT-CURRENT STUDY

A. Calculate the maximum available short-circuit current in amperes rms symmetrical at circuit-breaker positions of the electrical power distribution system. The calculation shall be for a current immediately after initiation and for a three-phase bolted short circuit at each of the following:
   1. Switchgear and switchboard bus.
   2. Medium-voltage controller.
   3. Motor-control center.
   4. Distribution panelboard.
   5. Branch circuit panelboard.

B. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Include studies of system-switching configurations and alternate operations that could result in maximum fault conditions.

C. Calculate momentary and interrupting duties on the basis of maximum available fault current according to IEEE 551.

D. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with IEEE 141 and IEEE 242.
   1. Transformers:
      a. ANSI C57.12.10.
      b. ANSI C57.12.22.
      c. ANSI C57.12.40.
      d. IEEE C57.12.00.
      e. IEEE C57.96.
   2. Medium-Voltage Circuit Breakers: IEEE C37.010.
   3. Low-Voltage Circuit Breakers: IEEE 1015 and IEEE C37.20.1.
   4. Low-Voltage Fuses: IEEE C37.46.

E. Study Report:

1. Show calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on electrical distribution system diagram.
2. Show interrupting (5-cycle) and time-delayed currents (6 cycles and above) on medium-voltage breakers as needed to set relays and assess the sensitivity of overcurrent relays.

F. Equipment Evaluation Report:
1. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
2. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.
3. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

3.04 COORDINATION STUDY

A. Perform coordination study using approved computer software program. Prepare a written report using results of fault-current study. Comply with IEEE 399.
1. Calculate the maximum and minimum 1/2-cycle short-circuit currents.
2. Calculate the maximum and minimum interrupting duty (5 cycles to 2 seconds) short-circuit currents.
3. Calculate the maximum and minimum ground-fault currents.

B. Comply with IEEE 241 recommendations for fault currents and time intervals.

C. Transformer Primary Overcurrent Protective Devices:
1. Device shall not operate in response to the following:
a. Inrush current when first energized.
b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.

D. Motors served by voltages more than 600 V shall be protected according to IEEE 620.

E. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.

F. Coordination-Study Report: Prepare a written report indicating the following results of coordination study:
1. Tabular Format of Settings Selected for Overcurrent Protective Devices:
a. Device tag.
b. Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.
c. Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.
d. Fuse-current rating and type.
e. Ground-fault relay-pickup and time-delay settings.
2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:
a. Device tag.
b. Voltage and current ratio for curves.
c. Three-phase and single-phase damage points for each transformer.

d. No damage, melting, and clearing curves for fuses.
e. Cable damage curves.
f. Transformer inrush points.
g. Maximum fault-current cutoff point.

G. Completed data sheets for setting of overcurrent protective devices.

3.05 ARC-FLASH HAZARD ANALYSIS

A. Comply with NFPA 70E and its Annex D for hazard analysis study.

B. Preparatory Studies: Perform the Short-Circuit and Protective Device Coordination study prior to starting the Arc-Flash Hazard Analysis.
1. Short-Circuit Study Output: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 26 05 73. "Short-Circuit Studies."
2. Coordination Study Report Contents: As specified in "Coordination Study Report Contents" Article in Section 26 05 73. "Coordination Studies."

C. Calculate maximum and minimum contributions of fault-current size.
1. Maximum calculation shall assume a maximum contribution from the utility and shall assume motors to be operating under full-load conditions.
2. Calculate arc-flash energy at the recommended short circuit values according to IEEE 1584.section 4.5.
3. Calculate arc-flash energy at 38 percent of maximum short-circuit current according to NFPA 70E recommendations.
4. Calculate arc-flash energy with the utility contribution at a minimum and assume no motor contribution.

D. Calculate the arc-flash protection boundary and incident energy at locations in electrical distribution system where personnel could perform work on energized parts.

E. Include medium-and low-voltage equipment locations, except equipment rated 240 V ac or less fed from transformers less than 125 kVA.

F. Calculate the limited, restricted, and prohibited approach boundaries for each location.

G. Incident energy calculations shall consider the accumulation of energy over time when performing arc-flash calculations on buses with multiple sources. Iterative calculations shall take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors and generators shall be decremented as follows:
1. Fault contribution from induction motors shall not be considered beyond three to five cycles.
2. Fault contribution from synchronous motors and generators shall be decayed to match the actual decrement of each as closely as possible (for example, contributions from permanent magnet generators will typically decay from 10 per unit to three per unit after 10 cycles).

H. Arc-flash energy shall generally be reported for the maximum of line or load side of a circuit breaker. However, arc-flash computation shall be performed and reported for both line and load side of a circuit breaker as follows:
1. When the circuit breaker is in a separate enclosure.
2. When the line terminals of the circuit breaker are separate from the work location.

I. Base arc-flash calculations on actual overcurrent protective device clearing time. Cap maximum clearing time at two seconds based on IEEE 1584, Section 6.9.

3.06 ARC-FLASH STUDY REPORT CONTENT

A. Executive summary of study findings.

B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

C. One-line diagram, showing the following:

1. Protective device designations and ampere ratings.
2. Conductor types, sizes, and lengths.
3. Transformer kilovolt ampere (kVA) and voltage ratings, including derating factors and environmental conditions.
4. Motor and generator designations and kVA ratings.
5. Switchgear, switchboard, motor-control center, panelboard designations, and ratings.

D. Study Input Data: As described in "Power System Data" Article.

E. Short-Circuit Study Output Data: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 26 05 73 "Short-Circuit Studies."

F. Protective Device Coordination Study Report Contents: As specified in "Coordination Study Report Contents" Article in Section 26 05 73"Coordination Studies."

G. Arc-Flash Study Output Reports:
1. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each equipment location included in the report:
a. Voltage.
b. Calculated symmetrical fault-current magnitude and angle.
c. Fault-point X/R ratio.
d. No AC Decrement (NACD) ratio.
e. Equivalent impedance.
f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.

H. Incident Energy and Flash Protection Boundary Calculations:
1. Arcing fault magnitude.
2. Protective device clearing time.
3. Duration of arc.
4. Arc-flash boundary.
5. Restricted approach boundary.
6. Limited approach boundary.
7. Working distance.
8. Incident energy.
9. Hazard risk category.
10. Recommendations for arc-flash energy reduction.

I. Fault study input data, case descriptions, and fault-current calculations including a definition of terms and guide for interpretation of computer printout.

3.07 ARC-FLASH WARNING LABELS

A. Comply with requirements in Section 26 05 53 "Identification for Electrical Systems" for self-adhesive equipment labels. Produce a 3.5-by-5-inch self-adhesive equipment label for each work location included in the analysis.

B. Label shall have an orange header with the wording, "WARNING, ARC-FLASH HAZARD," and shall include the following information taken directly from the arc-flash hazard analysis:
1. Location designation.
2. Nominal voltage.
3. Protection boundaries.
a. Arc-flash boundary.
b. Restricted approach boundary.
c. Limited approach boundary.
4. Arc flash PPE category.
5. Required minimum arc rating of PPE in Cal/cm squared.
6. Available incident energy.

7. Working distance.
8. Engineering report number, revision number, and issue date.

C. Labels shall be machine printed, with no field-applied markings.

D. Apply a label to each piece of equipment addresses by the study.

END OF SECTION 26 05 73

SECTION 26 09 13

ELECTRICAL POWER MONITORING AND CONTROL

PART 1 GENERAL

1.01 SECTION INCLUDES

A. The following for monitoring and control of electrical power system:
   1. PC-based workstation(s) and software.
   2. Communication network and interface modules for RS-485, Modbus TCP/IP data transmission protocols.

1.02 RELATED REQUIREMENTS

A. Section 26 27 13 "Electricity Metering" for equipment to meter electricity consumption and demand for tenant submetering.

1.03 DEFINITIONS

A. Ethernet: Local area network based on IEEE 802.3 standards.

B. Firmware: Software (programs or data) that has been written onto read-only memory (ROM). Firmware is a combination of software and hardware. Storage media with ROMs that have data or programs recorded on them are firmware.

C. HTML: Hypertext markup language.

D. I/O: Input/output.

E. KY Pulse: A term used by the metering industry to describe a method of measuring consumption of electricity that is based on a relay changing status in response to the rotation of the disk in the meter.

F. LAN: Local area network; sometimes plural as "LANs."

G. LCD: Liquid crystal display.

H. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or remote-control, signaling and power-limited circuits.

I. Modbus TCP/IP: An open protocol for exchange of process data.

J. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.

K. PC: Personal computer; sometimes plural as "PCs."

L. rms: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.

M. RS-232: A TIA standard for asynchronous serial data communications between terminal devices.

N. RS-485: A TIA standard for multipoint communications using two twisted-pairs.

O. TCP/IP: Transport control protocol/Internet protocol incorporated into Microsoft Windows.

P. THD: Total harmonic distortion.

Q. UPS: Uninterruptible power supply; used both in singular and plural context.

R. WAN: Wide area network.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.
   1. Attach copies of approved Product Data submittals for products (such as switchboards and switchgear) that describe power monitoring and control features to illustrate coordination among related equipment and power monitoring and control.

B. Shop Drawings: For power monitoring and control equipment. Include plans, elevations, sections, details, and attachments to other work.
   1. Outline Drawings: Indicate arrangement of components and clearance and access requirements.
   2. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
   3. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   4. Wiring Diagrams: For power, signal, and control wiring. Coordinate nomenclature and presentation with a block diagram.
   5. UPS sizing calculations for workstation.
   6. Surge Suppressors: Data for each device used and where applied.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified manufacturer.

B. Field quality-control reports.

C. Other Informational Submittals:
   1. Manufacturer's system installation and setup guides, with data forms to plan and record options and setup decisions.

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For power monitoring and control units, to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 1-11 "Operation and Maintenance Data," include the following:
   1. Operating and applications software documentation.
   2. Software licenses.
   3. Software service agreement.
   4. PC installation and operating documentation, manuals, and software for the PC and all installed peripherals. Software shall include system restore, emergency boot diskettes, and drivers for all installed hardware. Provide separately for each PC.
   5. Hard copies of manufacturer's specification sheets, operating specifications, design guides, user's guides for software and hardware, and PDF files on CD-ROM of the hard-copy submittal.

B. Software and Firmware Operational Documentation:
   1. Self-study guide describing the process for setting equipment's network address; setting Contracting Agency's options; procedures to ensure data access from any PC on the network, using a standard Web browser; and recommended firewall setup.
   2. Software operating and upgrade manuals.
   3. Software Backup: On a magnetic media or compact disc, complete with Contracting Agency-selected options.
   4. Device address list and the set point of each device and operator option, as set in applications software.
   5. Graphic file and print out of graphic screens and related icons, with legend.

C. Software Upgrade Kit: For Contracting Agency to use in modifying software to suit future power system revisions or power monitoring and control revisions.

D. Software licenses and upgrades required by and installed for operating and programming digital and analog devices.

1.07 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Addressable Relays: One for every 10 installed. Furnish at least one of each type.

2. Data Line Surge Suppressors: One for every 10 of each type installed. Furnish at least one of each type.
3. I/O Protection Fuses: One for every 10 of each type installed. Furnish at least one of each type.

1.08 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

B. Manufacturer Qualifications: A firm experienced in manufacturing power monitoring and control equipment similar to that indicated for this Project and with a record of successful in-service performance.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.09 COORDINATION

A. Coordinate features of distribution equipment and power monitoring and control components to form an integrated interconnection of compatible components.
1. Match components and interconnections for optimum performance of specified functions.

B. Coordinate Work of this Section with those in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.

1.10 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning with Substantial Completion, provide software support for 2 years.

B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within 2 years from date of Substantial Completion. Upgrading software shall include the operating systems. Upgrade shall include new or revised licenses for use of software.
1. Provide 30 days' notice to Contracting Agency to allow scheduling and access to system and to allow Contracting Agency to upgrade computer equipment if necessary.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Eaton Corporation; Cutler-Hammer products.
2. General Electric Company; GE Consumer & Industrial.
3. Landis+Gyr Inc.
4. Rockwell Automation, Inc.; Allen-Bradley brand.
5. Schneider Electric - Power Management Operation.

2.02 FUNCTIONAL DESCRIPTION

A. Instrumentation and Recording Devices: Monitor and record load profiles and chart energy consumption patterns.
1. Calculate and Record the Following:
a. Load factor.
b. Peak demand periods.
2. Measure and Record Metering Data for the Following:
a. Electricity.
b. Domestic water.
c. Natural gas.

B. Software: Calculate allocation of utility costs.
1. Automatically Import Energy Usage Records to Allocate Energy Costs for the Following:
a. At least 15 departments.

b. At least 30 tenants.
c. At least five buildings.

C. Power Quality Monitoring: Identify power system anomalies and measure, display, and record trends and alarms of the following power quality parameters:
1. Voltage regulation and unbalance.
2. Continuous three-phase rms voltage.
3. Periodic max./min./avg. voltage samples.
4. Harmonics.
5. Voltage excursions.

D. Emergency Load Shedding. Preserve critical loads or avoid total shutdown due to unforeseen loss of power sources according to the following logic:
1. Determine system topology.
2. Evaluate remaining loads and sources.
3. Shed loads in less than 100 ms.

E. Demand Management:
1. Peaking or co-generator control.
2. Load interlocking.
3. Load shedding.
4. Load trimming.

F. System: Report equipment status and power system control.

2.03 SYSTEM REQUIREMENTS

A. Monitoring and Control System: Include multiple PC-based workstations, with its operating system and application software, connected to data transmission network.

B. Surge Protection: For external wiring of each conductor entry connection to components to protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads.
1. Minimum Protection for Power Lines 120 V and More: Auxiliary panel suppressors complying with requirements in Section 26 43 13 "Surge Protection for Low-Voltage Electrical Power Circuits."
2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Comply with requirements as recommended by manufacturer for type of line being protected.

C. Addressable Devices: All transmitters and receivers shall communicate unique device identification and status reports to monitoring and control clients.

D. DDC Interface: Provide factory-installed hardware and software to enable the DDC to monitor, display, and record data for use in processing reports.
1. Hardwired Monitoring Points: Electrical power demand (kilowatts), electrical power consumption (kilowatt-hours), power factor.
2. ASHRAE 135 (BACnet) communication interface with the DDC shall enable the DDC operator to remotely monitor meter information from a DDC operator workstation. Control features and monitoring points displayed locally at metering panel shall be available through the DDC BAS.

2.04 OPERATING SYSTEM

A. Software: Configured to run on a portable laptop computer, a single PC, or a tablet computer, with capability for accessing a single meter at a time. System is not connected to a LAN. Modbus TCP/IP, RS-232, and RS-485 digital communications.

B. Software: Configured to run on a single PC, with capability for accessing multiple devices simultaneously. Modbus TCP/IP, RS-232, and RS-485 digital communications.

C. Software: Configured for a server and multiple client PCs, each with capability for accessing multiple devices simultaneously. Ethernet, Modbus TCP/IP, RS-232, and RS-485 digital communications.

D. Software: Configured for a server and multiple client PCs, each with capability for accessing multiple devices simultaneously. Software shall include interactive graphics client and shall be Web enabled. Workstations and portable computers shall not require any software except for an Internet browser to provide connectivity and full functionality. Include a firewall recommended by manufacturer. 100 Base-T Ethernet, Modbus TCP/IP RS-232, and RS-485 digital communications.

E. Operating System Software: Based on 32-bit, Microsoft Windows workstation operating system. Software shall have the following features:
   1. Multiuser and multitasking to allow independent activities and monitoring to occur simultaneously at different workstations.
   2. Graphical user interface to show pull-down menus and a menu tree format.
   3. Capability for future additions within the indicated system size limits.

F. Peer Computer Control Software: Shall detect a failure of workstation to assume control of all system functions without interruption of operation. Drivers shall be provided in both central computers to support this mode of operation.

2.05 APPLICATIONS SOFTWARE

A. Basic Requirements:
   1. Fully compatible with and based on the approved operating system.
   2. Password-protected operator login and access; three levels, minimum.
   3. Password-protected setup functions.
   4. Context-sensitive online help.
   5. Capability of creating, deleting, and copying files; and automatically maintaining a directory of all files, including size and location of each sequential and random-ordered record.
   6. Capability for importing custom icons into graphic views to represent alarms and I/O devices.
   7. Automatic and encrypted backups for database and history; automatically stored at central control PC and encrypted with a nine-character alphanumeric password, which must be used to restore or read data contained in backup.
   8. Operator audit trail for recording and reporting all changes made to user-defined system options.

B. Workstation Server Functions:
   1. Support other client PCs on the LAN.
   2. Maintain recorded data in databases accessible from other PCs on the LAN.

C. Data Formats:
   1. User-programmable export and import of data to and from commonly used Microsoft Windows spreadsheet, database, billing, and other applications; using dynamic data exchange technology.
   2. Option to convert reports and graphics to HTML format.
   3. Interactive graphics.
   4. Option to send preprogrammed or operator designed e-mail reports.

D. Metered Data: Display metered values in real time.

E. Remote Control:
   1. Display circuit-breaker status and allow breaker control.
   2. User defined with load-shedding automatically initiated and executed schemes responding to programmed time schedules, set points of metered demands, utility contracted load shedding, or combinations of these.

F. Equipment Documentation: Database for recording of equipment ratings and characteristics; with capability for graphic display on monitors.

G. Graphics: Interactive color-graphics platform with pull-down menus and mouse-driven generation of power system graphics, in formats widely used for such drafting; to include the following:
   1. Site plan.
   2. Floor plans.
   3. Equipment elevations.
   4. Single-line diagrams.

H. User-Defined Monitoring and Control Events: Display and record with date and time stamps accurate to 0.1 second, and including the following:
   1. Operator log on/off.
   2. Attempted operator log on/off.
   3. All alarms.
   4. Equipment operation counters.
   5. Out-of-limit, pickup, trip, and no-response events.

I. Trending Reports: Display data acquired in real-time from different meters or devices, in historical format over user-defined time; unlimited as to interval, duration, or quantity of trends.
   1. Spreadsheet functions of sum, delta, percent, average, mean, standard deviation, and related functions applied to recorded data.
   2. Charting, statistical, and display functions of standard Windows-based spreadsheet.

J. Alarms: Display and record alarm messages from discrete input and controls outputs, according to user programmable protocol.
   1. Functions requiring user acknowledgment shall run in background during computer use for other applications and override other presentations when they occur.

K. Waveform Data: Display and record waveforms on demand or automatically on an alarm or programmed event. Include the graphic displays of the following, based on user-specified criteria:
   1. Phase voltages, phase currents, and residual current.
   2. Overlay of three-phase currents and overlay each phase voltage and current.
   3. Waveforms ranging in length from 2 cycles to 5 minutes.
   4. Disturbance and steady-state waveforms up to 512 points per cycle.
   5. Transient waveforms up to 83,333 points per cycle on 60-Hz base.
   6. Calculated waveform, based on recorded data, on a minimum of four cycles of data of the following:
      a. THD.
      b. rms magnitudes.
      c. Peak values.
      d. Crest factors.
      e. Magnitude of individual harmonics.

L. Data Sharing: Allow export of recorded displays and tabular data to third-party applications software.
   1. Tabular data shall be in the comma-separated values.

M. Activity Billing Software:
   1. Automatically compute and prepare activity demand and energy-use statements based on metering of energy use and peak demand integrated over user-defined interval.
   2. Intervals shall be same as used by electric utilities, including current vendor.
   3. Import metered data from saved records that were generated by metering and monitoring software.
   4. Maintain separate directory for each activity's historical billing information.
   5. Prepare summary reports in user-defined formats and time intervals.

N. Reporting: User commands initiate the reporting of a list of current alarm, supervisory, and trouble conditions in system or a log of past events.
   1. Print a record of user-defined alarm, supervisory, and trouble events on workstation printer.

2. Sort and report by device name and by function.
3. Report type of signal (alarm, supervisory, or trouble), description, date, and time of occurrence.
4. Differentiate alarm signals from other indications.
5. When system is reset, report reset event with same information concerning device, location, date, and time.

O. Display Monitor:
1. Backlighted LCD to display metered data with touch-screen selecting device.
2. Touch-screen display shall be a minimum 12-inch diagonal, resolution of 800 by 600 RGB pixels, 256 colors; NEMA 250, Type 1 display enclosure.
3. Display 4 values on one screen at same time.

2.06 COMMUNICATION COMPONENTS AND NETWORKS

A. Network Configuration: High-speed, multi-access, open nonproprietary, industry standard communication protocol; LANs complying with EIA 485, 100 Base-T Ethernet, and Modbus TCP/IP.

2.07 POWER MONITORS

A. Separately mounted, permanently installed instrument for power monitoring and control, complying with UL 1244.
1. Enclosure: NEMA 250, Type 1

B. Environmental Conditions: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
1. Indoor installation in non-air-conditioned spaces that have environmental controls to maintain ambient conditions of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing.

C. rms Real-Time Measurements:
1. Current: Each phase, neutral, average of three phases, percent unbalance.
2. Voltage: Line-to-line each phase, line-to-line average of three phases, line-to-neutral each phase, line-to-neutral average of three phases, line-to-neutral percent unbalance.
3. Power: Per phase and three-phase total.
4. Reactive Power: Per phase and three-phase total.
5. Apparent Power: Per phase and three-phase total.
6. Power Factor: Per phase and three-phase total.
7. Displacement Power Factor: Per phase and three-phase total.
8. Frequency.
9. THD: Current and voltage.
10. Accumulated Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).
11. Incremental Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).
12. Conditional Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).

D. Demand Current Calculations, per Phase, Three-Phase Average and Neutral:
1. Present.
2. Running average.
3. Last completed interval.
4. Peak.

E. Demand Real Power Calculations, Three-Phase Total:
1. Present.
2. Running average.
3. Last completed interval.
4. Predicted.
5. Peak.
6. Coincident with peak kVA demand.

7. Coincident with kVAR demand.

F. Demand Reactive Power Calculations, Three-Phase Total:
1. Present.
2. Running average.
3. Last completed interval.
4. Predicted.
5. Peak.
6. Coincident with peak kVA demand.
7. Coincident with kVAR demand.

G. Demand Apparent Power Calculations, Three-Phase Total:
1. Present.
2. Running average.
3. Last completed interval.
4. Predicted.
5. Peak.
6. Coincident with peak kVA demand.
7. Coincident with kVAR demand.

H. Average Power Factor Calculations, Demand Coincident, Three-Phase Total:
1. Last completed interval.
2. Coincident with kW peak.
3. Coincident with kVAR peak.
4. Coincident with kVA peak.

I. Power Analysis Values:
1. THD, Voltage and Current: Per phase, three phase, and neutral.
2. Displacement Power Factor: Per phase, three phase.
3. Fundamental Voltage, Magnitude and Angle: Per phase.
4. Fundamental Currents, Magnitude and Angle: Per phase.
5. Fundamental Real Power: Per phase, three phase.
6. Fundamental Reactive Power: Per phase.
7. Harmonic Power: Per phase, three phase.
8. Phase rotation.
9. Unbalance: Current and voltage.
10. Harmonic Magnitudes and Angles for Current and Voltages: Per phase, up to 31st harmonic.

J. Power Demand Calculations: According to one of the following calculation methods, selectable by the user:
1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:
   a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes.
   b. Fixed block that calculates demand at end of the interval.
   c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.
3. Demand Calculation Initiated by a Synchronization Signal:
   a. Signal is a pulse from an external source. Demand period begins with every pulse. Calculation shall be configurable as either a block or rolling block calculation.
   b. Signal is a communication signal. Calculation shall be configurable as either a block or rolling block calculation.
   c. Demand can be synchronized with clock in the power meter.

K. Sampling:
   1. Current and voltage shall be digitally sampled at a rate high enough to provide accuracy to 63rd harmonic of 60-Hz fundamental.
   2. Power monitor shall provide continuous sampling at a rate of 128 samples per cycle on all voltage and current channels in the meter.

L. Minimum and Maximum Values: Record monthly minimum and maximum values, including date and time of record. For three-phase measurements, identify phase of recorded value. Record the following parameters:
   1. Line-to-line voltage.
   2. Line-to-neutral voltage.
   3. Current per phase.
   4. Line-to-line voltage unbalance.
   5. Line-to-neutral voltage unbalance.
   6. Power factor.
   7. Displacement power factor.
   8. Total power.
   9. Total reactive power.
   10. Total apparent power.
   11. THD voltage L-L.
   12. THD voltage L-N.
   13. THD current.
   14. Frequency.

M. Harmonic Calculation: Display and record the following:
   1. Harmonic magnitudes and angles for each phase voltage and current through 31st harmonic. Calculate for all three phases, current and voltage, and residual current. Current and voltage information for all phases shall be obtained simultaneously from same cycle.
   2. Harmonic magnitude reported as a percentage of the fundamental or as a percentage of rms values, as selected by user.

N. Current and Voltage Ratings:
   1. Designed for use with current inputs from standard instrument current transformers with 5-A secondary and shall have a metering range of 0-10 A.
   2. Withstand ratings shall not be less than 15 A, continuous; 50 A, lasting over 10 seconds, no more frequently than once per hour; 500 A, lasting 1 second, no more frequently than once per hour.
   3. Designed for use with voltage inputs from standard instrument potential transformers with a 120-V secondary.

O. Accuracy:
   1. Comply with ANSI C12.20, Class 0.5; and IEC 60687, Class 0.5 for revenue meters. Accuracy from Light to Full Rating shall meet the following criteria:
      a. Power: Accurate to 0.25 percent of reading, plus 0.025 percent of full scale.
      b. Voltage and Current: Accurate to 0.075 percent of reading, plus 0.025 percent of full scale.
      c. Power Factor: Plus or minus 0.002, from 0.5 leading to 0.5 lagging.
      d. Frequency: Plus or minus 0.01 Hz at 45 to 67 Hz.
   2. For meters that are circuit-breaker accessories, metering accuracy at full-scale shall not be less than the following:
      a. Current: Plus or minus 2.5 percent.
      b. Voltage: Plus or minus 1.5 percent.
      c. Energy, Demand, and Power: Plus or minus 4.0 percent.
      d. Frequency: Plus or minus 1 Hz.

P. Waveform Capture:

1. Capture and store steady-state waveforms of voltage and current channels; initiated manually. Each capture shall be for 3 cycles, 128 data points for each cycle, allowing resolution of harmonics to 31st harmonic of basic 60 Hz.
2. Store captured waveforms in internal nonvolatile memory; available for PC display, archiving, and analysis.

Q. Input: One digital input signal(s).
1. Normal mode for on/off signal.
2. Demand interval synchronization pulse, accepting a demand synchronization pulse from a utility demand meter.
3. Conditional energy signal to control conditional energy accumulation.

R. Outputs:
1. Operated either by user command sent via communication link or set to operate in response to user-defined alarm or event.
2. Closed in either a momentary or latched mode as defined by user.
3. Each output relay used in a momentary contact mode shall have an independent timer that can be set by user.
4. One digital KY pulse to a user-definable increment of energy measurement. Output ratings shall be up to 120-V ac, 300-V dc, 50 mA, and provide 3500-V rms isolation.
5. One relay output module(s), providing a load voltage range from 20- to 240-V ac or from 20- to 30-V dc, supporting a load current of 2 A.
6. Output Relay Control:
   a. Relay outputs shall operate either by user command sent via communication link or in response to user-defined alarm or event.
   b. Normally open and normally closed contacts, field configured to operate as follows:
      1) Normal contact closure where contacts change state for as long as signal exists.
      2) Latched mode when contacts change state on receipts of a pickup signal; changed state is held until a dropout signal is received.
      3) Timed mode when contacts change state on receipt of a pickup signal; changed state is held for a preprogrammed duration.
      4) End of power demand interval when relay operates as synchronization pulse for other devices.
      5) Energy Pulse Output: Relay pulses quantities used for absolute kWh, absolute kVARh, kVAh, kWh In, kVARh In, kWh Out, and kVARh Out.
      6) Output controlled by multiple alarms using Boolean-type logic.

S. Onboard Data Logging:
1. Store logged data, alarms, events, and waveforms in 800 KB of onboard nonvolatile memory.
2. Stored Data:
   a. Billing Log: User configurable; data shall be recorded every 15 minutes, identified by month, day, and 15-minute interval. Accumulate 24 months of monthly data, 32 days of daily data, and between 2 and 52 days of 15-minute interval data, depending on number of quantities selected.
   b. Custom Data Logs: One user-defined log(s) holding up to 96 parameters. Date and time stamp each entry to the second and include the following user definitions:
      1) Schedule interval.
      2) Event definition.
      3) Configured as "fill-and-hold" or "circular, first-in first-out."
   c. Alarm Log: Include time, date, event information, and coincident information for each defined alarm or event.
   d. Waveform Log: Store captured waveforms configured as "fill-and-hold" or "circular, first-in first-out."
3. Default values for all logs shall be initially set at factory, with logging to begin on device power up.

T. Alarms.
   1. User Options:
      a. Define pickup, dropout, and delay.
      b. Assign one of 4 severity levels to make it easier for user to respond to the most important events first.
      c. Allow for combining up to 4 alarms using Boolean-type logic statements for outputting a single alarm.
   2. Alarm Events:
      a. Over/undercurrent.
      b. Over/undervoltage.
      c. Current imbalance.
      d. Phase loss, current.
      e. Phase loss, voltage.
      f. Voltage imbalance.
      g. Over kW demand.
      h. Phase reversal.
      i. Digital input off/on.
      j. End of incremental energy interval.
      k. End of demand interval.

U. Control Power: 90- to 457-V ac or 100- to 300-V dc.

V. Communications:
   1. Power monitor shall be permanently connected to communicate via Modbus TCP via a 100 Base-T Ethernet.
   2. Local plug-in connections shall be for RS-232 and 100 Base-T Ethernet.

W. Display Monitor:
   1. Backlighted LCD to display metered data with touch-screen selecting device.
   2. Touch-screen display shall be a minimum 12-inch diagonal, resolution of 800 by 600 RGB pixels, 256 colors; NEMA 250, Type 1 display enclosure.
   3. Display 4 values on one screen at same time.
      a. Current, per phase rms, three-phase average and neutral.
      b. Voltage, phase to phase, phase to neutral, and three-phase averages of phase to phase and phase to neutral.
      c. Real power, per phase and three-phase total.
      d. Reactive power, per phase and three-phase total.
      e. Apparent power, per phase and three-phase total.
      f. Power factor, per phase and three-phase total.
      g. Frequency.
      h. Demand current, per phase and three-phase average.
      i. Demand real power, three-phase total.
      j. Demand apparent power, three-phase total.
      k. Accumulated energy (MWh and MVARh).
      l. THD, current and voltage, per phase.
   4. Reset: Allow reset of the following parameters at the display:
      a. Peak demand current.
      b. Peak demand power (kW) and peak demand apparent power (kVA).
      c. Energy (MWh) and reactive energy (MVARh).

2.08 STANDALONE, WEB-ENABLED MONITORING AND CONTROL INSTRUMENT

A. Separately mounted, permanently installed instrument for power monitoring and control.
   1. Enclosure: NEMA 250, Type 1.

B. Environmental Conditions: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability.

1. Indoor installation in non-air-conditioned spaces that have environmental controls to maintain ambient conditions of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing.

C. Power-Distribution Equipment Monitor: Web enabled, with integral network port and embedded Web server with factory-configured firmware and HTML-formatted Web pages for viewing of power monitoring and equipment status information from connected devices equipped with digital communication ports.

D. LAN Connectivity: Multipoint, RS-485 Modbus serial communication network, interconnecting all breaker trip units, protective relays, drives, and metering devices equipped with communications. Serial communication network connected to Ethernet server that functions as a gateway and server, providing data access via 100 Base-T LAN.

E. Communication Devices within the Equipment: Addressed at factory and tested to verify reliable communication with network server.

F. Server Configuration:
1. Initial network parameters set using a standard Web browser. Connect via a local operator interface, or an RJ-45 port accessible from front of equipment.
2. Network server shall be factory programmed with embedded HTML-formatted Web pages that are user configurable and that provide detailed communication diagnostic information for serial and Ethernet ports as status of RS-485 network; with internal memory management information pages for viewing using a standard Web browser.
3. Login: Password protected; password administration accessible from the LAN using a standard Web browser.
4. Operating Software: Suitable for local access; firewall protected.

G. Data Access:
1. Network server shall include embedded HTML pages providing real-time information from devices connected to RS-485 network ports via a standard Web browser.

H. Equipment Monitoring Options: Login shall be followed by a main menu for selecting summary Web pages that follow.

I. Summary Web pages shall be factory configured to display the following information for each communicating device within the power equipment lineup:
1. User-Configured Custom Home Page: Provide for the lineup, showing status-at-a-glance of key operating values.
2. Circuit Summary Page: Circuit name, three-phase average rms current, power (kW), power factor, and breaker status.
3. Load Current Summary Page: Circuit name, Phase A, B, and C rms current values.
4. Demand Current Summary Page: Circuit name, Phase A, B, and C average demand current values.
5. Power Summary Page: Circuit name, present demand power (kW), peak demand power (kW), and recorded time and date.
6. Energy Summary Page: Circuit name, energy (kWh), reactive energy (kVARh), and time/date of last reset.
7. Transformer Status Page: Transformer tag, coil temperatures, and cooling fan status.
8. Motor-Control Center Status Page: Circuit name, three-phase average rms current, thermal capacity (percentage), and drive output frequency (Hz) contactor status.
9. Specific Device Pages: Each individual communicating device shall display detailed, real-time information, as appropriate for device type.
   a. Display historical energy data that shall be logged automatically for each device, as appropriate for device type.
   b. Display historical data logged from each device in graphical time-trend plots. Value to be displayed on time-trend plot shall be user selectable. Time interval to be displayed on scale shall be for previous day or week.

10. Export historical energy data to a PC or workstation through network using FTP (File Transfer Protocol). Format exported data in a CSV (Comma Separated Variable) file format for importing into spreadsheet applications.

J. Communications:
   1. Power monitor: Permanently connected to communicate via Modbus TCP via a 100 Base-T Ethernet.
   2. Local Plug-in Connections: RS-232 and 100 Base-T Ethernet.
   3. Monitor Display: Backlighted LCD to display metered data with touch-screen selecting device.

2.09 RS-232 ASCII INTERFACE

A. ASCII interface shall allow RS-232 connections to be made between a meter or circuit monitor operating as the host PC and any equipment that will accept RS-232 ASCII command strings, such as local display panel.

B. Pager System Interface: Alarms shall be able to activate a pager system with customized message for each input alarm.
   1. RS-232 output shall be capable of connection to a pager interface that can be used to call a paging system or service and send a signal to a portable pager. System shall allow an individual alphanumeric message per alarm input to be sent to paging system. This interface shall support both numeric and alphanumeric pagers.

C. Alarm System Interface:
   1. RS-232 output shall be capable of transmitting alarms from other monitoring and alarm systems to workstation software.

D. Cables:
   1. PVC-Jacketed, RS-232 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, polypropylene insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; PVC jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
      a. NFPA 70, Type CM.
      b. Flame Resistance: UL 1581, Vertical Tray.
   2. Plenum-Type, RS-232 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, plastic insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; plastic jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
      a. NFPA 70, Type CMP.
      b. Flame Resistance: NFPA 262, Flame Test.

2.10 LAN CABLES

A. Comply with Section 27 15 13 "Copper Horizontal Cabling."

B. RS-485 Cable:
   1. PVC-Jacketed, RS-485 Cable: Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors, PVC insulation, unshielded, PVC jacket, and NFPA 70, Type CMG.
   2. Plenum-Type, RS-485 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, fluorinated-ethylene-propylene insulation, unshielded, and fluorinated-ethylene-propylene jacket, and NFPA 70, Type CMP.

C. Unshielded Twisted Pair Cables: Category 6 as specified for horizontal cable for data service in Section 27 15 13 "Copper Horizontal Cabling."

2.11 LOW-VOLTAGE WIRING

A. Comply with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

B. Low-Voltage Control Cable: Multiple conductor, color-coded, No. 20 AWG copper, minimum.
   1. Sheath: PVC; except in plenum-type spaces, use sheath listed for plenums.

2. Ordinary Switching Circuits: Three conductors unless otherwise indicated.
3. Switching Circuits with Pilot Lights or Locator Feature: Five conductors unless otherwise indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting installation.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 CABLING

A. Comply with NECA 1.

B. Install cables and wiring according to requirements in Section 27 15 13 "Copper Horizontal Cabling."

C. Wiring Method: Install wiring in raceway and cable tray except within consoles, cabinets, desks, and counters. Conceal raceway and wiring except in unfinished spaces.

D. Wiring Method: Install wiring in raceway and cable tray except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Use NRTL-listed plenum cable in environmental air spaces, including plenum ceilings. Conceal raceway and cables except in unfinished spaces.

E. Install LAN cables using techniques, practices, and methods that are consistent with specified category rating of components and that ensure specified category performance of completed and linked signal paths, end to end.

F. Install cables without damaging conductors, shield, or jacket.

3.03 IDENTIFICATION

A. Identify components and power and control wiring according to Section 26 05 53 "Identification for Electrical Systems."

B. Label each power monitoring and control module with a unique designation.

3.04 GROUNDING

A. Comply with IEEE 1100, "Recommended Practice for Powering and Grounding Electronic Equipment."

3.05 FIELD QUALITY CONTROL

A. Testing Agency: Contracting Agency will engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:
   1. Electrical Tests: Use caution when testing devices containing solid-state components.
   2. Continuity tests of circuits.
   3. Operational Tests: Set and operate controls at workstation and at monitored and controlled devices to demonstrate their functions and capabilities. Use a methodical sequence that cues and reproduces actual operating functions as recommended by manufacturer. Submit sequences for approval. Note response to each test command and op-

eration. Note time intervals between initiation of alarm conditions and registration of alarms at central-processing workstation.

a. Coordinate testing required by this Section with that required by Sections specifying equipment being monitored and controlled.
b. Test LANs according to requirements in Section 27 15 13 "Copper Horizontal Cabling."
c. System components with battery backup shall be operated on battery power for a period of not less than 10 percent of calculated battery operating time.
d. Verify accuracy of graphic screens and icons.
e. Metering Test: Load feeders, measure loads on feeder conductor with a rms reading clamp-on ammeter, and simultaneously read indicated current on the same phase at central-processing workstation. Record and compare values measured at the two locations. Resolve discrepancies greater than 5 percent and record resolution method and results.
f. Record metered values, control settings, operations, cues, time intervals, and functional observations and submit test reports printed by workstation printer.

E. Power monitoring and control equipment will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

G. Correct deficiencies make necessary adjustments, and retest. Verify that specified requirements are met.

H. Test Labeling: After satisfactory completion of tests and inspections, apply a label to tested components indicating test results, date, and responsible agency and representative.

I. Reports: Written reports of tests and observations. Record defective materials and workmanship and unsatisfactory test results. Record repairs and adjustments.

J. Remove and replace malfunctioning devices and circuits and retest as specified above.

3.06 DEMONSTRATION

A. Engage a factory-authorized service representative to train Contracting Agency's maintenance personnel to adjust, operate, and maintain systems. See Section 1-05.11 "Facility Startup, Testing and Training."

1. Train Contracting Agency's management and maintenance personnel in interpreting and using monitoring displays and in configuring and using software and reports. Include troubleshooting, servicing, adjusting, and maintaining equipment. Provide a minimum of 12 hours' training.
2. Training Aid: Use approved final versions of software and maintenance manuals as training aids.

3.07 ON-SITE ASSISTANCE

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to 3 visits to Project during other-than-normal occupancy hours for this purpose.

SECTION 26 09 43

NETWORK LIGHTING CONTROLS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes a networked lighting control system comprised of the following components
   1. System Software Interfaces
      a. Management Interface
      b. Historical Database and Analytics Interface
      c. Visualization Interface
      d. Personal Control Applications
      e. Smartphone Programming Interface for wired devices
   2. System Backbone and Integration Equipment
      a. System Controller
      b. OpenADR Interface
   3. Wired Networked Devices
      a. Wall Switches, Dimmers and Scene Controllers
      b. Graphic Wallstations
      c. Auxiliary Input/Output Devices
      d. Occupancy and Photocell Sensors
      e. Wall Switch Sensors
      f. Embedded Sensors
      g. Power Packs and Secondary Packs
      h. Networked Luminaires
      i. Relay and Dimming Panel
      j. Bluetooth® Low Energy Programming Device
      k. Communication Bridge
   4. The networked lighting control system shall meet all of the characteristics and performance requirements specified herein.
   5. The contractor shall provide, install and verify proper operation of all equipment necessary for proper operation of the system as specified herein and as shown on applicable drawings.

1.02 RELATED DOCUMENTS

A. Section 26 27 26 Wiring Devices

B. Section 26 51 13 Interior Lighting Fixtures

1.03 SUBMITTALS

A. Submittal shall be provided including the following items.
   1. Bill of Materials necessary to install the networked lighting control system.
   2. Product Specification Sheets indicating general device descriptions, dimensions, electrical specifications, wiring details, and nomenclature.
   3. Riser Diagrams showing device wiring connections of system backbone and floor plans pertinent to the specific project. Engineers design drawings returned back to the Engineer for review are not acceptable.
      a. Information Technology (IT) connection information pertaining to interconnection with facility IT networking equipment and third-party systems. The list shall include a checklist with all required information needed from the IT and required dates.
      b. Diagrams and Operational Descriptions to indicate system operation or interaction with other system(s).
      c. Contractor Startup/Commissioning Worksheet (must be completed prior to factory startup).
      d. Service Specification Sheets indicating general service descriptions, including startup, training, post-startup support, and service contract terms.
      e. Hardware and Software Operation Manuals.

1.04 APPROVALS

A. Prior approval from owner's representative is required for products or systems manufactured by companies not specified in the Network Lighting Controls section of this specification.

B. Any alternate product or system that has not received prior approval from the owner's representative at least 10 days prior to submission of a proposal package shall be rejected.

C. Alternate products or systems require submission of catalog datasheets, system overview documents and installation manuals to owner's representative. The submittal shall include significant differences between the specified product and the alternate.

1.05 QUALITY ASSURANCE

A. Product Qualifications
   1. System electrical components shall be listed or recognized by a nationally recognized testing laboratory (e.g., UL, ETL, or CSA) and shall be labeled with required markings as applicable.
   2. System luminaires and controls shall be designed and manufactured for interoperability.
   3. All components shall be subjected to 100% end of line testing prior to shipment to the project site to ensure proper device operation.
   4. All components and the manufacturing facility where product was manufactured must be RoHS compliant.

B. Installation and Startup Qualifications
   1. System start-up shall be performed by qualified personnel approved or certified by the manufacturer.

C. Service and Support Requirements
   1. Phone Support: Toll free technical support shall be available.
   2. Remote Support: The bidder shall offer a remote support capability.
   3. Onsite Support: The bidder shall offer onsite support that is billable at whole day rates.
   4. Service Contract: The bidder shall offer a Service Contract that packages phone, remote, and onsite support calls for the project. Response times for each type of support call shall be indicated in the terms of the service contract included in the bid package.

1.06 PROJECT CONDITIONS

A. Only install equipment after the following site conditions are maintained:
   1. USC Ambient Temperature: 14 to 105˚F.{USC}
   2. Relative Humidity: less than 90% non-condensing

B. Equipment shall not be subjected to dust, debris, moisture, or temperature and humidity conditions exceeding the requirements indicated above, at any point prior to installation.

C. Only properly rated equipment and enclosures, installed per the manufacturer's instructions, may be subjected to dust and moisture following installation.

1.07 WARRANTY

A. The manufacturer shall provide a minimum five-year warranty on all hardware devices supplied and installed. Warranty coverage shall begin on the date of shipment.

B. The hardware warranty shall cover repair or replacement, including programming, any defective products within the warranty period.

1.08 MAINTENANCE & SUSTAINABILITY

A. The manufacturer shall make available to the owner new parts, upgrades, and/or replacements available for a minimum of 5 years following installation.

PART 2 EQUIPMENT

2.01 MANUFACTURERS

A. Acceptable Manufacturers:
   1. nLight, Acuity Brands Lighting, Inc.

2. Encellium
3. WattStopper
4. nLight, Acuity Brands Lighting, Inc.
5. Enlighted
6. Lutron Vive

B. Basis of Design System: Acuity Controls nLight

C. Basis of BAS Control Integration: Distech Controls ECLYPSE

2.02 SYSTEM COMPLIANCE

A. System components shall comply with UL 916 and UL 924 standards where applicable.

B. System components shall comply with CFR Title 47, Part 15 standards where applicable.

C. All equipment shall be installed and connected in compliance with NFPA 70.

2.03 SYSTEM PERFORMANCE REQUIREMENTS

A. System Architecture

1. System shall have an architecture that is based upon three main concepts: (1) networkable intelligent lighting control devices, (2) standalone lighting control zones using distributed intelligence, (3) optional system backbone for remote, time based and global operation between control zones.
2. Intelligent lighting control devices shall have individually addressable network communication capability and consist of one or more basic lighting control components: occupancy sensor, photocell sensor, relay, dimming output, contact closure input, analog 10V input, and manual wallstation capable of indicating switching, dimming, and/or scene control. Combining one or more of these components into a single device enclosure shall be permissible so as to minimize overall device count of system.
3. System must be capable of interfacing directly with networked luminaires such that low voltage network cabling is used to interconnect networked luminaires with control components such as sensors, switches and system backbone (see Control Zone Characteristics sections for wired network connection).
4. Lighting control zones consisting of one or more networked luminaires and intelligent lighting control devices and shall be capable of providing automatic control from sensors (occupancy and/or photocell) and manual control from local wallstations without requiring connection to a higher level system backbone; this capability is referred to as “distributed intelligence.”
   a. Lighting control zones (wired) of at least 128 devices per zone shall be supported.
5. The system shall be capable of providing individually addressable switching and dimming control of the following: networked luminaires, control zones, and relay and dimming outputs from centralized panels to provide design flexibility appropriate with sequence of operations required in each project area or typical space type.
6. Networked luminaires and intelligent lighting control devices shall support individual (unique) configuration of device settings and properties.
7. Networked luminaires and intelligent lighting control devices shall have distributed intelligence programming stored in non-volatile memory such that following any loss of power the lighting control zones shall operate according to their defined default settings and sequence of operations.
8. Lighting control zones shall be capable of being networked with a higher level system backbone to provide time based control, remote control from inputs and/or systems external to the control zone, and remote configuration and monitoring through a software interface.
9. The system may include one or more system controllers that provide time-based control and global system control across multiple control zones and backbone network segments. The system controller also provides a means of connecting the lighting control system to a system software interface and building management systems via BACnet/IP protocol.

10. The system may include “communication bridge” devices that route communication from lighting control zones (wired or wireless) to and from the system controller, for purposes of decreasing system wiring requirements.
11. All system devices shall support remote firmware update, such that physical access to each device is not necessary, for purposes of upgrading functionality at a later date.

B. Wired Networked Control Zone Characteristics
1. Connections to devices within a wired networked lighting control zone and to backbone components shall be with a single type of low voltage network cable, which shall be compliant with CAT5e specifications or higher. To prevent wiring errors and provide cost savings, the use of mixed types of low voltage network cables shall not be permitted.
2. Devices in an area shall be connected via a “daisy-chain” topology; requiring all individual networked devices to be connected back to a central component in a “hub-and-spoke” topology shall not be permitted, so as to reduce the total amount of network cable required for each control zone.
3. System shall provide the option of having pre-terminated plenum rated low voltage network cabling supplied with hardware so as to reduce the opportunity for improper wiring and communication errors during system installation.
4. Following proper installation and provision of power, all networked devices connected together with low voltage network cable shall automatically form a functional lighting control zone without requiring any type of programming, regardless of the programming mechanism (e.g., software application, handheld remote, pushbutton). The “out of box” default sequence of operation is intended to provide typical sequence of operation so as to minimize the system start-up and programming requirements and to also have functional lighting control operation prior to system start-up and programming.
5. Once software is installed, system shall be able to automatically discover all connected devices without requiring any provisioning of system or zone addresses.
6. All networked devices shall have the ability to detect improper communication wiring and blink its LED in a specific cadence as to alert installation/start-up personnel.
7. Networked control devices intended for control of egress and/or emergency light sources shall not require the use of additional, externally mounted UL924 shunting and/or 0-10V disconnect devices, so as to provide a compliant sequence of operation while reducing the overall installation and wiring costs of the system. The following types of wired networked control devices shall be provided for egress and/or emergency light fixtures:
    a. Low-Voltage power sensing: These devices shall automatically provide 100% light level upon detection of loss of power sensed via the low voltage network cable connection.
    b. UL924 Listed Line-Voltage power sensing: These devices shall be listed as emergency relays under the UL924 standard and shall automatically close the load control relay(s) and provide 100% light output upon detection of loss of power sensed via line voltage connections.

C. System Integration Capabilities
1. The system shall interface with third party building management systems (BMS) to support two-way communication using the industry standard BACnet/IP or BACnet/MSTP protocols. The following system integration capabilities shall be available via BACnet/IP and BACnet/MSTP protocols:
    a. The system shall support control of individual devices, including, but not limited to, control of relay and dimming output. All system devices shall be available for control.
    b. The system shall support reading of individual device status information, including but not limited to, relay state, dimming output, power measurement, occupancy sensor status, and photocell sensor states or readings. All system devices shall be available for polling for devices status.
    c. The system shall support activation of pre-defined system Global Profiles (see Supported Sequence of Operations for further definition of Global Profile capabilities).

d. The system shall support activation of Profiles (local or global) and Preset Scenes from third party systems by receiving dry contact closure output signals or digital commands via RS-232/RS-485.
e. The system shall support activation of system profiles from Demand Response Automation Servers via the OpenADR 2.0a protocol.

D. Supported Sequence of Operations
1. The following characteristics and performance requirements shall apply to wired and wireless control zones provided by the system.
2. Control Zones
a. Networked luminaires and intelligent lighting control devices installed in an area (also referred to as a group of devices) shall be capable of transmitting and tracking occupancy sensor, photocell sensor, and manual switch information within at least 48 unique control zones to support different and reconfigurable sequences of operation within the area. These shall also be referred to as local control zones.
b. Networked luminaires and intelligent lighting control devices located in different areas shall be able to transmit and track occupancy, photocell, and switch information within at least 128 system-wide control zones to support required sequences of operation that may span across multiple areas. These shall also be referred to as global control zones.
3. Wallstation Capabilities
a. Wallstations shall be provided to support the following capabilities:
1) On/Off of a local control zone and global control zone simultaneously, as required.
2) Continuous dimming control of light level of a local control zone and global control zone simultaneously, as required.
3) Preset Scenes that can activate a specific combination of light levels across multiple local and global channels, as required.
4) Profile Scenes that can modify the sequence of operation for the devices in the area (group) in response to a button press. This capability is defined as supporting “Local Profiles” and is used to dynamically optimize the occupant experience and lighting energy usage. Parameters that shall be configurable and assigned to a Local Profile include light level, response to occupancy sensors (including enabling/disabling response), response to daylight sensors (including enabling/disabling response) and enabling/disabling of wallstations.
b. Dimming control to allow color tuning between 3000 and 5000K (Kelvin)
1) 3-way / multi-way control: multiple wallstations shall be capable of controlling the same local and global control zones, so as to support “multi-way” switching, dimming, preset scene, and profile scene control.
4. Occupancy Sensing Capabilities
a. Local and global control: Occupancy sensors shall be configurable to control a local and global zone simultaneously, as required.
b. Multi-sensor control: multiple occupancy sensors shall be capable of controlling the same local and global control zones. This capability combines occupancy sensing coverage from multiple sensors without consuming multiple control zone addresses.
c. System shall support the following types of occupancy sensing sequence of operations:
1) On/Off Occupancy Sensing
2) Partial-On Occupancy Sensing
3) Partial-Off Occupancy Sensing
4) Vacancy Sensing (Manual-On / Automatic-Off)

d. On/Off, Partial-On, and Partial-Off Occupancy Sensing modes shall function according to the following sequence of operation:
    1) Occupancy sensors automatically turn lights on to a designated level when occupancy is detected. To support fine tuning of Partial-On sequences the designated occupied light level shall support at least 100 dimming levels.
    2) Occupancy sensors automatically turn lights off or to a dimmed state(Partial-Off) when vacancy occurs or if sufficient daylight is detected. To support fine tuning of Partial-Off sequences the designated unoccupied dim level shall support at least 100 dimming levels.
    3) To provide additional energy savings the system shall also be capable of combining Partial-Off and Full-Off operation by dimming the lights to a designated level when vacant and then turning the lights off completely after an additional amount of time.
    4) Photocell readings, if enabled in the Occupancy Sensing control zone, shall be capable of automatically adjusting the light level during occupied or unoccupied conditions as necessary to further reduce energy usage. Additional requirements and details for photocell sensing capabilities are indicated under Photocell Sensing Capabilities.
    5) The use of a wallstation shall change the dimming level or turn lights off as selected by the occupant. The lights shall remain in this manually-specified light level until the zone becomes vacant; upon vacancy the normal sequence of operation, as defined above, shall proceed.

e. Vacancy Sensing mode (also referred to as Manual-On / Automatic-Off) shall function according to the following sequence of operation:
    1) The use of a wallstation is required turn lights on. The system shall be capable of programming the zone to turn on to either to a designated light level or the previous light level. Initially occupying the space without using a wallstation shall not result in any change in light level.
    2) Occupancy sensors shall automatically turn lights off when vacancy occurs is detected. To provide an enhanced occupant experience the system shall also be capable of dimming the lights when vacant and then turning the lights off completely after an additional amount of time.
    3) To minimize occupant impact in case the area or zone is still physically occupied following dimming or shutoff of the lights due to detection of vacancy, the system shall support an “automatic grace period” immediately following detection of vacancy, during which time any detected occupancy shall result in the lights reverting to the previous level. After the grace period has expired, the use of a wallstation is required to turn lights on.
    4) Photocell readings, if enabled in the Occupancy Sensing control zone, shall be capable of automatically adjusting the light level as necessary to further reduce energy usage. Additional requirements and details for photocell sensing capabilities are indicated under Photocell Sensing Capabilities.
    5) At any time, the use of a wallstation shall change the dimming level or turn lights off as selected by the occupant. The lights shall remain in this manually-specified light level until the zone becomes vacant; upon vacancy the normal sequence of operation, as defined above, shall proceed.

f. To accommodate different types of environments, vacancy time delays before dimming or shutting off lights shall be specifiable for control zones between 15 seconds to 2 hours.

5. Photocell Sensing Capabilities (Automatic Daylight Sensing)
    a. Photocell sensing devices shall be configurable to control a local and global zone simultaneously, as required.
    b. The system shall support the following types of photocell-based control:
        1) On/Off: The control zone is automatically turned off if the photocell reading exceeds the defined setpoint and automatically turned on if the photocell reading

is below the defined setpoint. A time delay or adaptive setpoint adjustable behavior may be used to prevent the system from exhibiting nuisance on/off switching.

2) Continuous Dimming: The control zone automatically adjusts its dimming output in response to photocell readings, such that a minimum light level consisting of both electric light and daylight sources is maintained at the task. The photocell response shall be configurable to adjust the photocell setpoint and dimming rates.

6. Schedule and Global Profile Capabilities
   a. The system shall be capable of automatically modifying the sequence of operation for selected devices in response to any of the following: a time-of-day schedule, contact closure input state, RS-232/RS-485 command, BACnet input command, and demand response signal. This capability is defined as supporting “Global Profiles” and is used to dynamically optimize the occupant experience and lighting energy usage.
   b. Scheduling. Global profiles may be scheduled with the following capabilities:
      1) Global Profiles shall be stored within and executed from the system controller (via internal timeclock) such that a dedicated software host or server is not required to be online to support automatic scheduling and/or operation of Global Profiles.
      2) Global Profile time of day schedules shall be capable of being given the following recurrence settings: daily, specific days of week, every “n” number of days, weekly, monthly, and yearly. Lighting control profile schedules shall support definition of start date, end date, end after “n” recurrences, or never ending. Daylight savings time adjustments shall be capable of being performed automatically, if desired.
      3) Global Profiles shall be capable of being scheduled to run according to timed offsets relative to sunrise or sunset. Sunrise/sunset times shall be automatically derived from location information using an astronomical clock.
      4) Blink warning and timed extension capabilities. At the end of a scheduled period, the system shall be capable of providing a visible “blink warning” 5 minutes prior to the end of the schedule. Wallstations may be programmed to provide timed overrides that turn the lights on for an additional period of time. Timed override duration shall be programmable for each individual device, zone of devices, or customized group of devices, ranging from 5 minutes to 12 hours.
      5) Software management interface shall be capable of displaying a graphic calendar view of profile schedules for each control zone.
   c. System Global Profiles shall have the following additional capabilities:
      1) Global Profiles shall be capable of being manually activated directly from the system controller, specially programmed input devices, and software management interface.
      2) Global Profiles shall be selectable to apply to a single device, zone of devices, or customized group of devices.
      3) Parameters that shall be configurable and assigned to a Global Profile include light level, response to occupancy sensors (including enabling/disabling response), response to daylight sensors (including enabling/disabling response) and enabling/disabling of wallstations.
   d. A backup of Local and Global Profiles shall be stored on the software’s host server such that the Profile backup can be applied to a replacement system controller or wallstation.
7. Automated demand response capabilities. Profiles created for automated demand response events shall support automatic reduction of light level to programmable values. At least four levels of demand response profiles shall be supported by the system.

2.04 SYSTEM SOFTWARE INTERFACES

A. Management Interface
   1. System shall provide a web-based management interface that provides remote system control, live status monitoring, and configuration capabilities of lighting control settings and schedules.
   2. Management interface must be compatible with industry-standard web browser clients, including, but not limited to, Microsoft Internet Explorer®, Apple Safari®, Google Chrome®, Mozilla Firefox®.
   3. Management interface shall require all users to login with a User Name and Password and shall support creation of at least 100 unique user accounts.
   4. Management interface shall support at least three permission levels for users: read-only, read & change settings, and full administrative system access.
   5. Management interface shall be capable of restricting read-only and read & change access for user accounts to specific devices within the system.
   6. All system devices shall be capable of being given user-defined names.
   7. The following device identification information shall be displayed in the Management interface: model number, model description, serial number, manufacturing date code custom label(s), and parent network device.
   8. Management interface shall be able to read the live status of a networked luminaire or intelligent control device and shall be capable of displaying luminaire on/off status, dim level, power measurement, device temperature, PIR occupancy sensor status, microphonic occupancy sensor status, remaining occupancy time delay, photocell reading, and active Scenes or Profiles.
   9. Management interface shall be able to read the current active settings of a networked luminaire or intelligent control device and shall be capable of displaying dimming trim levels, occupancy sensor and photocell enable/disable, occupancy sensor time delay and light level settings, occupancy sensor response (normal or vacancy), and photocell setpoints and transition time delays.
   10. Management interface shall be able to change the current active settings and also default settings for an individual networked luminaire or intelligent control device.
   11. Management interface shall be capable of applying settings changes for a zone of devices or a group of selected devices using a single “save” action that does not require the user to save settings changes for each individual device.
   12. A printable network inventory report shall be available via the management interface.
   13. A printable report detailing all system profiles shall be available via the management interface.
   14. All sensitive information stored by the software shall be encrypted.
   15. All system software updates must be available for automatic download and installation via the Internet.

B. Historical Database and Analytics Interface
   1. System shall provide a historical database that stores device operational history and calculates energy usage for all networked luminaires and intelligent control devices.
   2. System shall be capable of reporting lighting system events and performance data back to the historical database for display and analysis.
   3. Historical database shall be capable of recording historical data for up to 20,000 networked devices for a period of at least 1 calendar year.
   4. An “Energy Scorecard” shall be displayed that shows calculated energy savings in dollars, kWh, or CO2.
   5. Software shall calculate the allocation of energy savings to different control measures (occupancy sensors, photocells, manual switching, etc.).
   6. Energy savings data shall be calculated for the system as a whole or for individual zones.
   7. A time scaled graph showing all relay transitions shall be presented.
   8. A time scaled graph showing a zones occupancy time delay shall be presented

9. A time scaled graph showing the total light level shall be presented.
10. User shall be able to customize the baseline run-time hours for a space.
11. User shall be able to customize up to four time-of-day billing rates and schedules.
12. Historical data shall be exportable from the Historical Database via a “CSV” type of file format.

C. Visualization Interfaces
1. System shall provide a web-based visualization interface that displays graphical floorplan.
2. Graphical floorplan shall offer the following types of system visualization:
   a. Full Device Option - A master graphic of the entire building, by floor, showing each control device installed in the project with zones outlined to include but not be limited to the following:
      1) Controls embedded light fixtures
      2) Controls devices not embedded in light fixtures
      3) Daylight Sensors
      4) Occupancy Sensors
      5) Wall Switches and Dimmers
      6) Scene Controllers
      7) Networked Relays
      8) Bridges
      9) System Controllers
      10) Panels
      11) Zone outlines
   b. Zone Only Option - A master graphic of the entire building, by floor, showing control zones:
      1) Zones outlined
   c. Allow for pan and zoom commands so smaller areas can be displayed on a larger scale simply by panning and zooming each floor’s master graphic.
   d. A mouse click on any control device shall display the following information (as applicable):
      1) The device catalog number.
      2) The device name and custom label.
      3) Device diagnostic information.
      4) Information about the device status or current configuration is available with an additional mouse click.

D. Personal Control Applications
1. Software interface shall support personal control software applications that provide user-specific control of individual luminaires, control zones, and scene presets.
2. Personal control applications shall support control of dimming output or definition of dimming presets for luminaires and devices that are dimmable.
3. The system administrator shall be capable of defining personal control permissions for each user account.
4. Software interface shall provide a Microsoft Windows® operating system taskbar application for personal lighting control.
5. Software interface shall provide an Apple iOS® operating system application (supported by mobile phones and mobile tablet devices) for personal lighting control.

E. Smartphone Programming Interface for Wired Devices
1. Application interface shall be provided for both Apple iOS® and Android operating systems that allows configuration of lighting control settings.
2. The application shall support the configuration of wired networked control devices via a Bluetooth® Low Energy (BLE) Programming Device.
   a. Application shall support a security pin-code to access the zone of lighting control devices.

b. The application shall provide indication of signal strength where multiple Bluetooth Low Energy Programming Devices are available for configuration.
c. The application shall indicate the number of wired networked control devices.

3. Programming capabilities through the application shall include, but not be limited to, the following:
   a. Switch/occupancy/photosensor group configuration
   b. Manual/automatic on modes
   c. Turn-on dim level
   d. Occupancy sensor time delays
   e. Dual technology occupancy sensors sensitivity
   f. Trim level settings

2.05 SYSTEM BACKBONE AND SYSTEM INTEGRATION EQUIPMENT

A. IP nLight ECLYPSE™ System Controller (IP-NE-CTRL)
   1. System Controller shall be multi-tasking, real-time digital control processor consisting of modular hardware with plug-in enclosed processors, communication controllers, and power supplies.
   2. System Controller shall have 32-bit microprocessor operating at a minimum of 1 GHz.
   3. System Controller shall have minimum of 512MB memory, with a minimum of 4GB non-volatile flash, to support its own operating system and databases.
   4. System Controller shall perform the following functions:
      a. Facilitation of global network communication between different areas and control zones.
      b. Time-based control of downstream wired and wireless network devices.
      c. Linking into an Ethernet network.
      d. Integration with Building Management Systems (BMS) and Heating, Ventilation and Air Conditioning (HVAC) equipment.
      e. Connection to various software interfaces, including management interface, historical database and analytics interface, visualization interface, and personal control applications.
   5. System Controller shall have an integral web server to support configuration, diagnostics and hosting of software interfaces.
   6. Device shall have option for a graphical touch screen to support configuration and diagnostics.
   7. Device shall have three RJ-45 networked lighting control ports for connection to any of the following:
      a. The graphical touch screen
      b. Wired communication bridges
      c. Direct connection to networked wired luminaires and intelligent lighting control devices (up to 128 total devices per port)
   8. Device shall be capable of communicating with wireless mesh network bridges and software interfaces via LAN connection.
   9. Device shall automatically detect all networked devices connected to it, including those connected to wired and wireless communication bridges.
   10. Device shall have a standard internal time clock.
   11. Device shall have 2 switched RJ-45 10/100 BaseT Ethernet ports for local area network (LAN) connection
      a. Ethernet connection shall support daisy chain wiring to other lighting control system LAN devices, such as other system controllers and wireless mesh networked communication bridges.
      b. Ethernet connection shall support IPv4 and shall be capable of using a dedicated static or DHCP assigned IP address.

12. Device shall have 2 x USB 2.0 Expansion ports for
    a. 802.11 Wi-Fi Adapter enabling wireless connectivity including:
        1) Hot Spot
        2) Access Point
        3) Client
        4) Spanning Tree Protocol
13. Each System Controller shall be capable of managing and operating at least 1500 networked devices (wired or wireless).
    a. Multiple System Controllers may be networked together via LAN connection to scale the system up to 20,000 networked devices.
14. System Controller shall support BACnet/IP and BACnet/MSTP protocols to directly interface with BMS and HVAC equipment without the need for additional protocol translation gateways.
    a. BACnet/MSTP shall support up to minimum of 50 additional BACnet MS/TP controllers in addition to the Expansion I/O modules.
    b. BACnet/MSTP shall support 9600 to 115200 baud.
    c. System Controller shall be BACnet Testing Laboratory (BTL listed) using Device Profile BACnet Building Controller (B-BC) with outlined enhanced features.
    d. Shall contain a “FIPS 140-2 Level 1 Compliant” cryptographic module.

B. OpenADR Interface
1. System shall provide an interface to OpenADR protocol Demand Response Automation Servers (DRAS) typically provided by local electrical utility.
2. OpenADR interface shall meet all of the requirements of Open ADR 2.0a Virtual End Nodes(VEN), including:
    a. Programmable with the account information of the end-user’s electrical utility DRAS account credentials.
3. OpenADR interface shall support the activation of system profiles configured for each of the automated demand response levels defined in the utility demand response program.

2.06 WIRED NETWORKED DEVICES

A. Wired Networked Wall Switches, Dimmers, Scene Controllers
1. Devices shall recess into single-gang switch box and fit a standard GFI opening.
2. Communication and low voltage power shall be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
3. All switches shall have the ability to detect when it is not receiving valid communication and blink its LED in a pattern to visually indicate a potential wiring issue.
4. Devices with mechanical push-buttons shall provide tactile and LED user feedback.
5. Devices with mechanical push-buttons shall be made available with custom button labeling.
6. Wall switches & dimmers shall support the following device options:
    a. Number of control zones: 1, 2 or 4
    b. Control Types Supported: On/Off or On/Off/Dimming
    c. Colors: Ivory, White, Light Almond, Gray, Black, Red
7. Scene controllers shall support the following device options:
    a. Number of scenes: 1, 2 or 4
    b. Control Types Supported:
        1) On/Off
        2) On/Off/Dimming
        3) Preset Level Scene Type
        4) Reprogramming of other devices within daisy-chained zone so as to implement user selected lighting scene
        5) Selecting a lighting profile to be run by the system’s upstream controller so as to implement a selected lighting profile across multiple zones
        6) Colors: Ivory, White, Light Almond, Gray, Black, Red

7) Color tuning dimming to allow between 3000 and 5000K (Kelvin)

B. Wired Networked Graphic Wallstations
1. Device shall surface mount to single-gang switch box.
2. Device shall have a 3.5” full color touch screen.
3. Device shall be powered with Class 2 low voltage supplied locally via a directly wired power supply.
4. Device shall have a micro-USB style connector for local computer connectivity.
5. Communication shall be over standard low voltage network cabling with RJ-45 connectors.
6. Device shall enable user supplied screen saver image to be uploaded within one of the following formats: jpg, png, gif, bmp, tif.
7. Device shall enable configuration of all switches, dimmers, and lighting preset scenes via password protected setup screens.
8. Graphic wallstations shall support the following device options:
   a. Number of control zones: Up to 16
   b. Number of scenes: Up to 16
   c. Colors: Ivory, White, Light Almond, Gray, Black

C. Wired Networked Auxiliary Input / Output (I/O) Devices
1. Devices shall be plenum rated and be inline wired, screw mountable, or have an extended chase nipple for mounting to a □ in knockout.
2. Communication and low voltage power shall be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
3. Auxiliary Input/Output Devices shall be specified as an input or output device with the following options:
   a. Contact closure input
      1) Input shall be programmable to support maintained or momentary inputs that can activate local or global scenes and profiles, ramp light level up or down, or toggle lights on/off.
   b. 0-10V analog input
      1) Input shall be programmable to function as a daylight sensor.
   c. RS-232/RS-485 digital input
      1) Input supports activation of local or global scenes and profiles, and on/off/dimming control of up to 16 local control zones.
   d. 0-10V dimming control output, capable of sinking up to 20mA of current
      1) Output shall be programmable to support all standard sequence of operations supported by system.

D. Wired Networked Occupancy and Photosensors
1. Occupancy sensors shall sense the presence of human activity within the desired space and fully control the on/off function of the lights.
2. Sensors shall utilize passive infrared (PIR) technology, which detects occupant motion, to initially turn lights on from an off state, thus preventing false on conditions. Ultrasonic or Microwave based sensing technologies shall not be accepted.
3. For applications where a second method of sensing is necessary to adequately detect maintained occupancy (such as in rooms with obstructions), a sensor with an additional “dual” technology shall be used.
4. Dual technology sensors shall have one of its two technologies not require motion to detect occupancy. Acceptable dual technology includes PIR / Microphonics (also known as Passive Dual Technology or PDT) which both looks for occupant motion and listens for sounds indicating occupants. Sensors where both technologies detect motion (PIR / Ultrasonic) shall not be acceptable.
5. All sensing technologies shall be acoustically passive, meaning they do not transmit sound waves of any frequency (for example in the Ultrasonic range), as these technologies have the potential for interference with other electronic devices within the space (such as electronic white board readers). Acceptable detection technologies include Passive

Infrared(PIR), and/or Microphonics technology. Ultrasonic or Microwave based sensing technologies shall not be accepted.

6. Communication and low voltage power shall be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
7. All sensors shall have the ability to detect when it is not receiving valid communication and blink its LED in a pattern to visually indicate a potential wiring issue.
8. Sensor programming parameter shall be available and configurable remotely from the software and locally via the device push-button.
9. Network system shall have ceiling, fixture, recessed & corner mounted sensors available, with multiple lens options available customized for specific applications.
10. Sensors shall be available with zero or one integrated dry contact switching relays, capable of switching 1 amp at 24 VAC/VDC (resistive only).
11. Sensors shall be available with one or two occupancy “poles”, each of which provides a programmable time delay.
12. Sensors shall have optional features for photosensor/daylight override, dimming control, and low temperature/high humidity operation.
13. Photosensor shall provide for an on/off set-point, and a deadband to prevent the artificial light from cycling. Delay shall be incorporated into the photocell to prevent rapid response to passing clouds.
14. Photosensor and dimming sensor’s set-point and deadband shall be automatically calibrated through the sensor’s microprocessor by initiating an “Automatic Set-point Programming” procedure. Min and max dim settings as well as set-point may be manually entered.
15. Deadband setting shall be verified and modified by the sensor automatically every time the lights cycle to accommodate physical changes in the space (i.e., furniture layouts, lamp depreciation, or lamp outages).
16. A dual zone option shall be available for On/Off Photocell, Automatic Dimming Control Photocell, or Combination units. The secondary daylight zone shall be capable of being controlled as an “offset” from the primary zone.

E. Wired Networked Wall Switch Sensors
   1. Devices shall recess into single-gang switch box and fit a standard GFI opening.
   2. Communication and low voltage power shall be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
   3. All wall switch sensors shall have the ability to detect when it is not receiving valid communication and blink its LED in a pattern to visually indicate a potential wiring issue.
   4. Devices with mechanical push-buttons shall provide tactile user feedback.
   5. Wall switches sensors shall support the following device options:
      a. User Input Control Types Supported: On/Off or On/Off/Dimming
      b. Occupancy Sensing Technology: PIR only or Dual Tech acoustic
      c. Daylight Sensing Option: Inhibit Photosensor
      d. Colors: Ivory, White, Light Almond, Gray

F. Wired Networked Embedded Sensors
   1. Network system shall have embedded sensors consisting of occupancy sensors and/or dimming photocells that can be embedded into luminaire such that only the lens shows on luminaire face.
   2. USC Occupancy sensor detection pattern shall be suitable for 7.5 ft. to 20 ft. mounting heights. USC
   3. Embedded sensors shall support the following device options:
      a. Occupancy Sensing technology: PIR only or Dual Tech acoustic
      b. Daylight Sensing Option: Occupancy only, Daylight only, or combination Occupancy/Daylight sensor

G. Wired Networked Power Packs and Secondary Packs
   1. Power Packs shall incorporate one optional Class 1 relay, optional 0-10 VDC dimming output, and contribute low voltage Class 2 power to the rest of the system.
   2. Power Packs shall accept 120 or 277 VAC (or optionally 347 VAC) and carry a plenum rating.
   3. Secondary Packs shall incorporate the relay and 0-10 VDC or line voltage dimming output but shall not be required to contribute system power.
   4. Power Supplies shall provide system power only but are not required to switch line voltage circuit.
   5. Auxiliary Relay Packs shall switch low voltage circuits only, capable of switching 1 amp at 40 VAC/VDC (resistive only).
   6. Communication shall be delivered to each device via standard low voltage network cabling with RJ-45 connectors. Secondary packs shall receive low voltage power via standard low voltage network cable.
   7. Power Pack programming parameter shall be available and configurable remotely from the software and locally via the device push-button.
   8. Power Pack shall securely mount to junction location through a threaded □ in chase nipple or be capable of being secured within a luminaire ballast/driver channel. Plastic clips into junction box shall not be accepted. All Class 1 wiring shall pass through chase nipple into adjacent junction box without any exposure of wire leads. Note: UL Listing under Energy Management or Industrial Control Equipment automatically meets this requirement, whereas Appliance Control Listing does not meet this safety requirement.
   9. When required by local code, Power Pack must install inside standard electrical enclosure and provide UL recognized support to junction box. All Class 1 wiring is to pass through chase nipple into adjacent junction box without any exposure of wire leads.
   10. Power/Secondary Packs shall be available with the following options:
   11. Power Pack capable of full 16-Amp switching of all normal power lighting load types, with optional 0-10V dimming output capable of up to 100mA of sink current.
   12. Secondary Pack with UL924 listing for switching of full 16-Amp Emergency Power circuits, with optional 0-10V dimming output capable of up to 100mA of sink current.
   13. Power and Secondary Packs capable of full 20-Amp switching of general purpose receptacle (plug-load) control.
   14. Secondary Pack capable of full 16-Amp switching of all normal power lighting load types.
   15. Secondary Pack capable of 5-Amps switching and dimming 120 VAC incandescent lighting loads or 120/277 VAC line voltage dimmable fluorescent ballasts (2-wire and3-wire versions).
   16. Secondary Pack capable of 5-Amps switching and dimming of 120/277 VAC magnetic low voltage transformers.
   17. Secondary Pack capable of 4-Amps switching and dimming of 120 VAC electronic low voltage transformers.
   18. Secondary Pack capable of louver/damper motor control for skylights.
   19. Secondary Pack capable of providing a pulse on/pulse off signal for purposes of controlling shade systems via relay inputs.
   20. Secondary Pack capable of switching 1 amp at 40 VAC/VDC (resistive only) with the intent to provide relay signal to auxiliary system (e.g. BMS).
   21. Power Supply capable of providing auxiliary bus power (no switched or dimmed load).

H. Wired Networked Relay and Dimming Panel
   1. Relay and dimming panel shall be available with 4, 8, 12 or 16 individual Field Configurable Relays (FCR) per panel, with an equal number of individual 0-10V dimming outputs.
   2. Standard relays used shall have the following required properties:
      a. Configurable in the field to operate with single-, double-, or triple-pole relay groupings.
      b. Configurable in the field to operate with normally closed or normally open behavior.

c. Provides visual status of current state and manual override control of each relay.
d. Listed for the following minimum ratings:
1) 40A@120-480VAC Ballast
2) 16A@120-277VAC Electronic
3) 20A@120-277VAC Tungsten
4) 20A@48VDC Resistive
5) 2HP @ 120VAC,
6) 3HP @ 240-277VAC
7) 65kA SCCR @ 480VAC

3. 0-10 dimming outputs shall support a minimum of 100mA sink current per output.
4. Relay and dimming outputs shall be individually programmable to support all standard sequence of operations as defined in this specification.
5. Panel shall be UL924 listed for control of emergency lighting circuits.
6. Panel shall power itself from an integrated 120-277VAC or 347VAC supply.
7. Panel shall provide a configurable low-voltage sensor input with the following properties:
8. Configurable to support any of the following input types:
a. Indoor Photocell
b. Outdoor Photocell
c. Occupancy Sensor
d. Contact Closure
1) Low voltage sensor input shall provide +24VDC power for the sensor so that additional auxiliary power supplies are not required.
2) Sensor input supports all standard sequence of operations as defined in this specification.
9. Panel shall provide a contact closure input that acts as a panel override to activate the normally configured state of all relays (i.e., normally open or normally closed) in the panel. This input is intended to provide an interface to alarm systems, fire panels, or BMS system to override the panel.
10. Panel shall supply current limited low voltage power to other networked devices connected via low voltage network cable.
11. Panel shall be available with NEMA 1 rated enclosure with the following properties:
a. Surface-mounted or flush-mounted enclosure back box
b. Screw-fastened cover or hinged cover with keyed lock
12. USC Panel shall be rated from 32-122 °F. USC

I. Wired Networked Bluetooth® Low Energy Programming Device
1. Device shall be plenum rated and be inline wired, screw mountable.
2. Communication and low voltage power shall be delivered to device via standard low voltage network cabling with RJ-45 connectors.
3. Bluetooth Low Energy connection shall allow connection from smartphone application for programming device settings within the local daisy-chain zone (see list of available settings in section, 2.4-System Software Interfaces, Sub-section .5).
a. Device shall provide visual indication of remote Bluetooth connection via LED integrated into device enclosure such that it is visible from all angles while the zone is being programmed.

J. Wired Networked Communication Bridge
1. Device shall surface mount to a standard 4” x 4” square junction box.
2. Device shall have 8 RJ-45 ports for connection to lighting control zones (up to 128 devices per port), additional network bridges, and System Controller.
3. Device shall be capable of aggregating communication from multiple lighting control zones for purposes of minimizing backbone wiring requirements back to System Controller.
4. Device shall be powered with Class 2 low voltage supplied locally via a directly wired power supply or powered via low voltage network connections from powered lighting control devices (e.g. power packs).

5. Wired Bridge shall be capable of redistributing power from its local supply and connected lighting control zones with excess power to lighting control zones with insufficient local power. This architecture also enables loss of power to a particular area to be less impactful on network lighting control system.

PART 3 EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. Installation Procedures and Verification
   1. The successful bidder shall review all required installation and pre-startup procedures with the manufacturer's representative through pre-construction meetings.
   2. The successful bidder shall install and connect the networked lighting control system components according to the manufacturer's installation instructions, wiring diagrams, the project submittals and plans specifications.
   3. The successful bidder shall be responsible for testing of all lighting control low voltage network cable included in the bid. Bidder is responsible for verification of the following minimum parameters:
      a. Wire Map (continuity, pin termination, shorts and open connections, etc.)
      b. Length
      c. Insertion Loss

B. Coordination with Owner's IT Network Infrastructure
   1. The successful bidder is required to coordinate with the owner's representative to secure all required network connections to the owner's IT network infrastructure.
      a. The bidder shall provide to the owner's representative all network infrastructure requirements of the networked lighting control system.
      b. The bidder shall provide to the manufacturer's representative all necessary contacts pertaining to the owner's IT infrastructure, to ensure that the system is properly connected and started up.

C. Documentation and Deliverables
   1. The installing contractor shall be responsible for documenting installed location of all networked devices, including networked luminaires. This includes responsibility to provide as-built plan drawing showing device address barcodes corresponding to locations of installed equipment.
   2. The installing contractor is also responsible for the following additional documentation to the manufacturer's representative if visualization / graphical floorplan software is provided as part of bid package:
      a. As-Built floor plan drawings showing daisy-chain wired network control zones outlined, in addition to device address locations required above. All documentation shall remain legible when reproducing scanning drawing files for electronic submission.
      b. As-Built electrical lighting drawings (reflected ceiling plan) in PDF and CAD format. Architectural floor plans shall be based on as-built conditions.
         1) CAD files shall have layers already turned on/off as desired to be shown in the graphical floorplan background images. The following CAD elements are recommended to be hidden to produce an ideal background graphical image:
            a) Titleblock
            b) Text- Inclusive of room names and numbers, fixture tags and drawings notes
            c) Fixture wiring and homeruns
            d) Control devices
            e) Hatching or poch of light fixtures or architectural elements
         2) CAD files shall be of AutoCAD 2013 or earlier. Autodesk Revit files overall floor plan views shall be exported to AutoCAD 2013.

3.02 SYSTEM STARTUP

A. Upon completion of installation by the installer, including completion of all required verification and documentation required by the manufacturer, the system shall be started up and programmed by an authorized representative of the manufacturer.
   1. Low voltage network cable testing shall be performed prior to system startup.

B. System start-up and programming shall include:
   1. Verifying operational communication to all system devices.
   2. Programming the network devices into functional control zones to meet the required sequence of operation.
   3. Programming and verifying all sequence of operations.
   4. Customization of owner's software interfaces and applications.

C. Initial start-up and programming is to occur on-site. Additional programming may occur on-site or remotely over the Internet as necessary.

3.03 PROJECT TURNOVER

A. System Documentation and as-builts.
   1. Submit software database file with desired device labels and notes completed.

B. Owner Training
   1. Provisions for onsite training for owner and designated attendees to be included in submittal package. Training shall be a minimum of (1) day and shall be videotaped by the Contractor, and video provided to the Owner.
   2. Contractor shall include in their bid a second training to occur (6) months after occupancy of building by the Owner. The second training shall be a minimum of (4) hours.

END OF SECTION 26 09 43

This page intentionally left blank

SECTION 26 22 00

LOW-VOLTAGE TRANSFORMERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. The following types of dry-type transformers rated 600 V and less, with capacities up to 1000 kVA:
   1. Distribution transformers.
   2. Buck-boost transformers.

1.02 ACTION SUBMITTALS

A. Product Data: Manufacturer's technical data including rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer indicated. Include manufacturer's product data for each type of transformer and for each size specified. Highlight clearly specific information applicable to the project. Submittals with general catalogs will not be accepted and reviewed.
   1. K.V.A. and voltage of primary and secondary windings.
   2. Windings insulation class and rates temperature rise.
   3. Underwriters' Laboratories, Inc. (U.L.) label.
   4. Sound level test results of a similar transformer.
   5. Physical size and finish.
   6. Efficiency at 25, 50, 75 and 100 percent rated load.
   7. Windings material.
   8. Factory test report of ratio and polarity test.
   9. Factory test report of applied voltage test.
   10. Factory test report of induced voltage test.
   11. Factory test report of temperature rise at full load.
   12. Impedance rating and characteristics.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Wiring Diagrams: Power, signal, and control wiring.

1.03 INFORMATIONAL SUBMITTALS

A. Manufacturer Seismic Qualification Certification: Submit certification that transformers, accessories, and components will withstand seismic forces defined in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems." Include the following:
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
      a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
      b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Qualification Data: For testing agency.

C. Source quality-control test reports.

D. Field quality-control test reports.

1.04 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

1.05 QUALITY ASSURANCE

A. If alternate manufacturer of products other than what are specified in this section are submitted, all necessary documents not limited to cut sheets, technical information, test reports from recognized testing labs and factory test reports shall be submitted to the satisfaction of the Contracting Agency/engineer to ensure quality and conformance to the specifications. Additional testing shall be undertaken if it is concluded by the Contracting Agency/engineer that the submitted test reports are either insufficient or do not include all tests necessary for product acceptance. The tests shall be conducted by a recognized lab acceptable to the Contracting Agency/engineer and all tests shall be witnessed by Contracting Agency's/engineer's personnel. All testing procedures and test results shall be satisfactory to the Contracting Agency/engineer. Contractor shall be responsible for arranging the tests, for transportation, food and lodging for minimum of one Contracting Agency's/engineer's representative to witness the test at the testing lab. Include all costs for the above in the bid.

B. Contractor shall ensure that the manufacturer has a minimum of 15 years experience in the production of low voltage transformers to the type and size specified in this project.

C. Manufacturer shall have ISO 9001 Certification.

D. Manufacturer shall have ability to readily provide replacement parts for a minimum period of ten (10) years, from the date of completion of the project

E. Transformer shall be assembled at the manufacturer's own manufacturing facility using its own major devices (e.g. transformer core, windings etc.) for the assembly.

F. Materials and equipment shall be new, modern in design and shall not have been in prior service except as required by factory tests. Major components (e.g., primary switch, transformer, and switchboard) shall be manufactured within six months of installation.

G. Source Limitations: Obtain transformers through one source from a single manufacturer through a local distributor. All power distribution equipment shall be of the same manufacturer as the substation.

H. Comply with NFPA 70.

I. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E.

J. Product Options: Drawings indicate size, profiles, and dimensional requirements of secondary unit substations and are based on the specific system indicated. Refer to Part 2 "Product Requirements."

K. Electrical Components, Devices and Accessories: UL Listed and labeled as defined in NFPA 70, Article 100 and marked for intended use.

L. Testing Agency Qualifications:
   1. Testing agency shall be an independent company with the experience to conduct field testing as indicated; shall have been a member of Inter-National Testing Association (NETA) for a minimum of last ten (10) years.
   2. The company shall have permanent in-house testing engineers and technicians.
   3. Testing company shall be located with 50 miles radius of the project.
   4. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing to supervise on-site testing specified in Part 3.
   5. Field Testing technician and supervisor shall have minimum ten (10) years' experience in field testing of unit substations similar to the type and rating specified on this project.

M. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers."

1.06 DELIVERY, STORAGE, AND HANDLING

A. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.

1.07 COORDINATION

A. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

B. Coordinate installation of wall-mounting and structure-hanging supports with actual transformer provided.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Square D; Schneider Electric.
   2. Eaton Electrical Inc.; Cutler-Hammer Products.
   3. General Electric Company; ABB
   4. Siemens Energy & Automation, Inc.

2.02 GENERAL TRANSFORMER REQUIREMENTS

A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.

B. Cores: High grade, non-aging. grain-oriented, non-aging silicon steel. l with high magnetic permeability, and low hysteresis and eddy current losses. The core of the transformer shall be visibly grounded to the enclosure by means of flexible grounding conductor sized in accordance with applicable UL and NEC standard.

C. Coils: Continuous windings without splices except for taps.
   1. Internal Coil Connections: Brazed or pressure type.
   2. Coil material: Copper. Basic Insulation Level (BIL) for all 600V class windings shall be 10KV.

2.03 DISTRIBUTION TRANSFORMERS

A. Comply with NEMA ST 20, and list and label as complying with UL 1561.

B. Provide transformers that are constructed to withstand seismic forces specified in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."

C. Cores: One leg per phase.

D. Enclosure: Ventilated, NEMA 250, Type 2.
   1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.

E. Enclosure: Ventilated, NEMA 250, Type 3.
   1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.
   2. Shall be fabricated of heavy gauge, sheet steel construction.
   3. All ventilated openings shall be protected against falling dirt.
   4. Ventilated, raintight, NEMA 250, Type 3R, stainless steel. Provide suitable weather shields over ventilation openings.
   5. Provide rodent screen on front opening of the transformer.

F. Transformer Enclosure Finish: Comply with NEMA 250.
   1. Finish Color: ANSI 49 gray. The enclosure shall be finished utilizing a continuous process of degreasing, cleaning and phosphatizing followed by electrostatic deposition of polyester powder coating and baking.

G. Taps for Transformers Smaller Than 3 kVA: None.

H. Taps for Transformers 7.5 to 24 kVA: One 5 percent tap above and one 5 percent tap below normal full capacity.

~~I.~~ Taps for Transformers 25 kVA and Larger: Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity.

J. Insulation Class: 220 deg C, UL-component-recognized insulation system with a maximum of 115 deg C rise above 40 deg C ambient temperature. The maximum temperature of the top of the enclosure shall not exceed 50□C rise above a 40□C ambient.

K. Energy Efficiency for Transformers Rated 15 kVA and Larger:
   1. Comply with DOE 10 CFR Part 431 Appendix A of Subpart K 2016.
   2. Energy efficiency under DOE 2016 requirements is to be Energy Verified by UL.

L. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for nonsinusoidal load current-handling capability to the degree defined by designated K-factor. K factor shall not exceed 4, 13 or 20. K factor shall be as listed on the drawings.
   1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor.
   2. Indicate value of K-factor on transformer nameplate.

M. Electrostatic Shielding: Each winding shall have an independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.
   1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
   2. Include special terminal for grounding the shield.
   3. Shield Effectiveness:
      a. Capacitance between Primary and Secondary Windings: Not to exceed 33 picofarads over a frequency range of 20 Hz to 1 MHz.
      b. Common-Mode Noise Attenuation: Minimum of minus 120 dBA at 0.5 to 1.5 kHz; minimum of minus 65 dBA at 1.5 to 100 kHz.
      c. Normal-Mode Noise Attenuation: Minimum of minus 52 dBA at 1.5 to 10 kHz.

N. Wall Brackets: Manufacturer's standard brackets.

O. Fungus Proofing: Permanent fungicidal treatment for coil and core.

P. Low-Sound-Level Requirements: Minimum of 3 dBA less than NEMA ST 20 standard sound levels when factory tested according to IEEE C57.12.91.

2.04 IDENTIFICATION DEVICES

A. Nameplates: Engraved, laminated-plastic or metal nameplate for each distribution transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 26 05 53 "Identification for Electrical Systems."

2.05 SOURCE QUALITY CONTROL

A. Test and inspect transformers according to IEEE C57.12.91 at the factory prior to shipping to job site.

B. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project.

C. Prepare and submit test report indicating actual test data within two (2) weeks of completion of tests prior to shipping to job site. Test report shall be signed by the factory test technician or engineer and include comments by the testing engineer or supervisor. Include their name, date and location

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.

B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.

C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

D. Verify that ground connections are in place and requirements in Section 26 05 26 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install wall-mounting transformers level and plumb with wall brackets fabricated by transformer manufacturer.

B. Construct concrete bases and anchor floor-mounting transformers according to manufacturer's written instructions, seismic codes applicable to Project, and requirements in Section 26 05 29 "Hangers and Supports for Electrical Systems."

C. Transformers shall be installed at least six (6) inches from the adjacent wall or structure unless otherwise required by the manufacturer. Verify with manufacturer’s installation instructions before start of work.

D. All conduits shall be isolated from the transformer enclosures by the use of neoprene grommets at conduit entrances to enclosure and the use of a grounding bushing. Flexible jumpers shall be installed for grounding continuity from enclosure to conduits or bus ducts.

E. Where primary feeders come from the floor below, they shall terminate at the end of transformer enclosure with a metal grounding bushing with neoprene throat insert. Ground the bushing to the transformer enclosure.

F. Where primary feeders come from overhead, the conduits shall enter the side of the transformer enclosure. The conduits within 36 inches of the enclosure shall be flexible steel.

G. Where transformers are installed next to an indoor switchboard, secondary conductors shall be routed from transformer to secondary switchboard through a 12-inch long wiring gutter, flanged and bolted to transformer enclosure and switchboard enclosure. Install a neoprene gasket between gutter and transformer enclosure and bond gutter to transformer enclosure with a flexible copper grounding strap.

3.03 CONNECTIONS

A. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

C. Perform tests and inspections and prepare test reports.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:
   1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

E. Remove and replace units that do not pass tests or inspections and retest as specified above.

F. Infrared Scanning: Two months after Substantial Completion, perform an infrared scan of transformer connections.
   1. Use an infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
   2. Perform 2 follow-up infrared scans of transformers, one at 4 months and the other at 11 months after Substantial Completion.

3. Prepare a certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and scanning observations after remedial action.

G. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.05 ADJUSTING

A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 10 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Connect buck-boost transformers to provide nameplate voltage of equipment being served, plus or minus 5 percent, at secondary terminals.

C. Output Settings Report: Prepare a written report recording output voltages and tap settings.

3.06 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION 26 22 00

SECTION 26 24 13

SWITCHBOARDS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Service and distribution switchboards rated 600 V and less and between 800A to 2000A.

B. Surge Protective Devices (SPD).

C. Disconnecting and overcurrent protective devices.

D. Instrumentation.

E. Control power.

F. Accessory components and features.

G. Identification.

H. Mimic bus is not common for switchboards other than large, drawout-type switchboards; it is normally used for switchgear construction.

I. Mimic bus.

J. Switchboard shall be front aligned.

1.02 RELATED REQUIREMEMTS

A. Section 26 05 26 “Grounding and Bonding for Electrical Systems”.

B. Section 26 05 36 “Cable Tray for Electrical Systems”.

C. Section 26 05 48 “Vibration and Seismic Controls for Electrical Systems”

D. Section 26 05 53 “Identification for Electrical Systems”.

E. Section 26 05 73 "Short Circuit, Coordination and Arc Flash Studies" for short-circuit rating of devices and for setting of overcurrent protective devices.

F. Section 26 09 13 "Electrical Power Monitoring and Control" for communication features of power distribution system devices.

G. Section 26 25 00 "Enclosed Bus Assemblies" for busway connections between transformers and secondary distribution equipment.

H. Section 26 36 00 "Transfer Switches" for transfer switches that may be located in secondary distribution section.

I. Section 26 43 13 "Surge Protection for Low-Voltage Electrical Power Circuits" for transient voltage surge suppressors for low-voltage power, control, and communication equipment that may be located in secondary section.

1.03 DEFINITIONS

A. NETA ATS: InterNational Electrical Testing Association - Acceptance Testing Specification.

B. EMI: Electromagnetic interference.

C. GFCI: Ground-fault circuit interrupter.

D. RFI: Radio-frequency interference.

E. RMS: Root mean square.

F. SPDT: Single pole, double throw.

G. AIC: Interrupting capacity (RMS symmetrical) in amperes.

1.04 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Switchboards shall withstand the effects of earthquake motions determined according to SEI/ASCE 7
   1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
   2. Component Importance Factor: 1.0.
   3. Component Amplification Factor: 2.5.
   4. Component Response Modification Factor: 6.0.

1.05 ACTION SUBMITTALS

A. Product Data: For each type of switchboard, overcurrent protective device, transient voltage suppression device, ground-fault protector, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

B. Shop Drawings: For each switchboard and related equipment.
   1. Include dimensioned plans, elevations, sections, and details, including required horizontal and vertical clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.
   2. Detail enclosure types for types other than NEMA 250, Type 1.
   3. Detail bus configuration, current, and voltage ratings.
   4. Detail short-circuit current rating of switchboards and overcurrent protective devices.
   5. Include descriptive documentation of optional barriers specified for electrical insulation and isolation.
   6. Detail utility company's metering provisions with indication of approval by utility company.
   7. Include evidence of NRTL listing for series rating of installed devices. Series rated devices shall be provided if specified on the drawings.
   8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
   9. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.
   10. Include diagram and details of proposed mimic bus.
   11. Include schematic and wiring diagrams for power, signal, and control wiring.

C. Samples: Representative portion of mimic bus with specified material and finish, for color selection.

1.06 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Ceiling and floor plans, drawn to scale (1/4”=1”-0”), on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
   1. Show structural members e.g columns, beams, doors etc. within the area where switchboards are located.

B. Qualification Data: For qualified testing agency.

C. Seismic Qualification Certificates: Submit certification that switchboards, overcurrent protective devices, accessories, and components will withstand seismic forces defined in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems." Include the following:
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Field Quality-Control Reports:

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
4. Submit within two (2) weeks of completion of tests.

1.07 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For switchboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 1-11 "Operation and Maintenance Data," include the following:
   1. Routine maintenance requirements for switchboards and all installed components.
   2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
   3. Time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

1.08 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Potential Transformer Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
   2. Control-Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
   3. Fuses and Fusible Devices for Fused Circuit Breakers: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
   4. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
   5. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
   6. Indicating Lights: Equal to 10 percent of quantity installed for each size and type, but no fewer than one of each size and type.

1.09 QUALITY ASSURANCE

A. If alternate manufacturer of products other than what are specified in this section are submitted, all necessary documents not limited to cut sheets, technical information, test reports from recognized testing labs and factory test reports shall be submitted to the satisfaction of the Contracting Agency/engineer to ensure quality and conformance to the specifications. Additional testing shall be undertaken if it is concluded by the Contracting Agency/engineer that the submitted test reports are either insufficient or do not include all tests necessary for product acceptance. The tests shall be conducted by a recognized lab acceptable to the Contracting Agency/engineer and all tests shall be witnessed by Contracting Agency's/engineer's personnel. All testing procedures and test results shall be satisfactory to the Contracting Agency/engineer. Contractor shall be responsible for arranging the tests, for transportation, food and lodging for minimum of one Contracting Agency's/engineer's representative to witness the test at the testing lab. Include all costs for the above in the bid.

B. Contractor shall ensure that the manufacturer has a minimum of 15 years experience in the production of Switchboards similar to the type and size specified in this project.

C. Manufacturer shall have ISO 9001 or 9002 Certification.

D. Manufacturer shall have ability to readily provide replacement parts for a minimum period of ten (10) years, from the date of completion of the project. Furnish a letter from the manufacturer confirming the availability.

E. Switchboards shall be assembled at the manufacturer's own manufacturing facility using its own major devices (e.g., circuit breakers) for the assembly. These devices shall be normally carried by the manufacturer as standard catalog items.

F. Switchboard shall comply with seismic zone applicable to the project. Unless otherwise indicated, verify requirements with Architect or Structural Engineer of Record (SEOR). Provide certified test reports of shake table test done by manufacturer on similar units.

G. Materials and equipment shall be new, modern in design and shall not have been in prior service except as required by factory tests. Major components (e.g., primary switch, transformer, and switchboard) shall be manufactured within six months of installation.

H. Source Limitations: Obtain switchboards, overcurrent protective devices and accessories through one source from a single manufacturer through a local distributor unless otherwise indicated. All power distribution equipment shall be of the same manufacturer as the substation.

I. Comply with NEMA PB 2.

J. Comply with NFPA 70.

K. Comply with UL 891.

L. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E.

M. Product Options: Drawings indicate size, profiles, and dimensional requirements of switchboards and are based on the specific system indicated. Refer to Part 2 "Product Requirements."

N. Electrical Components, Devices, and Accessories: NRTL Listed and labeled as defined in NFPA 70, Article 100 and marked for intended location and application.

O. Testing Agency Qualifications: Member of NETA;
   1. Testing agency shall be an independent company; shall have been a member of NETA for a minimum of ten (10) years and has permanent in-house testing engineers and technicians involved with testing of switchboards and OCPDs similar to those specified on this project.
   2. Testing company shall be located with 50 miles radius of the project.
   3. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing to supervise on-site testing specified in Part 3.
   4. Field Testing technician and supervisor shall have minimum ten (10) years experience in field testing of switchboards similar to the type and rating specified on this project.

P. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, protect and handle products in accordance with manufacturer's recommended practices and as listed in Installation and Maintenance Manual.

B. Each switchboard section shall be shipped in individual shipping splits for ease of handling. They shall be mounted on shipping skids and individually wrapped.

C. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path at site.

D. Inspect and report damage to carrier within their required time period.

E. Store indoors in clean dry space with uniform temperature to prevent condensation. Protect from exposure to dirt, fumes, water, corrosive substances, and physical damage.

F. If stored in areas subjected to weather, cover switchboards to provide protection from weather, dirt, dust, corrosive substances, and physical damage.

G. Remove loose packing and flammable materials from inside switchboards and install temporary electric heating (250 W per section) connect factory-installed space heaters to temporary electrical service to prevent condensation.

H. Handle and prepare switchboards for installation according to NECA 400 NEMA PB 2.1.

1.11 PROJECT CONDITIONS

A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

B. Environmental Limitations:
   1. Do not deliver or install switchboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above switchboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
   2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
      a. Ambient Temperature: Not exceeding 104 deg F (40 deg C).
      b. Altitude: Not exceeding 6600 feet (2000 m).

C. Service Conditions: NEMA PB 2, usual service conditions, as follows:
   1. Ambient temperatures within limits specified.
   2. Altitude not exceeding 6600 feet (2000 m).

D. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Contracting Agency or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
   1. Notify Construction Manager no fewer than fourteen (14) days in advance of proposed interruption of electric service.
   2. Do not proceed with interruption of electric service without Construction Manager's written permission.
   3. All utility shutdowns will be done by Contracting Agency’s authorized personnel unless otherwise noted. Coordinate through Contracting Agency.
   4. Comply with NFPA 70E.
   5. Provide temporary standby power through a standby diesel quiet type back-up generator complete with fuel and 7/24 monitoring if the existing service interruption exceeds 2 hours. Coordinate additional requirements with Contracting Agency minimum fourteen days in advance. Indicate method of providing temporary electric service.

1.12 COORDINATION

A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

1.13 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace SURGE PROTECTION DEVICES that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Five (5) years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   1. Square D; a brand of Schneider Electric
   2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.

3. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
4. Siemens Energy & Automation, Inc.
5. ABB

C. Front-Connected, Front-Accessible Switchboards:
1. Main Devices: Fixed, individually mounted unless otherwise indicated.
2. Branch Devices: Panel mounted for sizes up to 400A.
3. Sections front and rear aligned.

D. Front- and Side-Accessible Switchboards:
1. Main Devices: Fixed, individually mounted.
2. Branch Devices: Panel mounted for sizes up to 400A.
3. Sections front and rear aligned.

E. Front- and Rear-Accessible Switchboards:
1. Main Devices: Drawout mounted if indicated on the drawings.
2. Branch Devices: Fixed and individually compartmented mounted.
3. Sections: front aligned.

F. Nominal System Voltage: see single line diagram.

G. Main-Bus Continuous: see single line diagram

H. Seismic Requirements: Fabricate and test switchboards according to IEEE 344 to withstand seismic forces defined in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."

I. Indoor Enclosures: Steel, NEMA 250, Type 1.

J. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard gray finish over a rust-inhibiting primer on treated metal surface.

K. Outdoor Enclosures: Type 3R.
1. Finish: Factory-applied finish in manufacturer's standard color; undersurfaces treated with corrosion-resistant undercoating.
2. Enclosure: Downward, rearward sloping roof; rear hinged doors for each section, with provisions for padlocking.
3. Doors: Personnel door at each end of aisle, minimum width of 30 inches (762 mm); opening outwards; with panic hardware and provisions for padlocking.
4. Accessories: Fluorescent lighting fixtures, ceiling mounted; wired to a three-way light switch at each end of aisle; ground-fault circuit interrupter (GFCI) duplex receptacle; emergency battery pack lighting fixture installed on wall of aisle midway between personnel doors. Battery pack shall be manufactured by “Bodine” and provide minimum 1100 lumens in emergency mode.
5. Walk-in Aisle Heating and Ventilating:
   a. Factory-installed electric unit heater(s), wall or ceiling mounted, with integral thermostat and disconnect and with capacities to maintain switchboard interior temperature of 40 deg F (5 deg C) with outside design temperature of 104 deg F (40 deg C).
   b. Factory-installed exhaust fan with capacities to maintain switchboard interior temperature of 100 deg F (38 deg C) with outside design temperature of 23 deg F (minus 5 deg C).
   c. Ventilating openings complete with replaceable fiberglass air filters.
   d. Thermostat: Single stage; wired to control heat and exhaust fan.
6. Power for Space Heaters, Ventilation, Lighting, and Receptacle: Include a control-power transformer within the switchboard. Supply voltage shall be 120-V ac.
7. Power for space heaters, ventilation, lighting, and receptacle provided by a remote source. Verify if a remote source is available nearby.

L. Barriers: Between adjacent switchboard sections.

M. Insulation and isolation for main bus of main section and main and vertical buses of feeder sections.

N. Cubicle Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point. Provide in all switchboards located outdoors, other areas with high humidity and switchboards located indoors in coastal areas.
   1. Space-Heater Control: Thermostats and a humidistat connected in parallel to maintain temperature and humidity of each section above expected dew point.
   2. Space-Heater Power Source: 120-V external branch circuit if available from a nearby branch circuit panel.
   3. For switchboards connected to emergency power, provide 120V (or 208 V) branch circuit to the space heaters from a local emergency power branch circuit panel. Circuit shall terminate at a factory installed disconnect switch located near the heaters in compliance with NEC. Control of heaters shall be through a thermostat and humidistat connected in parallel.

O. Utility Metering Compartment: Fabricated, barrier compartment and section complying with utility company's requirements; hinged sealed door; buses provisioned for mounting utility company's current transformers and potential transformers or potential taps as required by utility company. If separate vertical section is required for utility metering, match and align with basic switchboard. Provide service entrance label and necessary applicable service entrance features.

P. Customer Metering Compartment: A separate customer metering compartment and section with front hinged door, for indicated metering, and current transformers for each meter. Current transformer secondary wiring shall be terminated on shorting-type terminal blocks. Include potential transformers having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks. For switchboards with space heaters, provide CTs ahead of the main so that power used by the space heaters is recorded by the meter too.

Q. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.

R. Removable, Hinged Rear Doors and Compartment Covers: Secured by standard bolts, for access to rear interior of switchboard.

S. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.

T. Pull Box on Top of Switchboard:
   1. Provide a proper size (per NEC) pull box on the top of the switchboard.
   2. Adequate ventilation to maintain temperature in pull box within same limits as switchboard.
   3. Set back from front to clear circuit-breaker removal mechanism.
   4. Removable covers shall form top, front, and sides. Top covers at rear shall be easily removable for drilling and cutting.
   5. Bottom shall be insulating, fire-resistive material with separate holes for cable drops into switchboard.
   6. Cable supports shall be arranged to facilitate cabling and adequate to support cables indicated, including those for future installation.

U. Buses and Connections: Three phase, four wire unless otherwise indicated.
   1. Phase- and Neutral-Bus Material: Hard-drawn copper of 98 percent conductivity, or copper feeder circuit-breaker line connections.
   2. Phase- and Neutral-Bus Material: Hard-drawn copper of 98 percent conductivity
   3. Load Terminals: Insulated, rigidly braced, runback bus extensions, of same material as through buses, equipped with mechanical connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full-ampere rating of circuit-breaker position.
   4. Ground Bus: 1/4-by-1-inch- (6-by-25-mm-) hard-drawn copper of 98 percent conductivity, equipped with compression connectors for feeder and branch-circuit ground conductors. For busway feeders, extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.

5. Main Phase Buses and Equipment Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.
6. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with mechanical connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
7. Isolation Barrier Access Provisions: Permit checking of bus-bolt tightness.

V. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.

W. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.

X. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components including instruments and instrument transformers.

2.02 SURGE PROTECTIVE DEVICES (SPD)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following
1. Square D; a brand of Schneider Electric.
2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
3. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
4. Siemens Energy & Automation, Inc.

B. Surge Protection Device Description: IEEE C62.41-compliant, integrally mounted, bolt-on, solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, UL 1449, second edition, short-circuit current rating matching or exceeding the switchboard short-circuit rating, and with the following features and accessories:
1. Fuses rated at 200-kA interrupting capacity.
2. Fabrication using bolted compression lugs for internal wiring.
3. Integral disconnect switch.
4. Redundant suppression circuits.
5. Redundant replaceable modules.
6. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
7. LED indicator lights for power and protection status.
8. Audible alarm, with silencing switch, to indicate when protection has failed.
9. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of system operation. Contacts shall reverse position on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
10. 4-digit, transient-event counter set to totalize transient surges.

C. Peak Single-Impulse Surge Current Rating: 120 kA per mode/240 kA per phase.

D. Withstand Capabilities: 12,000 IEEE C62.41, Category C3 (10 kA), 8-by-20-mic.sec. surges with less than 5 percent change in clamping voltage.

E. Protection modes and UL 1449 SVR for grounded wye circuits with 480Y/277V and 208Y/120, three-phase, four-wire circuits shall be as follows:
1. Line to Neutral: 800 V for 480Y/277 and 400 V for 208Y/120.
2. Line to Ground: 800 V for 480Y/277 and 400 V for 208Y/120.
3. Neutral to Ground: 800 V for 480Y/277 and 400 V for 208Y/120.

F. Protection modes and UL 1449 SVR for 240/120-V, three-phase, four-wire circuits with high leg shall be as follows:
1. Line to Neutral: 400 V, 800 V from high leg.
2. Line to Ground: 400 V.
3. Neutral to Ground: 400 V.

2.03 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity (AIC) to meet available fault currents.
   1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
   2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
   3. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replicable electronic trip; field replaceable and the following field-adjustable settings:
      a. Instantaneous trip.
      b. Long- and short-time pickup levels.
      c. Long- and short-time time adjustments.
      d. Ground-fault pickup level, time delay, and I^2t response.
   4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
   5. GFCI Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).
   6. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30-mA trip).
   7. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:
      a. Standard frame sizes, trip ratings, and number of poles.
      b. Lugs: Compression style, suitable for number, size, trip ratings, and conductor material.
      c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
      d. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
      e. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
      f. Communication Capability: Integral communication module with functions and features compatible with power monitoring and control system specified in Section 26 09 13 "Electrical Power Monitoring and Control."
      g. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
      h. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
      i. Auxiliary Contacts: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
      j. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.

B. Insulated-Case Circuit Breaker (ICCB): 100 percent rated, sealed, insulated-case power circuit breaker with interrupting capacity rating to meet available fault current.
   1. Fixed circuit-breaker mounting.
   2. Two-step, stored-energy closing.
   3. Standard function, microprocessor-based trip units with interchangeable rating plug, trip indicators, and the following field-adjustable settings:
      a. Instantaneous trip.
      b. Long- and short-time time adjustments.
      c. Ground-fault pickup level, time delay, and I^2t response.
   4. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
   5. Remote trip indication and control.

6. Communication Capability: Integral communication module with functions and features compatible with power monitoring and control system specified in Section 26 09 13 "Electrical Power Monitoring and Control."
7. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
8. Control Voltage: 120-V ac.

C. Bolted-Pressure Contact Switch: Operating mechanism uses rotary-mechanical-bolting action to produce and maintain high clamping pressure on the switch blade after it engages the stationary contacts.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
a. Square D; a brand of Schneider Electric
b. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
c. Pringle Electrical Manufacturing Company, Inc.
d. Siemens Energy & Automation, Inc.
e. Boltswitch, Inc.
2. Main-Contact Interrupting Capability: Minimum of 12 times the switch current rating.
3. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.
a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.
4. Auxiliary Switches: Factory installed, single pole, double throw, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
5. Service-Rated Switches: Labeled for use as service equipment.
6. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.
a. Configuration: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).
7. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.

D. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

E. Fuses are specified in Section 26 28 13 "Fuses."

2.04 INSTRUMENTATION

A. Instrument Transformers: IEEE C57.13, NEMA EI 21.1, and the following:
1. Potential Transformers: IEEE C57.13; 120 V, 60 Hz, tapped secondary; disconnecting type with integral fuse mountings. Burden and accuracy shall be consistent with connected metering and relay devices.
2. Current Transformers: IEEE C57.13; 5 A, 60 Hz, secondary; wound type; single secondary winding and secondary shorting device. Burden and accuracy shall be consistent with connected metering and relay devices.
3. Control-Power Transformers: Dry type, mounted in separate compartments for units larger than 3 kVA.
4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker, ground-fault protection.

B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:
   1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:
      a. Phase Currents, Each Phase: Plus or minus 1 percent.
      b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
      c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
      d. Megawatts: Plus or minus 2 percent.
      e. Megavars: Plus or minus 2 percent.
      f. Power Factor: Plus or minus 2 percent.
      g. Frequency: Plus or minus 0.5 percent.
      h. Accumulated Energy, Megawatt Hours: Plus or minus 2 percent; accumulated values unaffected by power outages up to 72 hours.
      i. Megawatt Demand: Plus or minus 2 percent; demand interval programmable from five to 60 minutes.
      j. Contact devices to operate remote impulse-totalizing demand meter.
   2. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.
   3. Digital Meter shall be manufactured by the one following manufacturers: Square D; Eaton-Cutler Hammer.

C. Ammeters, Voltmeters, and Power-Factor Meters: ANSI C39.1.
   1. Meters: 4-inch (100-mm) diameter or 6 inches (150 mm) square, flush or semiflush, with antiparallax 250-degree scales and external zero adjustment.
   2. Voltmeters: Cover an expanded-scale range of nominal voltage plus 10 percent.

D. Instrument Switches: Rotary type with off position.
   1. Voltmeter Switches: Permit reading of all phase-to-phase voltages and, where a neutral is indicated, phase-to-neutral voltages.
   2. Ammeter Switches: Permit reading of current in each phase and maintain current-transformer secondaries in a closed-circuit condition at all times.

E. Feeder Ammeters: 2-1/2-inch (64-mm) minimum size with 90- or 120-degree scale. Meter and transfer device with off position, located on overcurrent device door for indicated feeder circuits only.

F. Watt-Hour Meters and Wattmeters:
   1. Comply with ANSI C12.1.
   2. Three-phase induction type with two stators, each with current and potential coil, rated 5 A, 120 V, 60 Hz.
   3. Suitable for connection to three- and four-wire circuits.
   4. Potential indicating lamps.
   5. Adjustments for light and full load, phase balance, and power factor.
   6. Four-dial clock register.
   7. Integral demand indicator.
   8. Contact devices to operate remote impulse-totalizing demand meter.
   9. Ratchets to prevent reverse rotation.
   10. Removable meter with drawout test plug.
   11. Semiflush mounted case with matching cover.
   12. Appropriate multiplier tag.

G. Impulse-Totalizing Demand Meter:
   1. Comply with ANSI C12.1.
   2. Suitable for use with switchboard watt-hour meter, including two-circuit totalizing relay.
   3. Cyclometer.
   4. Four-dial, totalizing kilowatt-hour register.
   5. Positive chart drive mechanism.
   6. Capillary pen holding a minimum of one month's ink supply.

7. Roll chart with minimum 31-day capacity; appropriate multiplier tag.
8. Capable of indicating and recording 15-minute integrated demand of totalized system.

2.05 CONTROL POWER

A. Control Circuits: 120-V ac, supplied through secondary disconnecting devices from control-power transformer.

B. Control Circuits: 120-V ac, supplied from remote branch circuit.

C. Electrically Interlocked Main and Tie Circuit Breakers: Two control-power transformers in separate compartments, with interlocking relays, connected to the primary side of each control-power transformer at the line side of the associated main circuit breaker. 120-V secondaries connected through automatic transfer relays to ensure a fail-safe automatic transfer scheme.

D. Control-Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.

E. Control Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

2.06 ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

B. Portable Test Set: For testing functions of solid-state trip devices without removing from switchboard. Include relay and meter test plugs suitable for testing switchboard meters and switchboard class relays.

C. Portable Circuit-Breaker Lifting Device: Floor-supported, roller-based, elevating carriage arranged for movement of circuit breakers in and out of compartments for present and future circuit breakers. Provide a factory manufactured separate full height section as part of switchboard lineup for storage of the portable device.

D. Overhead Circuit-Breaker Lifting Device: Mounted at top front of switchboard, with hoist and lifting yokes matching each drawout circuit breaker. Provide overhead type of device unless otherwise indicated. Verify adequate clearances are available around the switchboard for proper operation of the device and removal of the circuit breaker from the switchboard. Engineer to specify either portable or overhead lifting device.

E. Spare-Fuse Cabinet: Suitably identified, wall-mounted, lockable, compartmented steel box or cabinet. Arrange for wall mounting.

2.07 IDENTIFICATION

A. Mimic Bus: Continuously integrated mimic bus factory applied to front of switchboard. Arrange in single-line diagram format, using symbols and letter designations consistent with final mimic-bus diagram. Mimic bus name plate shall be at least 0.0625-inch- (1.588 mm-) thick laminated plastic (Gravoply) located at eye level on front cover of the switchboard.

B. Coordinate mimic-bus segments with devices in switchboard sections to which they are applied. Produce a concise visual presentation of principal switchboard components and connections.

C. Presentation Media: Painted graphics in color contrasting with background color to represent bus and components, complete with lettered designations.

D. Service Equipment Label: UL labeled for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

PART 3 EXECUTION

3.01 EXAMINATION

A. Receive, inspect, handle, and store switchboards according to NECA 400 NEMA PB 2.1.

B. Examine switchboards before installation to verify compliance with approved shop drawings. Reject switchboards that are moisture damaged or physically damaged.

C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected to the satisfaction of the Contracting Agency.

3.02 INSTALLATION

A. Install switchboards and accessories according to NECA 400 NEMA PB 2.1.

B. Equipment Mounting: Install switchboards on concrete base, 4-inch (100-mm) nominal thickness. Comply with requirements for concrete base specified in Section 03 30 00 "Cast-in-Place Concrete."
   1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
   2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
   3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   4. Install anchor bolts to elevations required for proper attachment to switchboards.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from switchboard units and components.

D. Comply with mounting and anchoring requirements specified in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."

E. Operating Instructions: Frame and mount the printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.

F. Install filler plates in unused spaces of panel-mounted sections.

G. Install overcurrent protective devices, surge protection devices, and instrumentation.
   1. Set field-adjustable switches and circuit-breaker trip ranges in accordance with the recommendations of the Overcurrent Protective Device Short Circuit, Coordination and Arc Flash Study.

H. Install spare-fuse cabinet.

I. Comply with NECA 1.

3.03 CONNECTIONS

A. Comply with requirements for terminating feeder bus specified in Section 26 25 00 "Enclosed Bus Assemblies." Drawings indicate general arrangement of bus, fittings, and specialties.

B. Comply with requirements for terminating cable trays specified in Section 26 05 36 "Cable Trays for Electrical Systems." Drawings indicate general arrangement of cable trays, fittings, and specialties.

C. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

D. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.04 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

B. Switchboard Nameplates: Label each switchboard compartment with a nameplate complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

C. Device Nameplates: Label each disconnecting, and overcurrent protective device and each meter and control device mounted in compartment doors with a nameplate complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

3.05 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, start-up and to assist in testing.

C. Acceptance Testing Preparation:
   1. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit.
   2. Test continuity of each circuit.

D. Tests and Inspections:
   1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
   2. All tests shall be witnessed by Contracting Agency. Provide minimum fourteen (14) days advance notice.
   3. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
   4. Perform the following infrared scan tests and inspections and prepare reports:
      a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switchboard. Remove front and rear panels so joints and connections are accessible to portable scanner.
      b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchboard 11 months after date of Substantial Completion.
      c. Instruments and Equipment:
         1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
   5. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

E. Switchboard will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.06 ADJUSTING

A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Section 26 05 73 "Overcurrent Protective Device Coordination Study."

3.07 PROTECTION

A. Temporary Heating: Apply temporary heat, to maintain temperature according to manufacturer's written instructions, until switchboard is ready to be energized and placed into service.

3.08 DEMONSTRATION

A. Engage a factory-authorized service representative to train Contracting Agency's maintenance personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories, and to use and reprogram microprocessor-based trip, monitoring, and communication units.

END OF SECTION 26 24 13

SECTION 26 24 16
PANELBOARDS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Distribution panelboards.

B. Lighting and appliance branch-circuit panelboards.

1.02 RELATED REQUIREMENTS

A. Section 26 05 53 “Identification for Electrical Systems”.

B. Section 26 05 73 "Overcurrent Protective Device Coordination Study" for short-circuit rating of devices and for setting of overcurrent protective devices.

1.03 DEFINITIONS

A. EMI: Electromagnetic interference.

B. GFCI: Ground-fault circuit interrupter.

C. RMS: Root mean square.

D. SPDT: Single pole, double throw

E. SPD: Surge Protective Device

1.04 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Panelboards shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.05 ACTION SUBMITTALS

A. Product Data: For each type of panelboard, switching and overcurrent protective device, transient voltage suppression device, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.

B. Shop Drawings: For each panelboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types and details for types other than NEMA 250, Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Short-circuit current rating of panelboards and overcurrent protective devices.
5. Include evidence of ~~UL~~ NRTL listing for series rating of installed devices. Series rated devices shall be permitted if specified on the drawings.
6. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
7. Include wiring diagrams for power, signal, and control wiring.
8. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

1.06 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified testing agency.

B. Seismic Qualification Certificates: Submit certification that panelboards, overcurrent protective devices, accessories, and components will withstand seismic forces defined in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems." Include the following:
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Field Quality-Control Reports:
   1. Test procedures used.
   2. Test results that comply with requirements.
   3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
   4. Submit within two (2) weeks of completion of tests.

D. Panelboard Schedules: For installation in panelboards. Submit final versions after load balancing.

1.07 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
   1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
   2. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

1.08 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Keys: 2 spares for each type of panelboard cabinet lock.
   2. Circuit Breakers Including GFCI and Ground Fault Equipment Protection (GFEP) Types: 2 spares for each panelboard.
   3. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
   4. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.

1.09 QUALITY ASSURANCE

A. If alternate manufacturer of products other than what are specified in this section are submitted, all necessary documents not limited to cut sheets, technical information, test reports from recognized testing labs and factory test reports shall be submitted to the satisfaction of the Contracting Agency/engineer to ensure quality and conformance to the specifications. Additional testing shall be undertaken if it is concluded by the Contracting Agency/engineer that the submitted test reports are either insufficient or do not include all tests necessary for product acceptance. The tests shall be conducted by a recognized lab acceptable to the Contracting Agency/engineer and all tests shall be witnessed by Contracting Agency's/engineer's personnel. All testing procedures and test results shall be satisfactory to the Contracting Agency/engineer. Contractor shall be responsible for arranging the tests, for transportation, food and lodging for minimum of one Contracting Agency's/engineer's representative to witness the test at the testing lab. Include all costs for the above in the bid.

B. Contractor shall ensure that the manufacturer has a minimum of 15 years experience in the production of Panelboards similar to the type and size specified in this project.

C. Manufacturer shall have ISO 9001 or 9002 Certification.

D. Manufacturer shall have ability to readily provide replacement parts for a minimum period of ten (10) years, from the date of completion of the project. Furnish a letter from the manufacturer confirming the availability.

E. Panelboards shall be assembled at the manufacturer's own manufacturing facility using its own major devices (e.g., circuit breakers) for the assembly. These devices shall be normally carried by the manufacturer as standard catalog items.

F. Panelboard shall comply with seismic zone applicable to the project. Unless otherwise indicated, verify requirements with Architect or Structural Engineer of Record (SEOR). Provide certified test reports of shake table test done by manufacturer on similar units as applicable for OSHPD projects.

G. Materials and equipment shall be new, modern in design and shall not have been in prior service except as required by factory tests. Major components (e.g. Circuit breakers) shall be manufactured within six months of installation.

H. Source Limitations: Obtain panelboards, overcurrent protective devices and accessories through one source from a single manufacturer through a local distributor unless otherwise indicated. All power distribution equipment shall be of the same manufacturer as the substation.

I. Comply with NFPA 70.

J. Comply with NEMA PB 1.

K. Comply with UL 891.

L. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E.

M. Product Options: Drawings indicate size, profiles, and dimensional requirements of panelboards and are based on the specific system indicated. Refer to Part 2 "Product Requirements."

N. Electrical Components, Devices, and Accessories: UL Listed and labeled as defined in NFPA 70, Article 100—and marked for intended location and application.

O. Testing Agency Qualifications: Member of NETA;
   1. Testing agency shall be an independent company; shall have been a member of NETA for a minimum of ten (10) years and has permanent in-house testing engineers and technicians involved with testing of switchboards, panelboards and OCPDs similar to those specified on this project.
   2. Testing company shall be located with 50 miles radius of the project.
   3. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing to supervise on-site testing specified in Part 3.
   4. Field Testing technician and supervisor shall have minimum ten (10) years experience in field testing of switchboards similar to the type and rating specified on this project.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.

B. Handle and prepare panelboards for installation according to NECA 407 NEMA PB 1.

1.11 PROJECT CONDITIONS

A. Environmental Limitations:
   1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
   2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
      a. Ambient Temperature: Not exceeding minus 22 deg F (minus 30 deg C) to plus 104 deg F (plus 40 deg C).

b. Altitude: Not exceeding 6600 feet (2000 m).

B. Service Conditions: NEMA PB 1, usual service conditions, as follows:
1. Ambient temperatures within limits specified.
2. Altitude not exceeding 6600 feet (2000 m).

C. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Contracting Agency or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
1. Notify Construction Manager no fewer than 2 days in advance of proposed interruption of electric service.
2. Do not proceed with interruption of electric service without Construction Manager's written permission.
3. Comply with NFPA 70E.

1.12 COORDINATION

A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

1.13 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.
1. Warranty Period: 5 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS FOR PANELBOARDS

A. Fabricate and test panelboards according to IEEE 344 to withstand seismic forces defined in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."

B. Enclosures: Flush- and surface-mounted cabinets.
1. Rated for environmental conditions at installed location.
a. Indoor Dry and Clean Locations: NEMA 250, Type 1
b. Outdoor Locations: NEMA 250, as indicated on plans
c. Wash-Down Areas: NEMA 250, as indicated on plans
d. Other Wet or Damp Indoor Locations: NEMA 250, as indicated on plans
e. Dusty or hazardous environment – Panelboard suitable for duty or hazardous environment
2. Front: Secured to box with concealed trim clamps. For surface-mounted fronts, match box dimensions; for flush-mounted fronts, overlap box.
3. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover.
4. Skirt for Surface-Mounted Panelboards: Same gage and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor. No splices shall be permitted inside the skirt.
5. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections. No splices shall be permitted inside gutters.
6. Finishes:

a. Panels and Trim: Steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat or Powder coated
b. Back Boxes: Same finish as panels and trim.
c. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components.

7. Directory Card: Inside panelboard door, mounted in metal frame with transparent protective cover.

C. Incoming Mains Location: Top and bottom.

D. Phase, Neutral, and Ground Buses:
1. Material: Hard-drawn copper, 98 percent conductivity.
2. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.
3. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.
4. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and UL listed as suitable for nonlinear loads.
5. Split Bus: Vertical buses divided into individual vertical sections.

E. Conductor Connectors: Suitable for use with conductor material and sizes.
1. Material: Hard-drawn copper, 98 percent conductivity.
2. Main and Neutral Lugs: Compression type.
3. Ground Lugs and Bus-Configured Terminators: Compression type.
4. Feed-Through Lugs: Compression type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
5. Subfeed (Double) Lugs: Compression type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
6. Gutter-Tap Lugs: Mechanical type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.

F. Service Equipment Label: NRTL labeled for use as service equipment for panelboards or load centers with one or more main service disconnecting and overcurrent protective devices.

G. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

H. Panelboard shall be listed and labeled with UL short circuit rating. If Series Rated Panelboard is specified-the panelboard shall be rated for series-connected system with integral or remote upstream overcurrent protective devices and labeled by NRTL. Include size and type of allowable upstream and branch devices, listed and labeled for series-connected short-circuit rating by an NRTL.

I. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals.

2.02 DISTRIBUTION PANELBOARDS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
1. Square D; a brand of Schneider Electric.
2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
3. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
4. Siemens Energy & Automation, Inc.

B. Panelboards: NEMA PB 1, power and feeder distribution type.

C. Interiors shall be completely factory assembled. These shall be designed such that switching and protective devices can be replaced without disturbing adjacent units and without removing the main bus interiors.

D. Doors: Secured with vault-type latch with tumbler lock; keyed alike.

1. For doors more than 36 inches (914 mm) high, provide two latches, keyed alike.

E. Mains: Circuit breaker.

F. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: Bolt-on circuit breakers.

G. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers; plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.

H. Branch Overcurrent Protective Devices: Fused switches.

I. Where indicated, provide circuit breakers UL listed for application at 100% of their continuous ampere rating in their intended enclosure.

J. Contactors in Main Bus: NEMA ICS 2, Class A, mechanically held, general-purpose controller, with same short-circuit interrupting rating as panelboard.
   1. Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
   2. External Control-Power Source: 120-V branch circuit

K. Column-Type Panelboards: Narrow gutter extension, with cover, to overhead junction box equipped with ground and neutral terminal buses.

2.03 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
   1. Square D; a brand of Schneider Electric
   2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
   3. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
   4. Siemens Energy & Automation, Inc.

B. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.

C. Mains: Circuit breaker.

D. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.

E. Contactors in Main Bus: NEMA ICS 2, Class A, electrically held, general-purpose controller, with same short-circuit interrupting rating as panelboard.
   1. Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
   2. External Control-Power Source: 120-V branch circuit

F. Doors: Door-in-door type. Concealed hinges; secured with flush latch with tumbler lock; keyed alike.

2.04 LOAD CENTERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
   1. Square D; a brand of Schneider Electric
   2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
   3. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
   4. Siemens Energy & Automation, Inc..

B. Load Centers: Comply with UL 67.

C. Mains: Circuit breaker.

D. Branch Overcurrent Protective Devices: Plug-in circuit breakers, replaceable without disturbing adjacent units.

E. Conductor Connectors: Mechanical type for main, neutral, and ground lugs and buses.

2.05 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
   1. Square D; a brand of Schneider Electric.
   2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
   3. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
   4. Siemens Energy & Automation, Inc..

B. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.
   1. Where indicated provide circuit breakers UL listed for application at 100% of their continuous ampere rating in their intended enclosure.
   2. Thermal-Magnetic Circuit Breakers (below 400A frame): Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Provide field adjustable magnetic trip setting for circuit-breakers serving motor loads or other special applications as indicated
   3. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
   4. Electronic trip circuit breakers (400A frame size and larger) with rms sensing; field-replaceable rating plug or field-replaceable electronic trip; and the following field-adjustable settings:
      a. Instantaneous trip.
      b. Long- and short-time pickup levels.
      c. Long- and short-time time adjustments.
      d. Ground-fault pickup level, time delay, and I^2t response.
      e. CBs shall have an integral power supply installed at the factory if required for proper functioning of the breaker. An external power supply shall not be acceptable.
   5. Circuit breakers shall have a minimum interrupting rating of 10,000 amperes RMS symmetrical at 240 volts, and 14,000 amperes RMS symmetrical at 480 volts, unless otherwise noted on the drawings. Verify maximum available fault levels from the Short Circuit and Coordination Study. Minimum interrupting rating (AIC) shall be 110% of the available fault level.
   6. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
   7. GFCI Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).
   8. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30-mA trip).
   9. Arc-Fault Circuit Interrupter (AFCI) Circuit Breakers: Comply with UL 1699; 120/240-V, single-pole configuration.
   10. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:
      a. Standard frame sizes, trip ratings, and number of poles.
      b. Lugs: Compression style, suitable for number, size, trip ratings, and conductor materials.
      c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
      d. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
      e. Communication Capability: Integral communication module with functions and features compatible with power monitoring and control system specified in Section 26 09 13 "Electrical Power Monitoring and Control."
      f. Shunt Trip: 120V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.

g. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
h. Auxiliary Contacts: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts and "b" contacts operate in reverse of circuit-breaker contacts.
i. Alarm Switch: Single-pole, normally open contact that actuates only when circuit breaker trips.
j. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
k. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function with other upstream or downstream devices.
l. Multipole units enclosed in a single housing or factory assembled to operate as a single unit.
m. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in on or off position.
n. Handle Clamp: Loose attachment, for holding circuit-breaker handle in on position.
o. Circuit breaker handle locks shall be provided for all circuits that supply exit signs, emergency lights, energy management, and control system (EMCS) panels and fire alarm panels.

C. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.
1. Fuses, and Spare-Fuse Cabinet: Comply with requirements specified in Section 26 28 13 "Fuses."
2. Fused Switch Features and Accessories: Standard ampere ratings and number of poles.
3. Auxiliary Contacts: Two normally open and normally closed contact(s) that operate with switch handle operation.

2.06 PANELBOARD SUPPRESSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
1. Square D; a brand of Schneider Electric
2. Current Technology; a subsidiary of Danahar Corporation.
3. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
4. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
5. Siemens Energy & Automation, Inc..

B. Surge Protection Device: IEEE C62.41-compliant, integrally mounted, solid-state, parallel-connected, non-modular type, with sine-wave tracking suppression and filtering modules, UL 1449, second edition, short-circuit current rating matching or exceeding the panelboard short-circuit rating, and with the following features and accessories:
1. Accessories:
a. LED indicator lights for power and protection status.
b. Audible alarm, with silencing switch, to indicate when protection has failed.
c. One set of dry contacts rated at 5 A and 250-V ac, for remote monitoring of protection status.

C. Surge Protection Device: IEEE C62.41-compliant, integrally mounted, bolt-on, solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, UL 1449, second edition, short-circuit current rating matching or exceeding the panelboard short-circuit rating, and with the following features and accessories:
1. Accessories:
a. Fuses rated at 200-kA interrupting capacity.
b. Fabrication using bolted compression lugs for internal wiring.
c. Integral disconnect switch.
d. Redundant suppression circuits.
e. Redundant replaceable modules.
f. Arrangement with wire connections to phase buses, neutral bus, and ground bus.

g. LED indicator lights for power and protection status.
h. Audible alarm, with silencing switch, to indicate when protection has failed.
i. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of system operation. Contacts shall reverse position on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
j. Four-digit, transient-event counter set to totalize transient surges.

2. Peak Single-Impulse Surge Current Rating: 160 kA per mode/320 kA per phase.
3. Minimum single-impulse current ratings, using 8-by-20-mic.sec. waveform described in IEEE C62.41.2.
   a. Line to Neutral: 70,000 A.
   b. Line to Ground: 70,000 A.
   c. Neutral to Ground: 70,000 A.
4. Withstand Capabilities: 12,000 IEEE C62.41, Category C3 (10 kA), 8-by-20-mic.sec. surges with less than 5 percent change in clamping voltage.
5. Protection modes and UL 1449 SVR for grounded wye circuits with 480Y/277, 208Y/120, three-phase, four-wire circuits shall be as follows:
   a. Line to Neutral: 800 V for 480Y/277 or 400 V for 208Y/120
   b. Line to Ground: 800 V for 480Y/277 or 400 V for 208Y/120
   c. Neutral to Ground: 800 V for 480Y/277 or 400 V for 208Y/120
6. Protection modes and UL 1449 SVR for 240/120-V, single-phase, three-wire circuits shall be as follows:
   a. Line to Neutral: 400 V.
   b. Line to Ground: 400 V.
   c. Neutral to Ground: 400 V.
7. Protection modes and UL 1449 SVR for 240/120-V, three-phase, four-wire circuits with high leg shall be as follows:
   a. Line to Neutral: 400 V, 800 V from high leg.
   b. Line to Ground: 400 V.
   c. Neutral to Ground: 400 V.
8. Protection modes and UL 1449 SVR for 240-, 480-, or 600-V, three-phase, three-wire, delta circuits shall be as follows:
   a. Line to Line: 2000 V for 480 V and 1000 V for 240 V.
   b. Line to Ground: 1500 V for 480 V 800 V for 240 V.

2.07 ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

B. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.

PART 3 EXECUTION

3.01 EXAMINATION

A. Receive, inspect, handle, and store panelboards according to NEMA PB 1.1.

B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.

C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install panelboards and accessories according to NEMA PB 1.1.

B. Equipment Mounting: Install panelboards on concrete bases, 4-inch (100-mm) nominal thickness. Comply with requirements for concrete base specified in Section 03 30 00 "Cast-in-Place Concrete."
   1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
   2. For panelboards, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
   3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   4. Install anchor bolts to elevations required for proper attachment to panelboards.
   5. Attach panelboard to the vertical finished or structural surface behind the panelboard.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.

D. Comply with mounting and anchoring requirements specified in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."

E. Mount top of trim 90 inches (2286 mm) above finished floor unless otherwise indicated. Mounting height of Over Current Protective Devices shall be 6”7” above finished floor to the center of the grip of device operating handle unless a lower height is indicated or required by code.

F. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.

G. Install overcurrent protective devices and controllers not already factory installed.
   1. Set field-adjustable, circuit-breaker trip ranges.

H. Install filler plates in unused spaces.

I. Stub four 1-inch (27-GRC) empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub four 1-inch (27-GRC) empty conduits into raised floor space or below slab not on grade.

J. Arrange conductors in gutters into groups and bundle and wrap with wire ties after completing load balancing.

K. Comply with NECA 1.

3.03 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Section 26 05 53 "Identification for Electrical Systems."

B. Create a directory to indicate installed circuit loads after balancing panelboard loads; incorporate Contracting Agency's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.

C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

D. Device Nameplates: Label each branch circuit device in distribution panelboards with a nameplate complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Acceptance Testing Preparation:

1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

E. Tests and Inspections:
1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:
   a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
   b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.
   c. Instruments and Equipment:
      1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

F. Panelboards will be considered defective if they do not pass tests and inspections.

G. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.05 ADJUSTING

A. Adjust moving parts and operable component to function smoothly and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Section 26 05 73 "Overcurrent Protective Device Coordination Study."

C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes.
1. Measure as directed during period of normal system loading.
2. Perform load-balancing circuit changes outside normal occupancy/working schedule of the facility and at time directed. Avoid disrupting critical 24-hour services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
3. After circuit changes, recheck loads during normal load period. Record all load readings before and after changes and submit test records.
4. Tolerance: Difference exceeding 20 percent between phase loads, within a panelboard, is not acceptable. Rebalance and recheck as necessary to meet this minimum requirement.

3.06 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

END OF SECTION 26 24 16

This page intentionally left blank

SECTION 26 25 00
ENCLOSED BUS ASSEMBLIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Feeder-bus assemblies.

B. Plug-in bus assemblies.

C. Bus plug-in devices.

1.02 DEFINITIONS

A. kAIC: kiloampere interrupting capacity.

B. SPD: Surge protective device.

1.03 ACTION SUBMITTALS

A. Shop Drawings: For each type of product.
   1. Show fabrication and installation details for enclosed bus assemblies. Include plans, elevations, and sections of components. Designate components and accessories, including clamps, brackets, hanger rods, connectors, straight lengths, and fittings.
   2. Show fittings, materials, fabrication, and installation methods for listed firestop barriers.
   3. Indicate required clearances, method of field assembly, and location and size of each field connection.
   4. Detail connections to switchgear, switchboards, transformers, and panelboards.
   5. Cable and conductor terminal sizes for bus and plug-in device terminations.
   6. Wiring Diagrams: Power wiring.

B. Delegated-Design Submittal: For seismic-restraint details, signed and sealed by a qualified professional engineer.
   1. Include design calculations for selecting seismic restraints.
   2. Detail fabrication, including anchorages and attachments to structure and to supported equipment.

1.04 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans and sections, drawn to scale. Include scaled bus-assembly layouts and relationships between components and adjacent structural, mechanical, and electrical elements. Show the following:
   1. Vertical and horizontal enclosed bus-assembly runs, offsets, and transitions.
   2. Clearances for access above and to the side of enclosed bus assemblies.
   3. Vertical elevation of enclosed bus assemblies above the floor or bottom of structure.
   4. Support locations, type of support, and weight on each support.
   5. Location of adjacent construction elements including luminaires, HVAC and plumbing equipment, fire sprinklers and piping, signal and control devices, and other equipment.

B. Qualification Data: For testing agency.

C. Seismic Qualification Certificates: For enclosed bus assemblies, plug-in devices, accessories, and components.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Field quality-control reports.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For enclosed bus assemblies to include in emergency, operation, and maintenance manuals.

1.06 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Plug-in Units: 10 percent of amount installed, but no fewer than 3 unit(s).

1.07 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA.
   1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle enclosed bus assemblies according to NEMA BU 1.1, "General Instructions for Handling, Installation, Operation, and Maintenance of Busway Rated 600 Volts or Less."

PART 2 PRODUCTS

2.01 ASSEMBLY DESCRIPTIONS

A. Source Limitations: Obtain enclosed bus assemblies and plug-in devices from single source from single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with UL 857.

2.02 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineerto design enclosed bus assemblies, plug-in devices, and components.

B. Seismic Performance: Enclosed bus assemblies, plug-in devices, and components shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
   2. Component Importance Factor: 1.5.

C. Derate enclosed bus assemblies for continuous operation at indicated ampere ratings for ambient temperature not exceeding 122 deg F (50 deg C).

2.03 ENCLOSED BUS ASSEMBLIES

A. Feeder-Bus Assemblies: Low-impedance bus assemblies in totally enclosed, nonventilated housing; single-bolt joints; ratings as indicated.
   1. Seismic Fabrication Requirements: Fabricate mounting provisions and attachments for feeder-bus assemblies with reinforcement strong enough to withstand seismic forces defined in Section 26 05 48.16 "Seismic Controls for Electrical Systems" when mounting provisions and attachments are anchored to building structure
   2. Electrical Characteristics:
      a. Voltage: 277/480 V.
      b. Phase: Three; 4 wire.
      c. Percent of Neutral Capacity: 100
   3. Short-Circuit Interrupting Rating:
      a. For Bus Amperage of 800: 85 symmetrical kAIC.
      b. For Bus Amperage of 1200: 100 symmetrical kAIC.
      c. For Bus Amperage of 1600: 125 symmetrical kAIC.
      d. For Bus Amperage of 2500: 150 symmetrical kAIC.

e. For Bus Amperage of 5000: 200 symmetrical kAIC.

4. Temperature Rise: 55 deg C above 40 deg C ambient maximum for continuous rated current.
5. Bus Materials: Current-carrying copper conductors, fully insulated with Class 130C insulation except at joints; plated surface at joints.
6. Voltage Drop:
   a. Measure voltage drop at 30 deg C ambient with bus thermally stabilized at full rated load.
   b. Three-phase, line-to-line voltage drop less than 3.1 V per 100 feet (30.5 m) at 40 percent power factor.
7. Ground: 50 percent capacity, integral with housing.
8. Ground: 50 percent capacity, internal bus bar of material matching bus material.
9. Ground: 50 percent capacity, isolated, internal bus bar of material matching bus material.
10. Enclosure: Steel, with manufacturer's standard finish.
11. Fittings and Accessories: Manufacturer's standard.
12. Firestop: Comply with UL 1479 firestop system, listed and labeled by an NRTL acceptable to authorities having jurisdiction for penetrations of fire-rated walls, ceilings, and floors.
13. Mounting: Arranged flat, edgewise, or vertically without derating. Rated for hanger spacing of up to 10 feet (3 m) for horizontally mounted runs and up to 16 feet (5 m) for vertically mounted runs.
14. Expansion Section: Manufacturer's standard expansion fitting for the provided busway with expansion capability to accommodate thermal expansion of bus and enclosure, and to accommodate movement across building expansion joints.

B. Joints:
1. Busway joints shall use one high-strength steel bolt with Belleville washers.
2. Bolts shall be torque indicating type and at ground potential.
3. Bolts shall be two-headed design to indicate when proper torque has been applied and require only a standard long handle wrench to be properly activated.
4. Access shall be required to only one side of the busway for tightening joint bolts.
5. Joint connection assemblies shall be removable without disturbing adjacent busway lengths.
6. Joint connection assemblies that rely on the joint cover to provide ground continuity are unacceptable.

PART 3 EXECUTION

3.01 INSTALLATION

A. Coordinate layout and installation of enclosed bus assemblies and suspension system with other construction that penetrates ceilings or floors or is supported by them, including luminaires, HVAC equipment, fire-suppression system, and partition assemblies.

B. Equipment Mounting:
1. Install enclosed bus assemblies on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 03 30 00 "Cast-in-Place Concrete."
2. Coordinate size and location of concrete curbs around openings for vertical bus. Concrete, reinforcement, and formwork requirements are specified with concrete.

C. Support bus assemblies independent of supports for other elements such as equipment enclosures at connections to panelboards and switchboards, pipes, conduits, ceilings, and ducts.
1. Design each fastener and support to carry load indicated by seismic requirements and to comply with seismic-restraint details according to Section 26 05 48.16 "Seismic Controls for Electrical Systems."
2. Design each fastener and support to carry 200 lb (90 kg) or 4 times the weight of bus assembly, whichever is greater.
3. Support bus assembly to prevent twisting from eccentric loading.

4. Support bus assembly with not less than 3/8-inch (10-mm) steel rods. Install side bracing to prevent swaying or movement of bus assembly. Modify supports after completion to eliminate strains and stresses on bus bars and housings.
5. Fasten supports securely to building structure according to Section 26 05 29 "Hangers and Supports."
6. Bolts and nuts that are loosened for any reason after tightening to manufacturer's recommended torque setting shall be discarded and replaced with new bolts and nuts.

D. Install expansion fittings at locations where bus assemblies cross building expansion joints. Install at other locations so distance between expansion fittings does not exceed manufacturer's recommended distance between fittings.

E. Construct rated firestop assemblies where bus assemblies penetrate fire-rated elements such as walls, floors, and ceilings. Seal around penetrations according to Section 07 84 00 " Firestopping."

F. Install weatherseal fittings and flanges where bus assemblies penetrate exterior elements such as walls or roofs. Seal around openings to make weathertight. See Section 07 92 00 "Joint Sealants" for materials and application.

G. Coordinate bus-assembly terminations to equipment enclosures to ensure proper phasing, connection, and closure.

H. Tighten bus-assembly joints with torque wrench or similar tool recommended by bus-assembly manufacturer. Tighten joints again after bus assemblies have been energized for 30 days.

I. Install bus-assembly, plug-in units. Support connecting conduit independent of plug-in unit.

J. Comply with NECA 1.

3.02 CONNECTIONS

A. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

C. Terminate to transformer enclosures with matching bus assemblies according to Section 26 22 00 "Low-Voltage Transformers."

D. Terminate to switchboard enclosures with matching bus assemblies according to Section 26 24 13 "Switchboards."

E. Terminate to panelboard enclosures with matching bus assemblies according to Section 26 24 16 "Panelboards."

3.03 FIELD QUALITY CONTROL

A. Testing Agency: Contracting Agency will engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
1. After installing equipment test, for compliance with requirements according to NETA ATS.
2. Visual and Mechanical Inspection:
   a. Compare equipment nameplate data with Drawings and Specifications.
   b. Inspect physical and mechanical condition.
   c. Inspect anchorage, alignment, and grounding.
   d. Verify correct connection according to single-line diagram.
   e. Inspect bolted electrical connections for high resistance using one or more of the following methods:
      1) Use of low-resistance ohmmeter.

2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method according to manufacturer's published data.
3) Perform thermographic survey.

3. Electrical Tests:
   a. Perform insulation resistance measurements through bolted connections and bus joints with low-resistance ohmmeter.
   b. Perform insulation resistance tests of each busway, phase to phase, and phase to ground.
   c. Perform a dielectric withstand voltage test on each busway, phase to ground with phases not under test grounded for one minute.
   d. Measure resistance of assembled busway sections on insulated busway and compare values with adjacent phases.
   e. Perform phasing test on each busway tie section energized by separate sources.
   f. Verify operation of busway space heaters.

D. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.
   1. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
   2. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.
   3. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.

E. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

F. Enclosed bus assemblies will be considered defective if they do not pass tests and inspections.

G. Prepare test and inspection reports.

3.04 ADJUSTING

A. Set field-adjustable, circuit-breaker trip ranges and overload relay trip settings as indicated.

3.05 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

3.06 PROTECTION

A. Provide final protection to ensure that moisture does not enter bus assembly.

END OF SECTION 26 25 00

This page intentionally left blank

SECTION 26 27 13
ELECTRICITY METERING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Equipment for electricity metering by utility company and electricity metering by Contracting Agency.

1.02 DEFINITIONS

A. KY Pulse: Term used by the metering industry to describe a method of measuring consumption of electricity that is based on a relay opening and closing in response to the rotation of the disk in the meter.

B. PC: Personal computer.

1.03 ACTION SUBMITTALS

A. Product Data: Manufacturer's technical data for each type of product indicated.

B. Shop Drawings: For electricity-metering equipment.
   1. Dimensioned plans and sections or elevation layouts.
   2. Wiring Diagrams: For power, signal, and control wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features.

C. Manufacturer Seismic Qualification Certification for Electricity-Metering Equipment: Submit certification that equipment components and their mounting and anchorage provisions have been designed to remain in place without separation of any parts or loosening of factory-made connections when subjected to the seismic forces and shall include the following:
   1. Basis for Certification: Indicate whether certification is based on actual test of assembled components or on calculations.
   2. Detailed description of equipment mounting and anchorage devices on which the certification is based and their installation requirements.

1.04 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data. In addition to items specified in Section 1-11 "Operation and Maintenance Data," include the following:
   1. Application and operating software documentation.
   2. Software licenses.
   3. Software service agreement.
   4. Hard copies of manufacturer's operating specifications, design user's guides for software and hardware, and PDF files on CD-ROM of the hard-copy Submittal.

1.06 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: UL Listed and labeled as defined in NFPA 70 and marked for intended location and application.

B. Contracting Agency's Meters in switchgear/switchboard/distribution board shall be installed by the manufacturer at the factory.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, store, and handle modular meter center according to NECA 400.

1.08 PROJECT CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Contracting Agency or others unless permitted in writing under the following conditions

and then only after arranging to provide temporary electrical service according to requirements indicated:

1. Notify Construction Manager no fewer than fourteen (14) days in advance of proposed interruption of electrical service.
2. Do not proceed with interruption of electrical service without Construction Manager's written permission.
3. Comply with NFPA 70E.
4. Provide temporary standby power through a standby diesel quiet type back-up generator complete with fuel and 7/24 monitoring if the existing service interruption exceeds 2 hours. Coordinate additional requirements with Contracting Agency minimum fourteen days in advance. Indicate method of providing temporary electric service.

1.09 COORDINATION

A. Electrical Service Connections: Coordinate with utility companies and components they furnish as follows:
   1. Comply with requirements of utilities providing electrical power services.
   2. Coordinate installation and connection of utilities and services, including provision for electricity-metering components.

1.10 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning with Substantial Completion, provide software support for 2 years from the date of acceptance of the project by the Contracting Agency.

B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of software at no additional cost to the Contracting Agency.
   1. Provide 30 days' notice to Contracting Agency to allow scheduling and access to system and to allow Contracting Agency to upgrade his computer equipment if necessary.

PART 2 PRODUCTS

2.01 EQUIPMENT FOR ELECTRICITY METERING BY UTILITY COMPANY

A. Meters will be furnished by utility company.

B. Current-Transformer Cabinets: Comply with requirements of electrical-power utility company.

C. Meter Sockets: Comply with requirements of electrical-power utility company.

D. Meter Sockets: Steady-state and short-circuit current ratings shall meet indicated circuit ratings.

E. Modular Meter Center: Factory-coordinated assembly of a main service terminal box with lugs only, wireways, tenant meter socket modules, and tenant feeder circuit breakers arranged in adjacent vertical sections. Assembly shall be complete with interconnecting buses and other features as specified below.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following.
      a. Square D; a brand of Schneider Electric
      b. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
      c. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
      d. Siemens Energy & Automation, Inc..
      e. Electrotech Industries
      f. E-Mon; a division of Hunt Power.
   2. Comply with requirements of utility company for meter center.
      a. Comply with UL 67.
   3. Housing: NEMA 250, Type 3R enclosure.
   4. Minimum Short-Circuit Rating: 42,000 A symmetrical at rated voltage.

5. Main Disconnect Device: Circuit breaker, series-combination rated for use with downstream feeder and branch circuit breakers.
6. Main Disconnect Device: Fusible switch, series-combination rated by circuit-breaker manufacturer to protect downstream feeder and branch circuit breakers.
7. Tenant Feeder Circuit Breakers: Series-combination-rated molded-case units, rated to protect circuit breakers in downstream tenant and to house load centers and panelboards that have 10,000-A interrupting capacity.
    a. Identification: Complying with requirements in Section 26 05 53 "Identification for Electrical Systems" with legend identifying tenant's address.
    b. Physical Protection: Tamper resistant, with hasp for padlock.
8. Meter Socket: Rating coordinated with indicated tenant feeder circuit rating.
9. Surge Protection: For main disconnect device, comply with requirements in Section 26 43 13 "Surge Protection for Low-Voltage Electrical Power Circuits."

F. Arc-Flash Warning Labels;
1. Labels: Comply with requirements for "Arc-Flash Warning Labels" in Section 26 05 73.19 "Arc-Flash Studies." Apply a 3-1/2-by-5-inch (76-by-127-mm) thermal transfer label of high-adhesion polyester for each work location included in the analysis.
2. Labels: Comply with requirements for "Self-Adhesive Equipment Labels" and "Signs" in Section 26 05 53 "Identification for Electrical Systems." Apply a 3-1/2-by-5-inch (76-by-127-mm) thermal transfer label of high-adhesion polyester for each work location included in the analysis. Labels shall be machine printed, with no field-applied markings.
    a. The label shall have an orange header with the wording, "WARNING, ARC-FLASH HAZARD," and shall include the following information taken directly from the arc-flash hazard analysis:
        1) Location designation.
        2) Nominal voltage.
        3) Flash protection boundary.
        4) Hazard risk category.
        5) Incident energy.
        6) Working distance.
3. Engineering report number, revision number, and issue date.

2.02 EQUIPMENT FOR ELECTRICITY METERING BY CONTRACTING AGENCY

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following
1. Square D; a brand of Schneider Electric
2. Eaton Electrical Inc.; Cutler-Hammer Business Unit
3. General Electric Company; GE Consumer & Industrial - Electrical Distribution
4. Electrotech Industries
5. E-Mon; a division of Hunt Power.

B. General Requirements for Contracting Agency's Meters:
1. Comply with UL 1244.
2. Meters used for billing shall have an accuracy of 0.2 percent of reading, complying with requirements in ANSI C12.20.
3. Enclosure: NEMA 250, Type 1 minimum, with hasp for padlocking or sealing.
4. Meters installed outdoor shall be in NEMA 4X stainless steel enclosure. Meter in enclosure shall be factory installed and assembled with strip heaters controlled by thermostat.
5. Identification: Comply with requirements in Section 26 05 53 "Identification for Electrical Systems."
6. Memory Backup: Self-contained to maintain memory throughout power outages of 72 hours, minimum.
7. Sensors: Current-sensing type, with current or voltage output, selected for optimum range and accuracy for meters indicated for this application.
    a. Type: Split core.

8. Current-Transformer Cabinet: Listed or recommended by metering equipment manufacturer for use with sensors indicated.
9. Building Automation System (BAS) Interface: One digital KY pulse to a user-definable increment of energy measurement. Match signal to BAS input and arrange to convey the instantaneous, integrated, demand level measured by meter to provide data for processing and possible programmed demand control action by destination system.

C. Kilowatt-hour Meter: Electronic single- and three-phase meters, measuring electricity used.
1. Voltage and Phase Configuration: Meter shall be designed for use on circuits with voltage rating and phase configuration indicated for its application.
2. Display: LCD with characters not less than 0.25 inch (6 mm) high, indicating accumulative kilowatt-hours and current kilowatt load. Retain accumulated kilowatt-hour in a nonvolatile memory, until reset.
3. Display: Digital electromechanical counter, indicating accumulative kilowatt-hours.

D. Kilowatt-hour/Demand Meter: Electronic single- and three-phase meters, measuring electricity use and demand. Demand shall be integrated over a 15-minute interval.
1. Voltage and Phase Configuration: Meter shall be designed for use on circuits with voltage rating and phase configuration indicated for its application.
2. Display: LCD with characters not less than 0.25 inch (6 mm) high, indicating accumulative kilowatt-hours, current time and date, current demand, and historic peak demand, and time and date of historic peak demand. Retain accumulated kilowatt-hour and historic peak demand in a nonvolatile memory, until reset.

E. Data Transmission Cable: Transmit KY pulse data over Class 1 control-circuit conductors in raceway. Comply with Section 26 05 23 "Control-Voltage Electrical Power Cables."

F. Software: PC based, a product of meter manufacturer, suitable for calculation of utility cost allocation and billing.
1. Tenant or Activity Billing Software: Automatically import energy-usage records to automatically compute and prepare tenant bills based on metering of energy use and peak demand. Maintain separate directory for each tenant's historical billing information. Prepare summary reports in user-defined formats and time intervals.

G. Accessories:
1. Fuses: Provide fuses to protect meters.
2. Shunting Devices: Provide shunting devices for maintenance of meters.

PART 3 EXECUTION

3.01 INSTALLATION

A. Comply with equipment installation requirements in NECA 1.

B. Install meters furnished by utility company. Install raceways and equipment according to utility company's written requirements. Provide empty conduits for metering leads and extend grounding connections as required by utility company.

C. Install modular meter center according to NECA 400 switchboard installation requirements.

D. Install arc-flash labels as required by NFPA 70.

E. Connect all new meters to BMS and provide compatible wiring and conduit.

F. Wiring Method:
1. Comply with requirements in Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
2. Install unshielded, twisted-pair cable for control and signal transmission conductors, complying with Section 27 15 13 " Copper Horizontal Cabling."
3. Minimum conduit size shall be 1/2 inch (13 mm).

3.02 IDENTIFICATION

A. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

1. Series Combination Warning Label: Self-adhesive type, with text as required by NFPA 70.
2. Equipment Identification Labels: Adhesive film labels with clear protective overlay.

3.03 FIELD QUALITY CONTROL

A. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:
   1. Connect a load of known kilowatt rating, 1.5 kW minimum, to a circuit supplied by metered feeder.
   2. Turn off circuits supplied by metered feeder and secure them in off condition.
   3. Run test load continuously for eight hours minimum, or longer, to obtain a measurable meter indication. Use test-load placement and setting that ensures continuous, safe operation.
   4. Check and record meter reading at end of test period and compare with actual electricity used, based on test-load rating, duration of test, and sample measurements of supply voltage at test-load connection. Record test results. This shall be done in the presence of Contracting Agency's Meter Shop Personnel. Coordinate through Contracting Agency.

C. Electricity metering will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

END OF SECTION 26 27 13

This page intentionally left blank

SECTION 26 27 26
WIRING DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Receptacles, receptacles with integral GFCI, and associated device plates.
B. USB receptacles.
C. SPD receptacles, 125 V, 20 A.
D. Hospital-grade receptacles, 125 V, 20 A.
E. Hazardous (classified) location receptacles.
F. Twist-locking receptacles.
G. Isolated-ground receptacles.
H. Tamper-resistant receptacles.
I. Weather-resistant receptacles.
J. Snap switches and wall-box dimmers.
K. Solid-state fan speed controls.
L. Wall-switch and exterior occupancy sensors.
M. Communications outlets.
N. Toggle switches, 120/277 V,20 A.
O. Decorator-style devices, 20 A.
P. Pendant cord-connector devices.
Q. Cord and plug sets.
R. Floor service outlets, poke-through assemblies, service poles, and multioutlet assemblies.

1.02 DEFINITIONS

A. AFCI: Arc-fault circuit interrupter.
B. EMI: Electromagnetic interference.
C. GFCI: Ground-fault circuit interrupter.
D. Pigtail: Short lead used to connect a device to a branch-circuit conductor.
E. RFI: Radio-frequency interference.
F. SPD: Surge Protective Device.
G. UTP: Unshielded twisted pair.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Receptacles for Contracting Agency-Furnished Equipment: Match plug configurations.
   2. Cord and Plug Sets: Match equipment requirements.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Shop Drawings: List of legends and description of materials and process used for premarking wall plates.
C. Samples: One for each type of device and wall plate specified, in each color specified.

1.05 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For wiring devices to include in all manufacturers' packing-label warnings and instruction manuals that include labeling conditions.

1.07 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Service/Power Poles: One for every 10, but no fewer than one.
   2. Floor Service-Outlet Assemblies: One for every 10, but no fewer than one.
   3. Poke-Through, Fire-Rated Closure Plugs: One for every five floor service outlets installed, but no fewer than two.
   4. SPD Receptacles: One for every 10 of each type installed, but no fewer than two of each type.

1.08 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of wiring device through one source from a single manufacturer. Switches, receptacles and cover plates shall be of the same manufacturer.

B. Comply with National Electrical Manufacturer's Association (NEMA) standards. Furnish products listed and classified by Underwriter's Laboratories Inc. as suitable for purpose specified and shown.

C. Manufacturer shall have a minimum of ten (10) years experience in the production of wiring devices specified and shall have ISO 9001 and 9002 certifications.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers' Names: Shortened versions (shown in parentheses) of the following manufacturers' names are used in other Part 2 articles:
   1. Hubbell Incorporated; Wiring Device-Kellems (Hubbell).
   2. Leviton Mfg. Company Inc. (Leviton).
   3. Pass & Seymour/Legrand (Pass & Seymour).

B. Source Limitations: Obtain each type of wiring device and associated wall plate from single source from single manufacturer.

2.02 GENERAL WIRING-DEVICE REQUIREMENTS

A. Wiring Devices, Components, and Accessories: UL Listed and labeled, and marked for intended location and application.

B. Comply with NFPA 70.

C. Devices that are manufactured for use with modular plug-in connectors may be substituted under the following conditions:
   1. Connectors shall comply with UL2459 and shall be made with stranding building wire.
   2. Devices shall comply with the requirements in this Section.

2.03 STRAIGHT-BLADE RECEPTACLES

A. Convenience Receptacles, 125V, 20A: Comply with NEMA WD1, NEMAWD6 Configuration 5-20R, UL498, and FSW-C-596.
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers :
      a. Hubbell; HBL5361 (single), HBL5362 (duplex).
      b. Leviton; 5361 (single), 5362 (duplex).
      c. Pass & Seymour; 5361 (single), 5362 (duplex).
   2. Description: Grounded, industrial extra heavy duty specifications grade, back- and side-wired, single-piece grounding brass strap with integral ground, impact-resistant thermoplastic nylon cover and body, smooth face, with separate grounding screw and NEMA 5-20R plug configurations.

3. Description: Single-piece, rivetless, nickel-plated, all-brass grounding system. Nickel-plated, single piece brass mounting strap with integral ground, impact resistant thermoplastic nylon cover and body, smooth face and separate grounding screw.
4. Products: Subject to compliance with requirements, provide one of the following manufacturers
   a. Hubbell; HBL8300SGA.
   b. Leviton; 8300-SGG.
   c. Pass & Seymour; TR63H.
5. Description: Grounded, specifications grade, back- and side-wired, single-piece grounding brass strap with integral ground, impact-resistant thermoplastic nylon cover and body, smooth face, 20A, 125V, duplex, with separate grounding screw and NEMA 5-20R plug configurations.
6. Labeled shall comply with NFPA 70, "Health Care Facilities" Article, "Pediatric Locations" Section.

B. Isolated-Ground, Duplex Convenience Receptacles, 125V, 20A: Comply with NEMA WD 1, NEMA WD 6 Configuration5-20R, UL498, and FSW-C-596.
1. Products: Subject to compliance with requirements, provide the following manufacturers
   a. Hubbell; IG5362.
   b. Leviton; 5362-IG.
   c. Pass & Seymour; IG5362.
2. Description: Straight blade; equipment grounding contacts shall be connected only to the green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Isolation shall be integral to receptacle construction and not dependent on removable parts.

C. Tamper-Resistant Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, UL 498 Supplement sd, and FS W-C-596.

D. Weather-Resistant Duplex Receptacle, 125 V, 20 A
1. Description: Two pole, three wire, and self-grounding. Integral shutters that operate only when a plug is inserted in the receptacle. Square face.
2. Configuration: NEMA WD 6, Configuration 5-20R.
3. Standards: Comply with UL 498.

E. Controlled Duplex Receptacles, 125 V, 20A
1. Description: Two pole, three wire and self-grounding.
2. Configuration: NEMA WD 6, Configuration 5-20R.
3. Standards: Comply with UL 498.
4. Marking: Shall have permanent marking per NEC 130.5 (d).
5. USB Receptacles: Dual and quad, USB Type A, 5 V dc, and 2.1 A per receptacle (minimum).
6. Standards: Comply with UL 1310 and USB 3.0 devices.

F. USB Charging Receptacles :
1. Description: Single-piece, rivetless, nickel-plated, all-brass grounding system. Nickel-plated, brass mounting strap.
2. USB Receptacles: Dual and quad, USB Type A, 5 V dc, and 2.1 A per receptacle (minimum).
3. Standards: Comply with UL 1310 and USB 3.0 devices.

G. Tamper-Resistant Duplex and USB Charging Receptacles :
1. Description: Single-piece, rivetless, nickel-plated, all-brass grounding system. Nickel-plated, brass mounting strap. Integral shutters that operate only when a plug is inserted in the line voltage receptacle.
2. Line Voltage Receptacles: Two pole, three wire, and self-grounding; NEMA WD 6, Configuration 5-20R.
3. USB Receptacles: Dual USB Type A, 5 V dc, and 2.1 A per receptacle (minimum).

4. Standards: Comply with UL 498, UL 1310, USB 3.0 devices, and FS W-C-596.
5. Marking: Listed and labeled as complying with NFPA 70, "Tamper-Resistant Receptacles" Article.

2.04 GFCI RECEPTACLES

A. General Description:
1. Straight blade, feed-through type.
2. Comply with NEMA WD 1, NEMA WD 6, UL 498, UL 943 Class A, and FS W-C-596.
3. Include indicator light that shows when the GFCI has malfunctioned and no longer provides proper GFCI protection.
4. Include self test feature so that the outlet is automatically tested every fifteen minutes.
5. Outlets used in coastal environments shall be suitable for such applications and shall be properly protected against the ambient conditions.

B. Duplex GFCI Convenience Receptacles, 125 V, 20 A:
1. Products: Subject to compliance with requirements, provide one of the following manufacturers:
a. Hubbell; GFR5352L.
b. Pass & Seymour; 2095.
c. Leviton; 7590.

C. Tamper-Resistant GFCI Convenience Receptacles, 125 V, 20 A:
1. Products: Subject to compliance with requirements, provide one of the following manufacturers:
a. Hubbell; GFTR20.
b. Pass & Seymour; 2095TR.

2.05 SPD RECEPTACLES

A. General Description: Comply with NEMA WD 1, NEMA WD 6, UL 498, UL 1449, and FS W-C-596, with integral SPD in line to ground, line to neutral, and neutral to ground.
1. SPD Components: Multiple metal-oxide varistors; with a nominal clamp-level rating of 400 V and minimum single transient pulse energy dissipation of 240 J, according to IEEE C62.41.2 and IEEE C62.45.
2. Active SPD Indication: Visual and audible, with light visible in face of device to indicate device is "active" or "no longer in service."

B. Duplex SPD Convenience Receptacles:
1. Products: Subject to compliance with requirements, provide one of the following manufacturers:
a. Hubbell; HBL5362SA.
b. Leviton; 5380.
c. Pass & Seymour; 5362BLSP.
2. Description: Straight blade, 125 V, 20 A; NEMA WD 6 Configuration 5-20R.

C. Isolated-Ground, Duplex SPD Convenience Receptacles:
1. 1. Products: Subject to compliance with requirements, provide one of the following manufacturers:
a. Cooper; IG5362BLS.
b. Hubbell; IG5362SA.
c. Leviton; 5380-IG.
d. Pass & Seymour; IG5362BLSP.
2. Description:
a. Straight blade, 125 V, 20 A; NEMA WD 6 Configuration 5-20R.
b. Equipment grounding contacts shall be connected only to the green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Isolation shall be integral to receptacle construction and not dependent on removable parts.

D. Isolated-Ground, Hospital-Grade, Duplex SPD Convenience Receptacles:
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers:
      a. Hubbell; IG8362SA.
      b. Leviton; 8380-IG.
      c. Pass & Seymour; IG8300BLSP.
   2. Description:
      a. Straight blade, 125 V, 20 A; NEMA WD 6 Configuration 5-20R.
      b. Comply with UL 498 Supplement sd.
      c. Equipment grounding contacts shall be connected only to the green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Isolation shall be integral to receptacle construction and not dependent on removable parts.

2.06 HAZARDOUS (CLASSIFIED) LOCATION RECEPTACLES

A. Wiring Devices for Hazardous (Classified) Locations: Comply with NEMA FB 11 and UL 1010.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
      a. Cooper Crouse-Hinds.
      b. EGS/Appleton Electric.
      c. Killark; Division of Hubbell Inc.

2.07 TWIST-LOCKING RECEPTACLES

A. Single Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 Configuration L5-20R, and UL 498.
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers
      a. Hubbell; HBL2310.
      b. Leviton; 2310.
      c. Pass & Seymour; L520-R.

B. Isolated-Ground, Single Convenience Receptacles, 125 V, 20 A:
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers:
      a. Cooper; IGL520R.
      b. Hubbell; IG2310.
      c. Leviton; 2310-IG.
      d. Pass & Seymour; IG4700.
   2. Description:
      a. Comply with NEMA WD 1, NEMA WD 6 Configuration L5-20R, and UL 498.
      b. Equipment grounding contacts shall be connected only to the green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Isolation shall be integral to receptacle construction and not dependent on removable parts.

2.08 PENDANT CORD-CONNECTOR DEVICES

A. Description:
   1. Matching, locking-type plug and receptacle body connector.
   2. NEMA WD 6 Configurations L5-20P and L5-20R, heavy-duty grade, and FS W-C-596.
   3. Body: Nylon, with screw-open, cable-gripping jaws and provision for attaching external cable grip.
   4. External Cable Grip: Woven wire-mesh type made of high-strength, galvanized-steel wire strand, matched to cable diameter, and with attachment provision designed for corresponding connector.

2.09 CORD AND PLUG SETS

A. Description:
   1. Match voltage and current ratings and number of conductors to requirements of equipment being connected.
   2. Cord: Rubber-insulated, stranded-copper conductors, with Type SOW-A jacket; with green-insulated grounding conductor and ampacity of at least 130 percent of the equipment rating.
   3. Plug: Nylon body and integral cable-clamping jaws. Match cord and receptacle type for connection.

2.10 TOGGLE SWITCHES

A. Comply with NEMA WD 1, UL 20, and FS W-S-896.

B. Switches, 120/277 V, 20 A:
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers:
      1) Single Pole:
         a) Hubbell; HBL1221.
         b) Leviton; 1221-2.
         c) Pass & Seymour; CSB20AC1.
      2) Two Pole:
         a) Hubbell; HBL1222.
         b) Leviton; 1222-2.
         c) Pass & Seymour; CSB20AC2.
      3) Three Way:
         Hubbell; HBL1223.
         a) Leviton; 1223-2.
         b) Pass & Seymour; CSB20AC3.
      4) Four Way:
         a) Hubbell; HBL1224.
         b) Leviton; 1224-2.
         c) Pass & Seymour; CSB20AC4.

C. Pilot-Light Switches, 20 A:
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers:
      a. Hubbell; HBL1201PL for 120 and 277 V.
      b. Leviton; 1221-LH1.
      c. Pass & Seymour; PS20AC1RPL for 120 V, PS20AC1RPL7 for 277 V.
   2. Description: Single pole, with neon-lighted handle, illuminated when switch is "off."

D. Key-Operated Switches, 120/277 V, 20 A:
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Hubbell; HBL1221L.
      b. Leviton; 1221-2L.
      c. Pass & Seymour; PS20AC1-L.
   2. Description: Single pole, with factory-supplied key in lieu of switch handle.

E. Single-Pole, Double-Throw, Momentary-Contact, Center-off Switches: 120/277 V, 20 A; for use with mechanically held lighting contactors.
   1. Products: Subject to compliance with requirements, provide one of the following
      a. Hubbell; HBL2057.
      b. Leviton; 1257.
      c. Pass & Seymour; 1251.

F. Key-Operated, Single-Pole, Double-Throw, Momentary-Contact, Center-off Switches: 120/277 V, 20 A; for use with mechanically held lighting contactors, with factory-supplied key in lieu of switch handle.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Hubbell; HBL2057L.
      b. Leviton; 1257L.
      c. Pass & Seymour; 1251L.

G. Antimicrobial, Double-Pole Switches, 120/277 V, 20 A :
   1. Description: Contact surfaces treated with a coating that kills 99.9 percent of certain common bacteria within two hours when regularly and properly cleaned.
      a. Standards: Comply with UL 20 and FS W-S-896.

H. Antimicrobial, Three-Way Switches, 120/277 V, 20 A :
   1. Description: Contact surfaces treated with a coating that kills 99.9 percent of certain common bacteria within two hours when regularly and properly cleaned.
      a. Standards: Comply with UL 20 and FS W-S-896.

2.11 DECORATOR-STYLE DEVICES

A. Convenience Receptacles: Square face, 125 V, 20 A; comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, and UL 498.
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers:
      a. Hubbell; DR20.
      b. Leviton; 16252.
      c. Pass & Seymour; 26252.

B. Tamper-Resistant Convenience Receptacles: Square face, 125 V, 20 A; comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, and UL 498.
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers:
      a. Hubbell; DR20TR.
      b. Pass & Seymour; TR26252.
   2. Description: Labeled to comply with NFPA 70, "Receptacles, Cord Connectors, and Attachment Plugs (Caps)" Article, "Tamper-Resistant Receptacles in Dwelling Units" Section.

C. Tamper-Resistant and Weather-Resistant Convenience Receptacles: Square face, 125 V, 20 A; comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, and UL 498.
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers:
      a. Hubbell; DR20TR.
      b. LevitonTRW20.
      c. Pass & Seymour; TRW26252.
   2. Description: Labeled to comply with NFPA 70, "Receptacles, Cord Connectors, and Attachment Plugs (Caps)" Article, "Tamper-Resistant Receptacles in Dwelling Units" Section, when installed in wet and damp locations.

D. GFCI, Feed-Through Type, Convenience Receptacles: Square face, 125 V, 20 A; comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, UL 498, and UL 943 Class A.
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers
      a. Hubbell; GF20LA.
      b. Leviton; 8599.
      c. Pass & Seymour; 2094.

E. GFCI, Tamper-Resistant and Weather-Resistant Convenience Receptacles: Square face, 125 V, 20 A; comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, UL 498, and UL 943 Class A.
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers
      a. Hubbell; GFTR20.
      b. Pass & Seymour; 2094TRWR.
   2. Description: Labeled to comply with NFPA 70, "Receptacles, Cord Connectors, and Attachment Plugs (Caps)" Article, "Tamper-Resistant Receptacles in Dwelling Units" Section.

F. Toggle Switches, Square Face, 120/277 V, 20 A: Comply with NEMA WD 1, UL 20, and FS W-S-896.
   1. Products: Subject to compliance with requirements provide one of the following manufacturers
      a. Hubbell; DS120 (single pole), DS320 (three way).
      b. Leviton; 5621-2 (single pole), 5623-2 (three way).
      c. Pass & Seymour; 2621 (single pole), 2623 (three way).

G. Lighted Toggle Switches, Square Face, 120 V, 20 A: Comply with NEMA WD 1 and UL 20.
   1. Products: Subject to compliance with requirements, provide one of the following manufacturers :
      a. Cooper; 7631 (single pole), 7633 (three way).
      b. Hubbell; DS120IL (single pole), DS320 (three way).
      c. Leviton; 5631-2 (single pole), 5633-2 (three way).
      d. Pass & Seymour; 2625 (single pole), 2626 (three way).
   2. Description: With neon-lighted handle, illuminated when switch is "off."

2.12 WALL PLATES

A. Single and combination types shall match corresponding wiring devices.
   1. Plate-Securing Screws: Metal with head color to match plate finish.
   2. Material for Finished Spaces: Smooth, high-impact thermoplastic or 0.035-inch- (1-mm-) thick, satin-finished, Type 302 stainless steel
   3. Material for Unfinished Spaces: Galvanized steel.
   4. Material for Damp Locations: Thermoplastic with spring-loaded lift cover, and listed and labeled for use in wet and damp locations.

B. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with Type 3R, weather-resistant with lockable cover.

C. Antimicrobial Cover Plates:
   1. Contact surfaces treated with a coating that kills 99.9 percent of certain common bacteria within two hours when regularly and properly cleaned.
   2. Tarnish resistant.

2.13 FLOOR SERVICE FITTINGS

A. Type: Modular, flush-type dual-service units suitable for wiring method used.

B. Compartments: Barrier separates power from voice and data communication cabling.

C. Service Plate: Rectangular with satin finish.

D. Power Receptacle: NEMA WD 6 Configuration 5-20R, gray finish, unless otherwise indicated.

2.14 PREFABRICATED MULTIOUTLET ASSEMBLIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
   1. Hubbell Incorporated; Wiring Device-Kellems.
   2. Wiremold/Legrand.

B. Description:

1. Two-piece surface metal raceway, with factory-wired multioutlet harness.
2. Components shall be products from single manufacturer designed for use as a complete, matching assembly of raceways and receptacles.

C. Raceway Material: Metal, with manufacturer's standard finish.

D. Multioutlet Harness:
1. Receptacles: 15-A, 125-V, NEMA WD 6 Configuration 5-15R receptacles complying with NEMA WD 1, UL 498, and FS W-C-596.
2. Receptacle Spacing: 6 inches (150 mm).
3. Wiring: No. 12 AWG solid, Type THHN copper, two circuit, connecting alternating receptacles.

2.15 SERVICE POLES

A. Description:
1. Factory-assembled and -wired units to extend power and voice and data communication from distribution wiring concealed in ceiling to devices or outlets in pole near floor.
2. Poles: Nominal 2.5-inch- (65-mm-) square cross section, with height adequate to extend from floor to at least 6 inches (150 mm) above ceiling, and with separate channels for power wiring and voice and data communication cabling.
3. Mounting: Ceiling trim flange with concealed bracing arranged for positive connection to ceiling supports; with pole foot and carpet pad attachment.
4. Finishes: Manufacturer's standard painted finish and trim combination.
5. Wiring: Sized for minimum of five No. 12 AWG power and ground conductors and a minimum of four, four-pair, Category 3 or Category 5 voice and data communication cables.
6. Power Receptacles: Two duplex, 20-A, straight-blade receptacles complying with requirements in this Section.

2.16 FINISHES

A. Device Color:
1. Wiring Devices Connected to Normal Power System: White or as selected by Architect unless otherwise indicated or required by NFPA 70 or device listing.
2. Wiring Devices Connected to Emergency Power System: Red.
3. SPD Devices: Blue.
4. Isolated-Ground Receptacles: As specified above, with orange triangle on face.

B. Wall Plate Color: For plastic covers, match device color.

PART 3 EXECUTION

3.01 INSTALLATION

A. Comply with NECA 1, including mounting heights listed in that standard, unless otherwise indicated.

B. Coordination with Other Trades:
1. Protect installed devices and their boxes. Do not place wall finish materials over device boxes and do not cut holes for boxes with routers that are guided by riding against outside of boxes.
2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
4. Install wiring devices after all wall preparation, including painting, is complete.

C. Conductors:
1. Do not strip insulation from conductors until right before they are spliced or terminated on devices.

2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.
3. The length of free conductors at outlets for devices shall meet provisions of NFPA 70, Article 300, without pigtails.
4. Existing Conductors:
   a. Cut back and pigtail, or replace all damaged conductors.
   b. Straighten conductors that remain and remove corrosion and foreign matter.
   c. Pigtailing existing conductors is permitted, provided the outlet box is large enough.

D. Device Installation:
1. Replace devices that have been in temporary use during construction and that were installed before building finishing operations were complete.
2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
4. Connect devices to branch circuits using pigtails that are not less than 6 inches (152 mm) in length.
5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, two-thirds to three-fourths of the way around terminal screw.
6. Use a torque screwdriver when a torque is recommended or required by manufacturer.
7. When conductors larger than No. 12 AWG are installed on 20-A circuits, splice No. 12 AWG pigtails for device connections.
8. Tighten unused terminal screws on the device.
9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device-mounting screws in yokes, allowing metal-to-metal contact.

E. Receptacle Orientation:
1. Install ground pin of vertically mounted receptacles down, and on horizontally mounted receptacles to the left.
2. Install hospital-grade receptacles in patient-care areas with the ground pin at the top.

F. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.

G. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical and with grounding terminal of receptacles on top. Group adjacent switches under single, multigang wall plates.

H. Adjust locations of floor service outlets and service poles to suit arrangement of partitions and furnishings.

3.02 GFCI RECEPTACLES

A. Install non-feed-through-type GFCI receptacles where protection of downstream receptacles is not required.

3.03 IDENTIFICATION

A. Comply with Section 26 05 53 "Identification for Electrical Systems."

B. Identify each receptacle with panelboard identification and circuit number. Use hot, stamped, or engraved machine printing with white-filled lettering on face of plate, and durable wire markers or tags inside outlet boxes.

C. Essential Electrical System: Mark receptacles supplied from the essential electrical system to allow easy identification using a self-adhesive label.

3.04 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:
1. In healthcare facilities, prepare reports that comply with recommendations in NFPA 99.
2. Test Instruments: Use instruments that comply with UL 1436.

3. Test Instrument for Convenience Receptacles: Digital wiring analyzer with digital readout or illuminated digital-display indicators of measurement.

B. Tests for Convenience Receptacles:
   1. Line Voltage: Acceptable range is 110 to 125 V.
   2. Percent Voltage Drop under 20-A Load: A value of 6 percent or higher is unacceptable.
   3. Ground Impedance: Values of up to 2 ohms are acceptable.
   4. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.
   5. Using the test plug, verify that the device and its outlet box are securely mounted.
   6. Tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, or similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.

C. Test straight-blade convenience outlets in patient-care areas and hospital-grade convenience outlets for the retention force of the grounding blade according to NFPA 99. Retention force shall be not less than 4 oz. (115 g).

D. Wiring device will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports. Submit reports within two (2) weeks of completion of tests.

SECTION 26 28 13
FUSES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cartridge fuses rated 600-V ac and less for use in control circuits, enclosed switches panelboards, switchboards, enclosed controllers, and, motor-control centers.

B. Plug fuses rated 125-V ac and less for use in plug-fuse-type enclosed switches, fuseholders, and panelboards.

C. Retain first subparagraph below if retaining rejection-base-type plug fuses and if Project contains fuseholders with Edison-base, plug-fuse sockets.

D. Plug-fuse adapters for use in Edison-base, plug-fuse sockets.

E. Spare-fuse cabinets.

1.02 RELATED DOCUMENTS

A. Section 26 00 00 “General Electrical Requirements.”

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material, dimensions, descriptions of individual components, and finishes for spare-fuse cabinets. Include the following for each fuse type indicated:

1. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.
    a. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
    b. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.
2. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
3. Current-limitation curves for fuses with current-limiting characteristics.
4. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse.
5. Coordination charts and tables and related data.
6. Fuse sizes for elevator feeders and elevator disconnect switches.

1.04 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 1-11 "Operation and Maintenance Data," include the following:

1. Ambient temperature adjustment information.
2. Current-limitation curves for fuses with current-limiting characteristics.
3. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse. Submit on translucent log-log graph paper.
4. Coordination charts and tables and related data.

1.05 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than 3 of each size and type.

1.06 QUALITY ASSURANCE

A. Source Limitations: Obtain fuses, for use within a specific product or circuit, from single source from single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with NEMA FU 1 for cartridge fuses.

D. Comply with NFPA 70.

E. Comply with UL 248-11 for plug fuses.

1.07 PROJECT CONDITIONS

A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F (5 deg C)or more than 100 deg F (38 deg C) , apply manufacturer's ambient temperature adjustment factors to fuse ratings.

1.08 COORDINATION

A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with system short-circuit current levels.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Cooper Bussmann, Inc.
   2. Edison Fuse, Inc.
   3. Ferraz Shawmut, Inc.
   4. Littelfuse, Inc.

2.02 CARTRIDGE FUSES

A. Characteristics: NEMA FU 1, nonrenewable cartridge fuses with voltage ratings consistent with circuit voltages.

2.03 PLUG FUSES

A. Characteristics: UL 248-11, nonrenewable plug fuses; 125-V ac.

2.04 PLUG-FUSE ADAPTERS

A. Characteristics: Adapters for using Type S, rejection-base plug fuses in Edison-base fuseholders or sockets; ampere ratings matching fuse ratings; irremovable once installed.

2.05 SPARE-FUSE CABINET

A. Characteristics: Wall-mounted steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.
   1. Size: Adequate for storage of spare fuses specified with 15 percent spare capacity minimum.
   2. Finish: Gray, baked enamel.
   3. Identification: "SPARE FUSES" in 1-1/2-inch- (38-mm-) high letters on exterior of door.
   4. Fuse Pullers: For each size of fuse, where applicable and available, from fuse manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.

B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.

C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.

D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 FUSE APPLICATIONS

A. Cartridge Fuses:
   1. Service Entrance: Class L, time delay
   2. Feeders: Class L, time delay
   3. Motor Branch Circuits: Class RK5, time delay.
   4. Other Branch Circuits: Class J, fast acting
   5. Control Circuits: Class CC, fast acting.

B. Plug Fuses:
   1. Motor Branch Circuits: Type S, dual-element time delay.
   2. Other Branch Circuits: Type S, dual-element time delay.

3.03 INSTALLATION

A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.

B. Install plug-fuse adapters in Edison-base fuseholders and sockets. Ensure that adapters are irremovable once installed.

C. Install spare-fuse cabinet(s).

3.04 IDENTIFICATION

A. Install labels complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems" and indicating fuse replacement information on inside door of each fused switch and adjacent to each fuse block, socket, and holder.

END OF SECTION 26 28 13

This page intentionally left blank

SECTION 26 28 16
ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fusible switches.

B. Nonfusible switches.

C. Receptacle switches.

D. Shunt trip switches.

E. Molded-case circuit breakers (MCCBs).

F. Molded-case switches.

G. Enclosures.

1.02 DEFINITIONS

A. NC: Normally closed.

B. NO: Normally open.

C. SPDT: Single pole, double throw.

1.03 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Enclosed switches and circuit breakers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

1.04 ACTION SUBMITTALS

A. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.
   1. Enclosure types and details for types other than NEMA 250, Type 1.
   2. Current and voltage ratings.
   3. Short-circuit current ratings (interrupting and withstand, as appropriate).
   4. Include evidence of NRTL listing for series rating of installed devices.
   5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices, accessories, and auxiliary components.
   6. Include time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device.

B. Shop Drawings: For enclosed switches and circuit breakers. Include plans, elevations, sections, details, and attachments to other work.
   1. Wiring Diagrams: For power, signal, and control wiring.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified testing agency.

B. Seismic Qualification Certificates: For enclosed switches and circuit breakers, accessories, and components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Field quality-control reports.
   1. Test procedures used.
   2. Test results that comply with requirements.
   3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

D. Manufacturer's field service report.

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 1-11 "Operation and Maintenance Data," include the following:
   1. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.
   2. Time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device.

1.07 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than 3 of each size and type.
   2. Fuse Pullers: 2 for each size and type.

1.08 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA or an NRTL.
   1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Source Limitations: Obtain enclosed switches and circuit breakers, overcurrent protective devices, components, and accessories, within same product category, from single source from single manufacturer.

C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Comply with NFPA 70.

1.09 PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
   1. Ambient Temperature: Not less than minus 22 deg F and not exceeding 104 deg F.
   2. Altitude: Not exceeding 6600 feet.

B. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Contracting Agency or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
   1. Notify Construction Manager no fewer than 7 days in advance of proposed interruption of electric service.
   2. Indicate method of providing temporary electric service.
   3. Do not proceed with interruption of electric service without Construction Manager's written permission.
   4. Comply with NFPA 70E.

1.10 COORDINATION

A. Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

PART 2 PRODUCTS

2.01 FUSIBLE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
   2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
   3. Siemens Energy & Automation, Inc.
   4. Square D; a brand of Schneider Electric.

B. Type GD, General Duty, Single Throw, 240-V ac, 800 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with cartridge fuse interiors to accommodate indicated fuses, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.

C. Type HD, Heavy Duty, Single Throw, 600V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

D. Type HD, Heavy Duty, Six Pole, Single Throw,600-V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

E. Type HD, Heavy Duty, Double Throw,600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

F. Accessories:
   1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
   2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
   3. Isolated Ground Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
   4. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
   5. Auxiliary Contact Kit: One NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
   6. Hookstick Handle: Allows use of a hookstick to operate the handle.
   7. Lugs: Compression type, suitable for number, size, and conductor material.
   8. Service-Rated Switches: Labeled for use as service equipment.
   9. Accessory Control Power Voltage: Remote mounted and powered; 24-V ac

2.02 NONFUSIBLE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
   2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
   3. Siemens Energy & Automation, Inc.
   4. Square D; a brand of Schneider Electric.

B. Type GD, General Duty, Single Throw, 600 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.

C. Type HD, Heavy Duty, Single Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

D. Type HD, Heavy Duty, Six Pole, Single Throw, 600-V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

E. Type HD, Heavy Duty, Double Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

F. Accessories:
   1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
   2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
   3. Isolated Ground Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
   4. Auxiliary Contact Kit: One NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
   5. Hookstick Handle: Allows use of a hookstick to operate the handle.
   6. Lugs: Compression type, suitable for number, size, and conductor material.
   7. Accessory Control Power Voltage: Remote mounted and powered; 24-V ac

2.03 RECEPTACLE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
   2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
   3. Siemens Energy & Automation, Inc.
   4. Square D; a brand of Schneider Electric.

B. Type HD, Heavy-Duty, Single-Throw Fusible Switch: 600-V ac, 100 A; UL 98 and NEMA KS 1; horsepower rated, with clips or bolt pads to accommodate indicated fuses; lockable handle with capability to accept three padlocks; interlocked with cover in closed position.

C. Type HD, Heavy-Duty, Single-Throw Nonfusible Switch: 240 600-V ac, 30 60 100 A; UL 98 and NEMA KS 1; horsepower rated, lockable handle with capability to accept three padlocks; interlocked with cover in closed position.

D. Interlocking Linkage: Provided between the receptacle and switch mechanism to prevent inserting or removing plug while switch is in the on position, inserting any plug other than specified, and turning switch on if an incorrect plug is inserted or correct plug has not been fully inserted into the receptacle.

2.04 SHUNT TRIP SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Cooper Bussmann, Inc.
   2. Ferraz Shawmut, Inc.
   3. Littelfuse, Inc.

B. General Requirements: Comply with ASME A17.1, UL 50, and UL 98, with 200-kA interrupting and short-circuit current rating when fitted with Class J fuses.

C. Switches: Three-pole, horsepower rated, with integral shunt trip mechanism and Class J fuse block; lockable handle with capability to accept three padlocks; interlocked with cover in closed position.

D. Control Circuit: 120-V ac; obtained from integral control power transformer, with primary and secondary fuses with a control power transformer of enough capacity to operate shunt trip, connected pilot, and indicating and control devices.

E. Accessories:
   1. Oiltight key switch for key-to-test function.
   2. Oiltight Red ON pilot light.
   3. Isolated neutral lug; 100 percent rating.
   4. Mechanically interlocked auxiliary contacts that change state when switch is opened and closed.
   5. Form C alarm contacts that change state when switch is tripped.
   6. Three-pole, double-throw, fire-safety and alarm relay; 120-V ac coil voltage.
   7. Three-pole, double-throw, fire-alarm voltage monitoring relay complying with NFPA 72.

2.05 MOLDED-CASE CIRCUIT BREAKERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
   2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
   3. Siemens Energy & Automation, Inc.
   4. Square D; a brand of Schneider Electric.

B. General Requirements: Comply with UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents.

C. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.

D. Adjustable, Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.

E. Electronic Trip Circuit Breakers: Field-replaceable rating plug, rms sensing, with the following field-adjustable settings:
   1. Instantaneous trip.
   2. Long- and short-time pickup levels.
   3. Long- and short-time time adjustments.
   4. Ground-fault pickup level, time delay, and I^2t response.

F. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller, and let-through ratings less than NEMA FU 1, RK-5.

G. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker and trip activation on fuse opening or on opening of fuse compartment door.

H. Ground-Fault, Circuit-Interrupter (GFCI) Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).

I. Ground-Fault, Equipment-Protection (GFEP) Circuit Breakers: With Class B ground-fault protection (30-mA trip).

J. Features and Accessories:
   1. Standard frame sizes, trip ratings, and number of poles.
   2. Lugs: Mechanical type, suitable for number, size, trip ratings, and conductor material.
   3. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge lighting circuits.
   4. Ground-Fault Protection: Comply with UL 1053; integrally mounted, self-powered type with mechanical ground-fault indicator; relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.

5. Communication Capability: Integral communication module with functions and features compatible with power monitoring and control system, specified in Section 26 09 13 "Electrical Power Monitoring and Control."
6. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.
7. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
8. Auxiliary Contacts: One SPDT switch with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
9. Alarm Switch: One NO contact that operates only when circuit breaker has tripped.
10. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
11. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
12. Electrical Operator: Provide remote control for on, off, and reset operations.
13. Accessory Control Power Voltage: integrally mounted, self-powered 120-V ac

2.06 MOLDED-CASE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
   2. Siemens Energy & Automation, Inc.
   3. Square D; a brand of Schneider Electric.

B. General Requirements: MCCB with fixed, high-set instantaneous trip only, and short-circuit withstand rating equal to equivalent breaker frame size interrupting rating.

C. Features and Accessories:
   1. Standard frame sizes and number of poles.
   2. Lugs: Mechanical Compression type, suitable for number, size, trip ratings, and conductor material.
   3. Ground-Fault Protection: Comply with UL 1053; remote-mounted and powered type with mechanical ground-fault indicator; relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.
   4. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.
   5. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
   6. Auxiliary Contacts: One SPDT switch with "a" and "b" contacts; "a" contacts mimic switch contacts, "b" contacts operate in reverse of switch contacts.
   7. Alarm Switch: One NO NC contact that operates only when switch has tripped.
   8. Key Interlock Kit: Externally mounted to prohibit switch operation; key shall be removable only when switch is in off position.
   9. Zone-Selective Interlocking: Integral with ground-fault shunt trip unit; for interlocking ground-fault protection function.
   10. Electrical Operator: Provide remote control for on, off, and reset operations.
   11. Accessory Control Power Voltage: Integrally mounted, self-powered 120-V ac

2.07 ENCLOSURES

A. Enclosed Switches and Circuit Breakers: NEMA AB 1, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.
   1. Indoor, Dry and Clean Locations: NEMA 250, Type 1
   2. Outdoor Locations: NEMA 250, Type 3R
   3. Wash-Down Areas: NEMA 250, Type 4X
   4. Other Wet or Damp, Indoor Locations: NEMA 250, Type 4X
   5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 12.

6. Hazardous Areas Indicated on Drawings: NEMA 250, Type 9

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.

B. Comply with mounting and anchoring requirements specified in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

D. Install fuses in fusible devices.

E. Comply with NFPA 70 and NECA 1.

3.03 IDENTIFICATION

A. Comply with requirements in Section 26 05 53 "Identification for Electrical Systems."
   1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
   2. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Acceptance Testing Preparation:
   1. Test insulation resistance for each enclosed switch and circuit breaker, component, connecting supply, feeder, and control circuit.
   2. Test continuity of each circuit.

E. Tests and Inspections:
   1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
   2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
   3. Perform the following infrared scan tests and inspections and prepare reports:
      a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each enclosed switch and circuit breaker. Remove front panels so joints and connections are accessible to portable scanner.
      b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each enclosed switch and circuit breaker 11 months after date of Substantial Completion.
      c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
   4. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

F. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.

G. Prepare test and inspection reports, including a certified report that identifies enclosed switches and circuit breakers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.05 ADJUSTING

A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Section 26 05 73 "Overcurrent Protective Device Coordination Study."

END OF SECTION 26 28 16

SECTION 26 31 00
PHOTOVOLTAIC COLLECTORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. PV system description.

B. Manufactured PV units.

C. PV module framing.

D. PV array construction.

E. Inverters.

F. System overcurrent protection.

G. Mounting structures.

1.02 RELATED DOCUMENTS

A. Section 26 00 00 “General Electrical Requirements.”

1.03 DEFINITIONS

A. ETFE: Ethylene tetrafluoroethylene.

B. FEP: Fluorinated ethylene propylene.

C. IP Code: Required ingress protection to comply with IEC 60529.

D. MPPT: Maximum power point tracking.

E. PTC: PVUSA Test Condition. Commonly regarded as a "real-world" measure of PV output. See below for definition of "PVUSA."

F. PV: Photovoltaic.

G. PVUSA: Photovoltaics for Utility Systems Applications.

H. STC: Standard Test Conditions defined in IEC 61215.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for PV panels.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: For PV modules.
   1. Include plans, elevations, sections, and mounting details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Detail fabrication and assembly.
   4. Include diagrams for power, signal, and control wiring.

C. Delegated-Design Submittal: For solar photovoltaic on rooftop, in addition to submittals listed above, indicate compliance with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.05 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

B. Sample Warranty: For manufacturer's special materials and workmanship warranty and minimum power output warranty.

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For PV modules to include in operation and maintenance manuals.

1.07 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of PV modules that fail in materials or workmanship within specified warranty period.
   1. Manufacturer's materials and workmanship warranties include, but are not limited to, the following:
      a. Faulty operation of PV modules.
   2. Warranty Period: 5 years from date of Substantial Completion.

B. Manufacturer's Special Minimum Power Output Warranty: Manufacturer agrees to repair or replace components of PV modules that fail to exhibit the minimum power output within specified warranty period. Special warranty, applying to modules only, applies to materials only, on a prorated basis, for period specified.
   1. Manufacturer's minimum power output warranties include, but are not limited to, the following warranty periods, from date of Substantial Completion:
      a. Specified minimum power output to 90 percent or more, for a period of 15 years.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
   1. LG.
   2. Lumos.
   3. Mission Solar.
   4. SolarTech Universal.
   5. Tesla.

2.02 SCOPE

A. Rooftop Solar photovoltaic (PV) is a delegated design. Contractor to provide full design, construction and shop drawings of the PV system with string inverters or central inverter for a maximum of 99.5 KW rating. Contractor shall determine the cost effective option between two system and system shall be tied to the main services as shown on the single line diagrams from bid set.

B. Contractor shall coordinate with utility for their requirements related to rapid shut down or any additional requirements.

2.03 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Hazardous Locations: FM Global approved for NFPA 70, Class 1, Division 2, Group C and Group D.

C. Seismic Qualification Certificates: For Inverter, combiner box, accessories, and components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

2.04 PV CAPACITIES AND CHARACTERISTICS

A. Minimum Electrical Characteristics:

1. Rated Open-Circuit Voltage: 41Vdc
2. Maximum System Voltage: 1000Vdc
3. Maximum Power at Voltage (Vpm): 500w.
4. Short-Circuit Temperature Coefficient: 10.6/deg C.
5. Rated Short-Circuit Current (Isc): 20A max.
6. Maximum System: 1000 V dc.
7. Rated Operation Current (Imp): 7.5A.
8. Maximum Power at STC (Pmax): 300w

2.05 PV SYSTEMS DESCRIPTION

A. Stand-Alone PV System: Collectors connected to provide power to Project dc and ac loads through an energy storage system.
   1. A 3 to 6 module array to generate a total nominal rated output of 99.5KW.
   2. System Components:
      a. PV modules.
      b. Array frame.
      c. Charge controller.
      d. Energy storage.
      e. Inverter.
      f. Overcurrent protection, disconnect, and rapid shutdown devices.
      g. Mounting structure.

2.06 MANUFACTURED PV UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
   1. LG
   2. Lumos
   3. Mission Solar
   4. SolarTech Universal
   5. Tesla

B. Cell Materials: Monocrystalline.
   1. c-Si.
   2. Gallium arsenide (GaAs).

C. Bypass Diode Protection: external.

D. Junction Box:
   1. Size: 1.56 by 3.96 by 0.52 inch (39.6 by 100.6 by 13.2 mm).
   2. Fully potted, vandal resistant.
   3. IP Code: IP67.
   4. Flammability Test: UL 1703.

E. Output Cabling:
   1. 0.158 inch (4 mm).
   2. MC4 connectors.
   3. Two-Conductor Harness: No traditional return wire is needed from the end of a row back to the source combiner.

F. Series Fuse Rating: 30A or less.

2.07 PV MODULE FRAMING

A. PV laminates mounted in anodized extruded-aluminum frames.
   1. Entire assembly UL listed for electrical and fire safety, Class A, according to UL 1703, and complying with IEC 61215.
   2. Frame strength exceeding requirements of certifying agencies in subparagraph above.
   3. Finish: Anodized aluminum.

a. Alloy and temper recommended by framing manufacturer for strength, corrosion resistance, and application of required finish.
b. Color: As indicated by manufacturer's designations.

4. Finish: High-performance organic finish.
   a. Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent PVC resin by weight.
   b. Color: As indicated by manufacturer's designations.
5. Finish: Baked-enamel finish.
   a. Color: As indicated by manufacturer's designations.

2.08 PV ARRAY CONSTRUCTION

A. Framing:
   1. Material: Extruded aluminum.
   2. Maximum System Weight: Less than 4 lb/sq. ft. (19.53 kg/sq. m).
   3. Raceway Cover Plates: Aluminum.

B. Flat-Roof Mounting:
   1. No roof penetrations.
   2. Self-ballasting.
   3. Wind-tunnel tested to 110-mph (160-km/h) wind.
   4. Service Life: 15 years.
   5. Freestanding system.

2.09 INVERTER

A. Inverter Type: Central.

2.10 MANUFACTURED INVERTER

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
   1. SMA America
   2. SolarEdge
   3. Yaskawa Solectria
   4. Outback

B. Inverter Electrical Characteristics:
   1. Maximum Recommended PV Input Power: 50KW.
   2. Maximum Open-Circuit Voltage: 800V.
   3. MPPT Voltage Range: 150 – 1000V
   4. Maximum Input Current: 120A.
   5. Number of String Inputs: 120A.
   6. Number of Independent MPPT Circuits: 6.
   7. Nominal Output Voltage: 480/277V.
   8. Maximum Output Current: 40A.
   9. Peak Efficiency: 97.5 percent min.
   10. DC/AC Terminal Range (AWG): 4 to 4/0.
   11. Communications Interface: RS 485 Ethernet.

C. Operating Conditions:
   1. Operating Ambient Temperatures: Minus 4 to plus 122 deg F (20 to plus 50 deg C).
   2. Storage Temperature: Minus 40 to plus 122 deg F (minus 40 to plus 50 deg C).
   3. Relative Humidity: Zero to 95 percent, noncondensing.

D. Charge controllers shall have the following:
   1. Overcurrent protection.
   2. Generator input breaker box.
   3. Automatic transfer relay.

4. Digital display.
5. Transformer.
6. Disconnect switch.
7. Shunt controller.
8. Shunt regulator.
9. Surge overload protection.

E. Enclosure:
1. NEMA 250 Type 4X.
2. Enclosure Material: Galvanized steel.
3. Cooling Methods:
a. Fan convection cooling.
b. Passive cooling.
4. Protective Functions:
a. AC over/undervoltage.
b. AC over/underfrequency.
c. Ground overcurrent.
d. Overtemperature.
e. AC and dc overcurrent.
f. DC overvoltage.
5. Standard LCD, four lines, 20 characters, with user display and on/off toggle switch.

F. Disconnects: Rated for system voltage and conductor.

G. Regulatory Approvals:
1. IEEE 1547.1.
2. IEEE 1547.3.
3. UL 1741.

2.11 SYSTEM OVERCURRENT PROTECTION

A. Circuit Breakers: 150A.

2.12 MOUNTING STRUCTURES

A. Roof Mount: Extruded aluminum, two rails, tilt legs, and roof standoffs.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrate areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Do not begin installation until mounting surfaces have been properly prepared.

C. If preparation of mounting surfaces is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

D. Examine modules and array frame before installation. Reject modules and arrays that are wet, moisture damaged, or mold damaged.

E. Examine roofs, supports, and supporting structures for suitable conditions where PV system will be installed.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Comply with NECA 1.

B. Coordinate layout and installation of PV panels with roof assembly and other construction.

C. Support PV panel assemblies independent of supports for other elements such as roof and support assemblies, enclosures, vents, pipes, and conduits. Support assembly to prevent twisting from eccentric loading.

D. Install PV inverters, rapid shutdown, and system control in locations indicated on Drawings.

E. Install weatherseal fittings and flanges where PV panel assemblies penetrate exterior elements such as walls or roofs. Seal around openings to make weathertight. See Section 07 92 00 "Joint Sealants" for materials and application.

F. Seismic Restraints: Comply with requirements for seismic-restraint devices specified in Section 26 05 48.16 "Seismic Controls for Electric Systems."

G. Wiring Method: Install cables in raceways.

H. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.03 CONNECTIONS

A. Coordinate PV panel cabling to equipment enclosures to ensure proper connections.

B. Coordinate installation of utility-interactive meter with utility.

C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

D. Make splices, terminations, and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

END OF SECTION 26 31 00

SECTION 26 32 13
ENGINE GENERATORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Packaged engine-generator sets for standby power supply with the following features:
   1. Diesel engine.
   2. Generators
   3. Unit-mounted cooling system.
   4. Unit-mounted control and monitoring.
   5. Performance requirements for sensitive loads.
   6. Load banks.
   7. Outdoor enclosure.
   8. Battery charger.
   9. Muffler.
   10. Exhaust piping external to set.
   11. Remote annunciator.
   12. Remote radiator.
   13. Remote stop switch.
   14. Starting battery and charger.

1.02 RELATED REQUIREMENTS

A. Section 26 05 26 "Grounding and Bonding for Electrical Systems."

B. Section 26 24 16 “Panelboards”

C. Section 26 28 16 Enclosed Switches and Circuit Breakers.

D. Section 26 36 00 "Transfer Switches" for transfer switches including sensors and relays to initiate automatic-starting and -stopping signals for engine-generator sets.

1.03 RELATED DOCUMENTS

A. Section 26 00 00 “General Electrical Requirements.”

1.04 DEFINITIONS

A. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.

B. LP: Liquid petroleum.

C. NETA: InterNational Electrical Testing Association

D. Steady-State Voltage Modulation: The uniform cyclical variation of voltage within the operational bandwidth, expressed in Hertz or cycles per second.

E. OSHPD: Office of Statewide Health Planning and Development

1.05 STANDARDS

A. National Electrical Manufacturer's Association (NEMA).

B. National Fire Protection Association (NFPA).

1.06 ACTION SUBMITTALS

A. Product Data: For each type of packaged engine generator indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. In addition, include the following:
   1. Thermal damage curve for generator.
   2. Time-current characteristic curves for generator protective device.
   3. Technical data sheets of each equipment.

B. Shop Drawings: Design of the concrete base or structural design of the generator shall be delegated to the contractor and approved by the approved structural engineer of record.

C. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Dimensioned outline plan and elevation drawings of engine-generator set and other components specified.
   2. Brake horsepower of engine.
   3. Fuel consumption and floor plans showing fuel line connections, pipe sizes and pump requirements.
   4. Cooling air requirements and its design.
   5. Noise db level.
   6. Electrical characteristics of generator, voltage regulator, and battery charger.
   7. Load graphs and load calculations to show the capabilities to supply the largest motor while connected to the full load. It shall also indicate the sequencing of the emergency load start-up.
   8. Control panel.
   9. Elevations of equipment including front elevation, side elevation, top view for complete assembly.
   10. Engine and generator details, including governor, turbocharger, exciter, after/intercooler, main fuel storage tank and associated required pumping drawings. The work shall indicate the method of the installation of the electrical, mechanical and plumbing work.
   11. Certified independent test lab data of generator characteristics, verification of emissions conformance to latest applicable regulations of CARB and AQMD.
   12. Main line circuit breaker.
   13. List showing manufacturer of each major component.
   14. Design Calculations: Signed and sealed by a qualified professional engineer. Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
   15. Vibration Isolation Base Details: Signed and sealed by a qualified professional engineer. Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include base weights.
   16. Wiring Diagrams: Power, signal, and control wiring. Differentiate between manufacturer installed and field installed wiring.
   17. Indicate name and place of manufacture of each major component.

1.07 INFORMATIONAL SUBMITTALS

A. Manufacturer Seismic Qualification Certification: Submit certification that engine-generator set, batteries, battery racks, accessories, and components will withstand seismic forces include the following:
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
      a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
      b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
   2. Manufacturer's dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Coordination Drawings: Pad sizing and seismic calculations shall be delegated to the contractor and approved by the approved structural engineer of record. Floor plans, drawn to scale (1/4"=1'-0"), showing dimensioned layout, required working clearances, and required area above and around Engine Generator set where pipe and ducts are prohibited. Show Engine Generator layout and relationships between electrical components and adjacent structural and

mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

C. Manufacturer's certified letter stating that unit complies with all California State Codes, Uniform Building Code (UBC), California Air Resource Board (CARB), California Electrical Code (CEC), latest edition and supplements and National Electric Manufacturer's Association (NEMA) standards for an emergency power plant.

D. Sound levels shall be measured in the octave bands, having center frequencies from 31.5 Hz to 8000 Hz according to the procedures given in American National Standards Institute (ANSI) Standards Sl.13.71. Measurements shall be made in at least four locations as described in the standard and shall be made at a distance of one meter from the surface of the equipment. Sound levels generated shall be within acceptable limits.

E. Qualification Data: For installer, manufacturer and testing agency.

F. Source quality-control test reports.
   1. Certified summary of prototype-unit test report.
   2. Certified Test Reports: For components and accessories that are equivalent, but not identical, to those tested on prototype unit.
   3. Certified Summary of Performance Tests: Certify compliance with specified requirement to meet performance criteria for sensitive loads.
   4. Certified Test Report of factory tests on units to be shipped for this Project, showing evidence of compliance with specified requirements. Submit within two (2) weeks of completion of tests. Report shall be signed by a factory testing engineer.
   5. Report of sound generation.
   6. Report of exhaust emissions showing compliance with applicable regulations.
   7. Certified Torsional Vibration Compatibility: Comply with NFPA 110.

G. Field quality-control test reports.

H. Warranty: Special warranty specified in this Section.

1.08 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For packaged engine generators to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 1-11 "Operation and Maintenance Data," include the following:
   1. List of tools and replacement items recommended to be stored at Project for ready access. Include part and drawing numbers, current unit prices, and source of supply (address and phone number of sources).

1.09 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Fuses: One for every 10 of each type and rating, but no fewer than one of each.
   2. Indicator Lamps: Two for every six of each type used, but no fewer than two of each.
   3. Filters: One set each of lubricating oil, fuel, and combustion-air filters.

1.10 QUALITY ASSURANCE

A. If alternate manufacturer of products other than what are specified in this section are submitted, all necessary documents not limited to cut sheets, technical information, test reports from recognized testing labs and factory test reports shall be submitted to the satisfaction of the Contracting Agency/engineer to ensure quality and conformance to the specifications. Additional testing shall be undertaken if it is concluded by the Contracting Agency/engineer that the submitted test reports are either insufficient or do not include all tests necessary for product acceptance. The tests shall be conducted by a recognized lab acceptable to the Contracting Agency/engineer and all tests shall be witnessed by Contracting Agency's/engineer's personnel. All testing procedures and test results shall be satisfactory to the Contracting Agency/engineer. Contractor shall be responsible for arranging the tests, for transportation, food and lodging for minimum of one Contracting Agency's/engineer's representative to witness the test at the testing lab. Include all costs for the above in the bid.

B. Manufacturer Qualifications: A qualified manufacturer. Maintain, within 75 miles of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.

C. Contractor shall ensure that the manufacturer has a minimum of 15 years experience in the production of Emergency/Standby Engine Generators similar to the type and size specified in this project. Furnish a list of three (3) contacts for the three (3) similar projects completed within the last 5 years. Include name, tele no and email of the facility engineers.

D. Manufacturer shall have ISO 9001 or 9002 Certification.

E. Manufacturer shall have ability to readily provide replacement parts for a minimum period of ten (10) years, from the date of completion of the project. Furnish a letter from the manufacturer confirming the availability.

F. Engine Generators shall be assembled at the manufacturer's own manufacturing facility using its own major devices (e.g., circuit breakers) for the assembly. These devices shall be normally carried by the manufacturer as standard catalog items.

G. Engine Generators shall comply with seismic zone applicable to the project. Unless otherwise indicated, verify requirements with Architect or Structural Engineer of Record (SEOR). Provide certified test reports of shake table test done by manufacturer on similar units.

H. Materials and equipment shall be new, modern in design and shall not have been in prior service except as required by factory tests. Major components (e.g. engines, generators, governers, controls) shall be manufactured within six months of installation.

I. Source Limitations: Obtain packaged engine generators, and accessories through one source from a single manufacturer through a local distributor. Manufacturer of overcurrent devices shall match other power distribution equipment on the project.

J. Comply with ASME B15.1.

K. Comply with NFPA 37.

L. Comply with NFPA 70.

M. Comply with NFPA 99.

N. Comply with NFPA 110 requirements for Level 1 emergency power supply system.

O. Comply with UL 2200.

P. Engine Exhaust Emissions: Comply with applicable state and local government requirements. Engine Exhaust Emissions: Apply and obtain a permit to construct and a permit to operate from Air Pollution Control District (authority having jurisdiction of the project) including payment of permit fees and health risk assessment fees. Contractor shall submit complete emission data along with the shop drawings for the generator set within six (6) weeks of receiving Notice to Proceed. Contractor shall not start installation without proper permits from the authority having jurisdiction.

Q. Noise Emission: Comply with applicable state and local government requirements for maximum noise level at adjacent property boundaries due to sound emitted by generator set including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.

R. Product Options: Drawings indicate size, profiles, and dimensional requirements of engine generators and are based on the specific system indicated. Refer to Part 2 "Product Requirements."

S. Electrical Components, Devices, and Accessories: UL Listed and labeled as defined in NFPA 70, Article 100–and marked for intended location and application.

T. Testing Agency Qualifications: Member of NETA;
   1. Testing agency shall be an independent company; shall have been a member of NETA for a minimum of ten (10) years and has permanent in-house testing engineers and technicians involved with testing of switchboards, panelboards and OCPDs similar to those specified on this project.
   2. Testing company shall be located with 50 miles radius of the project.

3. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing to supervise on-site testing specified in Part 3.

U. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
   1. Maintenance Proximity: Not more than four hours' normal travel time from Installer's place of business to Project site.
   2. Engineering Responsibility: Preparation of data for vibration isolators and seismic restraints of engine skid mounts, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

1.11 PROJECT CONDITIONS

A. Environmental Conditions: Engine-generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:
   1. Ambient Temperature: 5 to 40 deg C.
   2. Relative Humidity: 0 to 95 percent.
   3. Altitude: Sea level to 1000 feet.

B. Unusual Service Conditions: Engine-generator equipment and installation are required to operate under the following conditions:
   1. High salt-dust content in the air due to salt storage.

1.12 COORDINATION

A. Coordinate size and location of concrete bases for package engine generators. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

B. Coordinate size and location of roof curbs, equipment supports, and roof penetrations for remote radiators.

1.13 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of packaged engine generators and associated auxiliary components that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: 2 years from date of Substantial Completion.

1.14 MAINTENANCE SERVICE

A. Initial Maintenance Service: Beginning at Substantial Completion, provide 24 months' full maintenance by skilled employees of manufacturer's designated service organization. Include quarterly exercising to check for proper starting, load transfer, and running under load. Include routine preventive maintenance as recommended by manufacturer and adjusting as required for proper operation. Provide parts and supplies same as those used in the manufacture and installation of original equipment.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Caterpillar; Engine Div.
   2. Onan/Cummins Power Generation; Industrial Business Group
   3. Kohler Co.; Generator Division.
   4. MTU Onsite Energy Generator.
   5. Generac

2.02 ENGINE-GENERATOR SET

A. Factory-assembled and -tested, engine-generator set.

B. Mounting Frame: Maintain alignment of mounted components without depending on concrete foundation; and have lifting attachments.
   1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and generator-set center of gravity.

C. Capacities and Characteristics:
   1. Power Output Ratings: Nominal ratings as indicated
   2. Output Connections: Three-phase, four wire. Refer to drawings for more information.
   3. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.

D. Generator-Set Performance:
   1. Steady-State Voltage Operational Bandwidth: 3 percent of rated output voltage from no load to full load.
   2. Transient Voltage Performance: Not more than 20 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within three seconds.
   3. Steady-State Frequency Operational Bandwidth: 0.5 percent of rated frequency from no load to full load.
   4. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
   5. Transient Frequency Performance: Less than 5 percent variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within five seconds.
   6. Output Waveform: At no load, harmonic content measured line to line or line to neutral shall not exceed 5 percent total and 3 percent for single harmonics. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
   7. Sustained Short-Circuit Current: For a 3-phase, bolted short circuit at system output terminals, system shall supply a minimum of 250 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to generator system components.
   8. Start Time: Comply with NFPA 110, Type 10, system requirements.

E. Generator-Set Performance for Sensitive Loads:
   1. Oversizing generator compared with the rated power output of the engine is permissible to meet specified performance.
      a. Nameplate Data for Oversized Generator: Show ratings required by the Contract Documents rather than ratings that would normally be applied to generator size installed.
   2. Steady-State Voltage Operational Bandwidth: 1 percent of rated output voltage from no load to full load.
   3. Transient Voltage Performance: Not more than 10 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within 0.5 second.
   4. Steady-State Frequency Operational Bandwidth: Plus or minus 0.25 percent of rated frequency from no load to full load.
   5. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
   6. Transient Frequency Performance: Less than 2-Hz variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within three seconds.
   7. Output Waveform: At no load, harmonic content measured line to neutral shall not exceed 2 percent total with no slot ripple. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.

8. Sustained Short-Circuit Current: For a 3-phase, bolted short circuit at system output terminals, system shall supply a minimum of 300 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to winding insulation or other generator system components.
9. Excitation System: Performance shall be unaffected by voltage distortion caused by nonlinear load.
    a. Provide permanent magnet excitation for power source to voltage regulator.
10. Start Time: Comply with NFPA 110, Type 10, system requirements.

2.03 ENGINE

A. Fuel: ASTM D975-17

B. Rated Engine Speed: 3600 rpm.

C. Maximum Piston Speed for Four-Cycle Engines: 2250 fpm.

D. Lubrication System: The following items are mounted on engine or skid:
1. Filter and Strainer: Rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.
2. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
3. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.

E. Engine Fuel System:
1. Main Fuel Pump: Mounted on engine. Pump ensures adequate primary fuel flow under starting and load conditions.
2. Relief-Bypass Valve: Automatically regulates pressure in fuel line and returns excess fuel to source.
3. Dual Natural Gas with LP-Gas Backup (Vapor-Withdrawal) System:
    a. Carburetor.
    b. Secondary Gas Regulators: One for each fuel type.
    c. Fuel-Shutoff Solenoid Valves: One for each fuel source.
    d. Flexible Fuel Connectors: One for each fuel source.

F. Coolant Jacket Heater: Electric-immersion type, factory installed in coolant jacket system. Comply with NFPA 110 requirements for Level 1 equipment for heater capacity.

G. Governor: Mechanical.

H. Cooling System: Closed loop, liquid cooled, with radiator factory mounted on engine-generator-set mounting frame and integral engine-driven coolant pump.
1. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
2. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
3. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
4. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
5. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.
    a. Rating: 50-psig maximum working pressure with coolant at 180 deg F, and noncollapsible under vacuum.
    b. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.

I. Cooling System: Closed loop, liquid cooled, with remote radiator and integral engine-driven coolant pump.
1. Configuration: Vertical air discharge.

2. Radiator Core Tubes: Aluminum
5. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
6. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
7. Fan: Driven by totally enclosed electric motor with sealed bearings.
8. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
9. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.

J. Muffler/Silencer: Critical type, super quiet, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements. Provide stainless steel type muffler including pipe connection to engine where these are exposed to weather.
1. Minimum sound attenuation of 25 dB at 500 Hz.
2. Sound level measured at a distance of 23 feet from exhaust discharge after installation is complete shall be 75 dBA or less.

K. Muffler/Silencer: Industrial type, super quiet, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine back-pressure requirements. Provide stainless steel type muffler including pipe connection to engine where these are exposed to weather.
1. Minimum sound attenuation of 12 dB at 500 Hz.
2. Sound level measured at a distance of 25 feet from exhaust discharge after installation is complete shall be 87 dBA or less.

L. Air-Intake Filter: Standard-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator. Provide new filters after completion for field tests and before acceptance by the Contracting Agency.

M. Starting System: 24-V electric, with negative ground.
1. Components: Sized so they will not be damaged during a full engine-cranking cycle with ambient temperature at maximum specified in Part 1 "Project Conditions" Article.
2. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.
3. Cranking Cycle: As required by NFPA 110 for system level specified.
4. Battery: Adequate capacity within ambient temperature range specified in Part 1 "Project Conditions" Article to provide specified cranking cycle at least three times without recharging.
5. Battery Cable: Size as recommended by engine manufacturer for cable length indicated. Include required interconnecting conductors and connection accessories.
6. Battery Compartment: Factory fabricated of metal with acid-resistant finish and thermal insulation. Thermostatically controlled heater shall be arranged to maintain battery above 10 deg C regardless of external ambient temperature within range specified in Part 1 "Project Conditions" Article. Include accessories required to support and fasten batteries in place.
7. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.
8. Battery Charger: Current-limiting, automatic-equalizing and float-charging type. Unit shall comply with UL 1236 and include the following features:
    a. Operation: Equalizing-charging rate of 10 A shall be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit shall then be automatically switched to a lower float-charging mode and shall continue to operate in that mode until battery is discharged again.

b. Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from minus 40 deg C to plus 60 deg C to prevent overcharging at high temperatures and undercharging at low temperatures.
c. Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.
d. Ammeter and Voltmeter: Flush mounted in door. Meters shall indicate charging rates.
e. Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition shall close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.
f. Enclosure and Mounting: NEMA 250, Type 1, wall-mounted cabinet.

2.04 FUEL OIL STORAGE

A. Comply with NFPA 30. Fuel system shall be complete and shall consist of a dual filtering system, fuel storage tank, day tank and engine fuel pump. Provide fuel for testing and full tank after testing.

B. Day Tank: Comply with UL 142, freestanding, factory-fabricated fuel tank assembly, with integral, float-controlled transfer pump and the following features:
1. Containment: Integral rupture basin with a capacity of 150 percent of nominal capacity of day tank.
a. Leak Detector: Locate in rupture basin and connect to provide audible and visual alarm in the event of day-tank leak. Alarm shall be remotely monitored by BMS system.
2. Tank Capacity: 48 hours' operation at 100 percent of rated power output of engine-generator system without being refilled.
3. Pump Capacity: Exceeds maximum flow of fuel drawn by engine-mounted fuel supply pump at 110 percent of rated capacity, including fuel returned from engine.
4. Low-Level Alarm Sensor: Liquid-level device operates alarm contacts at 25 percent of normal fuel level.
5. High-Level Alarm Sensor: Liquid-level device operates alarm and redundant fuel shutoff contacts at midpoint between overflow level and 100 percent of normal fuel level.
6. Piping Connections: Factory-installed fuel supply and return lines from tank to engine; local fuel fill, vent line, overflow line; and tank drain line with shutoff valve.
7. Redundant High-Level Fuel Shutoff: Actuated by high-level alarm sensor in day tank to operate a separate motor device that disconnects day-tank pump motor. Sensor shall signal solenoid valve, located in fuel suction line between fuel storage tank and day tank, to close. Both actions shall remain in shutoff state until manually reset. Shutoff action shall initiate an alarm signal to control panel but shall not shut down engine-generator set.

C. Base-Mounted, Double-Wall Fuel Oil Tank: Factory installed and piped, complying with UL 142 fuel oil tank. Features include the following:
1. Tank level indicator.
2. Capacity: Fuel for 4 hours' continuous operation at 100 percent rated power output.
3. Leak detection in interstitial space.
4. Vandal-resistant fill cap.
5. Containment Provisions: Comply with requirements of authorities having jurisdiction.

2.05 CONTROL AND MONITORING

A. Automatic Starting System Sequence of Operation: When mode-selector switch on the control and monitoring panel is in the automatic position, remote-control contacts in one or more separate automatic transfer switches initiate starting and stopping of generator set. When mode-selector switch is switched to the on position, generator set starts. The off position of same switch initiates generator-set shutdown. When generator set is running, specified system or equipment failures or derangements automatically shut down generator set and initiate alarms. Operation of a remote emergency-stop switch also shuts down generator set.

B. Manual Starting System Sequence of Operation: Switching on-off switch on the generator control panel to the on position starts generator set. The off position of same switch initiates generator-set shutdown. When generator set is running, specified system or equipment failures or derangements automatically shut down generator set and initiate alarms. Operation of a remote emergency-stop switch also shuts down generator set.

C. Configuration:
   1. Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common control and monitoring panel mounted on the generator set. Mounting method shall isolate the control panel from generator-set vibration.
   2. Operating and safety indications, protective devices, basic system controls, and engine gages shall be groups in a common wall mounted control and monitoring panel.
   3. Operating and safety indications, protective devices, basic system controls, engine gages, instrument transformers, generator disconnect switch or circuit breaker, and other indicated components shall be grouped in a combination control and power panel. Control and monitoring section of panel shall be isolated from power sections by steel barriers. Panel features shall include the following:
      a. Switchboard Construction: Freestanding unit complying with Section 26 24 13 "Switchboards."
      b. Current and Potential Transformers: Instrument accuracy class

D. Configuration: Operating and safety indications, protective devices, basic system controls, engine gages, instrument transformers, generator disconnect switch or circuit breaker, and other indicated components shall be grouped in a combination control and power panel. Control and monitoring section of panel shall be isolated from power sections by steel barriers. Panel features shall include the following:
   1. Wall-Mounting Cabinet Construction: Rigid, self-supporting steel unit complying with NEMA ICS 6. Power bus shall be copper. Bus, bus supports, control wiring, and temperature rise shall comply with UL 891.
   2. Switchboard Construction: Freestanding unit complying with Section 26 24 13 "Switchboards."
   3. Current and Potential Transformers: Instrument accuracy class.

E. Indicating and Protective Devices and Controls: As required by NFPA 110 for Level 1 system, and the following:
   1. AC voltmeter.
   2. AC ammeter.
   3. AC frequency meter.
   4. DC voltmeter (alternator battery charging).
   5. Engine-coolant temperature gage.
   6. Engine lubricating-oil pressure gage.
   7. Running-time meter.
   8. Ammeter-voltmeter, phase-selector switch(es).
   9. Generator-voltage adjusting rheostat.
   10. Fuel tank derangement alarm.
   11. Fuel tank high-level shutdown of fuel supply alarm.
   12. Generator overload.

F. Indicating and Protective Devices and Controls:
   1. AC voltmeter.
   2. AC ammeter.
   3. AC frequency meter.
   4. DC voltmeter (alternator battery charging).
   5. Engine-coolant temperature gage.
   6. Engine lubricating-oil pressure gage.
   7. Running-time meter.
   8. Ammeter-voltmeter, phase-selector switch(es).
   9. Generator-voltage adjusting rheostat.

10. Start-stop switch.
11. Overspeed shutdown device.
12. Coolant high-temperature shutdown device.
13. Coolant low-level shutdown device.
14. Oil low-pressure shutdown device.
15. Fuel tank derangement alarm.
16. Fuel tank high-level shutdown of fuel supply alarm.
17. Generator overload.

G. Supporting Items: Include sensors, transducers, terminals, relays, and other devices and include wiring required to support specified items. Locate sensors and other supporting items on engine or generator, unless otherwise indicated.

H. Connection to Data Link: A separate terminal block, factory wired to Form C dry contacts, for each alarm and status indication is reserved for connections for data-link transmission of indications to remote data terminals. Data system connections to terminals are covered in Section 26 09 13 "Electrical Power Monitoring and Control."

I. Common Remote Audible Alarm: Comply with NFPA 110 requirements for Level 1 systems. Include necessary contacts and terminals in control and monitoring panel.
1. Overcrank shutdown.
2. Coolant low-temperature alarm.
3. Control switch not in auto position.
4. Battery-charger malfunction alarm.
5. Battery low-voltage alarm.

J. Common Remote Audible Alarm: Signal the occurrence of any events listed below without differentiating between event types. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset.
1. Engine high-temperature shutdown.
2. Lube-oil, low-pressure shutdown.
3. Overspeed shutdown.
4. Remote emergency-stop shutdown.
5. Engine high-temperature pre-alarm.
6. Lube-oil, low-pressure pre-alarm.
7. Fuel tank, low-fuel level.
8. Low coolant level.

K. Remote Alarm Annunciator: Comply with NFPA 99. An LED labeled with proper alarm conditions shall identify each alarm event and a common audible signal shall sound for each alarm condition. Silencing switch in face of panel shall silence signal without altering visual indication. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset. Cabinet and faceplate are surface- or flush-mounting type to suit mounting conditions indicated.

L. Remote Emergency-Stop Switch: Red mush-room head type with an engraved label “EMERGENCY STOP SWITCH”. Flush; wall mounted, unless otherwise indicated; and labeled. Push button shall be protected from accidental operation with a transparent see-thru lexan cover.

2.06 GENERATOR OVERCURRENT AND FAULT PROTECTION

A. Generator Circuit Breaker (400A Frame and above): Molded-case, electronic-trip type; 100 percent rated; complying with UL 489.
1. Tripping Characteristics: Field adjustable long-time and short-time delay and instantaneous. Trip unit shall be field replaceable.
2. Trip Settings: Selected to coordinate with generator thermal damage curve.
3. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
4. Mounting: Adjacent to or integrated with control and monitoring panel.

5. Enclosure: Provide NEMA 4X stainless steel enclosure for breakers mounted exposed to weather.

B. Generator Disconnect Switch: Molded-case type, 100 percent rated.
   1. Rating: Matched to generator output rating.
   2. Shunt Trip: Connected to trip switch when signaled by generator protector or by other protective devices.
   3. Enclosure: Provide NEMA 4X stainless steel enclosure for breakers mounted exposed to weather.

C. Generator Protector: Microprocessor-based unit shall continuously monitor current level in each phase of generator output, integrate generator heating effect over time, and predict when thermal damage of alternator will occur. When signaled by generator protector or other generator-set protective devices, a shunt-trip device in the generator disconnect switch shall open the switch to disconnect the generator from load circuits. Protector shall perform the following functions:
   1. Initiates a generator overload alarm when generator has operated at an overload equivalent to 110 percent of full-rated load for 60 seconds. Indication for this alarm is integrated with other generator-set malfunction alarms.
   2. Under single or three-phase fault conditions, regulates generator to 300 percent of rated full-load current for up to 10 seconds.
   3. As overcurrent heating effect on the generator approaches the thermal damage point of the unit, protector switches the excitation system off, opens the generator disconnect device, and shuts down the generator set.
   4. Senses clearing of a fault by other overcurrent devices and controls recovery of rated voltage to avoid overshoot.

D. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications. Alarm shall be remotely monitored by BMS.

2.07 GENERATOR, EXCITER, AND VOLTAGE REGULATOR

A. Comply with NEMA MG 1.

B. Drive: Generator shaft shall be directly connected to engine shaft. Exciter shall be rotated integrally with generator rotor.

C. Electrical Insulation: Class H or Class F.

D. Stator-Winding Leads: Brought out to terminal box to permit future reconnection for other voltages if required.

E. Construction shall prevent mechanical, electrical, and thermal damage due to vibration, overspeed up to 125 percent of rating, and heat during operation at 110 percent of rated capacity.

F. Enclosure: Drip proof.

G. Instrument Transformers: Mounted within generator enclosure.

H. Voltage Regulator: Solid-state type, separate from exciter, providing performance as specified.
   1. Adjusting rheostat on control and monitoring panel shall provide plus or minus 5 percent adjustment of output-voltage operating band.

I. Strip Heater: Thermostatically controlled unit arranged to maintain stator windings above dew point.

J. Windings: Two-thirds pitch stator winding and fully linked amortisseur winding.

K. Sub transient Reactance: 12 percent, maximum.

2.08 OUTDOOR GENERATOR-SET ENCLOSURE

A. Description: Vandal-resistant, weatherproof steel housing or NEMA 4X stainless steel, wind resistant up to 100 mph. Roof shall be pitched for drainage and overlapping on all sides. Exhaust pipe opening shall be fitted watertight sealing material. Provide a drip shield around the exhaust pipe opening. Multiple panels shall be lockable and provide adequate access to components

requiring maintenance. Panels shall be removable by one person without tools. Instruments and control shall be mounted within enclosure and accessible by opening the hinged panel doors. Panel doors shall swing out 180 degrees.

B. Description: Prefabricated or pre-engineered walk-in enclosure of sufficient size to allow code required clearances on all sides and maintenance. Provide with the following features:
   1. Construction: Galvanized-steel, or metal-clad, integral structural-steel-framed building erected on concrete foundation. .
   2. Structural Design and Anchorage: Comply with ASCE 7 for wind loads.
   3. Seismic Design: Comply with ASCE 7, Chapter 13, as modified by 2016 California Building Code sections 1613A and 1616A.
   4. Enclosure shall have sound attenuation to reduce the noise to 70dB at 21 feet.
   5. Space Heater: Thermostatically controlled and sized to prevent condensation.
   6. Louvers: Equipped with bird screen and filter arranged to permit air circulation when engine is not running while excluding exterior dust, birds, and rodents.
   7. Hinged Doors: With padlocking provisions.
   8. Ventilation: Louvers equipped with bird screen and filter arranged to permit air circulation while excluding exterior dust, birds, and rodents.
   9. Thermal Insulation: Manufacturer's standard materials and thickness selected in coordination with space heater to maintain winter interior temperature within operating limits required by engine-generator-set components.
   10. Muffler Location: Within enclosure. Verify with Contracting Agency if enclosure walls need to be extended up to hide the external muffler so that it is not visible from grade.

C. Engine Cooling Airflow through Enclosure: Maintain temperature rise of system components within required limits when unit operates at 110 percent of rated load for 2 hours with ambient temperature at top of range specified in system service conditions.
   1. Louvers: Fixed-engine, cooling-air inlet and discharge. Storm-proof and drainable louvers prevent entry of rain and snow.
   2. Automatic Dampers: At engine cooling-air inlet and discharge. Dampers shall be closed to reduce enclosure heat loss in cold weather when unit is not operating.

D. Lighting panelboard: Provide a 100A, 120/208V single phase 3 W NEMA 1 lighting panel with main circuit breaker inside the walk-in enclosure. Panel shall have bolt-on type main and branch breakers to serve branch circuits for block heaters, battery charger, interior and exterior lights, outlets, cooling fan plus minimum three spare 20A-1 pole breakers.

E. Interior Lights with Switch: Factory-wired, vapor proof-type fluorescent fixtures within housing; arranged to illuminate controls and accessible interior. Arrange for external electrical connection.
   1. AC lighting system and connection point for operation when remote source is available.
   2. DC lighting system for operation when remote source and generator are both unavailable.

F. Convenience Outlets: Specification grade, factory wired GFCI. Arrange for external electrical connection.

2.09 MOTORS

A. General requirements for motors are specified in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."
   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   2. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in electrical Sections.
   3. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
   4. Temperature Rise: Match insulation rating.

2.10 VIBRATION ISOLATION DEVICES

A. Elastomeric Isolator Pads: Oil- and water-resistant elastomer or natural rubber, arranged in single or multiple layers, molded with a nonslip pattern and galvanized-steel baseplates of suffi-

cient stiffness for uniform loading over pad area, and factory cut to sizes that match requirements of supported equipment.

1. Material: Standard neoprene
4. Durometer Rating: 50.
5. Number of Layers: 2.

B. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic restraint.
   1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to wind loads or if weight is removed; factory-drilled baseplate bonded to 1/4-inch-thick, elastomeric isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
   2. Outside Spring Diameter: Not less than 80 percent of compressed height of the spring at rated load.
   3. Minimum Additional Travel: 50 percent of required deflection at rated load.
   4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
   5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

C. Provide vibration isolation and flexible connector materials for steel piping.

D. Provide vibration isolation and flexible connector materials for exhaust shroud and ductwork.

E. Vibration isolation devices shall not be used to accommodate misalignments or to make bends

2.11 FINISHES

A. Indoor and Outdoor Enclosures and Components: Manufacturer's standard finish over corrosion-resistant pretreatment and compatible primer. Verify with architect if a custom finish is required.

2.12 SOURCE QUALITY CONTROL

A. Prototype Testing: Factory test engine-generator set using same engine model, constructed of identical or equivalent components and equipped with identical or equivalent accessories.
   1. Tests: Comply with NFPA 110, Level 1 Energy Converters and with IEEE 115.

B. Project-Specific Equipment Tests: Before shipment, factory test engine-generator set and other system components and accessories manufactured specifically for this Project. Perform tests at rated load and power factor. Include the following tests:
   1. One hour at 25 percent load.
   2. One hour at 50 percent load.
   3. Two hours at 75 percent load.
   4. Two hours at 100 percent load.

C. Test data shall be recorded and included in the maintenance manual. The following test data shall be recorded during factory and field tests:
   1. Voltage:
      a. Strip chart for 15 minutes at 75 percent load.
      b. Strip chart for 15 minutes at 100 percent load.
   2. Current:
      a. Strip chart for 15 minutes at 75 percent load.
      b. Strip chart for 15 minutes at 100 percent load.
   3. Frequency:
      a. Strip chart for 15 minutes at 75 percent load.
      b. Strip chart for 15 minutes at 100 percent load.
   4. Oil Pressure: Record in 15-minute intervals during test.
   5. Water Temperature: Record in 15-minute intervals during test.
   6. Water Pressure: Record in 15-minute intervals during test.
   7. Oil Temperature: Record in 15 minute intervals during test.
   8. KW Output: Record in 15-minute intervals during test.
   9. Test shall include testing with cold start including jacket heaters.

10. Test components and accessories furnished with installed unit that are not identical to those on tested prototype to demonstrate compatibility and reliability.
11. Voltage regulation.
12. Transient and steady-state governing.
13. Single-step load pickup.
14. Safety shutdown.
15. Observation of Factory Tests: Provide 14 days' advance notice of tests and opportunity for observation of tests by University's representative.

D. Report factory test results within 10 days of completion of test.
1. Report shall be reviewed, signed by the factory testing engineer. Include name of the engineer, date and location of testing.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine-generator performance.

B. Examine roughing-in of piping systems and electrical connections. Verify actual locations of connections before packaged engine-generator installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Comply with packaged engine-generator manufacturers' written installation and alignment instructions and with NFPA 110.

B. Install packaged engine generator to provide access, without removing connections or accessories, for periodic maintenance.

C. Install packaged engine generator with restrained spring isolators having a minimum deflection of 1 inch on 4-inch-high concrete base. Secure sets to anchor bolts installed in concrete bases.

D. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

3.03 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping and specialties.

B. Connect fuel, cooling-system, and exhaust-system piping adjacent to packaged engine generator to allow service and maintenance.

C. Connect cooling-system water piping to engine-generator set and remote radiator heat exchanger with flexible connectors.

D. Connect engine exhaust pipe to engine with flexible connector.

E. Install exhaust-system piping. Extend to point of termination outside structure. Size piping according to manufacturer's written instructions.
1. Install condensate drain piping for engine exhaust system. Extend drain piping from low points of exhaust system and from muffler to condensate traps and to point of disposition.

F. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

G. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.04 IDENTIFICATION

A. Identify system components according to Section 23 05 53 "Identification for HVAC Piping and Equipment" and Section 26 05 53 "Identification for Electrical Systems."

B. Install a warning sign at the neutral to ground bond location indicating:

1. “WARNING: SHOCK HAZARD EXISTS IF GROUNDING ELECTRODE CONDUCTOR OR BONDING JUMPER CONNECTION IN THIS EQUIPMENT IS REMOVED WHILE ALTERNATE SOURCE IS ENERGIZED.”

3.05 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

C. Perform tests and inspections and prepare test reports.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:
   1. Perform tests recommended by manufacturer and each electrical test and visual and mechanical inspection for "AC Generators and for Emergency Systems" specified in NETA Acceptance Testing Specification. Certify compliance with test parameters.
   2. NFPA 110 Acceptance Tests: Perform tests required by NFPA 110 that are additional to those specified here including, but not limited to, single-step full-load pickup test.
   3. Battery Tests: Equalize charging of battery cells according to manufacturer's written instructions. Record individual cell voltages.
      a. Measure charging voltage and voltages between available battery terminals for full-charging and float-charging conditions. Check electrolyte level and specific gravity under both conditions.
      b. Test for contact integrity of all connectors. Perform an integrity load test and a capacity load test for the battery.
      c. Verify acceptance of charge for each element of the battery after discharge.
      d. Verify that measurements are within manufacturer's specifications.
   4. Battery-Charger Tests: Verify specified rates of charge for both equalizing and float-charging conditions.
   5. System Integrity Tests: Methodically verify proper installation, connection, and integrity of each element of engine-generator system before and during system operation. Check for air, exhaust, and fluid leaks.
   6. Exhaust-System Back-Pressure Test: Use a manometer with a scale exceeding 40-inch wg. Connect to exhaust line close to engine exhaust manifold. Verify that back pressure at full-rated load is within manufacturer's written allowable limits for the engine.
   7. Exhaust Emissions Test: Comply with applicable government test criteria.
   8. Voltage and Frequency Transient Stability Tests: Use recording oscilloscope to measure voltage and frequency transients for 50 and 100 percent step-load increases and decreases and verify that performance is as specified.
   9. Harmonic-Content Tests: Measure harmonic content of output voltage under 25 percent and at 100 percent of rated linear load. Verify that harmonic content is within specified limits.
   10. Noise Level Tests: Measure A-weighted level of noise emanating from generator-set installation, including engine exhaust and cooling-air intake and discharge, at 3 locations on the property line, and compare measured levels with required values.

E. Coordinate tests with tests for transfer switches and run them concurrently.

F. Test instruments shall have been calibrated within the last 12 months, traceable to standards of NIST, and adequate for making positive observation of test results. Make calibration records available for examination on request.

G. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

H. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

I. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

J. Remove and replace malfunctioning units and retest as specified above.

K. Retest: Correct deficiencies identified by tests and observations and retest until specified requirements are met.

L. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation resistances, time delays, and other values and observations. Attach a label or tag to each tested component indicating satisfactory completion of tests.

M. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each power wiring termination and each bus connection. Remove all access panels so terminations and connections are accessible to portable scanner.
   1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan 11 months after date of Substantial Completion.
   2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
   3. Record of Infrared Scanning: Prepare a certified report that identifies terminations and connections checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.06 DEMONSTRATION

A. Engage a factory-authorized service representative to train Contracting Agency's maintenance personnel to adjust, operate, and maintain packaged engine generators. Training shall be held on site after the generator set is complete and fully functional. Refer to Section 1-05.11 "Facility Startup, Testing, and Training."

END OF SECTION 26 32 13

This page intentionally left blank

SECTION 26 36 00
TRANSFER SWITCHES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Transfer switches rated 600 V and less, including the following:
   1. Automatic transfer switches.
   2. Bypass/isolation switches.
   3. Nonautomatic transfer switches.
   4. Remote annunciation systems.
   5. Remote annunciation and control systems.

1.02 RELATED DOCUMENTS

A. Section 26 00 00 “General Electrical Requirements.”

1.03 DEFINITIONS

A. ATS: Automatic Transfer Switch

B. BP/IS: Bypass switch and Isolation Switch

C. EMI: Electromagnetic interference.

D. LCD: Liquid-crystal display.

E. LED: Light-emitting diode.

F. NETA: InterNational Electrical Testing Association.

G. PC: Personal computer.

H. THD: Total harmonic distortion.

I. UPS: Uninterruptible power supply.

1.04 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Transfer switches shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.05 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, weights, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings: Dimensioned plans, elevations, sections, and details showing minimum clearances on all sides, conductor entry provisions, gutter space, installed features and devices, and material lists for each switch specified. Drawings shall be drawn to scale (1/4”=1’-0”).
   1. Single-Line Diagram: Show connections between transfer switch, bypass/isolation switch, power sources, and load; and show interlocking provisions for each combined transfer switch and bypass/isolation switch.

1.06 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and testing agency.

B. Manufacturer Seismic Qualification Certification: Submit certification that transfer switches accessories, and components will withstand seismic forces defined in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems." Include the following:
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
      a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Field quality-control test reports.
1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

1.07 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 1-11 "Operation and Maintenance Data," include the following:
1. Features and operating sequences, both automatic and manual.
2. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.

1.08 QUALITY ASSURANCE

A. American made products have been acceptable to the Owner. If non-domestic products are submitted, notice is hereby given that extensive testing shall be required to insure quality and conformance to the Specifications. Testing shall be done by a recognized lab acceptable to the Owner and all tests shall be witnessed by Owner's personnel. Testing procedures and test results shall be satisfactory to the Owner. Contractor shall be responsible for arranging the tests, for transportation, food and lodging for minimum of one Owner's representative to witness the test at the testing lab. Include all costs for the above in the bid.

B. Manufacturer Qualifications: A qualified manufacturer. Maintain, within 75 miles (120 kms of Project site, a service center capable of providing training, parts, and emergency maintenance repairs within 8 hours from the time of notification.

C. Contractor shall ensure that the manufacturer has a minimum of 15 years experience in the production of Emergency/Standby Engine Generators similar to the type and size specified in this project. Furnish a list of three (3) contacts for the three (3) similar projects completed within the last 5 years. Include name, tele no and email of the facility engineers.

D. Manufacturer shall have ISO 9001 or 9002 Certification.

E. Manufacturer shall have ability to readily provide replacement parts for a minimum period of ten (10) years, from the date of completion of the project. Furnish a letter from the manufacturer confirming the availability.

F. Transfer Switch shall be assembled at the manufacturer's own manufacturing facility using its own major devices (e.g., contactors) for the assembly. These devices shall be normally carried by the manufacturer as standard catalog items.

G. Transfer Switch shall comply with seismic zone applicable to the project. Unless otherwise indicated, verify requirements with Architect or Structural Engineer of Record (SEOR). Provide certified test reports of shake table test done by manufacturer on similar units.

H. Materials and equipment shall be new, modern in design and shall not have been in prior service except as required by factory tests. Major components (e.g. contactors, controls) shall be manufactured within six months of installation.

I. Source Limitations: Obtain automatic transfer switches and remote annunciator and control panels through one source from a single manufacturer switch, and accessories through one source from a single manufacturer through a local distributor.

J. Product Options: Drawings indicate size, profiles, and dimensional requirements of engine generators and are based on the specific system indicated. Refer to Part 2"Product Requirements."

K. Electrical Components, Devices, and Accessories: UL Listed and labeled as defined in NFPA 70, Article 100, and marked for intended location and application.

L. Testing Agency Qualifications: Member of NETA;
   1. Testing agency shall be an independent company; shall have been a member of NETA for a minimum of ten (10) years and has permanent in-house testing engineers and technicians involved with testing of transfer switches, switchboards, panelboards and OCPDs similar to those specified on this project.
   2. Testing company shall be located with 50 miles radius of the project.
   3. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing to supervise on-site testing specified in Part 3.

M. Comply with NEMA ICS 1.

N. Comply with NFPA 70.

O. Comply with NFPA 99.

P. Comply with NFPA 110.

Q. Comply with UL 1008 unless requirements of these Specifications are stricter.

1.09 PROJECT CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service:
   1. Notify Construction Manager no fewer than fourteen (14) days in advance of proposed interruption of electrical service.
   2. Do not proceed with interruption of electrical service without Construction Manager's written permission.

1.10 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 03 30 00 "Cast-in-Place Concrete."

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
   a. Contactor Transfer Switches:
   b. Russellectric Inc
   c. Emerson; ASCO Power Technologies, LP.
   d. GE Zenith Controls.
   e. Kohler Power Systems; Generator Division.
   f. Onan/Cummins Power Generation; Industrial Business Group.

2.02 GENERAL TRANSFER-SWITCH PRODUCT REQUIREMENTS

A. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.

B. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.

1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location. Verify maximum available fault levels from the Short Circuit and Coordination Study.
2. Short-time withstand capability for three cycles.

C. Solid-State Controls: Repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.

D. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.

E. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.

F. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.
1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are not acceptable.
2. Switch Action: Double throw; mechanically held in both directions.
3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.

G. Service-Rated Transfer Switch:
1. Comply with UL 869A and UL 489.
2. Provide terminals for bonding the grounding electrode conductor to the grounded service conductor.
3. In systems with a neutral, the bonding connection shall be on the neutral bus.
4. Provide removable link for temporary separation of the service and load grounded conductors.
5. Surge Protective Device: Service rated.
6. Ground-Fault Protection: Comply with UL 1008 for normal bus.
7. Service Disconnecting Means: Externally operated, manual mechanically actuated.

H. Neutral Switching. Where four-pole switches are indicated, provide neutral pole switched simultaneously with phase poles.

I. Neutral Terminal: Solid and fully rated, unless otherwise indicated.

J. Oversize Neutral: Ampacity and switch rating of neutral path through units indicated for oversize neutral shall be double the nominal rating of circuit in which switch is installed.

K. Heater: Equip switches exposed to outdoor temperatures and humidity, and other units indicated, with an internal heater. Provide thermostat within enclosure to control heater. Thermostat shall be accessible for operator control.

L. Battery Charger: For generator starting batteries.
1. Float type rated 10 A.
2. Ammeter to display charging current.
3. Fused ac inputs and dc outputs.

M. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.

N. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color-code or by numbered or lettered wire and cable tape markers at terminations. Color-coding and wire and cable tape markers are specified in Section 26 05 53 "Identification for Electrical Systems."
1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.
3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.

O. Enclosures: Free standing. general-purpose NEMA 250, Type 3R or 4X Stainless Steel, complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

P. 1. Enclosure shall be fabricated from 12 gauge steel and shall be sized to exceed minimum bending space required by UL 1008. Doors shall have hinges and locking handle latch with provision for padlocks.

Q. 2. Contractors field wiring terminating within the enclosure shall comply with NFPA 70. Wires shall be permanently tagged near the terminal at each end with the wire number shown on approved shop drawings.

R. 3. The enclosure shall be constructed for convenient removal and replacement of contacts, coils, springs and control devices from the front without removal of main power conductors or removal of major components. The enclosure housing the ATS and BP/IS shall be constructed to protect personnel from energized components of the BO/IS during maintenance of the ATS.

2.03 AUTOMATIC TRANSFER SWITCHES

A. Comply with Level 1 equipment according to NFPA 110.

B. Switching Arrangement: Double-throw type, incapable of pauses or intermediate position stops during normal functioning, unless otherwise indicated.

C. Manual Switch Operation: Under load, with door closed and with either or both sources energized. Transfer time is same as for electrical operation. Control circuit automatically disconnects from electrical operator during manual operation.

D. Manual Switch Operation: Unloaded. Control circuit automatically disconnects from electrical operator during manual operation.

E. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval is adjustable from 1 to 30 seconds.

F. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.

G. Automatic Closed-Transition Transfer Switches: Include the following functions and characteristics:
   1. Fully automatic make-before-break operation.
   2. Load transfer without interruption, through momentary interconnection of both power sources not exceeding 100 ms.
   3. Initiation of No-Interruption Transfer: Controlled by in-phase monitor and sensors confirming both sources are present and acceptable.
      a. Initiation occurs without active control of generator.
      b. Controls ensure that closed-transition load transfer closure occurs only when the 2 sources are within plus or minus 5 electrical degrees maximum, and plus or minus 5 percent maximum voltage difference.
   4. Failure of power source serving load initiates automatic break-before-make transfer.

H. In-Phase Monitor: Factory-wired, internal relay controls transfer so it occurs only when the two sources are synchronized in phase. Relay compares phase relationship and frequency difference between normal and emergency sources and initiates transfer when both sources are within 15 electrical degrees, and only if transfer can be completed within 60 electrical degrees. Transfer is initiated only if both sources are within 2 Hz of nominal frequency and 70 percent or more of nominal voltage.

I. Motor Disconnect and Timing Relay: Controls designate starters so they disconnect motors before transfer and reconnect them selectively at an adjustable time interval after transfer. Control connection to motor starters is through wiring external to automatic transfer switch. Time delay for reconnecting individual motor loads is adjustable between 1 and 60 seconds, and settings are as indicated. Relay contacts handling motor-control circuit inrush and seal currents are rated for actual currents to be encountered.

J. Programmed Neutral Switch Position: Switch operator has a programmed neutral position arranged to provide a midpoint between the two working switch positions, with an intentional,

time-controlled pause at midpoint during transfer. Pause is adjustable from 0.5 to 30 seconds minimum and factory set for 0.5 second, unless otherwise indicated. Time delay occurs for both transfer directions. Pause is disabled unless both sources are live.

K. Automatic Transfer-Switch Features:
   1. Undervoltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.
   2. Adjustable Time Delay: For override of normal-source voltage sensing to delay transfer and engine start signals. Adjustable from zero to six seconds, and factory set for one second.
   3. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.
   4. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes to automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.
   5. Test Switch: Simulate normal-source failure.
   6. Switch-Position Pilot Lights: Indicate source to which load is connected.
   7. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.
      a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
      b. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."
   8. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.
   9. Transfer Override Switch: Overrides automatic retransfer control so automatic transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.
   10. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open; rated 10 A at 32-V dc minimum.
   11. Engine Shutdown Contacts: Instantaneous; shall initiate shutdown sequence at remote engine-generator controls after retransfer of load to normal source.
   12. Engine Shutdown Contacts: Time delay adjustable from zero to five minutes, and factory set for five minutes. Contacts shall initiate shutdown at remote engine-generator controls after retransfer of load to normal source.
   13. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods are adjustable from 10 to 30 minutes. Factory settings are for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:
      a. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.
      b. Push-button programming control with digital display of settings.
      c. Integral battery operation of time switch when normal control power is not available.

2.04 BYPASS/ISOLATION SWITCHES

A. Comply with requirements for Level 1 equipment according to NFPA 110.

B. Description: Manual type, arranged to select and connect either source of power directly to load, isolating transfer switch from load and from both power sources. Include the following features for each combined automatic transfer switch and bypass/isolation switch:
   1. Means to lock bypass/isolation switch in the position that isolates transfer switch with an arrangement that permits complete electrical testing of transfer switch while isolated. While isolated, interlocks prevent transfer-switch operation, except for testing or maintenance.
   2. Drawout Arrangement for Transfer Switch: Provide physical separation from live parts and accessibility for testing and maintenance operations.
   3. Bypass/Isolation Switch Current, Voltage, Closing, and Short-Circuit Withstand Ratings: Equal to or greater than those of associated automatic transfer switch, and with same phase arrangement and number of poles.
   4. Contact temperatures of bypass/isolation switches shall not exceed those of automatic transfer-switch contacts when they are carrying rated load.
   5. Operability: Constructed so load bypass and transfer-switch isolation can be performed by 1 person in no more than 2 operations in 15 seconds or less.
   6. Legend: Manufacturer's standard legend for control labels and instruction signs shall describe operating instructions.
   7. Maintainability: Fabricate to allow convenient removal of major components from front without removing other parts or main power conductors.

C. Interconnection of Bypass/Isolation Switches with Automatic Transfer Switches: Factory-installed copper bus bars; plated at connection points and braced for the indicated available short-circuit current.

2.05 NONAUTOMATIC TRANSFER SWITCHES

A. Operation: Electrically actuated by push buttons designated "Normal Source" and "Alternate Source." Switch shall be capable of transferring load in either direction with either or both sources energized.

B. Operation: Electrically actuated by push buttons designated "Normal Source" and "Alternate Source." In addition, removable manual handle provides quick-make, quick-break manual-switching action. Switch shall be capable of electrically or manually transferring load in either direction with either or both sources energized. Control circuit disconnects from electrical operator during manual operation.

C. Double-Throw Switching Arrangement: Incapable of pauses or intermediate position stops during switching sequence.

D. Each switch shall be fully rated for the available fault current closing and withstand rating based on available fault current. Verify maximum available fault current from the Short Circuit and Coordination Study.

E. Nonautomatic Transfer-Switch Accessories:
   1. Pilot Lights: Indicate source to which load is connected.
   2. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and alternate-source sensing circuits.
      a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
      b. Emergency Power Supervision: Red light with nameplate engraved "Alternate Source Available."
   3. Unassigned Auxiliary Contacts: One set of normally closed contacts for each switch position, rated 10 A at 240-V ac.

2.06 REMOTE ANNUNCIATOR SYSTEM

A. Functional Description: Remote annunciator panel shall annunciate conditions for indicated transfer switches. Annunciation shall include the following:
   1. Sources available, as defined by actual pickup and dropout settings of transfer-switch controls.

2. Switch position.
3. Switch in test mode.
4. Failure of communication link.
5. Fail to transfer.

B. Annunciator Panel: LED-lamp type with audible signal and silencing switch.
1. Indicating Lights: Grouped for each transfer switch monitored.
2. Label each group, indicating transfer switch it monitors, location of switch, and identity of load it serves.
3. Mounting: Flush, modular, steel cabinet, unless otherwise indicated.
4. Lamp Test: Push-to-test or lamp-test switch on front panel.

2.07 REMOTE ANNUNCIATOR AND CONTROL SYSTEM

A. Functional Description: Include the following functions for indicated transfer switches:
1. Indication of sources available, as defined by actual pickup and dropout settings of transfer-switch controls.
2. Indication of switch position.
3. Indication of switch in test mode.
4. Indication of failure of digital communication link.
5. Key-switch or user-code access to control functions of panel.
6. Control of switch-test initiation.
7. Control of switch operation in either direction.
8. Control of time-delay bypass for transfer to normal source.

B. Malfunction of annunciator, annunciation and control panel, or communication link shall not affect functions of automatic transfer switch. In the event of failure of communication link, automatic transfer switch automatically reverts to stand-alone, self-contained operation. Automatic transfer-switch sensing, controlling, or operating function shall not depend on remote panel for proper operation.

C. Remote Annunciation and Control Panel: Solid-state components. Include the following features:
1. Controls and indicating lights grouped together for each transfer switch.
2. Label each indicating light control group. Indicate transfer switch it controls, location of switch, and load it serves.
3. Digital Communication Capability: Matched to that of transfer switches supervised.
4. Mounting: Flush, modular, steel cabinet, unless otherwise indicated.

2.08 SOURCE QUALITY CONTROL

A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

PART 3 EXECUTION

3.01 INSTALLATION

A. Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details. See Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."

B. Floor-Mounting Switch: Anchor to floor by bolting.
1. Concrete Bases: 4 inches (100 mm) high, reinforced, with chamfered edges. Extend base no more than 4 inches (100 mm) in all directions beyond the maximum dimensions of switch, unless otherwise indicated or unless required for seismic support. Construct concrete bases according to Section 26 05 29 "Hangers and Supports for Electrical Systems." Comply with requirements for equipment bases and foundations specified in Section 03 30 00 "Cast-in-Place Concrete."

C. Annunciator and Control Panel Mounting: Flush in wall, unless otherwise indicated.

D. Identify components according to Section 26 05 53 "Identification for Electrical Systems."

E. Set field-adjustable intervals and delays, relays, and engine exerciser clock.

3.02 CONNECTIONS

A. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to Owner if necessary to accommodate required wiring.

B. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

C. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.03 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform tests and inspections and prepare test reports.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

C. Perform tests and inspections and prepare test reports.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installation, including connections, and to assist in testing.
   2. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
   3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
   4. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
      a. Check for electrical continuity of circuits and for short circuits.
      b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
      c. Verify that manual transfer warnings are properly placed.
      d. Perform manual transfer operation.
   5. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
      a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
      b. Simulate loss of phase-to-ground voltage for each phase of normal source.
      c. Verify time-delay settings.
      d. Verify pickup and dropout voltages by data readout or inspection of control settings.
      e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
      f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
      g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.
   6. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
      a. Verify grounding connections and locations and ratings of sensors.

D. Testing Agency's Tests and Inspections:
   1. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
   2. Perform each visual and mechanical inspection and electrical test stated in latest edition of NETA Acceptance Testing Specification. Certify compliance with test parameters.
   3. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
      a. Check for electrical continuity of circuits and for short circuits.
      b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
      c. Verify that manual transfer warnings are properly placed.
      d. Perform manual transfer operation.
   4. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
      a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
      b. Simulate loss of phase-to-ground voltage for each phase of normal source.
      c. Verify time-delay settings.
      d. Verify pickup and dropout voltages by data readout or inspection of control settings.
      e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
      f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
      g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.
   5. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
      a. Verify grounding connections and locations and ratings of sensors.

E. Coordinate tests with tests of generator and run them concurrently.

F. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.

G. Remove and replace malfunctioning units and retest as specified above.

H. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.
   1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.
   2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
   3. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.04 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain transfer switches and related equipment as specified below. Refer to Section 1-05.11 "Facility Startup, Testing and Training." Training shall be held on site after the all transfer switches are completely installed, tested and fully functional.

B. Coordinate this training with that for generator equipment.

END OF SECTION 26 36 00

This page intentionally left blank

SECTION 26 43 13

SURGE PROTECTION FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Field-mounted SPDs for low-voltage (120 to 600 V) power distribution and control equipment.

1.02 RELATED REQUIREMENTS

A. Section 26 24 13 "Switchboards" for factory-installed SPDs.

B. Section 26 24 16 "Panelboards" for factory-installed SPDs.

1.03 RELATED DOCUMENTS

A. Section 26 00 00 “General Electrical Requirements.”

1.04 DEFINITIONS

A. I(nominal): Nominal discharge current.

B. MCOV: Maximum continuous operating voltage.

C. Mode(s), also Modes of Protection: The pair of electrical connections where the VPR applies.

D. MOV: Metal-oxide varistor; an electronic component with a significant non-ohmic current-voltage characteristic.

E. OCPD: Overcurrent protective device.

F. SCCR: Short-circuit current rating.

G. SPD: Surge protective device.

H. VPR: Voltage protection rating.

1.05 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
   2. Product Certificates: For transient voltage surge suppression devices, signed by the product manufacturer certifying compliance with the following standards UL 1449 and UL 1283.
   3. Copy of UL Category Code VZCA certification, as a minimum, listing the tested values for VPRs, Inominal ratings, MCOVs, type designations, OCPD requirements, model numbers, system voltages, and modes of protection.

1.06 INFORMATIONAL SUBMITTALS

A. Field quality-control reports. Include the following:
   1. Test procedures used.
   2. Test results that comply with the requirements.
   3. Failed test results and corrective action taken to achieve the requirements.

B. Sample Warranty: For manufacturer's special warranty.

1.07 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For SPDs to include emergency, operation and maintenance manuals.

1.08 QUALITY ASSURANCE

A. If alternate manufacturer of products other than what are specified in this section are submitted, all necessary documents not limited to cut sheets, technical information, test reports from recognized testing labs and factory test reports shall be submitted to the satisfaction of the Contracting Agency/engineer to ensure quality and conformance to the specifications. Additional testing shall be undertaken if it is concluded by the Contracting Agency/engineer that the submitted test reports are either insufficient or do not include all tests necessary for product ac-

ceptance. The tests shall be conducted by a recognized lab acceptable to the Contracting Agency/engineer and all tests shall be witnessed by Contracting Agency's/engineer's personnel. All testing procedures and test results shall be satisfactory to the Contracting Agency/engineer. Contractor shall be responsible for arranging the tests, for transportation, food and lodging for minimum of one Contracting Agency's/engineer's representative to witness the test at the testing lab. Include all costs for the above in the bid.

B. Contractor shall ensure that the manufacturer has a minimum of 15 years experience in the production of Surge Protective Devices (SPDs) similar to the type and size specified in this project.

C. Manufacturer shall have ISO 9001 Certification.

D. Manufacturer shall have ability to readily provide replacement parts for a minimum period of ten (10) years, from the date of completion of the project. Furnish a letter from the manufacturer confirming the availability.

E. Surge Protective Devices (SPDs) shall be assembled at the manufacturer's own manufacturing facility using its own major components (e.g., trip units) for the assembly. These devices shall be normally carried by the manufacturer as standard catalog items.

F. Provide certified test reports of shake table test done by manufacturer on similar units.

G. Materials and equipment shall be new, modern in design and shall not have been in prior service except as required by factory tests. Controllers shall be manufactured within six months of installation.

H. Source Limitations: Obtain Surge Protective Devices (SPDs), overcurrent protective devices, components, and accessories, within same product category, through one source from a single manufacturer through a local distributor unless otherwise noted.

I. Comply with NFPA 70.

J. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E.

K. Product Options: Drawings indicate size, profiles, and dimensional requirements of Surge Protective Devices (SPDs) are based on the specific system indicated. Refer to Part 2 "Product Requirements."

L. Electrical Components, Devices, and Accessories: UL Listed and labeled as defined in NFPA 70, Article 100 and marked for intended location and application.

M. Testing Agency Qualifications: Member of NETA;
   1. Testing agency shall be an independent company; shall have been a member of NETA for a minimum of last ten (10) years and has permanent in-house testing engineers and technicians involved with testing of Surge Protective Devices, OCPDs, switches and breakers similar to those specified on this project.
   2. Testing company shall be located with 50 miles radius of the project.
   3. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing to supervise on-site testing specified in Part 3.
   4. Field Testing technician and supervisor shall have minimum ten (10) years experience in field testing of Surge Protective Devices (SPDs), OCPDs, switches and circuit breakers similar to the type and rating specified on this project.

1.09 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to replace or replace SPDs that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: 5 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by the following manufacturers
   1. Schneider Electric Industries SAS
   2. ABB
   3. Advanced Protection Technologies Inc. (APT).
   4. Eaton Corporation.
   5. GE Zenith Controls.
   6. LEA International; Protection Technology Group.
   7. Leviton Manufacturing Co., Inc.
   8. PowerLogics, Inc..
   9. Siemens Industry, Inc.

2.02 GENERAL SPD REQUIREMENTS

A. SPD with Accessories: UL Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with NFPA 70.

C. Comply with UL 1449 and 1283

D. Comply with ANSI/IEEE C62.41-2002 and C62.5-2002

E. MCOV of the SPD shall be at least 125 percent of the nominal system voltage.

2.03 SERVICE ENTRANCE AND TRANSFER SWITCH SUPPRESSOR

A. SPDs: Comply with UL 1449, Type 1.

B. SPDs: Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 1449, Type 1
   1. SPDs with the following features and accessories:
      a. Integral disconnect switch.
      b. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
      c. Indicator light display for protection status. Visible indication display of proper SPD connection and operation shall be provided. The indicator light shall indicate which phase and module is fully operational. The status of each SPD module shall be monitored on the front cover of the enclosure. A push to test button shall ne provided to test each phase indicator.
      d. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status
      e. Surge counter. A surge counter shall be located on the diagnostic panel on the front cover of the enclosure. The counter shall be equipped with manual reset and battery backup to retain the memory upon loss of AC Power

C. SPD shall be tested with the ANSI/IEEE Category C_{High} exposure waveform (20kV-1.2/50μs, 10kA-8/20μ.

D. Pulse life test: Capable of protecting against and surviving 20,000 ANSI/IEEE Category C_{High} transients without failure or degradation of clamping voltage by more than 10%.

E. Comply with UL 1283.

F. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 200 kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual MOVs in a given mode.

G. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V, three-phase, four-wire circuits shall not exceed the following:
   1. Line to Neutral: 1200 V for 480Y/277 V and 700 V for 208Y/120 V.

2. Line to Ground: 1200 V for 480Y/277 V and 700 V for 208Y/120 V.
3. Line to Line: 2000 V for 480Y/277 V and 1000 V for 208Y/120 V.

H. Protection modes and UL 1449 VPR for 240/120 V, single-phase, three-wire circuits shall not exceed the following:
1. Line to Neutral: 700 V.
2. Line to Ground: 1000 V.
3. Line to Line: 1000 V.

I. SCCR: Equal or exceed 100 kA.

J. I(nominal) Rating: 20 kA.

2.04 PANEL SUPPRESSORS

A. SPDs: Comply with UL 1449, Type 1.
1. Include LED indicator lights for power and protection status.
2. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
3. Include Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status

B. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 100 kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual MOVs in a given mode.

C. Comply with UL 1283.

D. Protection modes and UL 1449 VPR for grounded wye circuits with 208Y/120V , three-phase, four-wire circuits shall not exceed the following:
1. Line to Neutral: 1200 V for 480Y/277 V and 700 V for 208Y/120 V
2. Line to Ground: 1200 V for 480Y/277 V and 700 V for 208Y/120 V
3. Neutral to Ground: 1200 V for 480Y/277 V and 700 V for 208Y/120 V
4. Line to Line: 2000 V for 480Y/277 V and 1000 V for 208Y/120 V.

E. Protection modes and UL 1449 VPR for 240/120-V, single-phase, three-wire circuits shall not exceed the following:
1. Line to Neutral: 700 V.
2. Line to Ground: 700 V.
3. Neutral to Ground: 700 V.
4. Line to Line: 1200 V.

F. SCCR: Equal or exceed 100 kA.

G. I(nominal) Rating: 20 kA.

2.05 ENCLOSURES

A. Indoor Enclosures: NEMA 250, Type 1.

B. Outdoor Enclosures: NEMA 250, Type 3R. Outdoor enclosure shall have temper proof screws and be lockable with a padlock.

2.06 CONDUCTORS AND CABLES

A. Power Wiring: Same size as SPD leads, complying with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

B. Class 2 Control Cables: Multiconductor cable with copper conductors not smaller than No. 24AWG, complying with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than No. 12 AWG, complying with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

PART 3 EXECUTION

3.01 INSTALLATION

A. Comply with NECA 1.

B. Install an OCPD or disconnect as required to comply with the UL listing of the SPD.

C. Install SPDs with conductors between suppressor and points of attachment as short and straight as possible, and adjust circuit-breaker positions to achieve shortest and straightest leads. Do not splice and extend SPD leads unless specifically permitted by manufacturer. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.

D. Use crimped connectors and splices only. Wire nuts are unacceptable.

E. Wiring:
   1. Power Wiring: Comply with wiring methods in Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
   2. Controls: Comply with wiring methods in Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.02 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative.
   1. Compare equipment nameplate data for compliance with Drawings and Specifications.
   2. Inspect anchorage, alignment, grounding, and clearances.
   3. Verify that electrical wiring installation complies with manufacturer's written installation requirements.

B. An SPD will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.03 STARTUP SERVICE

A. Complete startup checks according to manufacturer's written instructions.

B. Do not perform insulation-resistance tests of the distribution wiring equipment with SPDs installed. Disconnect SPDs before conducting insulation-resistance tests, and reconnect them immediately after the testing is over.

C. Energize SPDs after power system has been energized, stabilized, and tested.

3.04 DEMONSTRATION

A. Engage a factory-authorized service representative to train Contracting Agency's maintenance personnel to operate and maintain SPDs.

END OF SECTION 26 43 13

This page intentionally left blank

SECTION 26 51 19
LED INTERIOR LIGHTING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. The following types of LED luminaires:
   1. Cylinder.
   2. Downlight.
   3. Highbay, linear.
   4. Highbay, nonlinear.
   5. Linear industrial.
   6. Lowbay.
   7. Parking garage.
   8. Recessed, linear.
   9. Strip light.
   10. Surface mount, linear.
   11. Surface mount, nonlinear.
   12. Suspended, linear.
   13. Suspended, nonlinear.
   14. Track Mounted, monopoint.

1.02 RELATED REQUIREMENTS

A. Section 26 09 43 “Network Lighting Controls”.”

1.03 RELATED DOCUMENTS

A. Section 26 00 00 “General Electrical Requirements.”

1.04 DEFINITIONS

A. CCT: Correlated color temperature.

B. CRI: Color Rendering Index.

C. Fixture: See "Luminaire."

D. IP: International Protection or Ingress Protection Rating.

E. LED: Light-emitting diode.

F. Lumen: Measured output of lamp and luminaire, or both.

G. Luminaire: Complete lighting unit, including lamp, reflector, and housing.

1.05 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Arrange in order of luminaire designation.
   2. Include data on features, accessories, and finishes.
   3. Include physical description and dimensions of luminaires.
   4. Include emergency lighting units, including batteries and chargers.
   5. Include life, output (lumens, CCT, and CRI), and energy-efficiency data.
   6. Photometric data and adjustment factors based on laboratory tests, complying with IES "Lighting Measurements Testing and Calculation Guides" for each luminaire type. The adjustment factors shall be for lamps and accessories identical to those indicated for the luminaire as applied in this Project.
      a. Manufacturers' Certified Data: Photometric data certified by manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.
      b. Testing Agency Certified Data: For indicated luminaires, photometric data certified by a qualified independent testing agency. Photometric data for remaining luminaires shall be certified by manufacturer.

B. Shop Drawings: For nonstandard or custom luminaires.
   1. Include plans, elevations, sections, and mounting and attachment details.
   2. Include details of luminaire assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include diagrams for power, signal, and control wiring.

C. Samples: For each luminaire and for each color and texture with standard factory-applied finish.

D. Samples for Initial Selection: For each type of luminaire with custom factory-applied finishes.
   1. Include Samples of luminaires and accessories involving color and finish selection.

E. Samples for Verification: For each type of luminaire.
   1. Include Samples of luminaires and accessories to verify finish selection.

F. Product Schedule: For luminaires and lamps, refer to light fixture schedule on plans.

1.06 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Luminaires.
   2. Suspended ceiling components.
   3. Partitions and millwork that penetrate the ceiling or extend to within 12 inches of the plane of the luminaires.
   4. Structural members to which equipment and or luminaires will be attached.
   5. Initial access modules for acoustical tile, including size and locations.
   6. Items penetrating finished ceiling, including the following:
      a. Other luminaires.
      b. Air outlets and inlets.
      c. Speakers.
      d. Sprinklers.
      e. Access panels.
      f. Ceiling-mounted projectors.
   7. Moldings.

B. Qualification Data: For testing laboratory providing photometric data for luminaires.

C. Seismic Qualification Data: For luminaires, accessories, and components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Product Certificates: For each type of luminaire Product Test Reports: For each type of luminaire, for tests performed by DLC and as follows:
   1. Test reports complying with LM-79 (IES approved method for electrical and photometric measurements of Solid-State Lighting) providing total luminous flux, luminous intensity distribution, electrical power characteristics, luminous efficacy and color characteristics (CRI, CCT) shall be submitted.
   2. Test reports complying with LM-80 (IES approved standard for measuring lumen maintenance of LED light sources) providing lumen maintenance of LED light sources shall be submitted.
   3. ISTMT (IN SITU TEMPERATATURE MEASUREMENT TEST) – It is the measure of the LED source case temperature within the LED system (luminaire or lamp or it is the temperature of the LED within the luminaire. This measurement should be performed according to the temperature measurement point (TMP) indicated by the particular LED package

manufacturer. The temperature measured within the luminaire shall be within the temperature of the LM-80-08 LED source report.

4. All LED lifetime projections shall be made per TM-21-11 (approved method for taking LM-80 data and making useful LED lifetime projections).

E. Sample warranty.

1.07 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For luminaires and lighting systems to include in operation and maintenance manuals.
   1. Provide a list of all lamp types used on Project; use ANSI and manufacturers' codes.

1.08 QUALITY ASSURANCE

A. Luminaire Photometric Data Testing Laboratory Qualifications: Luminaire manufacturer's laboratory that is accredited under the NVLAP for Energy Efficient Lighting Products.

B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7, accredited under the NVLAP for Energy Efficient Lighting Products, and complying with the applicable IES testing standards.

C. Provide luminaires from a single manufacturer for each luminaire type.

D. Each luminaire type shall be binned within a three-step MacAdam Ellipse to ensure color consistency among luminaires.

E. Mockups: For interior luminaires in room or module mockups, complete with power and control connections.
   1. Obtain Architect's approval of luminaires in mockups before starting installations.
   2. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
   3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
   4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Protect finishes of exposed surfaces by applying a strippable, temporary protective covering before shipping.

1.10 WARRANTY

A. Warranty: Manufacturer and Installer agree to repair or replace components of luminaires that fail in materials or workmanship within specified warranty period.

B. Warranty Period: 5 year(s) from date of Substantial Completion.

PART 2 PRODUCTS

2.01 REFER TO LIGHT FIXTURE SCHEDULE ON PLANS

2.02 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Luminaires shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

B. Seismic Performance: Luminaires and lamps shall be labeled vibration and shock resistant.
   1. The term "withstand" means "the luminaire will remain in place without separation of any parts when subjected to the seismic forces specified ."

C. Ambient Temperature: 41 to 104 deg F (5 to 40 deg C).
   1. Relative Humidity: Zero to 95 percent.

D. Altitude: Sea level to 1000 feet.

2.03 LUMINAIRE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps. Locate labels where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.
   1. Label shall include the following lamp characteristics:
      a. "USE ONLY" and include specific lamp type.
      b. Lamp diameter, shape, size, wattage, and coating.
      c. CCT and CRI.

C. Recessed luminaires shall comply with NEMA LE 4.

D. NRTL Compliance: Luminaires for hazardous locations shall be listed and labeled for indicated class and division of hazard by an NRTL.

E. FM Global Compliance: Luminaires for hazardous locations shall be listed and labeled for indicated class and division of hazard by FM Global.

2.04 MATERIALS

A. Metal Parts:
   1. Free of burrs and sharp corners and edges.
   2. Sheet metal components shall be steel unless otherwise indicated.
   3. Form and support to prevent warping and sagging.

B. Steel:
   1. ASTM A 36/A 36M for carbon structural steel.
   2. ASTM A 568/A 568M for sheet steel.

C. Stainless Steel:
   1. 1. Manufacturer's standard grade.
   2. 2. Manufacturer's standard type, ASTM A 240/240 M.

D. Galvanized Steel: ASTM A 653/A 653M.

E. Aluminum: ASTM B 209.

2.05 METAL FINISHES

A. Variations in finishes are unacceptable in the same piece. Variations in finishes of adjoining components are acceptable if they are within the range of approved Samples and if they can be and are assembled or installed to minimize contrast.

2.06 LUMINAIRE SUPPORT

A. Comply with requirements in Section 26 05 29 "Hangers and Supports for Electrical Systems" for channel and angle iron supports and nonmetallic channel and angle supports.

B. Single-Stem Hangers: 1/2-inch steel tubing with swivel ball fittings and ceiling canopy. Finish same as luminaire.

C. Wires: ASTM A 641/A 641 M, Class 3, soft temper, zinc-coated steel, 12 gage.

D. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.

E. Hook Hangers: Integrated assembly matched to luminaire, line voltage, and equipment with threaded attachment, cord, and locking-type plug.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for luminaire to verify actual locations of luminaire and electrical connections before luminaire installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 TEMPORARY LIGHTING

A. If approved by the Architect, use selected permanent luminaires for temporary lighting. When construction is sufficiently complete, clean luminaires used for temporary lighting and install new lamps.

3.03 INSTALLATION

A. Comply with NECA 1.

B. Install luminaires level, plumb, and square with ceilings and walls unless otherwise indicated.

C. Install lamps in each luminaire.

D. Supports:
   1. Sized and rated for luminaire weight.
   2. Able to maintain luminaire position after cleaning and relamping.
   3. Provide support for luminaire without causing deflection of ceiling or wall.
   4. Luminaire-mounting devices shall be capable of supporting a horizontal force of 100 percent of luminaire weight and a vertical force of 400 percent of luminaire weight.

E. Flush-Mounted Luminaires:
   1. Secured to outlet box.
   2. Attached to ceiling structural members at four points equally spaced around circumference of luminaire.
   3. Trim ring flush with finished surface.

F. Wall-Mounted Luminaires:
   1. Attached to structural members in walls
   2. Do not attach luminaires directly to gypsum board.

G. Suspended Luminaires:
   1. Ceiling Mount:
      a. Two 5/32-inch diameter aircraft cable supports adjustable to 12 feet in length.
      b. Pendant mount with 5/32-inch diameter aircraft cable supports adjustable to 12 feet in length.
      c. Hook mount.
   2. Pendants and Rods: Where longer than 24 inches, brace to limit swinging.
   3. Stem-Mounted, Single-Unit Luminaires: Suspend with twin-stem hangers. Support with approved outlet box and accessories that hold stem and provide damping of luminaire oscillations. Support outlet box vertically to building structure using approved devices.
   4. Continuous Rows of Luminaires: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of luminaire chassis, including one at each end.
   5. Do not use ceiling grid as support for pendant luminaires. Connect support wires or rods to building structure.

H. Ceiling-Grid-Mounted Luminaires:
   1. Secure to any required outlet box.
   2. Secure luminaire to the luminaire opening using approved fasteners in a minimum of four locations, spaced near corners of luminaire.
   3. Use approved devices and support components to connect luminaire to ceiling grid and building structure in a minimum of four locations, spaced near corners of luminaire.

I. Comply with requirements in Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables" for wiring connections.

3.04 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

3.05 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:
   1. Operational Test: After installing luminaires, switches, and accessories, and after electrical circuitry has been energized, test units to confirm proper operation.
   2. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery power and retransfer to normal.

B. Luminaire will be considered defective if it does not pass operation tests and inspections.

C. Prepare test and inspection reports.

3.06 STARTUP SERVICE

A. Comply with requirements for startup specified in Section 26 09 43.16 "Addressable-Luminaire Lighting Controls."

B. Comply with requirements for startup specified in Section 26 09 43.23 "Relay-Based Lighting Controls."

3.07 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting the direction of aim of luminaires to suit occupied conditions. Make up to two visits to Project during other-than-normal hours for this purpose. Some of this work may be required during hours of darkness.
   1. During adjustment visits, inspect all luminaires. Replace lamps or luminaires that are defective.
   2. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
   3. Adjust the aim of luminaires in the presence of the Architect.

END OF SECTION 26 51 19

SECTION 26 56 19
LED EXTERIOR LIGHTING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Exterior solid-state luminaires that are designed for and exclusively use LED lamp technology.
   2. Luminaire supports.
   3. Luminaire-mounted photoelectric relays.

B. Related Requirements:
   1. Section 26 09 43 ”Network Lighting Controls”

1.02 DEFINITIONS

A. CCT: Correlated color temperature.

B. CRI: Color rendering index.

C. Fixture: See "Luminaire."

D. IP: International Protection or Ingress Protection Rating.

E. Lumen: Measured output of lamp and luminaire, or both.

F. Luminaire: Complete lighting unit, including lamp, reflector, and housing.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of luminaire.
   1. Arrange in order of luminaire designation.
   2. Include data on features, accessories, and finishes.
   3. Include physical description and dimensions of luminaire.
   4. Lamps, include life, output (lumens, CCT, and CRI), and energy-efficiency data.
   5. Photometric data and adjustment factors based on laboratory tests, complying with IES Lighting Measurements Testing and Calculation Guides, of each luminaire type. The adjustment factors shall be for lamps and accessories identical to those indicated for the luminaire as applied in this Project and testing procedures and criteria required by IES LM-79 and LM-80.
      a. Manufacturer's Certified Data: Photometric data certified by manufacturer's laboratory with a current accreditation under the NVLAP for Energy Efficient Lighting Products.
      b. Testing Agency Certified Data: For indicated luminaires, photometric data certified by a qualified independent testing agency. Photometric data for remaining luminaires shall be certified by manufacturer.
   6. Wiring diagrams for power, control, and signal wiring.
   7. Photoelectric relays.
   8. Means of attaching luminaires to supports and indication that the attachment is suitable for components involved.

B. Shop Drawings: For nonstandard or custom luminaires.
   1. Include plans, elevations, sections, and mounting and attachment details.
   2. Include details of luminaire assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include diagrams for power, signal, and control wiring.

C. Sustainable Design Submittals:
   1. "BUG ratings" Light Pollution Reduction for both uplight and light trespass.

PART 2 PRODUCT DATA INDICATING LUMINAIRE IS CERTIFIED BY DESIGN LIGHTS CONSORTIUM

A. Samples: For each luminaire and for each color and texture indicated with factory-applied finish.

B. Product Schedule: For luminaires and lamps. Use same designations indicated on Drawings.

C. Delegated-Design Submittal: For luminaire supports.
   1. Include design calculations for luminaire supports and seismic restraints.

2.02 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Luminaires.
   2. Structural members to which equipment and luminaires will be attached.
   3. Underground utilities and structures.
   4. Existing underground utilities and structures.
   5. Above-grade utilities and structures.
   6. Existing above-grade utilities and structures.
   7. Building features.
   8. Vertical and horizontal information.

B. Qualification Data: For testing laboratory providing photometric data for luminaires.

C. Seismic Qualification Data: For luminaires, accessories, and components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Product Certificates: For each type of the following:
   1. Luminaire.
   2. Photoelectric relay.

E. Test reports complying with LM-79 (IES approved method for electrical and photometric measurements of Solid-State Lighting) providing total luminous flux, luminous intensity distribution, electrical power characteristics, luminous efficacy and color characteristics (CRI, CCT) shall be submitted.Test reports complying with LM-80 (IES approved standard for measuring lumen maintenance of LED light sources) providing lumen maintenance of LED light sources shall be submitted.

F. ISTMT (IN SITU TEMPERATATURE MEASUREMENT TEST) – It is the measure of the LED source case temperature within the LED system (luminaire or lamp or it is the temperature of the LED within the luminaire. This measurement should be performed according to the temperature measurement point (TMP) indicated by the particular LED package manufacturer. The temperature measured within the luminaire shall be within the temperature of the LM-80-08 LED source report.

G. All LED lifetime projections shall be made per TM-21-11 (approved method for taking LM-80 data and making useful LED lifetime projections).

H. Product Test Reports: For each luminaire, for tests performed a qualified testing agencyas follows:
   1. Test reports complying with LM-79 (IES approved method for electrical and photometric measurements of Solid-State Lighting) providing total luminous flux, luminous intensity distribution, electrical power characteristics, luminous efficacy and color characteristics (CRI, CCT) shall be submitted.
   2. Test reports complying with LM-80 (IES approved standard for measuring lumen maintenance of LED light sources) providing lumen maintenance of LED light sources shall be submitted.

3. ISTMT (IN SITU TEMPERATATURE MEASUREMENT TEST) – It is the measure of the LED source case temperature within the LED system (luminaire or lamp or it is the temperature of the LED within the luminaire. This measurement should be performed according to the temperature measurement point (TMP) indicated by the particular LED package manufacturer. The temperature measured within the luminaire shall be within the temperature of the LM-80-08 LED source report.
4. All LED lifetime projections shall be made per TM-21-11 (approved method for taking LM-80 data and making useful LED lifetime projections).

I. Source quality-control reports.

J. Sample warranty.

2.03 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For luminaires and photoelectric relays to include in operation and maintenance manuals.
1. Provide a list of all lamp types used on Project. Use ANSI and manufacturers' codes.
2. Provide a list of all photoelectric relay types used on Project; use manufacturers' codes.

2.04 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Lamps: Ten for every 100 of each type and rating installed. Furnish at least one of each type.
2. Glass, Acrylic, and Plastic Lenses, Covers, and Other Optical Parts: One for every 100 of each type and rating installed. Furnish at least one of each type.
3. Diffusers and Lenses: One for every 100 of each type and rating installed. Furnish at least one of each type.
4. Globes and Guards: One for every 20 of each type and rating installed. Furnish at least one of each type.

2.05 QUALITY ASSURANCE

A. Luminaire Photometric Data Testing Laboratory Qualifications: Luminaire manufacturers' laboratory that is accredited under the NVLAP for Energy Efficient Lighting Products.

B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7, accredited under the NVLAP for Energy Efficient Lighting Products and complying with applicable IES testing standards.

C. Provide luminaires from a single manufacturer for each luminaire type.

D. Each luminaire type shall be binned within a three-step MacAdam Ellipse to ensure color consistency among luminaires.

E. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

F. Mockups: For exterior luminaires, complete with power and control connections.
1. Obtain Architect's approval of luminaires in mockups before starting installations.
2. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed work.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

2.06 DELIVERY, STORAGE, AND HANDLING

A. Protect finishes of exposed surfaces by applying a strippable, temporary protective covering prior to shipping.

2.07 FIELD CONDITIONS

A. Verify existing and proposed utility structures prior to the start of work associated with luminaire installation.

B. Mark locations of exterior luminaires for approval by Architect prior to the start of luminaire installation.

2.08 WARRANTY

A. Warranty: Manufacturer and Installer agree to repair or replace components of luminaires that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures, including luminaire support components.
      b. Faulty operation of luminaires and accessories.
      c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   2. Warranty Period: 5-years from date of Substantial Completion.

PART 3 PRODUCTS

3.01 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Luminaires shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

B. Seismic Performance: Luminaires and lamps shall be labeled vibration and shock resistant.
   1. The term "withstand" means "the luminaire will remain in place without separation of any parts when subjected to the seismic forces specified and the luminaire will be fully operational during and after the seismic event."

3.02 LUMINAIRE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NRTL Compliance: Luminaires shall be listed and labeled for indicated class and division of hazard by an NRTL.

C. FM Global Compliance: Luminaires for hazardous locations shall be listed and labeled for indicated class and division of hazard by FM Global.

D. UL Compliance: Comply with UL 1598 and listed for wet location.

E. Lamp base complying with IEC 60061-1.

F. Bulb shape complying with ANSI C79.1.

G. CRI of minimum 80. CCT of 4000K.

H. L70 lamp life of 50,000 hours.

I. Lamps dimmable from 100 percent to 0 percent of maximum light output.

J. Internal driver.

K. Nominal Operating Voltage: 277 V ac.

L. In-line Fusing: On the primary for each luminaire.

M. Lamp Rating: Lamp marked for outdoor use and in enclosed locations.

N. Source Limitations: Obtain luminaires from single source from a single manufacturer.

O. Source Limitations: For luminaires, obtain each color, grade, finish, type, and variety of luminaire from single source with resources to provide products of consistent quality in appearance and physical properties.

3.03 LUMINAIRE-MOUNTED PHOTOELECTRIC RELAYS

A. Comply with UL 773 or UL 773A.

B. Contact Relays: Factory mounted, single throw, designed to fail in the on position, and factory set to turn light unit on at 1.5 to 3 fc and off at 4.5 to 10 fc with 15-second minimum time delay.

Relay shall have directional lens in front of photocell to prevent artificial light sources from causing false turnoff.

1. Relay with locking-type receptacle shall comply with ANSI C136.10.
2. Adjustable window slide for adjusting on-off set points.

3.04 LUMINAIRE TYPES

A. Area and Site:
   1. Luminaire Shape: Round or Square
   2. Mounting: See plans.
   3. Luminaire-Mounting Height: See plans.
   4. Distribution: See plans.
   5. Diffusers and Globes: Coordinate with Architect
   6. Housings:
      a. Extruded-aluminum housing and heat sink.
      b. See plans or coordinate with Architect for finish.

B. Canopy:
   1. Shape: Rectangular
   2. Dimensions:4 feet.
   3. Diffusers and Globes: Coordinate with Architect
   4. Housings:
      a. Extruded-aluminum housing and heat sink.
      b. See plans or coordinate with Architect for finish.

C. Roadway:
   1. Luminaire-Mounting Height: See plans.
   2. Mounting Type:See Plans
   3. Distribution: Type II, Type IV
   1. Diffusers and Globes: Coordinate with Architect
   4. Housings:
      a. Extruded-aluminum housing and heat sink.
      b. See plans or coordinate with Architect for finish.

3.05 MATERIALS

A. Metal Parts: Free of burrs and sharp corners and edges.

B. Sheet Metal Components: Corrosion-resistant aluminum. Form and support to prevent warping and sagging.

C. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position. Doors shall be removable for cleaning or replacing lenses.

D. Diffusers and Globes:
   1. Acrylic Diffusers: 100 percent virgin acrylic plastic, with high resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
   2. Glass: Annealed crystal glass unless otherwise indicated.
   3. Lens Thickness: At least 0.125 inch minimum unless otherwise indicated.

E. Lens and Refractor Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in luminaire doors.

F. Reflecting surfaces shall have minimum reflectance as follows unless otherwise indicated:
   1. White Surfaces: 85 percent.
   2. Specular Surfaces: 83 percent.
   3. Diffusing Specular Surfaces: 75 percent.

G. Housings:
   1. Rigidly formed, weather- and light-tight enclosure that will not warp, sag, or deform in use.

2. Provide filter/breather for enclosed luminaires.

H. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.
   1. Label shall include the following lamp characteristics:
      a. "USE ONLY" and include specific lamp type.
      b. Lamp diameter, shape, size, wattage and coating.
      c. CCT and CRI for all luminaires.

3.06 FINISHES

A. Variations in Finishes: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

B. Luminaire Finish: Manufacturer's standard paint applied to factory-assembled and -tested luminaire before shipping. Where indicated, match finish process and color of pole or support materials.

C. Factory-Applied Finish for Aluminum Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
   1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
   2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20 requirements; and seal aluminum surfaces with clear, hard-coat wax.
   3. Class I, Clear-Anodic Finish: AA-M32C22A41 (Mechanical Finish: Medium satin; Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
   4. Class I, Color-Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: Medium satin; Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker), complying with AAMA 611.
      a. Color: See plans, or as selected by Architect.

3.07 LUMINAIRE SUPPORT COMPONENTS

A. Comply with requirements in Section 26 05 29 "Hangers and Supports for Electrical Systems" for channel and angle iron supports and nonmetallic channel and angle supports.

PART 4 EXECUTION

4.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for luminaire electrical conduit to verify actual locations of conduit connections before luminaire installation.

C. Examine walls, roofs, ceilings for suitable conditions where luminaires will be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

4.02 TEMPORARY LIGHTING

A. If approved by the Architect, use selected permanent luminaires for temporary lighting. When construction is substantially complete, clean luminaires used for temporary lighting and install new lamps.

4.03 GENERAL INSTALLATION REQUIREMENTS

A. Comply with NECA 1.

B. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.

C. Install lamps in each luminaire.

D. Fasten luminaire to structural support.

E. Supports:
   1. Sized and rated for luminaire weight.
   2. Able to maintain luminaire position after cleaning and relamping.
   3. Support luminaires without causing deflection of finished surface.
   4. Luminaire-mounting devices shall be capable of supporting a horizontal force of 100 percent of luminaire weight and a vertical force of 400 percent of luminaire weight.

F. Wall-Mounted Luminaire Support:
   1. Attached to structural members in walls.

G. Wiring Method: Install cables in raceways. Conceal raceways and cables.

H. Install luminaires level, plumb, and square with finished grade unless otherwise indicated. Install luminaires at height and aiming angle as indicated on Drawings.

I. Coordinate layout and installation of luminaires with other construction.

J. Adjust luminaires that require field adjustment or aiming. Include adjustment of photoelectric device to prevent false operation of relay by artificial light sources, favoring a north orientation.

K. Comply with requirements in Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables" and Section 26 05 33 "Raceways and Boxes for Electrical Systems" for wiring connections and wiring methods.

4.04 CORROSION PREVENTION

A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.

B. Steel Conduits: Comply with Section 26 05 33 "Raceways and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

4.05 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

4.06 FIELD QUALITY CONTROL

A. Inspect each installed luminaire for damage. Replace damaged luminaires and components.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
   1. Operational Test: After installing luminaires, switches, and accessories, and after electrical circuitry has been energized, test units to confirm proper operation.
   2. Verify operation of photoelectric controls.

C. Illumination Tests:
   1. Measure light intensities at night. Use photometers with calibration referenced to NIST standards. Comply with the following IES testing guide(s):
      a. IES LM-5.
      b. IES LM-50.
      c. IES LM-52.
      d. IES LM-64.
      e. IES LM-72.
   2. Operational Test: After installing luminaires, switches, and accessories, and after electrical circuitry has been energized, test units to confirm proper operation.

D. Luminaire will be considered defective if it does not pass tests and inspections.

E. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

4.07 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain luminaires and photocell relays.

4.08 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting the direction of aim of luminaires to suit occupied conditions. Make up to two visits to Project during other-than-normal hours for this purpose. Some of this work may be required during hours of darkness.
   1. During adjustment visits, inspect all luminaires. Replace lamps or luminaires that are defective.
   2. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
   3. Adjust the aim of luminaires in the presence of the Architect.

END OF SECTION 26 56 19

SECTION 27 05 00

REQUIREMENTS FOR COMMUNICATIONS INSTALLATIONS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provide a standard defining the structured communications cabling systems to be installed within customer facility. The goal is to accomplish this in the most economic and systematic fashion possible, and in a manner compliant with the latest codes, cabling standards and industry best practices.

B. Scope of Work Compliance.

C. Contractor Qualifications.

D. Warranty.

E. Safety.

F. Working Conditions.

1.02 GENERAL TERMS AND CONDITIONS.

A. General Contractor is responsible for all required Division 27 scope of Work and shall ensure all communication sub-tier contractors adhere to the qualifications set forth in all project Division 27 specifications including project experience and certifications.

B. Prices quoted shall be all-inclusive and represent a complete fully-engineered system installation at the Project site as contemplated by and detailed in the drawing package and in accompanying specifications.

C. Omissions in the specification of any provision herein described shall not be construed as to relieve the Contractor of any responsibility or obligation requisite to the complete and satisfactory delivery, installation, operation and support of any and all systems, equipment or services. Correction of any omission on the part of the Contractor, either due to misinterpretation of this specification or any other conditions of the project, shall be the responsibility of the Contractor and shall not result in any contract modification or additional costs to Contracting Agency.

D. Where conflicts and/or irregularities occur between project documents, specifications, drawings, and/or applicable codes, rules, regulations, ordinances, standards, guidelines and practices, the more stringent requirement shall apply as reasonably determined by Contracting Agency or government agency inspector.

E. This specification represents the design intent for the project communicated by way of narrative descriptions of intended functionality and single line or detail drawings indicating likely equipment connectivity to achieve that functionality. The designs in this specification do not represent fully engineered technical solutions. Contractors are required to review the designs presented in the project documents closely, submit any questions and clarifications regarding the design intent through the RFI process and develop their own engineered solutions representing a fully functional turn-key solution in their bid responses.

F. The scope of this project includes the complete system engineering, procurement, fabrication, installation, programming, testing, training and warranty.

G. Proposed solutions shall be based on the designs communicated in the specifications, but shall include any additional equipment, materials, software, licenses and/or labor required for the Contractor to deliver a fully functional turn-key system solution that meets intended operational performance requirements.

H. It is the responsibility of the Contractor awarded this project to ensure that all quantities, materials, labor, licenses, permits, sales taxes and any and all other costs to provide a turn-key project are included in their bid.

I. Floor plans, drawings, elevation drawings, and other drawings received by the Contractor as part of the construction process are hereby incorporated into this document by reference. It is the responsibility of the Contractor to ensure that amounts and lengths of cabling and pathways

are correct, and that all materials and labor are included to install the system per the drawings and these specifications.

J. Permits, licenses, applicable sales taxes, insurance requirements, payment/performance bond costs, and other miscellaneous costs are the responsibility of the Contractor and shall be included in the contract price and this scope of Work. Such items are to be listed separately on pricing sheets, if provided. Copies of all required permits, licenses, insurance requirements and bond(s) are to be delivered to Contracting Agency prior to commencement of any work.

K. Installation Schedule and Coordination: Contractor shall take the fast-track nature of this project and potential requirement for installation/work schedule adjustments and quick turnarounds into consideration in constructing this project as Contracting Agency will NOT entertain or agree to added-cost change orders associated with scheduling changes.

L. Work will need to be closely coordinated with architect, City Personnel, GC, MEP contractors, structural Contractor and all low-voltage contractors and each of their respective schedules.

M. This will be a turn-key Project. Any item of the equipment or material not specifically addressed on the drawings, specifications or elsewhere in Division 27 specifications documents, but required to provide complete and functional systems as contemplated and/or specified herein, shall be provided at no additional charge to Contracting Agency in a quantity and quality consistent with other specified items.

N. Coordination with Project Design Team: The build contractor will be responsible for coordinating all communications cabling infrastructure requirements, including review of existing site conditions, review and coordination of electrical power and grounding requirements, conduits and back boxes, structural support requirements, and coordination.

O. Assembly: The Contractor shall procure and assemble all hardware and equipment and any additional materials as required to deliver the completely functioning communications cabling system.

P. Installation: The Contractor shall install all equipment, inter-rack and intra-rack cable, wiring of equipment, connectors, panels, plates, and other material at the Project site.

Q. Testing and Adjustment: The Contractor shall perform all tests and adjustments, furnish all test equipment necessary and perform all Work required to properly configure the systems and to verify their performance in accordance with the information in this document and the design-build integrator's approved engineered designs.

R. Warranty: The Contractor shall warrant the installed system in accordance with the terms of this document and accompanying contractual documents.

1.03 RELATED DOCUMENTS

A. All divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings including but not limited to Telecommunication Drawings.

C. Project Basis of Design document for low-voltage/signal systems (a.k.a. Technology Systems including but not limited to; IP Network, Wireless IP Network, Paging, Category 6A Structured Cabling Solution

D. Refer to structural seismic requirement design documents specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

8. Anywhere cabling Standards conflict with electrical or safety Codes, Contractor shall defer to NEC and any applicable local codes or ordinances, or default to the most stringent requirements listed by either.
9. Knowledge and execution of applicable codes is the sole responsibility of the contractor.
10. Any code violations committed at the time of installation shall be remedied at the contractor's expense.

1.06 SCOPE OF WORK

A. General project information:
1. These Specifications and associated drawings are the governing document for the installation of the telecommunications infrastructure and includes project descriptions, specified and recommended products, installation and project management methods, the scope of Work and elevation drawing specifications.
2. Through this division specification document, Kitsap will be referred to as the Contracting Agency.
3. Contracting Agency wishes to contract with a General Contractor, who will sub-tier the supplier/contractor ("ICT-Information, Communication Technology and Physical Security") to provide, install, test and warranty a complete turn-key a Cable Infrastructure System and Security System for the Contracting Agency's (Kitsap), the "Project" per the scope of Work and specifications stated herein. This inquiry implies no obligation on the part of Contracting Agency. Contractor shall bear all costs and expenses incurred in preparing a response a Request for Proposal ("RFP") and subsequent award of project, it being understood and agreed that Contracting Agency accepts no responsibility for any costs and/or expenses incurred by winning Contractor in preparing and submitting such response.
4. The existing North District Road Maintenance facilities serving north Kitsap County have been deemed functionally obsolete by Kitsap County Public Works (KCPW). KCPW requires a new Road Maintenance and Operations facility that will also include administrative offices, vehicle maintenance bays, an equipment and vehicle wash bay, a vehicle and equipment fueling station, and a moderate risk waste (f) collection site. The purpose of the HHWCF collection site is to provide a collection point for household hazardous waste (HHW) from North Kitsap County and Bainbridge Island residents. The building will consist of the following:
a. Both the new first floor of the MRWF and Maintenance buildings will have BDFs that will support the network requirements for the site.
b. Describe Room types to be in scope
c. Reference Div 28 security systems
d. Describe MDF/BDF/IDF room build out.
e. Describe backbone infrastructure and cable as needed.
f. Describe Horizontal cable infrastructure as needed.

B. Purpose:
   1. This specification defines quality standards and practices common to all network cabling for the project. In addition, said project will have Requests for Proposals (RFP), associated drawings and requirements pertaining to their specific environments. Such collateral will be referred to in this document as "Project Specific Documentation" or simply "Construction Documents".
   2. Voice and Data Networks encompass a broad spectrum of technologies and are distributed into project internal spaces. Installed cables will be used for Ethernet, high and low speed data applications, used in analog and digital voice, not to exclude other future Voice/Data technologies. This specification will include indoor/outdoor cable installations, and backbone cabling, telecommunications closet and equipment cabling, equipment hardware as well as routing and support infrastructure.
   3. It is the responsibility of the installing Contractor to evaluate these general recommendations and adapt them effectively to actual projects. Contractor is responsible for identifying and bringing to the attention of any design directions that may be in conflict or otherwise improved. All such conflict resolutions shall be in writing from A/E or Contracting Agency.
   4. Note that while many portions of this global specification are addressed to "The contractor", these requirements apply equally to anyone doing the network cabling and infrastructure work within, whether those persons are outside contractors or persons directly employed by the Contracting Agency.
   5. Contractor shall be solely responsible for all parts, labor, testing, documentation and all other associated processes and physical apparatus necessary to turn-over the completed system fully warranted and operational for acceptance by A/E.
   6. This specification includes structured cabling design considerations, product specifications and installation guidelines for low-voltage network systems and associated infrastructure including, but not limited to:
      a. Cabling Sub-system 1 – Horizontal
         1) Category 6A cable
         2) Work area (equipment outlet) appliances and configuration
         3) Horizontal Pathways
         4) Copper Patching
         5) Powered fiber cabling and infrastructure
      b. Backbone Cabling
         1) Interbuilding backbone – Copper and Fiber
         2) Patching / Cross-connect – Copper and Fiber
      c. Telecommunications Spaces
         1) Telecommunications Room Requirements
         2) Racks and Cabinets
         3) Overhead Pathways
      d. Communications Grounding Systems
      e. Communications Labeling and Administration

C. Scheduling:
   1. Contract Documents and the overall construction schedule must be carefully reviewed to determine all required interfacing and timing of the Work. All such documents shall be available through the General Contractor or Construction Manager.
   2. Project schedule shall include, but are not limited to, the following task sequence:
      a. New Server Room, IDF Construction and buildout.
      b. Conduit infrastructure; including vaults/pull box install and conduit duct banks.
      c. Individual Building Pathway Installation.
      d. Building Category 6A Cable installations; includes install, termination, labeling, testing, as-built and warranty documentation.
      e. Wireless Access Points.
      f. New backbone fiber optic cabling installations: includes install, termination, labeling, testing, as built and warranty documentation.
      g. Service provider cabling and equipment installation.

h. Service provider completion and commissioning.

D. Coordination:
1. Install and coordinate the telecommunications cabling work in cooperation with other trades installing interrelated Work. Before installation, make proper provisions to avoid interference in a manner accepted by the architect. Any repairs or changes made necessary in the contract work, caused by the sub-contractor's neglect, shall be made by the sub-contractor at their own expense

E. Project Scoping from Basis of Design:
1. The Contractor shall use all input from Kitsap current technology standards for a complete functioning turn-key technology solution
2. The building shall contain a dedicated main IDF/Data Room housing building network equipment racks, terminal backboards, and other telecommunication equipment. A Cat 6A structured cabling system will be provided per the Contracting Agency's standards extending from the respective IDF facility to outlets serving workstations, printers, copiers, fax machines, wireless access points (WAPs), other devices/locations as determined by the Contracting Agency. Wireless LAN coverage will be provided for exterior building spaces as coordinated with the Contracting Agency. All final WAP locations and coverages are to be coordinated with and determined by the Contracting Agency.

1.07 SYSTEM DESCRIPTION AND GENERAL RESPONSIBILITIES

A. The Work to be performed under this contract includes the furnishing of all labor, materials, and equipment for an industry compliant telecommunications pathway and spaces building system, analog and optical fiber backbone cabling solution, category six enhanced (6A) manufacturer compliant structured cabling systems with extended performance and replacement warranty, for the systems required by project. These systems include data network connections, VoIP instruments, and headend interfaces, project systems requirements, wireless and Wi-Fi access, Paging. Video surveillance system, a physical access control system. Work shall include all provisions of new electronics controls systems, including physical access control, duress alarm, video surveillance, and audio. The portion of the Work is to be bid as an optional add alternate, and the Contracting Agency may or may not choose to execute this Work under the contract.

B. Combined Prescriptive and Performance Design Requirements
1. Division 27 includes a combination of prescriptive and performance specifications. Compliance with the performance specifications, as well as coordination and integration of the prescription requirements, will require substantial design work on the part of the Contractor.
2. The performance requirements are intended to establish overall system performance requirements, satisfy the operational requirements, and establish the inter-coordination requirements for the Division 27 systems.
3. The prescriptive requirements establish the minimum quality, characteristics, and types of components, equipment, and materials to be used to achieve the stated system performance requirements. The Contractor is advised, however, that prescriptive specifications have not been provided to satisfy all of the specified performance requirements.
4. The Contractor shall carefully consider all of the requirements for each of the Division 27 systems when preparing its bid. Any questions regarding the intent of these requirements, the scope of the systems, or their coordination requirements must be submitted in writing prior to bidding in accordance with the Instructions to Bidders. The Contractor shall have no claim for either extra compensation or extra time on the grounds that it did not understand the scope or the requirements of the Division 27 work, and/or the coordination requirements of the Division 27 work with the Work of the other Divisions.
5. Compliance with the project requirements will be progressively monitored and adjusted through the submittal process, installation period, and performance verification testing.

C. Drawing Interpretation
1. The drawings are diagrammatic and indicate the general arrangement of systems and equipment unless indicated otherwise by dimensions or detailed drawings. The Drawings installation and schematic diagrams and symbols to outline the Work to be provided.

These drawings do not have any dimensional significance nor do they delineate every item required for the intended Work. No interpretation shall be made from the limitations of symbols and diagrams that any elements necessary for complete Work are excluded.

2. The Work shall be provided in accordance with the intent expressed on the Drawings and Specifications and in conformance with the actual building architectural and structural conditions. When in conflict, field conditions take precedence over the Contract Documents.
3. The meaning of abbreviations shall be the same, whether in lower case letters or without periods.
4. The use of words in the singular shall not be considered as singular where other indications denote that more than one item is referred to.
5. Details that appear on the Contract Documents, which are specific with regard to the dimensioning and positioning of the Work, are intended only for the purpose of establishing general feasibility. They do not replace engineering or field coordination by the Contractor for the Work.

D. Provide all parts and equipment for a complete and operational system for the Work of Division 27 as described herein and shown on the drawings.

E. Furnish and install all trenching and backfill, duct banks, conduits, raceways, sleeves, boxes, gutters, shelves, enclosures, shelf and enclosure supports, backboards, pull ropes (in unused or spare conduits) required to make all systems fully operational, including components not shown on the Drawings, but necessary for fully operational systems.

F. Furnish, install, terminate, test, dress, and identify all wire and cable required to make systems fully operational, including all wire and cabling not shown on the Drawings, but necessary for fully operational systems.

G. Recognize that the Work entails integration between individual systems, as well as the design and implementation of many systems and component interfaces. Take full responsibility for the complete design, installation, and performance of the total integrated system, including integration between systems and various interfaces, in order to achieve the specified operational features and system performance requirements.

H. Fully test the systems, demonstrate their satisfactory operation, and train maintenance and operating personnel, as specified in this Section and the Sections governed by this Section.

1.08 CONTRACTOR QUALIFICATIONS

A. General:
1. Contractor shall have at least 5 years of experience installing and testing structured cabling systems.
2. Contractor shall employ at least one BICSI Registered Communication Distribution Designer (RCDD), and the RCDD shall sign-off on all designs offered, including stamping the design with their current BICSI/RCDD stamp.
3. Contractor shall have the responsibility to obtain any of the necessary permits, licenses, and inspections required for the performance of data, voice, and fiber optic cable installations.
4. Contactor shall be a current manufacturer Certified Installer certificate. A copy of corporate certificate shall be included with quote.
5. Contractor shall have service facilities within 50 miles of project location.
6. At least 75 percent of the technicians on the job shall have a current manufacturer Certified Copper Technicians certificate to install manufacturer Copper Distribution Systems.
7. At least 75 percent of the technicians installing any Fiber Distribution Systems shall have a current manufacturer Certified Fiber Technicians certificate to install Fiber Distribution Systems.
8. The Telecommunications contractor shall provide a project manager to serve as the single point of contact to manage the installation, speak for the Contractor and provide the following functions:
   a. Initiate and coordinate tasks with the Construction Manager and others as specified by the project schedule.
   b. Provide day to day direction and on-site supervision of Contractor personnel.

c. Ensure conformance with all contract and warranty provisions.
d. Participate in weekly site project meetings.
e. This individual shall remain project manager for the duration of the project. The Contractor may change Project Manager only with the written approval of A/E.

B. References:
1. Communications Contractor shall provide with bid a list of three reference accounts where similar Data, Voice, Fiber Optic Cable, and related migration/cutover equipment installation work was performed within the last year or twelve-month period.

C. Insurance Requirements:
1. Contractor shall be insured and shall provide with bid a Certificate of Indemnification, Certificate of Insurance, and meet all required insurance and licensing policies as specified by A/E Risk Management Division and any Federal, State, and local organization pertaining to data, voice and fiber optic cable installation.
2. Contractor's vehicles brought onto project properties, shall comply with all requirements of all Federal, State, and local agencies. Vehicles shall meet current DOT, state and local, safety inspections where required.

D. Termination of Services:
1. Contracting Agency or A/E reserves the right to terminate the Communication Contractor's services if at any time the A/E determines the Communication Contractor is not fulfilling their responsibilities as defined within this document.
2. Contractor's appearance and work ethics shall be of a professional manner, dress shall be commensurate with Work being performed.
3. Dress displaying lewd or controversial innuendos shall strictly be prohibited.
4. Conduct on project property shall be professional in nature.
5. Any person in the Contractor's employ working on a project considered by to be incompetent or disorderly, or for any other reason unsatisfactory or undesirable, such person shall be removed from Work on the project.
6. The Communications Contractor shall be restricted from the premises and compensated for the percentage of Work completed satisfactorily.

E. Other Contractor Responsibilities
1. Contractor is responsible for the removal and disposal of all installation and construction debris created in the process of the job. All work areas shall be cleaned at the conclusion of the workday and no tools or materials shall be left in a manner as to pose a safety hazard.
2. Contractor shall remove all abandoned cable per Article 800 of the National Electrical Code and per TIA and BICSI standards, recycling these materials where possible. This is mandatory; Contractors shall consider this when placing bids.
3. Contractor shall abide by the regulations set by A/E or Contracting Agency Security Department pertaining to access to and conduct while on project property and shall obey speed limits and parking regulations.

1.09 SYSTEM PERFORMANCE WARRANTY

A. General
1. Contractor shall provide a manufacturer System Warranty on all copper and fiber permanent cabling links.
2. This is a system performance warranty guaranteeing for a minimum of 20 years from acceptance that the installed system shall support all data link protocols for which that copper Category (6A) or fiber OS designation is engineered to support according to IEEE and TIA standards.
3. The manufacturer System Warranty may be invoked only if the cabling channel links are comprised of manufacturer connectivity and approved by the manufacturer. Patch cords shall be same manufacturer of cable.
4. Upon acceptance of Warranty, manufacturer will mail a notification letter to the installer and a notification letter and warranty certificate to A/E.

B. Contractor Warranty Obligations
   1. Installation firm shall be a current manufacturer Certified Installer in good standing and shall include a copy of the company certification with the bid.
   2. Contractor shall name a supervisor to serve on site as a liaison responsible to inspect and assure all terminations are compliant to factory methods taught in manufacturer Technician Certification Training and according to all Standards cited in the Regulatory References section of this document.
   3. Contractor liaison shall have a current, up-to-date manufacturer Certified Technician certificate in both copper and fiber. Copies of the copper and fiber certificates of the manufacturer liaison shall be submitted with the bid.
   4. Contractor agrees all components comprising active links shall be of the same copper Category (6A) or fiber OS/OM designation as the system being installed. Contractor shall under no circumstances mix different Categories or OS/OM classes of cable or termination devices (connectors) within the same link or system.
   5. Contractor shall install all racking and support structures according to cited TIA Standards in such fashion as to maintain both Standards and Manufacturer recommendations for uniform support and protection, segregation of different cable types, maintenance of maximum pulling tensions, minimum bend radius, approved termination methods as well as adhering to industry accepted practices of good workmanship.
   6. Contractor is responsible for understanding and submitting to manufacturer all documents required prior to project start to apply for this warranty. These include but are not limited to the project information form and SCS warranty agreement.
   7. Contractor is responsible for understanding and submitting to manufacturer all documents required at project end. These include completed warranty forms, passing test reports and drawings of floor plans showing locations of links tested.
   8. Test results shall be delivered in the tester native format (not Excel) and represent the full test report. Summaries shall not be accepted. Contact manufacturer for a current list of approved testers, test leads and latest operating systems.
   9. The Communications Contractor shall correct any problems and malfunctions that are warranty-related issues without additional charge for the entire warranty period. The warranty period shall commence following the acceptance of the project by A/E and written confirmation of Warranty from manufacturer.

1.10 SAFETY

A. General
   1. All cabling work being performed on project property or under contract to shall comply with Rules for safe operations, any state or local safety regulations and meet the requirements of OSHA Safety and Health Standards. The contractor Project Manager shall maintain a copy of Rules for Safe Operations for reference. It is the responsibility of the Communications Contractor to immediately correct any unsafe working practices on the part of contractor personnel. Unsafe working environments or conditions created by contractor personnel shall be reported immediately to the Construction Manager.
   2. Any liability for correction of conditions created by the Contractor's personnel rests with the Contractor.
   3. The Communications Contractor shall be solely and completely responsible for conditions of the job site (as pertaining to the materials and equipment specified), including safety of persons and property during performance of Work.
   4. No act, service, drawing review or construction observance by any employee, representative or engineer may be construed as a review or approval of the adequacy of the Contractor (s) safety measures, in, on, or near the construction site.

1.11 WORKING CONDITIONS

A. Site Access
   1. All cable installations shall be pre-approved by the Construction Manager to ensure that the necessary arrangements have been made for proper access to project sites.
   2. A twenty-four-hour prior notice shall be submitted to the Construction Manager for any work schedule changes.

3. Communications Contractor shall display badges or passes as mandated by project property Security Department Rules and Regulations.

B. Scheduling
1. Coordination of site surveys and the issue of project Contracting Agency owned materials and equipment shall be the responsibility of the Construction Manager. Once said equipment and materials are in the Contractor's possession, it is the contractors to safeguard the material and equipment from damage or theft.
2. Information required by the Contractor to price and complete a defined scope of Work shall be furnished to the Communications Contractor by the A/E Project Manager in a Scope of Work document and at the time of the site survey (if necessary) and shall be maintained by the Communications Contractor until the completion of the job.
3. It is the Contractor's responsibility to begin Work promptly according to the Start Dates and to complete Work by the Proposed Completion Date listed on the Cable Run Request Form.
4. The Contractor shall notify the Construction Manager in writing of any delays; at that time, they shall come up with a mutually agreeable project schedule.
5. The Communications Contractor shall coordinate with the Construction Manager working hours and job site access issues.
6. The Communications Contractor shall coordinate with the Construction Manager to minimize outages to the existing systems.
7. Any service interruption required by the Communications Contractor shall be requested in writing and scheduled with the Construction Manager.
8. The Communications Contractor shall not proceed with the requested service interruption until written approval is granted by the Construction Manager.
9. All problems, and questions relating to a particular job, shall be referred to the Construction Manager and no changes shall be made without his/her written approval.

C. Harmony Clause
1. Contractor shall coordinate and work in harmony with other trades on the project as well as with A/E personnel.

1.12 COORDINATION

A. Coordinate layout and installation of voice and data communication cabling with other Contracting Agency contractors and equipment suppliers.
1. Meet jointly with other contractors, equipment suppliers, and Contracting Agency representatives to exchange information and agree on details of equipment arrangements and installation interfaces.
2. Record agreements reached in meetings and distribute to other participants.
3. Adjust arrangements and locations of distribution frames, cross-connect and patch panels in equipment rooms and telecommunications rooms to accommodate and optimize arrangement and space requirements of voice and LAN equipment.
4. When indicated on drawings, Contractor shall reuse existing copper and fiber optic backbone cables.
5. Provide weekly progress reports and crew schedules to project representatives by 5:00 PM, Thursday (or agreed upon day) of each project work week.

1.13 ACTION SUBMITTALS

A. Product Data: For each product indicated.
1. Submit all product data in accordance with general requirements of the construction documents.
2. Submit product cut sheets and a detailed list of components a minimum of two (2) weeks prior to commencement of Division-27 Work for A/E review and action.
3. Contractor shall submit product materials in one complete Division 27 package, with subdivisions clearly identified. Products applicable to project drawings and specifications clearly identified under each sub-division.
4. Contractor shall provide product data and installation instructions for all fire stopping materials

5. Alternate and "Or Equal" designated products shall be submitted for review and judgment to the A/E prior to installation. The Contractor proposed alternate products or components shall be verified by two (2) independent sources within the past 6 months. This request shall include the two (2) independent sources, the original Product's specification sheet, the proposed substitute product cut sheet, and a written request to review the substitute product.
6. Any request of an alternate or substitution shall be submitted to the A/E for action no later than fourteen (14) calendar days after release of the original telecommunications bid documents.

1.14 INFORMATION & COMMUNICATION TECHNOLOGY (ICT) COMPONENTS

A. The Contract Documents generally outline industry standard components to be installed as part of the project ICT installation requirements. Such identification is intended to be general in nature rather than exhaustive. All stated quantities are subject to validation by ICT contractor. ICT Contractor is reminded that differences between estimated quantities and those reasonably derived based from the Contract Documents (as well as through bid conferences, job walks, addendums, and other distribution of information) shall be the responsibility of the ICT contractor. There shall be no additional cost incurred by Kitsap project for not complying with the specifications and requirements of the Contract Documents.

B. Any variance from those components identified on the drawings and/or below shall be submitted to Kitsap project representatives for approval prior to ordering and installation; the risk for all costs incurred by the ICT Contractor for materials ordered prior to such written approval shall be borne entirely by the ICT contractor. Nonetheless, it is imperative that the ICT Contractor determine the availability of necessary materials and propose equivalent substitutes as necessary to meet all installation milestones. Delays in ICT installations due to lack of product availability are unacceptable. As catalog numbers change frequently, the ICT Contractor shall verify all part numbers prior to ordering materials. Clarifications shall be issued in response to written Requests for Information (RFI).

C. Fire Stop and firestopping requirements for the project include:
   1. All conduits leaving the entrance room for other portions of the building shall be firestopped after the installation of cable.
   2. The Contractor shall fire stop around the tray and, after installation of the cables, within the tray using removable pillow-style products following manufacturers' guidelines. Sound deadening material shall be provided and installed after installation of cable.
   3. Strict adherence to the CEC/NEC NFPA 101 is required for any raceway penetrations of fire-rated walls. See section 07840 for UL system numbers and to construction drawings for details.
   4. All riser conduits shall be sealed using a UL classified fire stop. The Contractor shall provide a copy of the fire seal manufacturer's installation instructions and rating information prior to inspection of the installed materials.
   5. Integrally Fire Stopped Sleeves
      a. Integrally Fire Stopped Sleeves shall be used for Telecommunications cabling in locations where the cabling pathway penetrates a fire barrier. The IFSS shall replace the use of conduit used in conjunction with other fire stopping methods.
      b. All manufacture instructions and requirements shall be followed for the installation of the IFSS.
      c. Documentation shall include picture of completed assemble with time/date stamp.

D. All new fiber optic cabling shall be indoor/outdoor-Plenum rated. Unrated cable (such as filled ASP) shall not be installed within the structure except when placed within IMT, PVC or RGS conduit.

E. Throughout this specification, Corning, Superior Essex, Chatsworth Products, Inc. and other manufacturers are cited. These citations are for the purpose of establishing quality, performance and warranty certification criteria.

1.15 DELIVERY AND STORAGE

A. ICT Contractor shall provide a materials schedule prior to the start date of cable installation. Material schedule shall specify all material quantities and their delivery date for this project.

B. ICT Contractor shall provide protection from weather, moisture, dirt, dust and other contaminants for telecommunications cabling and pathway equipment placed in storage.

1.16 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:
   1. Submit all shop drawings in accordance with the general requirements of the construction documents.
   2. Submit shop drawings a minimum of two (2) weeks prior to commencement of Division-27 Work for A/E review and action.
   3. Shop drawings shall include evidence of grounding and bonding components are coordinated with field conditions and the Work of other trades.
   4. This submittal may have a written component and a visual, drawn component for review and action by the A/E prior to installation.

B. Certificates:
   1. Submit management and installation team reference documentation verifying:
      a. The project manager is a RCDD in good standing with BICSI and is qualified to manage the scope of Work described in the contract documents and has five (5) years of experience managing similar projects in size and scope. The documentation shall include the RCDD registration number.
      b. The field supervisor is a BICSI trained technician that is qualified to perform and oversee the Work described in the contract documents.

C. Qualification Statements:
   1. The Contractor shall submit documentation that within the past 12 months, a minimum of 75% of all installation personnel have been trained or certified by the manufacturer of the products they are installing.

1.17 CLOSEOUT SUBMITTALS

A. As-Built Drawings:
   1. Submit all as-built drawings in accordance with the general requirements of the construction documents.
      a. The drawing notes shall define field conditions experienced not defined in sheet notes.
      b. The drawings shall identify all fire stop locations and digital picture shall accompany as-built package.
   2. Submit as-built drawings a minimum of two (2) weeks after completion of all Division- 27 work for A/E and Contracting Agency reference.
   3. Communication contractor to print, frame and mount approved as-built drawings in MPOE. Coordinate location with A/E.

1.18 QUALITY ASSURANCE

A. Qualifications – Manufacturer
   1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.
   2. Installers shall have manufacturer certificate of completion for the fire stop solution being proposed.

B. Qualifications – Installer:
   1. At a minimum, seventy-five percent (75%) of the onsite Contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

C. Workmanlike Manner
   1. Installers shall address their job functions for this scope of work from the guidance provided by ANSI/NECA-1-2010
   2. Cable - Hangers, Saddles, Supports, J-Hooks shall be routed inline and parallel to building lines.
      a. All cable routing shall maintain an "Above" approach to cabling when crossing any obstruction – Cable Hangers shall be installed to support the cable bundle above and away for physical damage or electrical interference from accidental contact with the UTP cabling system.
      b. Cable hangers shall be installed on a minimum 3/8" threaded rod and installed at a uniformed height above finished floor where ever possible
      c. Maintain a minimum 6" clearance above the finished ceiling
      d. Cable Hanger routing shall be identified on as-built conditions and record drawings
   3. Cable - Hangers, Saddles, Supports, J-Hooks shall be attached per manufacturer's installation requirements and reviewed and confirmed with SEOR prior to rough-in
   4. Cable hangers shall be required to maintain the maximum required cable bundle size for the different rating of PoE (power rating) as listed on the cable jacket
   5. Cable hangers are field defined routing; therefore, all non-rated, fire-fated, acoustical-rated sleeves shall be responsible for configuration, furnish, install, and document.
   6. This requirement includes manufacturer training for proper fire stop installation of technicians performing these installations

PART 2 PRODUCTS (NOT APPLICABLE)

PART 3 EXECUTION

3.01 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section.

B. Methodology for fire stop requirements that Contractor shall comply with, include:
   1. In any area in which a fire rated wall, partition, floor, or ceiling is penetrated, the Contractor shall be responsible for creating the pathway and sealing around all cables and sleeves with a UL classified fire seal sufficient to return the structure to its original rating. Creation of such openings as are necessary for cable passage between locations as shown on the drawings shall be the responsibility of the Contractor. Any opening in a rated structure created by the Contractor that is larger than one inch in diameter shall be equipped with a metal sleeve secured and fire-stopped in place.
   2. Comply with requirements in Section 07 84 00 " Firestopping
   3. Comply with TIA-569-B, Annex A, "Firestopping."
   4. Comply with BICSI TDMM, "Firestopping Systems" Article.

C. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:
   1. Interior Penetrations of Non-Fire-Rated Walls and Floors:
      a. Seal annular space between sleeve and pathway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 07 92 00 "Joint Sealants."
      b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall, so no voids remain. Tool exposed surfaces smooth; protect material while curing.
   2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
   3. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and pathway or cable unless sleeve seal is to be installed or unless seismic criteria require different clearance.
   4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.

5. Install sleeves for floor penetrations. Extend sleeves installed in floors 4 inches above finished floor level. Install sleeves during erection of floors.

D. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:
   1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
   2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.

3.02 RE-INSTALLATION

A. No additional burden to the Contracting Agency regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the Contracting Agency prior to beginning any re- installation work

3.03 CLOSEOUT ACTIVITIES

A. Contractor shall provide testing results and as-built conditions in the documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Contracting Agency and A/E team.

B. Contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Contracting Agency

END OF SECTION 27 05 00

This page intentionally left blank

SECTION 27 05 26

GROUNDING BONDING FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Specifications for grounding and bonding components utilized to provide proper grounding and bonding for telecommunications cabinets, racks, cable tray, ladder tray, cable and equipment.

B. Grounding and bonding components with design criteria.

1.02 RELATED REQUIREMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1.03 CLOSEOUT SUBMITTALS

A. As-Built Drawings
   1. Submit all as-built drawings in accordance with the general requirements of the construction documents.
   2. Submit as-built drawings a minimum of two (2) weeks after completion of all Division- 27 work for A/E and Contracting Agency reference:

1.04 QUALITY ASSURANCE

A. Qualifications – Manufacturer
   1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.

B. Qualifications – Installer:
   1. At a minimum, seventy-five percent (75%) of the onsite sub-contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

PART 2 PRODUCTS

1. 2.1 GROUNDING AND BONDING

B. Basis-of-Design Product: Subject to compliance with requirements, provide manufacturer or comparable product by one of the following:
   1. CPI.
   2. B-Line.
   3. Circa.
   4. Or Equal.

C. Product Options:
   1. The indicated manufacturers shall be the basis of the design and each component selected shall address the infrastructure requirement.

D. Description:
   1. Sub-contractor is responsible for bonding to ground all newly placed equipment and installed racks or cabinets per the TIA 607-B Standard.
   2. EXECUTION

2.02 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section.

2.03 INSTALLATION

A. Process:

1. All newly installed racks and cabinets shall have installed a vertical busbar mounted along one equipment rail to serve as a clean, low-resistance bonding place for any equipment not equipped with a designated grounding pad.
2. Smaller equipment without an integrated grounding pad shall be bonded to the vertical busbar using a thread-forming grounding screw that is anodized green and includes serrations under the head to cut through oxidation or paint on the equipment flange.
3. Larger equipment (chassis switches) with a designated grounding terminal shall be bonded to the vertical busbar with and EBC (equipment bonding conductor) kit built to that purpose.
4. All grounding wire shall be a minimum #6 AWG stranded annealed ground wire, PVC sheathed with nylon. Meets UL83 for THHN or THWN and UL1063.
5. All OSP cabling terminated with-in new campus MDF shall be terminated to a Building Entrance Terminal with gas fuses.
6. Sub-contractor shall take care to clean (wire brush, scotchbrite pads) any metallic surface to be bonded down to bare metal and apply a film of anti-oxidation paste to the surfaces prior to effecting the bond.
7. All bonding lugs on racks and busbars shall be of two-hole irreversible compression type. Mechanical lugs and single-hole lugs will not be accepted and shall be removed and replaced at Sub-contractor's expense.
8. Every rack or cabinet shall have an individual bonding conductor into the grounding network. Serially connecting (daisy-chaining) of racks is expressly forbidden and will not be accepted.
9. Rack Bonding Conductors (RBC) may tap into an overhead or underfloor aisle ground, or may run to the wall-mounted grounding busbar in smaller Telecommunications rooms containing 5 racks or less.
10. Armored cables shall be properly bonded to the earthing system with a kit built to that purpose.
11. All metallic conduit stub-ups shall be grounded, and where multiple stub-ups are made within an equipment enclosure, they shall be equipped with grounding bushings and bonded together and to the enclosure and the enclosure ground bus.
12. Each metallic raceway, pipe, duct and other metal object entering the buildings shall be bonded together. The Sub-contractor shall use #6 AWG green insulated copper conductors.
13. Each identified telecommunications space within a building shall have a common signal reference ground. The signal reference ground shall conform to the following:
    a. Within the building, all communication spaces shall be separately bonded to each other and connected to the primary building ground in accordance with the provisions of EIA/TIA 607. The communication ground shall not ground any other equipment or be connected to any potential high voltage source. All racks, frames, drain wires, and all installed communication equipment shall only be grounded to this common reference ground with a minimum size #6 AWG green insulated copper wire.
    b. The Sub-contractor shall provide, as a minimum, a continuous #3/0 AWG copper electrical conductor connected to a 1/4" x 4" x 12" telecommunications grounding bus bar (TGB) 6" AFF on the plywood backboard of each IDF (or telecommunication space) to terminate chassis and other equipment grounds.
    c. The ground wires from each individual IDF shall be routed directly to the Building Distribution Frame (BDF), terminated and bonded together via a telecommunications main grounding bus bar (TMGB) of minimum 1/4" x 4" x 20" dimensions. This point of single reference for all closets in a building shall in turn be grounded with a minimum #3/0 AWG ground conductor to the main building ground. If a main building ground is unavailable, the ground wire from the BDF shall be grounded to the nearest electrical panel ground bus bar. The building ground for signal reference shall be the building service entrance ground.

14. Ground Bus Bar Identification.
    a. The master ground bar shall be labeled as such.
    b. Each subsidiary ground bar shall be labeled as such and have a unique identifier.
    c. All ground bars shall have a warning label that states, “If this connector or cable is loose or shall be removed, please call the Telecommunications Manager.” All ground bars will be connected to the building ground with continuous “3/0” AWG wire.
    d. Each ground cable shall be labeled with a unique identifier.

2.04 RE-INSTALLATION

A. No additional burden to the Contracting Agency regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the Contracting Agency prior to beginning any re- installation work

2.05 CLOSEOUT ACTIVITIES

A. Sub-contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Contracting Agency and A/E team.

B. Sub-contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Contracting Agency.

END OF SECTION 27 05 26

This page intentionally left blank

SECTION 27 05 29

HANGER AND SUPPORTS FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provides specifications for non-continuous cable support components utilized to provide pathways support to telecommunications cables traveling outside cable trays, conduits, or other continuous cable supports.

B. Non-continuous cable supports.

1.02 RELATED DOCUMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1. Anywhere cabling Standards conflict with electrical or safety Codes, Sub-contractor shall defer to NEC and any applicable local codes or ordinances, or default to the most stringent requirements listed by either.
2. Knowledge and execution of applicable codes is the sole responsibility of the Sub-contractor.
3. Any code violations committed at the time of installation shall be remedied at the Sub-contractor's expense.

1.03 QUALITY ASSURANCE

A. Qualifications – Manufacturer

1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.

B. Qualifications – Installer:

1. At a minimum, seventy-five percent (75%) of the onsite sub-contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

1.04 WARRANTY

A. Warranty:

1. Sub-contractor shall provide a 25 year System Warranty on all copper and fiber permanent cabling links.
2. This is a system performance warranty guaranteeing for 25 years from acceptance that the installed system shall support all data link protocols for which that copper Category or fiber OM/OS designation is engineered to support according to IEEE and TIA standards.
3. The System Warranty may be invoked only if the cabling channel links are comprised of approved cable infrastructure connectivity and approved cable. Patch cords must be manufactured by same approved cable and/or connectivity system.
4. Upon acceptance of Warranty, manufacturer will mail a notification letter to the installer and a notification letter and warranty certificate to A/E.

PART 2 PRODUCTS

2.01 NON-CONTINUOUS CABLE SUPPORTS

A. Basis-of-Design Product: Subject to compliance with requirements:

1. Erico – Caddy CableCat Support System
2. Copper/BLine – Cable Hook System
3. CEAS Attachments – Stiffy Series
4. Panduit – Jmod Cable Support System

5. Or Equal

B. Product Options:
   1. The indicated manufacturers shall be the basis of the design and each component selected shall address the particular infrastructure requirement.
      a. Stiffy Series with metal cradles. Plastic cable saddles not permitted.
      b. Four inch (0'4"), two inch (0'2") J-Hook Supports

C. Description:
   1. Non-continuous cable supports shall be available in multiple sizes, styles and materials. Rigid supports shall be equipped with flared edges and pre-configured bend radius controls.
   2. Provide drop wire supports and threaded rod assemblies in areas where structural mounting surfaces are non-functional or inaccessible.
   3. Support assemblies shall provide a bearing surface of sufficient width to comply with required bend radii of high-performance UTP and optical fiber cables.
   4. Non-continuous cable supports sized 1 5/16" and larger shall have a cable retainer strap to provide containment of cables within the hanger. The cable retainer strap shall be reusable.
   5. Select approved non-continuous cable supports suitable for specific installation environments and/or air handling (plenum) spaces.

PART 3 EXECUTION

3.01 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section.

3.02 INSTALLATION

A. Process:
   1. Follow manufacturer's instructions and recommended industry standards and guidelines.
   2. The installed non-continuous support system must be an independent support structure for the voice/data communication system.
   3. Draping cables over other structures in the ceiling is unacceptable. Water pipes, ceiling grid, sprinkler system, electrical supports, air ducts or any other in-ceiling structure may not be used for cable support.
   4. Sub-contractor installed supports shall be used to supplement the main cable support system when any cabling leaves the main support system or is unsupported for more than three and one half feet (3'-5'-0") feet.
   5. Non-continuous supports shall be installed with rod stock or threaded rod secured to the slab above to support the telecommunications cable infrastructure parallel to the slab throughout the cable plant, unless site conditions dictate a non-parallel installation.
   6. Cable must be routed to follow existing corridors and parallel or 90 degree angles from all walls and the cable tray whenever possible.
   7. Communication EMT conduit sleeves shall receive conduit waterfall to control bend radius of the communication cable to a minimum of a 4" radius.
   8. All pathways shall avoid electromagnetic interference (EMI). Cable that is distributed in partially-enclosed metallic pathways shall be routed with the following minimum clearances:
      a. Four (4) feet from motors or transformers.
      b. One (1) foot from conduit and cables used for electrical power and distribution.
      c. Five (5) inches from fluorescent lighting.

3.03 RE-INSTALLATION

A. No additional burden to the Contracting Agency regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the Contracting Agency prior to beginning any re- installation work

3.04 CLOSEOUT ACTIVITIES

A. Sub-contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Contracting Agency and A/E team.

B. Sub-contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Contracting Agency

END OF SECTION 27 05 29

This page intentionally left blank

SECTION 27 05 33

CONDUITS AND BOXES FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provides specifications for conduit pathways, back boxes and pull box enclosures utilized for the distribution and housing of telecommunications cabling and components:

B. Telecom EMT conduit and boxes

1.02 RELATED DOCUMENTS

A. All divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

PART 2 PRODUCTS

2.01 CONDUIT AND BACKBOXES

A. EMT conduit
   1. Wheatland Tube.
   2. Appleton.
   3. Crouse-Hinds.
   4. Or equal.

B. PVC conduit
   1. JM Eagle.
   2. Electro Flex.
   3. Or equal.

C. Pull boxes
   1. Hoffman Engineering Co,
   2. Or equal.

D. Back Boxes
   1. Thomas & Betts.
   2. Hubbell Raco.

2.02 TELECOMMUNICATIONS CONDUIT AND BACKBOXES

A. Electrical Metallic Galvanized Tubing and Fittings with natural finish for all conduits not exposed: ANSI C80.3 with compression-type fittings.

B. Communication EMT conduit sleeves shall receive conduit waterfall to control bend radius of the communication cable to a minimum of a 4” radius.

C. Indoor Pull boxes: Galvanized steel, screw cover pull box. Grey polyester powder coat finish inside and out. NEMA Type 1. Pull boxes to be sized per NEC code to accommodate the number of EMT conduits as shown on Telecom drawings with adequate clearances, access and cable management space.

D. Supporting devices: U channel trapeze assemblies, 1/2” Threaded rods, clamps, conduit straps, C-clamps and retainers.

E. Fasteners: 3/8” Carbon steel expansion anchors with 2 ½” embed into concrete slab for pull box U-channel support attachment to concrete slab. The anchors must be tested and approved under dual load conditions.

F. U-channel systems: 16 gauge steel channels. Provide fittings and accessories that match with the U-channel of the same manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

Conduit Trade Size (in.)	Pull box Width (in.)	Pull box Length (in.)	Pull box Depth (in.)	Pull box Width Increase for Additional Conduit (in.)
1	4	16	3	2
1 1/4	6	20	3	3
1 1/2	8	27	4	4
2	8	36	4	5
2 1/2	10	42	5	6
3	12	48	5	6
3 1/2	12	54	6	6
4	15	60	8	8

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section.

3.02 INSTALLATION

A. Pull boxes:
   1. Install Pull boxes in easily accessible locations.
   2. Install Horizontal cabling boxes immediately above suspended ceilings.
   3. A pull box should not be used in lieu of a bend.
   4. Conduits that enter the pull box from opposite ends with each other should be aligned.
   5. For direct access to a box located above inaccessible ceilings provide a suitable, marked, hinged access panel (or equivalent) in the ceiling. This access panel can also serve as the cover for the box.
   6. Install conduit radius waterfall for all EMT conduit sleeves entering telecommunication room or through main pathway fire rated walls, quantity as shown on drawings.
   7. Pull box sizing table:

B. Back Boxes
   1. Provide 4-11/16” H X 4-11/16” W X 2-1/8” D outlet back boxes at all telecom outlet locations shown on drawings. Provide (1) 1-1/4” conduit from back box to telecom room or pull box except as otherwise noted. All connectors and couplings shall be zinc-plated steel set screw type. Die cast zinc fittings are not to be used. Provide bushing on ends of all conduits. Provide pull string in all conduits.
   2. Provide single gang plaster ring on all communications outlet back boxes, unless indicated otherwise.
   3. Provide bonding to cable tray pathways.

C. Conduit support and bracing:
   1. Coordinate layout and installation of conduits and pull boxes with other trade conditions to ensure adequate clearances, access and cable management.
   2. Install and provide support for EMT conduits and pull boxes in accordance with the latest edition of the NEC code, as well as all state and local codes and requirements. Coordinate installation and location with existing conditions. Notify and get the Contracting Agency’s Representative approval before installing conduits and pull boxes where the location need to deviate from the contract documents.
   3. Install conduits above ceilings at height to provide access to pull. Install conduits and pull boxes level and square and at proper elevations. Ensure adequate clearances, access and cable management.
   4. Use fittings and support devices compatible with conduits and pull boxes and suitable for use and location. Strength of each support shall be adequate to carry present and future load multiplied by a safety factor of at least four.

5. Install individual and multiple trapeze hangers and riser clamps as necessary to support the conduits. Provide U-bolts, clamp attachments and other necessary hardware for hanger assemblies and for securing hanger rods and conduits. Space supports for conduits on maximum 10-foot centers.
6. Provide and install expansion or deflection fittings for conduits runs at all instances at seismic or expansion joints to allow for movement in any direction.

D. Conduit routing, bends and radius guidelines:
1. If the conduit has an internal diameter of 2 inches or less the bend radius must be at least 6 times the internal conduit diameter.
2. If the conduit has an internal diameter of more than 2 inches the bend radius must be at least 10 times the internal conduit diameter.
3. Conduit bends should be smooth, even, and free of kinks or other discontinuities that may have detrimental effects on pulling tension or cable integrity during or after installation.
4. If a conduit run requires more than two 90-degree bends then provide a pull box between sections with two bends or less.
5. If a conduit run requires a reverse bend (between 100 degrees and 180 degrees) then insert a pull point or pull box at each bend having an angle from 100 degrees to 180 degrees.
6. Consider an offset as equivalent to a 90-degree bend.
7. A pullbox shall not be used as a 90-degree bend.
8. Communication EMT conduit sleeves shall receive conduit waterfall to control bend radius of the communication cable to a minimum of a 4” radius.
9. Achieve the best direct route with no bend greater than 90 degrees or an aggregate of bends in excess of 180 degrees between pull points or pull boxes.
10. Contain no continuous sections longer than 100 ft.
11. For runs that total more than 100 ft. in length, pull points or pull boxes should be inserted so that no segment between points/boxes exceeds the 100 ft. limit.
12. Withstand the environment to which they will be exposed.
13. Conduits should not be routed through areas in which flammable material may be stored or over or adjacent to boilers, incinerators, hot-water lines and steam lines.
14. Keep conduits at least 6’ away from parallel runs of steam, hot water pipes or mechanical ductwork.

E. Conduit Terminations
1. Join conduits with fittings designed and approved for the purpose. Make the joints tight without protruding lips that can snag cable pulling inside the conduits.
2. Where conduits are terminated with locknuts and bushings align the conduit to enter squarely and install the locknuts with dished part against the box. Use two locknuts, one inside and one outside the box.
3. Ream all conduit ends and fit them with an insulated bushing to eliminate sharp edges that can damage cables during installation or service.
4. Conduits that enter a telecom room should terminate near the corners to allow for proper cable racking.
5. Terminate conduits that protrude through the structural floor 3 inches above the surface.
6. Maintain the integrity of all fire stop barriers for all floor or wall penetrations.

F. Provide grounding and bonding for conduits and pull boxes as indicated by NEC code and instructed by manufacturer.

G. Conduits shall be clearly labeled at both ends designating the opposite locations(s) served. The numbering scheme shall be room number plus a suffix to guarantee uniqueness, e.g., 143-1. Labeling must be machine generated.

H. Conduit Protection:
1. Remove burrs, dirt and construction debris from conduits and pull boxes.
2. Conduits should be left capped for protection.
3. Provide final protection and maintain conditions in a manner acceptable to the Contracting Agency’s Representative to ensure that coatings, finishes and pull boxes are without

damage or deterioration at completion. Repair damage to galvanized finishes with zinc-rich paint recommended by the manufacturer.

3.03 ACCEPTANCE

A. All specified conduits and pull boxes indicated on the drawings and specifications shall be complete.

B. Specified shop drawings and product submittals shall have been submitted for review and all review comments and deficiencies shall have been resolved. Final shop drawings and product submittals shall have been submitted, reviewed and found to meet the requirements of the specifications.

C. Issues and deficiencies identified in field reports and punch lists shall have been resolved. Final as-built drawings shall have been submitted, reviewed and found to meet the requirements of the specifications.

D. Sub-contractor shall provide written notice of final completion of the telecom infrastructure. Upon receipt, the Contracting Agency will review/observe the completed installation. Once the Contracting Agency is satisfied that all work is in accordance with the Contract Documents, the Sub-contractor will be notified in writing.

3.04 RE-INSTALLATION

A. No additional burden to the Contracting Agency regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the Contracting Agency prior to beginning any re- installation work

3.05 CLOSEOUT ACTIVITIES

A. Sub-contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Contracting Agency and A/E team.

B. Sub-contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Contracting Agency

END OF SECTION 27 05 33

SECTION 27 05 36

CABLE TRAYS FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1.02 SUMMARY

A. Section Includes:
   1. Ladder cable trays.
   2. Wire-basket cable trays.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of cable tray.
   1. Include data indicating dimensions and finishes for each type of cable tray indicated.

B. Shop Drawings: For each type of cable tray.
   1. Show fabrication and installation details of cable trays, including plans, elevations, and sections of components and attachments to other construction elements. Designate components and accessories, including clamps, brackets, hanger rods, splice-plate connectors, expansion-joint assemblies, straight lengths, and fittings. Drawings to match same scale as approved design or construction drawing set.

1.04 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans and sections, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Include scaled cable tray layout and relationships between components and adjacent structural, electrical, and mechanical elements.
   2. Vertical and horizontal offsets and transitions.
   3. Clearances for access above and to side of cable trays.
   4. Vertical elevation of cable trays above the floor or below bottom of ceiling structure.

B. Seismic Qualification Certificates: For cable trays, accessories, and components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Field quality-control reports.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Cable trays and supports shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. The term "withstand" means "the cable trays will remain in place without separation of any parts when subjected to the seismic forces specified."
   2. Component Importance Factor: 1.5.

B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes in cable tray installed outdoors.
   1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.02 GENERAL REQUIREMENTS FOR CABLE TRAYS

A. Cable Trays and Accessories: Identified as defined in 2016 CEC Article 392 and marked for intended location, application, and bonding per Article 800.100/A/1-6.
   1. Source Limitations: Obtain cable trays and components from single manufacturer.

B. Sizes and Configurations: See drawings for specific requirements for types, materials, sizes, and configurations.

C. Structural Performance: See articles for individual cable tray types for specific values for the following parameters:
   1. Uniform Load Distribution: Capable of supporting a uniformly distributed load on the indicated support span when supported as a simple span and tested according to NEMA VE 1.
   2. Concentrated Load: A load applied at midpoint of span and centerline of tray.
   3. Load and Safety Factors: Applicable to both side rails and rung capacities.

2.03 LADDER CABLE TRAYS (LADDER RACKING)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Cooper B-Line, Inc.
   2. Chatsworth Products Inc.
   3. Hoffman Pentair

B. Description:
   1. Configuration: Two 1-1/2'' x 3/8'' 16-gauge tubular steel side rails with transverse rungs welded to side rails.
   2. Rung Spacing: 9 inches O.C.
   3. Radius-Fitting Rung Spacing: 9 inches at center of tray's width.
   4. Minimum Cable-Bearing Surface for Rungs: 1-inch width with radius edges.
   5. No portion of the rungs shall protrude below the bottom plane of side rails.
   6. Structural Performance of Each Rung: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a 200-lb concentrated load, when tested according to NEMA VE 1, Section 5.4.
   7. Straight Section Lengths: 9 feet 11.5 inches except where shorter lengths are required to facilitate tray assembly.
   8. Width: 12 inches unless otherwise indicated on Drawings.
   9. Fitting Minimum Radius: 12 inches.
   10. Splicing Assemblies: Bolted type using serrated flange locknuts.
   11. Splice Plate Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.

2.04 WIRE-BASKET CABLE TRAYS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Cablofil/Legrand.
   2. Cooper B-Line, Inc.
   3. Snaketray.
   4. Chatsworth Products Inc.

B. Description:
   1. Configuration: Wires are formed into a standard 2-by-4-inch wire mesh pattern with intersecting wires welded together. Mesh sections must have at least one bottom longitudinal wire along entire length of section.

2. Materials: High-strength-steel longitudinal wires with no bends.
3. Safety Provisions: Wire ends along wire-basket sides (flanges) rounded during manufacturing to maintain integrity of cables and installer safety.
4. Sizes:
   a. Straight sections shall be furnished in standard 10 feet lengths.
   b. Wire-Basket Depth: 2-inch usable loading depth by 4 inches to 24 inches wide.
   c. Wire-Basket Depth: 4-inch usable loading depth by 4 inches to 24 inches wide.
   d. Wire-Basket Depth: 6-inch usable loading depth by 8 inches to 24 inches wide.
5. Connector Assemblies: Bolt welded to plate shaped to fit around adjoining tray wires and mating plate. Mechanically joins adjacent tray wires to splice sections together or to create horizontal fittings.
6. Connector Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
7. Hardware and Fasteners: Steel, zinc plated according to ASTM B 633.

2.05 MATERIALS AND FINISHES

A. Steel:
1. Straight Section and Fitting Side Rails and Rungs: Steel complies with the minimum mechanical properties of ASTM A 1008/A 1008M, Grade 33, Type 2.
2. Fasteners: Steel complies with the minimum mechanical properties of ASTM A 510/A 510M, Grade 1008.
3. Finish: Mill galvanized before fabrication.
   a. Standard: Comply with ASTM A 653SS/A 653M, G90.
   b. Hardware: Chromium-zinc plated, ASTM F 1136.
4. Finish: Electrogalvanized before fabrication.
   a. Standard: Comply with ASTM B 633SS.
   b. Hardware: Galvanized, ASTM B 633SS.
5. Finish: Hot-dip galvanized after fabrication.
   a. Standard: Comply with ASTM A 123/A 123M, Class B2/ASTM A1008, Grade 33, Type 2.
   b. Hardware: Chromium-zinc plated, ASTM F 1136.
6. Finish: Powder-coat enamel paint.
   a. Powder-Coat Enamel: Cable tray manufacturer's recommended primer and corrosion-inhibiting treatment, with factory-applied powder-coat paint.
   b. Epoxy-Resin Prime Coat: Cold-curing epoxy primer, MPI# 101.
   c. Epoxy-Resin Topcoat: Epoxy, cold-cured, gloss, MPI# 77.
   d. Hardware: Chromium-zinc plated, ASTM F 1136.
7. Finish: Factory-standard primer, ready for field painting, with chromium-zinc-plated hardware according to ASTM F 1136.
8. Finish: Black oxide finish for support accessories and miscellaneous hardware according to ASTM D 769.

B. Aluminum:
1. Materials: Alloy 6063-T6 according to ANSI H 35.1/H 35.1M for extruded components and Alloy 6061-T6 according to ANSI H 35.1/H 35.1M for fabricated parts.
2. Hardware: Chromium-zinc-plated steel, ASTM F 1136.

2.06 CABLE TRAY ACCESSORIES

A. Fittings: Tees, crosses, risers, elbows, and other fittings as indicated, of same materials and finishes as cable tray.

B. Barrier Strips: Same materials and finishes as for cable tray.

C. Cable tray supports and connectors, including bonding jumpers, as recommended by cable tray manufacturer.

2.07 WARNING SIGNS

A. Lettering: 1-1/2-inch high, black letters on yellow background with legend "Warning Not to Be Used as Walkway, Ladder, or Support for Ladders or Personnel."

B. Comply with requirements for fasteners in Section 26 05 53 "Identification for Electrical Systems."

2.08 SOURCE QUALITY CONTROL

A. Testing: Test and inspect cable trays according to NEMA VE 1.

PART 3 EXECUTION

3.01 CABLE TRAY INSTALLATION

A. Install cable trays according to NEMA VE 2.

B. Install cable trays as a complete system, including fasteners, hold-down clips, support systems, barrier strips, adjustable horizontal and vertical splice plates, elbows, reducers, tees, crosses, cable dropouts, adapters, covers, and bonding.

C. Install cable trays so that the tray is accessible for cable installation and all splices are accessible for inspection and adjustment.

D. Remove burrs and sharp edges from cable trays.

E. Join aluminum cable tray with splice plates; use four square neck-carriage bolts and locknuts.

F. Fasten cable tray supports to building structure and install seismic restraints.

G. Design fasteners and supports to carry cable tray, the cables, and a concentrated load of 200 lb. Comply with requirements in Section 26 05 29 "Hangers and Supports for Electrical Systems."Comply with seismic-restraint details according to Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."

H. Place supports so that spans do not exceed maximum spans on schedules and provide clearances shown on Drawings. Install intermediate supports when cable weight exceeds the load-carrying capacity of the tray rungs.

I. Construct supports from channel members, threaded rods, and other appurtenances furnished by cable tray manufacturer. Arrange supports in trapeze or wall-bracket form as required by application.

J. Support bus assembly to prevent twisting from eccentric loading.

K. Install center-hung supports for single-rail trays designed for 60 versus 40 percent eccentric loading condition, with a safety factor of 3.

L. Locate and install supports according to NEMA VE 2. Do not install more than one cable tray splice between supports.

M. Support wire-basket cable trays with center support hangers, trapeze hangers, or wall brackets as noted on construction drawings.

N. Support center support hangers and trapeze hangers for wire-basket trays with 3/8-inch- diameter rods.

O. Make connections to equipment with flanged fittings fastened to cable trays and to equipment. Support cable trays independent of fittings. Do not carry weight of cable trays on equipment enclosure.

P. Install expansion connectors where cable trays cross building expansion joints and in cable tray runs that exceed dimensions recommended in NEMA VE 2. Space connectors and set gaps according to applicable standard.

Q. Make changes in direction and elevation using manufacturer's recommended fittings.

R. Make cable tray connections using manufacturer's recommended fittings.

S. Seal penetrations through fire and smoke barriers. Comply with requirements in Section 07 84 13 "Penetration Firestopping."

T. Install capped metal sleeves for future cables through firestop-sealed cable tray penetrations of fire and smoke barriers.

U. Install cable trays with enough workspace to permit access for installing cables.

V. Install barriers to separate cables of different systems, such as power, communications, and data processing; or of different insulation levels, such as 600, 5000, and 15 000 V.

W. Install permanent covers, if used, after installing cable. Install cover clamps according to NEMA VE 2.

X. Clamp covers on cable trays installed outdoors with heavy-duty clamps.

Y. Install warning signs in visible locations on or near cable trays after cable tray installation.

3.02 CABLE TRAY GROUNDING

A. Ground cable trays according to NFPA 70 unless additional grounding is specified. Comply with requirements in ANSI/NECA/BICSI-607, ITSM-2017, and Section 26 05 26 "Grounding and Bonding for Electrical Systems."

B. Cable trays with communications cable shall be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.

C. Cable trays with control conductors shall be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.

D. When using epoxy- or powder-coat painted cable trays as a grounding conductor, completely remove coating at all splice contact points or ground connector attachment. After completing splice-to-grounding bolt attachment, repair the coated surfaces with coating materials recommended by cable tray manufacturer.

E. Bond cable trays to power source for cables contained within with bonding conductors sized according to ANSI/NECA/BICSI-607, ITSM-2017, and Section 26 05 26 "Grounding and Bonding for Electrical Systems."

3.03 CABLE INSTALLATION

A. Install cables only when each cable tray run has been completed and inspected.

B. Fasten cables on horizontal runs with cable clamps or cable ties according to NEMA VE 2. Tighten clamps only enough to secure the cable, without indenting the cable jacket. Install cable ties with a tool that includes an automatic pressure-limiting device.

C. Fasten cables on vertical runs to cable trays every 18 inches.

D. Fasten and support cables that pass from one cable tray to another or drop from cable trays to equipment enclosures. Fasten cables to the cable tray at the point of exit and support cables independent of the enclosure. The cable length between cable trays or between cable tray and enclosure shall be no more than 72 inches.

E. Tie MI cables down every 36 inches where required to provide a 2-hour fire rating and every 72 inches elsewhere.

F. In existing construction, remove inactive or dead cables from cable trays.

3.04 CONNECTIONS

A. Remove paint from all connection points before making connections. Repair paint after the connections are completed.

B. Connect pathways to cable trays according to requirements in NEMA VE 2 and NEMA FG 1.

3.05 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. After installing cable trays and after electrical circuitry has been energized, survey for compliance with requirements.

2. Visually inspect cable insulation for damage. Correct sharp corners, protuberances in cable trays, vibrations, and thermal expansion and contraction conditions, which may cause or have caused damage.
3. Verify that the number, size, and voltage of cables in cable trays do not exceed that permitted by NFPA 70. Verify that communications or data-processing circuits are separated from power circuits by barriers or are installed in separate cable trays.
4. Verify that there are no intruding items such as pipes, hangers, or other equipment in the cable tray.
5. Remove dust deposits, industrial process materials, trash of any description, and any blockage of tray ventilation.
6. Visually inspect each cable tray joint and each ground connection for mechanical continuity. Check bolted connections between sections for corrosion. Clean and retorque in suspect areas.
7. Check for improperly sized or installed bonding jumpers.
8. Check for missing, incorrect, or damaged bolts, bolt heads, or nuts. When found, replace with specified hardware.
9. Perform visual and mechanical checks for adequacy of cable tray grounding; verify that all takeoff raceways are bonded to cable trays. Test entire cable tray system for continuity. Maximum allowable resistance is 1 ohm.

B. Prepare test and inspection reports.

3.06 PROTECTION

A. Protect installed cable trays and cables.
1. Install temporary protection for cables in open trays to safeguard exposed cables against falling objects or debris during construction. Temporary protection for cables and cable tray can be constructed of wood or metal materials and shall remain in place until the risk of damage is over.
2. Repair damage to galvanized finishes with zinc-rich paint recommended by cable tray manufacturer.
3. Repair damage to paint finishes with matching touchup coating recommended by cable tray manufacturer.

END OF SECTION 27 05 36

SECTION 27 05 43

UNDERGROUND DUCTS FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Publications and Standards.

B. Work Sequencing and Coordination.

C. Telecommunications Submittals.

D. Quality Assurance.

1.02 PUBLICATIONS AND STANDARDS

A. National Electrical Code (NEC) (ANSI/NFPA 70):
   1. Chapter 8: “Communications Systems”
   2. Article 250: “Grounding”

B. Telecommunications Industry Association TIA 607 - Commercial Building Grounding and Bonding Requirements for Telecommunications

C. Federal Communications Commission (FCC) Part 15 and Part 68

D. Rural Utilities Services (RUS), formally REA

E. Lightning Protection Code - ANSI/NFPA 780-2017

F. American Society for Testing Materials (ASTM) Publications

G. National Electrical Manufacturer’s Association (NEMA) Publications

1.03 RELATED SECTIONS

A. Contract Terms and Conditions

B. Division 26 Related Electrical Underground Section(s)

C. Division 26 Related Bonding and Earthing Section(s)

1.04 SUBMITTALS

A. Submittals shall be made as defined in Section 27 05 00.

1.05 QUALITY ASSURANCE

A. For products or workmanship specified by association, trade, Federal, or State Standards, the Contractor shall comply with the requirements of the standard. When more rigid requirements are specified or required by applicable (City) codes, the Contractor shall comply with City codes and local AHJ requirements.

B. The Contractor shall conform to reference standard by date of issue current on final design documents.

PART 2 PRODUCTS

2.01 COMMUNICATIONS UTILITY VAULTS

A. All telecommunications vaults to be placed shall be specifically designed for telecommunications applications, with no exceptions.

B. Materials
   1. The Contractor shall provide pre-cast utility vaults meeting ASTM C 478 with 28-day 5500 psi minimum compressive strength concrete and designed for AASHTO H-20 loading per AASHTO HB 14. The dimensions for each utility vault are specified on the construction drawings. Any questions the Contractor has about the size should be discussed with the Contracting Agency and the telecommunications engineer.
   2. Utility vaults shall have tongue-and-grove double sealed joints on mating edges of pre-cast components. The joints shall firmly interlock adjoining components and provide waterproof junctions and adequate shear transfer. Joints shall be sealed with approved watertight joint sealant as prescribed in the manufacturer's installation specifications and conforming to AASHTO M198, Type B. Sealing material shall be installed in strict accordance with manufacturer's printed instructions.
   3. Conduit Entrances
      a. Knockout panels or pre-cast individual conduit openings may be used.
      b. On sides where no conduit is installed, 12-inch high by 12-inch wide (minimum) knockout panels for future raceway installation shall be provided. Knockouts are required on all four sides.
      c. For existing utility vaults, new ducts shall enter the utility vault with factory-formed bell end of the conduit, and a seal around the conduit shall be applied after installation. Existing utility vaults shall be retrofitted with the required racking and grounding and bonding per the TIA Bonding and Grounding Standards.
   4. Covers
      a. The Contractor shall provide solid covers (traffic rated), with a 76.2 cm (30 in.) diameter clear opening. For vaults longer than 12' in length, (2) openings with covers are required.
      b. Heavy-duty type frames and covers made of cast iron 10" high, suitable for H-20 loading, and having machined bearing surfaces shall be used.
      c. The covers shall be of indented type with solid top design.
      d. The upper side of each cover shall have the letters "Communications" cast or burned by welder, in integral letters no less than 2 inches high. Either the covers or the ring of the casting shall be field stamped with utility vault or pull box numbers.

C. Manufacturers
   1. Utility Vault Company (Old Castle)
   2. Jensen Precast
   3. Approved equivalent product

2.02 COMMUNICATIONS PULL BOXES

A. Pre-cast pull boxes shall meet the standards defined in Subsection 2.1.B.(1).

B. Joints and seals shall be provided and installed as defined in Subsection 2.1.B.(2).

C. Conduit entrances shall be provided as defined in Subsection 2.1.B.(3).

D. Pull boxes shall be equipped with cable racking on both long walls suitable to support large copper cables as called for on the design documents.

E. All pull boxes shall be equipped with spring-loaded, traffic-rated, skid proof lids with a locking mechanism, unless otherwise specified in the drawings. All lids shall have the identification marking of "Communications" permanently affixed to the cover. The pull box number identification shall be stamped or welded on the cover per the Contracting Agency's specified numbering plan.

2.03 COMMUNICATIONS UTILITY VAULT/PULL BOX HARDWARE

A. Materials
   1. Pulling irons shall be provided, as required for the size of utility vault/pull box (minimum of 4 per utility vault: 2 placed on each end wall, top and bottom). Pulling irons shall be placed opposite the terminators. All pulling irons shall be constructed of 2.2 cm (7/8 inch) hot-dip galvanized steel.

2. A sump of 30cm (12 in.) in diameter shall be provided in each utility vault, per the manufacturer's specifications.
3. Heavy-weight cable racks with adjustable arms shall be provided for all cables in each utility vault. The racks shall be attached with adjustable inserts set in the concrete walls (bolts or studs embedded in concrete will not be used). Racks and inserts shall be centered on the side walls that are utilized for the racking of splice cases in the utility vault, arranged so that all spare conduit ends are clear for future cable installation. The racks shall have a sufficient number of arms to accommodate cables for each conduit entering or leaving the utility vault.
4. Corner stand-off brackets 15cm to 20cm (6 in. to 8 in. from wall) shall be provided if the utility vault is equipped with center exit conduits. The bracket shall extend from 15cm (6 in.) off floor to 15cm (6 in.) below roof.
5. All utility vault and pull box hardware shall be steel that is hot dip galvanized after fabrication.
6. Each utility vault shall have a detachable galvanized steel ladder that can be removed to facilitate future work in the utility vault. The ladder shall be secured to a top support arm in the utility vault opening or chimney.

B. Manufacturers
1. Hardware: Alhambra Foundry (model No. A-3382 ladder with A-3383 support bar) or Inwesco Products, or an approved equivalent product.
2. Utility vault: Utility Vault, or Associated Concrete Products, or an approved equivalent product.

C. Materials
1. Conduit
a. Schedule 40 PVC - 4 inch inside diameter.
b. Type C telephone conduit - 4 inch inside diameter (if concrete encased).
c. If directional boring: HDPE Conduit, 4" from Carlon or equal.
d. Corrugated flexible orange inner duct, 1-inch ID diameter, will be placed for fiber optic cable protection. A minimum of 4 inner ducts shall be placed in a 4-inch conduit, unless otherwise directed in the drawings.
2. Conduit shall have a factory formed bell on one end for interconnecting segments.
3. Spacers: High impact spacers shall be used in all multi-duct systems, for both solely-owned or joint telecommunications/power construction. They shall conform with NEMA TC-2, TC-6, TC-8, and ASTM F 512 dimensions.
4. All fittings shall be designed specifically for use with the type of conduit placed.
5. All conduits shall be equipped with seal plugs in all utility vaults/pull boxes and expansion rubber seal plugs within all buildings.
6. Manufacturer: CARLON or approved equivalent.

2.04 COMMUNICATIONS ENTRANCE CONDUIT

A. To prevent shear, all conduit entering a building shall transition from PVC to metal from a minimum distance of 24" beyond the exterior of the foundation. These conduits shall slope downward away from the building to reduce the potential of water entering the building.

2.05 DUCT-BANK LOCATING CABLE (DETECTABLE WARNING TAPE)

A. Warning tape shall be a minimum of 3" wide, orange in color, and shall have a nondegradable imprint as follows:
1. "Caution Joint Power and Telecom Cable Buried Below"

B. The tape shall be detectable.

C. Manufacturer:
1. Carlon
2. Approved equivalent product

2.06 PULL ROPE

A. Pull rope shall be new 1/4" polypropylene over polyester rope with a minimum 1700 lb. tensile strength or woven cotton cord with footage markings (mule tape).

B. Manufacturers: Carlon or approved equivalent.

2.07 BONDING/GROUNDING – VAULTS AND PULL BOXES

A. The reinforcing steel in the walls of the utility vault shall be bonded together and brazed to the bronze inserts of each section of the utility vault per the manufacturer's utility vault specifications. Two ground rods at opposite corners shall be furnished and installed in each vault (one rod in vaults smaller than 3' X 5' X 4'). The ground inserts shall be attached to the steel rebar to provide a point of attachment for the ground wires or bonding ribbon. The inserts shall be bronze, flush mounted, and brazed (exothermic weld) to the rebar cage of all the sections of the utility vault (bottom, intermediate, and roof sections).

B. Materials
   1. Bonding Ribbon: Shall be made of annealed solid copper 3/8-inch-wide x 1/16 inch thick, tin plated. Manufacturer: INWESCO Cat.12A55 or approved equivalent.
   2. Bonding Ribbon Clamp: Shall be made of soft lead 1/2-inch-wide by 1/16-inch-thick and shall accept 1/4-inch diameter bolt. Manufacturer: INWESCO Cat. 12A56 or approved equivalent.
   3. Fargo Clamp: Shall be cast from copper, silver plated, furnished with copper bolt. Manufacturer: INWESCO Cat.12A57 or approved equivalent.
   4. Ground Rod: Shall be manufactured of high strength high carbon steel, with electrolytically bonded jacket of copper on surface, and shall meet UL spec. 467 and ANSI C-33.8-1072. Manufacturer: INWESCO Cat.12A60 or approved equivalent.
   5. Ground Inserts: Shall be made of Cast Bronze W/1/4 Copper Rod. Manufacturer: INWESCO Cat.12H69 or approved equivalent.

2.08 RACEWAY TAGS

A. Permanent markers with raceway designations engraved onto the tag shall be provided. Tags relying on adhesives or taped-on markers shall not be used.

2.09 DUCT PLUGS

A. Provide duct plugs capping all empty conduit and at conduit with installed cabling. All ducts and duct plugs must be re-enterable.

PART 3 EXECUTION

3.01 COMMUNICATIONS UTILITY VAULTS AND PULL BOXES

A. General
   1. The Contractor shall obtain all required permits and notifications before commencing any work operations.
   2. All state and local ordinances shall be complied with at all times.
   3. All federal, state, and local safety rules, including OSHA, will be enforced at all times during the duration of the project. It is the responsibility of the Contractor to inspect the job site to ensure compliance.

B. Final location of all communications utility vaults and pull boxes shall be determined by the Contractor and Contracting Agency.

C. All conduits entering a utility vault or pull box shall be placed at right angles to the short walls and shall be sealed to prevent seepage unless otherwise specified on the construction documents.

D. Excavation dimensions shall be verified with the utility vault supplier in advance so as to prevent delays in setting schedule. All utility vaults and pull boxes shall be placed on 12 inches of compacted bedding material.

E. Shoring shall be in accordance to prevailing underground construction codes, i.e., OSHA, G. O. 128, NESC, and all applicable local, state, and federal statutes.

F. All utility vaults shall be equipped with pulling irons and a ladder for access.

G. Finish grade shall be established prior to placing structures.

H. The Contractor and the Contracting Agency shall inspect all utility vaults prior to backfilling.

I. Backfill materials shall have been sifted to provide a sand equivalent of not less than 20, and a sieve size of No.4 Backfill material shall be mechanically compacted to a minimum relative compaction of 90 percent to a level six (6) inches above final grade. The excess material shall be excavated to the final grade upon acceptance of compaction.

J. Existing and/or new communications utility vaults/pull boxes may be placed near the existing power and signal vault system. The Contractor shall either place new or enlarge existing utility vaults/pull boxes and conduits in such a manner as to not disturb existing utilities while maintaining specified clearances from all obstructions. This may require clearing much of the area around the vaults by hand. The final placement and depth shall be determined by the Contractor and Contracting Agency.

K. The Contractor shall locate all existing utilities within 20 feet of the new and/or enlarged utility vault/pull box system. The Contractor and Contracting Agency shall review and approve any revised coordination schematics. Caution shall be used when working in this area.

L. The Contractor shall excavate around existing vaults using caution to identify and preserve all utilities in the area.

3.02 UTILITY VAULT COVERS AND HARDWARE

A. Pull boxes shall be equipped with a non-skid, spring-loaded traffic-capable lid with a locking mechanism.

3.03 DUCT BANKS AND CONDUITS

A. All communications conduit banks shall be encased in slurry (2 bag cement mix, minimum 1800 PSI) with at least 2 inches of concrete at the top and bottom and 2 inches on each side when deemed necessary based on one or more of the following: bending radius, weight bearing, mechanical stress, etc. A horizontal and vertical separation of 2 inches between the ducts shall be maintained by installing high impact spacers with horizontal and vertical locking intervals of ten feet. Concrete shall have ten pounds of red oxide added for color.

B. All communications conduit shall be placed in a uniform manner between vaults. Conduit in position #1 at one utility vault shall maintain its position within the duct run and terminate in the #1 position at the next utility vault. The position of all conduits between utility vaults shall be maintained. All conduits shall enter utility vaults using the lower most precast knockouts.

C. Long radius bends (over 40 feet) shall be used whenever possible to make changes in direction. If it is found to be necessary to place a 90-degree bend in the conduit run, a factory-made sweep of no less than 12’ 6” radius shall be used. No conduit run shall exceed a total of 180 degrees of bend between any two points (such as utility vaults or buildings) considering both vertical and horizontal sweeps. Cold formed trench bends shall have a radius of not less than 40 feet and shall pass mandrel integrity. Bend radius criteria for conduit size 2” or less is 6 times the diameter of the conduit and, for any conduit larger than 2”, 10 times the diameter of the conduit.

D. All bends of less than 20-foot radius shall be encased in concrete when using Type C or Schedule 40 PVC conduits. Encasement shall start from 2 feet before curve to 2 feet past curve. Concrete shall be Type B at 2500 PSI, aggregate of no more than ¼” minus. Conduits shall be spaced at 2 inches minimum using high impact spacers at 2 feet on center.

E. The length and destination of all conduits shall be identified in each utility vault, pull box, and building. Embossed metal tags identifying each conduit shall be placed on end walls.

F. After installation of communications conduit, the Contractor shall prove all conduits by pulling a mandrel with a diameter □ inch smaller than the conduit and 6 inches long through each conduit end-to-end. An inspector designated by the Contractor and the Contracting Agency shall be notified 24 hours before this procedure. Each conduit shall be cleaned with a bristle brush to remove any debris.

G. All utility vault and pull box entrances shall be shear-blocked with standard concrete extending no less than 15 inches from the entry wall. All entering ducts shall be completely encased.

H. Utility marking tape (see 3.5.A) shall be buried 12 inches below the surface directly above the conduit.

I. All conduit structures shall be built with the telecommunications conduits placed above the power conduits unless otherwise called out on the construction drawings and approved by the campus. If this type of construction is required, it shall receive the prior approval of the Contractor, the Contracting Agency, and the Local Exchange Carrier.

J. All entrance conduits shall be securely fastened to the building. The end of the conduit located inside the building shall be sealed with expandable solid plugs to prevent rodents, water, or gases from entering the building.

3.04 ENTRANCE CONDUIT

A. The Contractor and the Contracting Agency shall determine the placement of all entrance conduit. All Applicable standards shall be adhered to, i.e., NEC, BICSI, Western Electric OSP, NESC or G.O. 128.

3.05 LOCATING DUCT BANK CABLE

A. Underground detectable warning tape shall be placed in all trenches at one foot below the final grade after the conduit and encasement is complete. The tape shall indicate the type of cable that will utilize the substructure system, e.g., fiber optic or copper cables. The detectable warning tape shall be installed according to manufacturer's specifications to ensure access to the tape for locating purposes.

3.06 PULL ROPE

A. Pull rope shall be new material that is free of knots, kinks, and abrasions.

B. Pull rope shall be placed as a single continuous length in every new duct section. (See Section 16730, 2.7.)

C. Pull rope shall be secured at each end.

3.07 BONDING/GROUNDING

A. Two ground rods shall be installed in each new manhole and one rod in a new pull box. All non-current-carrying metal parts in the utility vault and any metallic raceway grounding bushing shall be connected to this ground rod with a No. 4/0 bare copper ground conductor and approved ground clamp, as required per NEC.

B. The grounding system shall not rely on plumbing systems.

C. Bonding conductors shall be routed with a minimum number of bends. The bends placed in the conductor should be sweeping.

D. All bonding connections shall utilize listed bolts, crimp pressure connectors, clamps, or lugs. Exothermic welding may be used.

E. Multiple bus bars shall be directly bonded together with a No. 4/0 copper conductor.

F. Backbone cabling shall be bonded at each sheath opening with, minimally, a 6-AWG copper conductor.

END OF SECTION 27 05 43

SECTION 27 05 53

IDENTIFICATION FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provides specifications information for identification of the various components of the telecommunications infrastructure and pathway system.

B. Labeling and identification.

1.02 RELATED DOCUMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1.03 CLOSEOUT SUBMITTALS

A. As-Built Drawings:
   1. Submit all as-built drawings in accordance with the general requirements of the construction documents.
   2. Submit as-built drawings a minimum of two (2) weeks after completion of all Division- 27 work for A/E and Contracting Agency reference:
   3. Communication sub-contractor to print, frame and mount approved as-built drawings in MPOE. Coordinate location with A/E.

1.04 QUALITY ASSURANCE

A. Qualifications – Manufacturer
   1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.

B. Qualifications – Installer:
   1. At a minimum, seventy-five percent (75%) of the onsite sub-contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

PART 2 PRODUCTS

2.01 IDENTIFICATION LABELS

A. Basis-of-Design Product: Subject to compliance with requirements:
   1. Panduit – Thermal Transfer
   2. Brady Label System
   3. Brother Label System
   4. Or Equal

B. Product Options:
   1. The indicated manufacturers shall be the basis of the design and each component selected shall address the infrastructure requirements.

C. Description:
   1. In new installations (Greenfield), Sub-contractor shall develop and submit for approval a labeling strategy based on the TIA 606-B Circuit Designation and Labeling Standard.
   2. All labels shall be machine-manufactured by a labeling machine. Handwritten labels will not be accepted for final labeling.
   3. The intention of the labeling scheme is to be TIA/EIA 606-B compliant.

4. It is the responsibility of the sub-contractor to acquire, understand, and utilize the Contracting Agency's labeling scheme for all component of the voice data communications system.
5. It is the responsibility of the sub-contractor to provide labels sized to show the Contracting Agency's labeling scheme in readable font size while still matching the specified hardware identification dimensions.
6. All labeling information shall be recorded on the as-built drawings and all test documents shall reflect the appropriate labeling scheme.

D. Indoor Copper and Fiber optic cables and grounding conductors:
1. The cable sheaths shall be labeled with laser-printed polyester self-laminating wrap around labels sized to fit the Contracting Agency's labeling scheme in readable font size.

E. Horizontal cable outlet housings and faceplates:
1. Cable termination connectors at each position on the outlet housing shall be labeled with laser-printed polyester labels inserted into the outlet housing labeling window.

F. Copper patch panels:
1. The patch panels shall be labeled on the front and rear top left corner with a laser- printed polyester self-laminating label sequentially identifying the patch panel.

G. Copper patch termination blocks:
1. The termination blocks shall be labeled on the front rows with the termination block designation strip colored per the BICSI requirements identifying the copper cable pairs.

H. Fiber optic termination panels and housings:
1. The panels and housings shall be labeled on the outside front and rear top left corner with a laser-printed polyester self-laminating label sequentially identifying the panel.
2. Cable termination identifier and fiber positions inside the termination panels shall be made using the manufacturer's provided label card behind the plastic panel.

I. Equipment racks:
1. Bakelite plastic label engraved with rack label scheme attached to front and rear facing top angle bracket.
2. Label shall be adhesive backed for secure placement. Optional mounting with self-tapping screws will be at the discretion of Contracting Agency.

J. Equipment cabinets:
1. Bakelite plastic label engraved with cabinet label scheme attached to top front and rear facing frame of cabinet.
2. Label shall be adhesive backed for secure placement. Optional mounting with self-tapping screws will be at the discretion of Contracting Agency.

K. Indoor Conduits and pullboxes:
1. Each section of conduit shall be labeled on the outside facing and unobstructed view with a laser-printed polyester self-laminating label sequentially identifying the conduit and its origin and termination end (to and from).
2. Each pullbox shall be labeled on the outside door panel facing and unobstructed view with a laser-printed polyester self-laminating label sequentially identifying the pullbox and building location.

EXECUTION

2.03 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section.

2.04 INSTALLATION

A. Process:
1. The Contracting Agency-provided labeling scheme is intended to comply with TIA/EIA 606-B standard for labeling and administration of a cable plant. It is the responsibility of the sub-contractor to acquire, understand, and utilize the Contracting Agency's labeling

scheme for all component of the voice data communications system including, but not limited to:

2. Indoor Horizontal copper and fiber optic cables (Identify at both ends within 6-inches of termination).
3. Indoor copper and fiber optic backbone cables (Identify at both ends within 12-inches of the point that the cable enters termination panels/blocks, within 12- of the point that the cable enters or exits pullboxes, wall and floor sleeves.
4. Workstation outlets, faceplates and individual outlet connectors.
5. Termination panels.
6. Termination blocks.
7. Racks, cabinets, and equipment enclosures. (front and rear).
8. Indoor conduit pathways and pullboxes.
9. Grounding conductors and ground bars.
10. Label each component with a specified label at an unobstructed view location and where it is accessible for administration.

2.05 RE-INSTALLATION

A. No additional burden to the Contracting Agency regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the Contracting Agency prior to beginning any re- installation work.

2.06 CLOSEOUT ACTIVITIES

A. Sub-contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Contracting Agency and A/E team.

B. Sub-contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Contracting Agency.

END OF SECTION 27 05 53

This page intentionally left blank

SECTION 27 11 16

CABINETS, RACKS, ENCLOSURES FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provides specifications for network cabinets, racks, and telecommunications enclosure components utilized to house various telecommunications infrastructure components and systems equipment.

B. Equipment Racks

1.02 RELATED DOCUMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1.03 CLOSEOUT SUBMITTALS

A. As-Built Drawings:
   1. Submit all as-built drawings in accordance with the general requirements of the construction documents.
   2. Submit as-built drawings a minimum of two (2) weeks after completion of all Division- 27 work for A/E and Contracting Agency reference:

1.04 QUALITY ASSURANCE

A. Qualifications – Manufacturer
   1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.

B. Qualifications – Installer:
   1. At a minimum, seventy-five percent (75%) of the onsite contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

PART 2 PRODUCTS

2.01 CABINETS, RACKS, ENCLOSURES

A. Basis-of-Design Product: Subject to compliance with requirements:
   1. Chatsworth Products Incorporated
   2. Middle Atlantic
   3. Approved equal

B. Product Options:
   1. The indicated manufacturers shall be the basis of the design and each component selected shall address the particular infrastructure requirements.

C. Description:
   1. New cabinet and cabinet components shall be black in color. Finish shall be powder coat.
   2. Network equipment will mount on to a network equipment suited cabinet 45u or 40u rack units tall, 24 Wide, and 42” and/or32” deep.
   3. Floor mounted racks shall be permanently attached, per structural engineer or manufacturer requirements, to the floor using lag bolt and lag shields for masonry type floors or appropriate fastening hardware for other types of flooring as approved by the Contracting Agency. Racks installed adjacent to each other will be fastened together using proper bolt, nut, and washer combinations.
   4. Rated load for equipment cabinets shall be no less than 2500 pounds.

5. Ladder rack shall be fastened using the proper hanging and connecting hardware, secured in a manner consistent with recommended weight load spacing recommendations.
6. Patch panels, wire cable management hardware, and other related passive equipment will be attached to racks and mounting rails with at least two screws per mounting bracket and located in accordance with the Rack/Cabinet Equipment Elevation Form contained in project documentation on a per job basis.
7. All equipment shall be free from imperfections and defects.
8. All cabinets and racks shall be grounded and bonded to specification of BICSI, Telecommunications Methods Manual and ANSI/NECA/BICSI 607 (2011) Bonding and Grounding Standard or BICSI-ITSM (2015). See grounding section in this document for details.
9. Active equipment shall be positioned in racks and cabinets to work in accordance of the “hot aisle/cold aisle” configuration of that room.
10. Equipment with intake/exhaust patterns other than front-to-back should be remediated with appropriate passive ducts to correct airflow to front-to-back pattern wherever possible.
11. Any rack/cabinet spaces not used should be filled with blank panels to minimize rogue backflow of air within the facility.
12. All racks and cabinets shall have a minimum of 3 feet clearance in the front, with 4 feet being preferable for the movement and installation of equipment. Some equipment may require more clearance. See project documentation or equipment manufacturer’s guidelines for details.
13. All racks and cabinets shall have a minimum of 2 feet clearance in the rear, with 3 feet being preferable for the movement and installation of equipment.
14. Each cabinet enclosure shall have a rectangular frame with removable top panel, side panels and doors. Installed cabinets shall include thermal, power, and cable management accessories that control airflow through the cabinet and keep network and power cables separate and organized.
15. Provide various configurable size blanking panels for each equipment cabinet.
16. The cabinet frame shall be rectangular with four corner posts, manufactured from steel with welded and bolted frame construction. The horizontal frame members shall be steel extrusion with grooves that accept captive hardware to allow attachment of equipment mounting rails and thermal, cable and power management accessories. The captive hardware will slide within the groove allowing rails and accessories to be adjusted in depth without removal from the cabinet. The slide extrusions will be marked with a scale that allows easy top-to-bottom alignment of mounting rails and other accessories when adjusted in depth.
17. Each cabinet shall include two pairs of equipment mounting rails. Mounting rails shall bolt to the side of the cabinet frame at the top and bottom of the frame and shall be adjustable in depth to provide front and rear support for equipment.
18. Equipment Mounting Rails shall be spaced horizontally to support 19” wide EIA-310- D compliant rack-mount equipment. Each RMU will be marked and numbered on the front mounting rails.
19. Attachment points will be M5/M6cage nuts or 10-32/10-24 threaded rails. Mounting rails shall be square-punched according to the ANSI/EIA-310-D Universal hole pattern. The cabinet will include assembly and equipment-mounting hardware. Each cabinet will include (50) each combination pan head, pilot point mounting screws.
20. The cabinet shall include a solid top panel with four cable access ports located near the front and rear corners of the frame. Each cable access port shall be plastic with a brush seal to allow easy addition and removal of cables while limiting bypass airflow.
21. The cabinet shall include two locking solid side panels with spring loaded latches for easy installation and removal. The cabinet shall be designed to allow baying with or without side panels installed.
22. The sides of the equipment-mounting channels will be punched to allow attachment of equipment support rails, vertical power strips and cable managers along the sides of the rack or for rack-to-rack baying

23. The cabinet shall include a single front door with a high air flow perforated metal panel, hidden tamper-resistant hinges with quick-release hinge pins and a swing handle. The door shall be removable and reversible to open from the right or left. The door shall open to 150° when the cabinet is bayed with other cabinets. The front door shall have a single-point slam latch with a keyed lock.
24. The cabinet shall include a high flow perforated metal double rear door with a swing handle. The doors shall be removable. The doors shall open to 175° when the cabinet is bayed with other cabinets. The double rear door shall have a two-point cam latch with a keyed lock.
25. The mounting rails, top panel, side panels and doors shall be electrically bonded to the cabinet frame. The cabinet frame shall have a prepared location for attaching a grounding lug.
26. The cabinet shall be UL Listed. UL Listing will be stated in the manufacturer's product literature.
27. The cabinet shall include (4) leveling feet, (4) clamps for securing the leveling feet to the floor and a grounding lug for bonding the cabinet frame to the Telecommunications Grounding Busbar. The manufacturer of the cabinet shall sell compatible casters and equipment mounting hardware as an accessory.

D. Accessory Products:
   1. Cabinet-mounted vertical power distribution units. Refer to the Division 27 11 26 specifications.

2.02 POWER REQUIREMENTS

A. Basis-of-Design Product: Subject to compliance with requirements:
   1. Hubble HBL5366C / 20A 125V

B. Contractor shall be responsible for confirming cabinets containing active equipment have installed (2) PDUs (power strips) to provide sufficient number of receptacles and current capacity to support the equipment.

C. Minimum power configuration should be no less than 20 A, 120 Vac power, with 208 Vac where needed. All circuits shall be on the same phase of power, coordinate phase requirements when circuits are fed from UPS or transformer. Consult project documentation for details on power needs of specific racks and cabinets.

D. Power circuits should have dedicated neutral and ground conductors and no exposed on/off switch or breaker controls that might cause accidental shut-off.

E. 120Vac Power circuits should have dedicated neutral and ground conductors and no exposed on/off switch or breaker controls that might cause accidental shut-off.

2.03 EQUIPMENT RACKS

A. Basis-of-Design Product: Subject to compliance with requirements:
   1. CPI
      a. 2-Post
      b. 4-Post

B. Product Options:
   1. The indicated manufacturers shall be the basis of the design and each component selected shall address the particular infrastructure requirements.

C. Description:
   1. Equipment racks and rack components shall be black in color. Finish shall be powder coat.
   2. Universal Free Standing 2-Post Relay Racks shall be aluminum, able to support and organize electronic equipment, cross-connection and/or termination hardware for fiber optic cabling, station cabling, riser cabling, or building entrance cabling as may be required by design.

3. Free Standing 4-Post Relay Racks shall be steel, aluminum, or combination of both steel and aluminum, able to support and organize electronic equipment, cross-connection and/or termination hardware for fiber optic cabling, station cabling, riser cabling, or building entrance cabling as may be required by design.
4. The assembled rack will measure 84”H x 20.3”W x 29 or 36””D. The sides of the equipment- mounting channels will be punched to allow attachment of vertical cable managers along the sides of the rack or for rack-to-rack baying.
5. Racks shall be manufactured from aluminum and/or steel extrusions.
6. Each rack will have two L-shaped top angles, two L-shaped base angles and two C-shaped equipment-mounting channels. The rack will assemble with bolt hardware. Equipment-mounting channels will be threaded for easy assembly. The base angles will be pre-punched for attachment to the floor.
7. Equipment mounting channels will be 3” deep and punched on the front and rear flange with the ANSI/EIA-310-D Universal hole pattern to provide 45 rack-mount spaces for equipment. Each mounting space will be marked and numbered on the mounting channel.
8. The rack will be UL Listed.
9. Network equipment will mount on to a network equipment suited cabinet 45u rack units tall.
10. Floor mounted racks shall be permanently attached to the floor using lag bolt and lag shields for masonry type floors or appropriate fastening hardware for other types of flooring as approved by the Contracting Agency. Racks installed adjacent to each other will be fastened together using proper bolt, nut, and washer combinations.
11. Rated load for equipment cabinets shall be no less than 1000 pounds, equipment evenly distributed along height of rack.
12. Ladder rack shall be fastened using the proper hanging and connecting hardware, secured in a manner consistent with recommended weight load spacing recommendations.
13. Patch panels, wire cable management hardware, and other related passive equipment will be attached to racks and mounting rails with at least two screws per mounting bracket and located in accordance with the Rack Equipment Elevation Form contained in project documentation on a per job basis.
14. All equipment shall be free from imperfections and defects.
15. All racks shall be grounded and bonded to specification of BICSI, Telecommunications Methods Manual and ANSI/TIA 607-B Bonding and Grounding Standard. See grounding section in this document for details.
16. Active equipment shall be positioned in racks to work in accordance of the “hot aisle/cold aisle” configuration of that room.
17. Equipment with intake/exhaust patterns other than front-to-back should be remediated with appropriate passive ducts to correct airflow to front-to-back pattern wherever possible.
18. Any rack/cabinet spaces not used should be filled with blank panels to minimize rogue backflow of air within the facility.
19. All racks and cabinets shall have a minimum of 3 feet clearance in the front, with 4 feet being preferable for the movement and installation of equipment. Some equipment may require more clearance. See project documentation or equipment manufacturer’s guidelines for details.
20. All racks shall have a minimum of 3 feet of clearance in the rear for the movement and installation of equipment.
21. Equipment Mounting Rails shall be spaced horizontally to support 19” wide EIA-310- D compliant rack-mount equipment. Each RMU will be marked and numbered on the front mounting rails.
22. Attachment points will be threaded with 12-24 roll-formed threads. The rack will include assembly and equipment-mounting hardware. Each rack will include (50) each combination pan head, pilot point mounting screws
23. The cabinet shall be UL Listed. UL Listing will be stated in the manufacturer’s product literature.

D. Accessory Products:
   1. Cabinet-mounted vertical power distribution units. Refer to the Section 27 11 26.

PART 3 EXECUTION

3.01 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section.

3.02 INSTALLATION

A. Process:
   1. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section. Examples of work which must be checked include, but are not limited to:
      a. Electrical requirements (conduit installation and capacity).
      b. The telecommunications rooms are the size indicated in the project drawings.
      c. Adequate clearances of doors, riser spaces and ceilings for all component of the telecommunications system.
      d. Examine and compare the telecommunications drawings and specifications with the drawings and specifications of other trades. Report any discrepancies between them to the A/E and obtain written instructions for changes or revisions.
   2. Assemble racks and cabinets according to manufacturer's instructions. Verify that equipment mounting rails are positioned properly for rack-mount equipment before attaching the rack to the floor.
   3. Anchor all racks and cabinets to the concrete floor per the structural requirements and cross brace to the cable runway system above.
   4. Racks shall be grounded to the TGB using appropriate hardware provided by the contractor. The ground will meet local code requirements and will be approved by the Authority Having Jurisdiction (AHJ).
   5. Ladder rack may be attached to the top of the rack to deliver cables to the rack. The rack should not be drilled to attach ladder rack. Use appropriate hardware from the ladder rack manufacturer.

3.03 RE-INSTALLATION

A. No additional burden to the Contracting Agency regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the Contracting Agency prior to beginning any re- installation work.

3.04 CLOSEOUT ACTIVITIES

A. Contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Contracting Agency and A/E team.

B. Contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Contracting Agency.

END OF SECTION 27 11 16

This page intentionally left blank

SECTION 27 11 19

TERMINATION BLOCKS AND PATCH PANELS FOR COMMUNICATIONS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provides specifications for wall and rack/cabinet-mounted blocks, termination panels and patch panel components utilized to terminate various telecommunications infrastructure cabling and connectivity.

B. Optical Fiber Termination panels.

C. Copper horizontal cabling Patch Panels.

1.02 RELATED DOCUMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1.03 ACTION SUBMITTALS

A. Product Data: For each product indicated.
   1. Submit all product data in accordance with general requirements of the construction documents.
   2. Submit product cut sheets and a detailed list of components a minimum of two (2) weeks prior to commencement of Division-27 work for A/E review and action.
   3. Alternate and “Or Equal” designated products must be submitted for review and judgment to the A/E prior to installation. The contractor-proposed alternate products or components must be verified by two (2) independent sources within the past 6 months. This request shall include the two (2) independent sources, the original Product’s specification sheet, the proposed substitute product cut sheet, and a written request to review the substitute product.
   4. Any request of an alternate or substitution must be submitted to the A/E for action no later than fourteen (14) calendar days after release of the original telecommunications bid documents.

1.04 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:
   1. Submit all shop drawings in accordance with the general requirements of the construction documents.
   2. Submit shop drawings a minimum of two (2) weeks prior to commencement of Division-27 work for A/E review and action.
   3. Shop drawings shall include evidence of grounding and bonding components are coordinated with field conditions and the work of other trades.
   4. This submittal may have a written component and a visual, drawn component for review and action by the A/E prior to installation.

B. Certificates:
   1. Submit management and installation team reference documentation verifying:
      a. The project manager is a RCDD in good standing with BICSI and is qualified to manage the scope of work described in the contract documents and has five (5) years of experience managing similar projects in size and scope. The documentation shall include the RCDD registration number.
      b. The field supervisor is a BICSI trained technician that is qualified to perform and oversee the work described in the contract documents

C. Qualification Statements:
   1. The contractor shall submit documentation that within the past 12 months, a minimum of 75% of all installation personnel have been trained or certified by the manufacturer of the products they are installing.

1.05 CLOSEOUT SUBMITTALS

A. As-Built Drawings:
   1. Submit all as-built drawings in accordance with the general requirements of the construction documents.
   2. Submit as-built drawings a minimum of two (2) weeks after completion of all Division- 27 work for A/E and Contracting Agency reference:

1.06 QUALITY ASSURANCE

A. Qualifications – Manufacturer
   1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.

B. Qualifications – Installer:
   1. At a minimum, seventy-five percent (75%) of the onsite contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

PART 2 PRODUCTS

2.01 OPTICAL FIBER TERMINATION PANELS

A. Basis-of-Design Product: Subject to compliance with requirements:
   1. Corning
   2. Or Approved

B. Product Options:
   1. The indicated manufacturers shall be the basis of the design and each component selected shall address the particular infrastructure requirements.

C. Description:
   1. 19-inch Rack mountable fiber optic termination shelf with maximum 12 panels slots with integrated splicing for termination inside Telecom rooms.
   2. Minimum 1U rack units' height, maximum 4U rack units'.
   3. Optical fiber termination panel housings shall be provided for cross-connecting or inter-connecting purposes between OSP, Indoor riser backbone, and/or distribution cables and the active network electronic switches, as noted in drawings.
   4. Single mode termination: Fusion splice both ends of each single mode fiber optic strand onto factory connectorized single mode pigtails mounted in connector housings assembled by the manufacturer of the single mode fiber optic cable.
      a. Single-Mode splice-on Connector is acceptable.
   5. Multimode termination: Terminate both ends of each multimode fiber optic strand onto field installable anaerobic type connectors.
   6. All optical fiber housings shall be complete factory-provided assemblies that contain all components including LC duplex connector adapter panels and internal/external bend radius, strain relief and cable clamp components that are provided in a housing which includes an accessible rear access hatch.
   7. All optical fiber patch panel trays and associated bulkhead inserts shall have factory numerical labeling included in the design and presentation to the user side of the panel.
   8. The optical fiber patch panel bulkheads that house the terminating modules for the fiber backbone cabling and any horizontal optical fiber cabling shall accept TIA 568-C standard-compliant LC-connectors compatible with the optical fiber strands being terminated.

D. Accessory Products:
   1. Provide any accessory products related to the optical fiber termination panels to provide a complete and functional infrastructure system.

2.02 COPPER HORIZONTAL CABLING PATCH PANELS

A. Manufacturer List:
   1. Manufacturer
      a. Category 6A 48 Port

B. Product Options:
   1. The indicated manufacturers shall be the basis of the design and each component selected shall address the particular requirements for each situation.

C. Description:
   1. All patch panels are to be rack/cabinet mountable within industry standard TIA/EIA 19” mounting rails unless otherwise noted.
   2. All patch panels are to provide adequate space for individual port labeling on the front and cable/connector labeling on the back.
   3. All installed station cable patch panels shall be Category 6A forty-eight (48) port flat patch panels
   4. All multi-pair backbone OSP cables terminated in a TR shall be terminated on a BEC protection block, unless otherwise noted on drawings. Reference Division 270526 specification.
   5. The performance criteria for the patch panels must meet or exceed the performance parameters for frequency, attenuation, near end cross-talk (NEXT), attenuation to cross-talk ratio (ACR), power sum NEXT (PS-NEXT), power sum ACR (PS-ACR), equal level far end cross-talk (ELFEXT), power sum far end cross-talk (PS-FEXT), and return loss (RL) as set forth in TIA/EIA 568-C category standards.

D. Accessory Products:
   1. Provide any accessory products related to the patch panels to provide a complete and functional infrastructure system.
   2. Where required, provide RJ-45 jack block out device to safely secure access to unused ports and deter vandalism to jacks.
   3. Provide complete with all required mounting hardware and fittings and cables needed.

PART 3 EXECUTION

3.01 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section. Examples of work which must be checked include, but are not limited to:
   1. Electrical requirements (conduit installation and capacity)
   2. The telecommunications rooms are the size shown on the project drawings.
   3. Adequate clearances of doors, riser spaces and ceilings for all component of the telecommunications system.
   4. Examine and compare the telecommunications drawings and specifications with the drawings and specifications of other trades. Report any discrepancies between them to the A/E and obtain written instructions for changes or revisions.

3.02 INSTALLATION

A. Process:
   1. Install all optical fiber and category copper termination panels/panels under the guidelines of the manufacturer’s recommended instructions and per all TIA/EIA 568-C standards and manufacturer-approved industry practices as shown in the drawings.

2. The installation and performance parameters of all installed cable termination panels shall be verified by the contractor through ANSI/TIA 568-C testing procedures.
3. Label all cable termination panels to identify each port and each specific panel in accordance with the TIA/EIA 606 labeling scheme approved by the Contracting Agency.

B. Installation description:
1. Contractor shall use existing cabling management pathways and take care to place cable like with like, maintaining original segregation strategies for separating fiber and copper cables as well as any separation necessary between different types of copper cables.
2. Cables shall be dressed neatly within patch management pathways with care taken to maintain minimum bend radius of not less than 1 times the cord outer diameter for copper and not less than a 1" bend radius for fiber jumpers as per ANSI/TIA 568-C.0
3. The installation and performance parameters of all installed cable termination panels shall be verified by the contractor through ANSI/TIA 568-C testing procedures.
4. Label all cable termination panels to identify each port and each specific panel in accordance with the TIA/EIA 606 labeling scheme approved by the Contracting Agency.

3.03 RE-INSTALLATION

A. No additional burden to the Contracting Agency regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components due to manufacturer defects or contractor poor performance. Scheduling for re- installation work shall be coordinated, in writing, with the Contracting Agency prior to beginning any re- installation work.

3.04 CLOSEOUT ACTIVITIES

A. Contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Contracting Agency and A/E team.

B. Contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Contracting Agency

END OF SECTION 27 11 19

SECTION 27 11 26

POWER DISTRIBUTION UNIT (PDU)

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Provides specifications for the provision and installation of power distribution units with-in rack or cabinet frames within telecommunications distribution spaces.
   2. Vertical mount Power Distribution Units
   3. Rack mount Horizontal Power Distribution Units

1.02 RELATED DOCUMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1.03 CLOSEOUT SUBMITTALS

A. As-Built Drawings:
   1. Submit all as-built drawings in accordance with the general requirements of the construction documents.
   2. Submit as-built drawings a minimum of two (2) weeks after completion of all Division- 27 work for A/E and Owner reference:

1.04 QUALITY ASSURANCE

A. Qualifications – Manufacturer
   1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.

B. Qualifications – Installer:
   1. At a minimum, seventy-five percent (75%) of the onsite contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

PART 2 PRODUCTS

2.01 HORIZONTAL POWER DISTRIBUTION UNITS

A. Basis-of-Design Product: Subject to compliance with requirements:
   1. CPI
   2. APC
   3. Raritan
   4. Or equal

B. Product Options:
   1. The indicated manufacturers shall be the basis of the design and each component selected shall address the particular infrastructure requirements.

C. Horizontal Power Distribution Unit Product Description:
   1. Quantity: two (2) per IDF/MDF rack.
   2. Output:
      a. Nominal Output Voltage 120V
      b. Maximum Total Current Draw per Phase 20A
      c. Output Connections C13, C19 and NEMA 5-20R
      d. Default setting are always in the on position.

3. Input
    a. Nominal Input Voltage 120V
    b. Input Frequency 50/60 Hz
    c. Regulatory derated Input Current (North America) 16A for 20A - 80% of (rated) value.
    d. Input Connections NEMA L5-20P (from UPS)
    e. Minimum Cord Length 9 feet
    f. Number of Power Cords (1)
    g. Maximum Input Current per phase 20A

D. Local Current Monitoring Display
1. The aggregate current draw per power distribution unit is displayed on the unit via a digital display. The local digital display helps installers avoid overloaded circuits by providing a visible warning when the current draw is close to the maximum amperage draw of the strip.

E. Physical
1. Height 1.75 inches
2. Width 17.50 inches
3. Depth 4.25 inches
4. 1 RU

F. Conformance and Regulatory Approvals
1. CSA
2. FCC Part 15 Class A
3. ICES-003
4. UL 60950

G. Accessory Products:
1. The indicated manufacturers shall be the basis of the design and each component selected shall address the particular infrastructure requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section. Examples of work which must be checked include, but are not limited to:
1. Electrical requirements (conduit installation and capacity).
2. The telecommunications rooms are the size shown on the project drawings.
3. Adequate clearances of doors, riser spaces and ceilings for all component of the telecommunications system.
4. Examine and compare the telecommunications drawings and specifications with the drawings and specifications of other trades. Report any discrepancies between them to the A/E and obtain written instructions for changes or revisions.

3.02 INSTALLATION

A. Process:
1. Install all power distribution units per the manufacturer’s recommended installation instructions.
2. Provide one (1) horizontal (to each rack) power units per PDU electrical circuit requested.
3. Secure power distribution units and other accessories using appropriate factory manufactured screws.
4. Align devices with rack or cabinet hole patterns to allow for installation of screws in all mounting holes. Hand-tighten screws to factory limits being careful not to over tighten, cross thread or strip screw heads.
5. Final location of each power distribution unit to be coordinated with the designer and the owner.
6. All rack and cabinet-mounted vertical power strips shall be provided with rear facing stand off or internal cabinet mounting brackets that are both offset to the side of the mounting

rails so as not to interfere with the equipment mounted within the rack and provided with sufficient depth to allow access to the vertical and horizontal wire managers.

7. Contractor shall verify with OAR as to PDU facing front/rear of cabinet/rack.

3.03 RE-INSTALLATION

A. No additional burden to the owner regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the owner prior to beginning any re-installation work

3.04 CLOSEOUT ACTIVITIES

A. Contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Owner and A/E team.

B. Contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Owner

END OF SECTION 27 11 26

This page intentionally left blank

SECTION 27 13 13

COMMUNICATIONS COPPER BACKBONE CABLING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provides specifications for high pair count UTP copper backbone cabling to distribute network signals between telecommunications distribution spaces.

B. Backbone Multi-Pair UTP Cable.

1.02 RELATED DOCUMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1.03 CLOSEOUT SUBMITTALS

A. Warranty Documentation:
   1. Submit manufacturers extended warranty certification documentation one (1) week after the warranty acceptance by the manufacturer. It shall be the contractor's responsibility to facilitate the manufacturer-specific warranty requirements

B. As-Built Drawings:
   1. Submit all as-built drawings in accordance with the general requirements of the construction documents.
   2. Submit as-built drawings a minimum of two (2) weeks after completion of all Division- 27 work for A/E and Contracting Agency reference:

1.04 QUALITY ASSURANCE

A. Qualifications – Manufacturer
   1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.

B. Qualifications – Installer:
   1. At a minimum, seventy-five percent (75%) of the onsite contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

PART 2 PRODUCTS

2.01 BACKBONE MULTI-PAIR CABLING

A. Basis-of-Design Product: Subject to compliance with requirements:
   1. General Cable
   2. Superior Essex
   3. Or Approved Equal

B. Product Options:
   1. The indicated manufacturers shall be the basis of the design and each component selected shall address the particular infrastructure requirements.

C. Description:
   1. All voice and data ISP and OSP copper backbone cable is to be rated per the constructed conditions and verified by the contractor prior to installation. Per code, plenum cable is to be installed at all times when a communications cable is exposed in a plenum air space. It is the responsibility of the contractor to bid, purchase, install, and verify the rating of the ISP and OSP cable for the specific construction conditions.

2. Backbone cables that are exposed to moisture shall contain moisture-blocking materials to prevent moisture damage to cable performance.
3. Backbone multi-pair UTP cable shall be Category-3 copper UTP, twenty-four (24) AWG cable.
4. The performance criteria for the UTP backbone cable shall be in accordance with the specific standards for the particular cable's rating. A category-3 rated cable must perform up to, or beyond the current specification parameters for the published category-3 rating by TIA/EIA 568-C.2.
5. Installed cable shall have appropriate cable construction, including external jacket properties, when installing cables in aerial, outdoor, underground and corrosive environments.

D. Accessory Products:
1. Provide any accessory products related to the UTP copper backbone cabling required to provide a complete and functional infrastructure system.

PART 3 EXECUTION

3.02 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section. Examples of work which must be checked include, but are not limited to:
1. Electrical requirements (conduit installation and capacity)
2. The telecommunications rooms are the size shown on the project drawings.
3. Adequate clearances of doors, riser spaces and ceilings for all component of the telecommunications system.
4. Examine and compare the telecommunications drawings and specifications with the drawings and specifications of other trades. Report any discrepancies between them to the A/E and obtain written instructions for changes or revisions.

3.03 INSTALLATION

A. Process:
1. Install all copper backbone/station cable per the manufacturer's recommended installation instructions, under the guidelines of TIA/EIA 568 C and BICSI, and in quantities indicated in the LV series drawings.
2. Install all cables with proper attention paid to bend radii, pulling method, attachment method, and pulling forces. The cable manufacturer's specifications for each particular cable type shall be followed exactly.
3. Backbone cable shall be visually inspected for insufficient bend radius during and after pulling. Damaged cables, or those installed under questionable methods and/or circumstances shall be replaced at no additional cost to the Contracting Agency.
4. All cable shall be pulled using an appropriate measuring device to ensure that the specified force is not exceeded as noted in manufacture installation guidelines.
5. Install backbone cables with attention paid to aesthetic means and methods when routing cabling within IT spaces.
6. No backbone cable shall be left unsupported for more than four (4) feet, three (3) feet preferred, vertically or horizontally at any time.
7. All backbone cables shall be clearly labeled on both ends and in an accessible location no more than one (1) foot from each cable end.

3.04 RE-INSTALLATION

A. No additional burden to the Contracting Agency regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the Contracting Agency prior to beginning any re- installation work

3.05 CLOSEOUT ACTIVITIES

A. Contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Contracting Agency and A/E team.

B. Contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Contracting Agency.

END OF SECTION 27 13 13

This page intentionally left blank

SECTION 27 13 23

COMMUNICATIONS OPTICAL FIBER BACKBONE CABLING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provides specifications for optical fiber backbone cabling to distribute optical network signals between telecommunications distribution spaces and equipment.

B. Backbone Single-mode Optical Fiber Cable.

C. Backbone Multi-Mode Optical Fiber Cable.

1.02 RELATED DOCUMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Section 27 15 15 for powered fiber specification.

C. Architectural, mechanical, electrical, and all technology drawings.

D. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1.03 CLOSEOUT SUBMITTALS

A. As-Built Drawings:
   1. Submit all as-built documentation in accordance with the general requirements of the construction documents.
   2. Cabling as-built drawings must contain detailed location and identification information coordinated with the as-built cable schedules.
   3. All cabling must meet or exceed applicable TIA/EIA testing requirements and any additional parameters outlined in the Commissioning of Communications specification Section 27 08 00.
   4. Test results must be submitted for Contracting Agency review and approval adhering to the General Contractor schedule milestones related to the projects active systems integration.

1.04 QUALITY ASSURANCE

A. Qualifications – Manufacturer
   1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.

B. Qualifications – Installer:
   1. At a minimum, seventy-five percent (75%) of the onsite contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

PART 2 PRODUCTS

2.01 BACKBONE MULTI-MODE/SINGLE-MODE OPTICAL CABLING

A. Basis-of-Design Product: Subject to compliance with requirements:
   1. Corning.

B. Product Options:
   1. The manufacturers noted above shall be the only manufacturers acceptable to the Contracting Agency and A/E. Cable construction shall be a hybrid multi-mode and single-mode fiber stands combined in a single protection jacket as indicated on the project drawings.

C. Description:
   1. All backbone OM4 LOMMF cables shall be capable of 10 Gb/s Ethernet signal transmission to 550 meters at 3500/500 MHz/km effective modal bandwidth, while

allowing the use of low-cost, 850 nm vertical cavity surface emitting laser (VCSEL). Maximum attenuation for a LOMMF cable shall be no greater than 3.0dB per kilometer using 850nm and 1.0dB per kilometer using 1300nm wavelengths respectively.

2. All backbone single-mode optical fiber cable shall be capable of 10 Gb/s Ethernet signal transmission to 10,000 meters in the 1310nm operating window. Maximum attenuation for a single-mode cable shall be no greater than 0.4dB per kilometer using 1310nm and 0.3dB per kilometer using 1550nm wavelengths respectively.
3. Each optical fiber strand shall be sufficiently free of surface imperfections and inclusions to meet the optical, mechanical, and environmental requirements of this specification and all EIA/TIA 568-C.3 and 568-C.3-1 performance parameters.
4. All optical fibers inside each individual cable shall be provided in counts indicated in the drawings and usable to the fullest capacity specified by the manufacturer and meet required specifications at all times.
5. Indoor/Outdoor backbone multi-mode/single-mode optical fiber cables shall be:
    a. Individual jacketed, tight buffered fiber type.
    b. Cable construction shall be a multi-mode/single-mode hybrid in a single protective outer sheath.
    c. The individual fibers are grouped in jacketed subunits color coded per TIA- 598.
    d. Have integrated dielectric central and strength members.
6. The optical fiber cables shall be rated per the installation environment as required by the local Authority Having Jurisdiction and/or National Fire Codes. Select an appropriate cable construction, including external jacket properties, when installing optical fiber cables in aerial, outdoor, underground and corrosive environments.
7. All MMF/SMF shall meet or exceed TIA compliant network cable-testing device certification by an independent laboratory, such as ETL, for verification of high speed, TIA/EIA T568C-compliant performance.

D. Cable sizes defined in Contract Documents.
1. 96-strand Single-mode mode - OSP - Outdoor Rated
2. 24-strand Single-mode / 12-strand Multi-mode – ISP – Riser Rated
3. 6-strand Single-mode mode - ISP – Riser Rated

E. Accessory Products:
1. Provide any accessory products related to the optical fiber backbone cabling required to provide a complete and functional infrastructure system.

2.02 INNDERDUCT SYSTEMS

A. Description:
1. Outside plant shall be constructed with High Density Polyethylene-rated plastic (HDPE)
2. Inside Plant shall be constructed of riser rated Polyethylene-rated plastic.
3. Shall be 25mm or 32mm in diameter as called for on the drawings or as required to provide a maximum of 40% fill.
4. Orange is an acceptable color.
5. Shall be UL listed to 2024 standard.
6. Shall be corrugated in design.
7. Shall be available with two and three-way couplers to join two ends together at pull points.

B. Products:
1. Carlon.
2. Endot.
3. Premier.

2.03 DUCT PLUGS

A. Description:
1. All Duct Plugs shall be constructed of high impact plastic components with durable elastic gaskets.
2. Shall be installed for all innerducts where water may be present.

3. Triplex and/or Quadplex Plugs shall be installed around each innerduct installed in an underground system to organize and support innerducts within conduits.
4. Fiber Optic Duct Plugs shall be installed inside each innerduct surrounding installed fiber optic cabling.
5. Shall be sized for diameter of the innerduct and fiber optic cable.
6. Expandable Plugs shall be provided within buildings for all unused underground conduits.
7. All duct plugs shall be water and airtight.

B. Acceptable Manufacturer:
1. Triplex Plugs.
2. Quadplex Plugs.
3. Fiber Optic Duct Plugs.
4. Expandable Plugs.

PART 3 EXECUTION

3.02 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section. Examples of work which must be checked include, but are not limited to:
1. Electrical requirements (conduit installation and capacity)
2. The telecommunications rooms are the size shown on the project drawings.
3. Adequate clearances of doors, riser spaces and ceilings for all component of the telecommunications system.
4. Examine and compare the telecommunications drawings and specifications with the drawings and specifications of other trades. Report any discrepancies between them to the A/E and obtain written instructions for changes or revisions.

3.03 INSTALLATION

A. Process:
1. Install all backbone cable per the manufacturer’s required installation instructions, under the guidelines of TIA/EIA 568C and BICSI, and in quantities indicated in the drawings.
2. Install all cables with proper attention paid to bend radii, pulling method, attachment method, and pulling forces. The cable manufacturer's requirement specifications for each particular cable type shall be followed exactly.
3. Backbone cable shall be visually inspected for non-compliant bend radius during and after pulling. Damaged cables, or those installed under questionable methods and/or circumstances shall be replaced at no additional cost to the Contracting Agency.
4. All cable shall be pulled using an appropriate measuring device to ensure that the specified force is not exceeded as noted in manufacturers requirements.
5. Install backbone cables with attention paid to aesthetic means and methods when routing cabling within IT spaces. No backbone cable shall be left unsupported for more than three (3) feet vertically or horizontally at any time.
6. Fiber optic cables shall be placed in neat bundles separated from other communications cabling. Fiber optic cables shall be neatly placed and bundled with Velcro ties to the horizontal and vertical cable management and runways at minimum 4-foot intervals, not to exceed every 4th rung, plus all locations where the cables change direction.
7. Provide radius drop out fittings at all locations where fiber optic cables transition from vertical to horizontal cable management systems.
8. All backbone cable shall be securely fastened to the termination shelf with a manufacturers strain relief bracket and termination panel cable clamp in a way that does not damage the optical fiber strands or impede the performance of the media. This secure fastening method shall also serve to insure a secure termination environment.
9. A minimum of three feet (3’-0”) of each optical fiber strand shall be left protected within the termination shelf for any future re-termination of a particular optical fiber strand.

10. All backbone cables shall be clearly labeled on both ends and in an accessible location no more than one (1) foot from each cable end.

3.04 RE-INSTALLATION

A. No additional burden to the Contracting Agency regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the Contracting Agency prior to beginning any re- installation work

3.05 CLOSEOUT ACTIVITIES

A. Contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Contracting Agency and A/E team.

B. Contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Contracting Agency

END OF SECTION 27 13 23

SECTION 27 15 13
COPPER HORIZONTAL CABLING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provides specifications for four-pair UTP copper horizontal workstation cabling to distribute network signals from telecommunications distribution spaces to work area outlet locations.

B. Category 6A CMP rated, Four-Pair Copper Cabling.

C. RG6 Coaxial CMP rated Cabling.

1.02 RELATED DOCUMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Section 27 15 15 for powered fiber specification

C. Architectural, mechanical, electrical, and all technology drawings.

D. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1.03 CLOSEOUT SUBMITTALS

A. As-Built Drawings:
   1. Submit all as-built drawings in accordance with the general requirements of the construction documents.
   2. Submit as-built drawings a minimum of two (2) weeks after completion of all Division- 27 work for A/E and Contracting Agency reference:
   3. All cabling must meet or exceed applicable TIA/EIA testing requirements
   4. Test results must be submitted for Contracting Agency review and approval adhering to the General Contractor schedule milestones related to the projects active systems integration.

1.04 QUALITY ASSURANCE

A. Qualifications – Manufacturer
   1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.

B. Qualifications – Installer:
   1. At a minimum, seventy-five percent (75%) of the onsite contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

PART 2 PRODUCTS

2.01 FOUR PAIR CATEGORY 6A CABLING

A. Basis-of-Design Product: Subject to compliance with requirements:
   a. Mohawk
   b. Commscope
   c. Berktek
   d. AMP

B. Product Options:
   1. The indicated manufacturers shall be the basis of the design and each component selected shall address the particular infrastructure requirements.

C. Description:
   1. All category-6A performance four (4) pair cable shall consist of eight (8) twenty-four (23) gauge, or greater, thermoplastic insulated solid twisted conductors that utilize the industry standard color code designations.
   2. The performance criteria for four (4) pair cable shall be above and beyond specific EIA/TIA 568-C.2 standards for the particular cable's rating and shall show stable performance with documented electrical characterization out to 500 MHz.
   3. Four (4) pair cables must perform over and above each of the current specification parameters for the latest published twisted pair, 10Gb performance cable solution.
   4. Cables shall be rated per the installation environment as required by the local AHJ and local codes.
   5. Select an appropriate cable construction, including external jacket properties, when installing cables in aerial, outdoor, underground and corrosive environments.
   6. Cable to be run continuous without splices.

D. Accessory Products:
   1. The indicated manufacturers shall be the basis of the design and each component selected shall address the particular infrastructure requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section. Examples of work which must be checked include, but are not limited to:
   1. Electrical requirements (conduit installation and capacity)
   2. The telecommunications rooms are the size shown on the project drawings.
   3. Adequate clearances of doors, riser spaces and ceilings for all component of the telecommunications system.
   4. Examine and compare the telecommunications drawings and specifications with the drawings and specifications of other trades. Report any discrepancies between them to the A/E and obtain written instructions for changes or revisions.

3.02 INSTALLATION

A. Process:
   1. Install all horizontal station cabling per the manufacturer's recommended installation instructions, under the guidelines of TIA/EIA 568C and BICSI, and in quantities indicated in the drawings.
   2. Locations requiring horizontal cable shall be, but not limited to, CCTV, Elevator control panels, work area outlet and WiFi.
   3. Install all cables with proper attention paid to bend radii, pulling method, attachment method, and pulling forces. All cable shall be pulled using an appropriate measuring device to ensure that the specified force is not exceeded as noted in BICSI installation guidelines. Also refer to the cable manufacturer's specifications for exact cable requirements per the particular cable type.
   4. All cables shall be visually inspected for insufficient bend radius during and after pulling. Damaged cables, or those installed under questionable methods and/or circumstances shall be replaced at no additional cost to the Contracting Agency.
   5. Contractor shall ensure that all TIA/EIA and industry standards are met with special regards to maximum stripping length of cable jackets. No four (4) pair UTP cables shall have more than three-eight inch (3/8") of cable jacket removed beyond the termination points.
   6. Install the horizontal cabling with attention paid to aesthetic means and methods when routing cabling within IT spaces. All horizontal cabling shall terminate in their respective floor serving technology space; specifically cables from floor outlets need to terminate in their corresponding floor telecom room.

7. All cabling distributed horizontally through metal stud framing shall have plastic protective bushings inserted to protect cables prior to installation.
8. All cables shall be clearly labeled on both ends and in an accessible location no more than six inches (0'-6") from the cable ends.
9. The Contracting Agency reserves the right to specify a new location for any outlet or equipment without increasing contractor unit cost – providing that the new location is specified prior to roughing-in of technology cable and is not farther than ten (10) feet away from the original location specified.
10. Communication EMT conduit sleeves shall receive conduit waterfall to control bend radius of the communication cable to a minimum of a 4" radius.

3.03 RE-INSTALLATION

A. No additional burden to the Contracting Agency regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the Contracting Agency prior to beginning any re- installation work

3.04 CLOSEOUT ACTIVITIES

A. Contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Contracting Agency and A/E team.

B. Contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Contracting Agency

END OF SECTION 27 15 13

This page intentionally left blank

SECTION 27 15 15

POWERED FIBER CABLE SYSTEM DATA COMMUNICATIONS HORIZONTAL CABLING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Sections 27 05 00, 27 15 13, 27 13 23, and all divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1.02 INTRODUCTION

A. Introduction
   1. Provide a powered cabling solution that combines power and optical fiber communications into one complete system.
   2. The cable must combine electrical power conductors and optical fiber into one package to speed up installations and simplify power and communications delivery to devices.

B. Powered Fiber Cable System
   1. System must be a complete "rack to device" solution capable of powering and communicating with small cells, Wi-Fi hotspots, HD cameras, and variety of devices requiring optical communications and DC power in one system.
   2. The hybrid cable shall allow for "standalone" use in delivering of power and fiber data communications.
   3. When used along with the PoE extender, the powered fiber optic cable shall supply optical fiber communications and PoE+ power for network access and other low voltage DC devices.
   4. See Table 1 for cable distances by gauge and input power.

TABLE 1 - POE EXTENDER ELECTRIC TRANSMISSION AND RECOMMENDED CABLE LENGTH DISTANCES

   5. Must be compatible with commercially available NEC Class 2 and/or SELV compliant 48-57VDC power supply
   6. System shall comply with the following standards: a. RoHS (2002/95/EC)
      a. REACH SVHC, 536/20/11
      b. California Prop 65 for safe drinking water and toxic enforcement act
      c. Telcordia GR-20-CORE Issue 3May 2008, EIA/TIA FOTPS
      d. TIA-568-C
      e. Deca-BDE free
      f. Power limited circuit cable UL 13 (CL2R-OF AND CL3R-OF)
      g. Communication cable per UL 444 (CMR-OF)
      h. UL 1666 standard for test for flame propagation - Edition 5 - Revision date 2012/06/27 j. IEC 60332-1-1, -2, 60332-3-24 Cat. C, 6103460745-2

i. k. ITU.T K21,
j. l. GR-1089
k. m. IEC 60793-2-50 type B.1.3 and B.6.A&B
l. n. ITU-T G.657.A1 or A2/B2 optical fiber, backwards compatible with G.652.D
m. o. PoE (IEEE 802.3af-2003) and PoE+ (IEEE 802.3at-2009)
n. p. Must comply with Canadian code ICES-003

7. Equipment must comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules
8. Standard system consists of five (5) components:
   a. Hybrid fiber/copper cabling
   b. PoE Extender
      1) 1-port
      2) 2-port
   c. Power and fiber distribution element
   d. Cable and fiber management
   e. SFP connector

PART 2 PRODUCTS

2.01 MANUFACTURED COMPONENTS

A. Manufacturer List
   1. CommScope
   2. Approved equivalent

B. System Components
   1. Hybrid fiber/copper cable
      a. 12 AWG (2mm) or 16 AWG (1.2mm) conductor size
      b. 02, 04 or 12 optical fibers
      c. Singlemode or OM3 Multimode fiber type
      d. Outdoor rated polyethylene (PE) or Riser/LSZH indoor/outdoor
      e. jacket type
      f. 1 Km, 2 Km or 4 Km cable length
      g. Compatible with FOSC 450A splice closure
      h. Cable must meet specifications in Table 1 and Table 2.

TABLE 3
POWERED FIBER CABLE PART NUMBER CONFIGURATOR

i. Cable shall be CommScope product part number (see Table 3) or approved equivalent.

2. PoE Extender
   a. Provides termination for hybrid cable input and automatically corrects voltage drop over distance
   b. Optical signal and power in must be converted to RJ45 PoE+ compliant jack(s)
   c. Shall be available in 1 or 2 port configurations
      1) 2-port configuration must allow for two (2) PoE or PoE+ devices to be connected via one hybrid cable
      2) 2-port must provide option to share the bandwidth of a single 1 Gb/s SFP or utilize two (2)
      3) SFPs for 1 Gb/s per port operation
   d. Must use outdoor rated patch cord
   e. Must be Earth grounded via a 12AWG conductor connected to the chassis ground lug.
   f. Shall be available in pole or wall mount options
   g. Extender shall have three (3) levels of electrical protection
      1) Primary - GDT component rated to 40kA surge protection
      2) Secondary - MOV components rated to 4.5kA
      3) Tertiary - TVS prevents the voltage from rising above 80-100V
   h. Termination block shall support a minimum of 200 re-terminations while maintaining a contact resistance of less than one (1) milliohm.
   i. Environmentally sealed closure rated to IP67
   j. Must provide electrical power transmission management
   k. Must be ascetically appealing for Wi-Fi access point or camera deployment
   l. SFP module in the POE extender should match module in existing switch
   m. Must include sunshade for harsh temperature installation
   n. PoE extender must meet specifications in Tables 4 and 5.

POE EXTENDER PHYSICAL DIMENSIONS

1-PORT POE EXTENDER

2-PORT POE EXTENDER

3. Power and Fiber Distribution Element
   a. Must be compatible with GE Critical Power Express Class II shelf, DC Rectifier Shelf and Modules.
   b. Shall comply with NEC Class II and SELV
   c. Each GE Modules shall accommodate eight (8) cable outputs; each GE chassis shall contain up to four (4) modules total per power supply for a total of 32 cables per power supply;

C. Slimline SPS DC Rectifier Module

PART 3 EXECUTION

3.01 INSTALLATION

A. Install all systems in accordance with manufacturer's printed instructions, as well as all Kitsap standards.

B. The power supply shall be installed in a safe location with access to the fiber optic network into which small cells or other network access devices are desired to be connected, and either 120VAC, 240VAC.

C. Parameters to be considered prior to system deployment:
   1. Distance from power supply to the network devices
   2. Maximum power consumption of the network devices
   3. Number of devices to be deployed
   4. Type of cable (jacket, support)
   5. Fiber Management options

D. For outdoor direct burial installations, the PE-jacketed "outdoor-only" rated cable is recommended.
   1. When installing in ducts, care should be given to avoid cable twisting.
   2. Standard cable lubricants may be used to assist with conduit or duct installations.
   3. If it is not practical to bring a reel of cable to the installation site, then utilize a standard figure 8 procedure to lay the cable out prior to pulling in duct. This helps avoid cable twisting.

E. The PE-jacketed outdoor cable is rated for direct burial but for long-term reliability is recommended installing below-ground cables in conduit/ducts.

F. Powered Fiber Cable is not rated for aerial self-support thus cable lashing is recommended.

G. Use only a typical pair of wire strippers to access the powered fiber cable and, optionally, a wire cutter or snip.

H. In cases where it becomes necessary to prevent shrink back and enhance coupling the additional buffer tube coupling can be achieved by placing slack or coupling coils at each splice closure or optical tap.
   1. The size of the loop should be based on the unloaded minimum bend radius of the cable.
   2. Laboratories testing and aerial installation test site demonstrate that a total of 5 loops on the input and 5-□ loops on the output adequately enhances the coupling to prevent buffer tube movement and provide proper entry into and out of the tap per Figure 1 below.

I. The LSZH/riser rated indoor/outdoor cable may also be installed in conduits or ducts, however, frictional forces are greater for the indoor/outdoor cable and, therefore, achievable distances may be less.

J. Standard cable lubricants may be used to assist with the indoor/outdoor cable for duct installation.

K. PoE Extender port openings must be properly sealed at all times (prior, during and after installation) against weather, moisture, dust/debris. Any exposure could result in catastrophic damage to electronic components.

L. PoE Extenders and Power Shelves must be properly grounded per manufacturer's instructions.

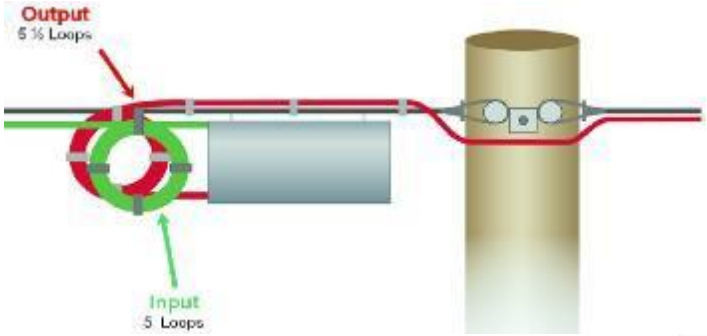

FIGURE 1 – EXAMPLE OF COUPLING COILS

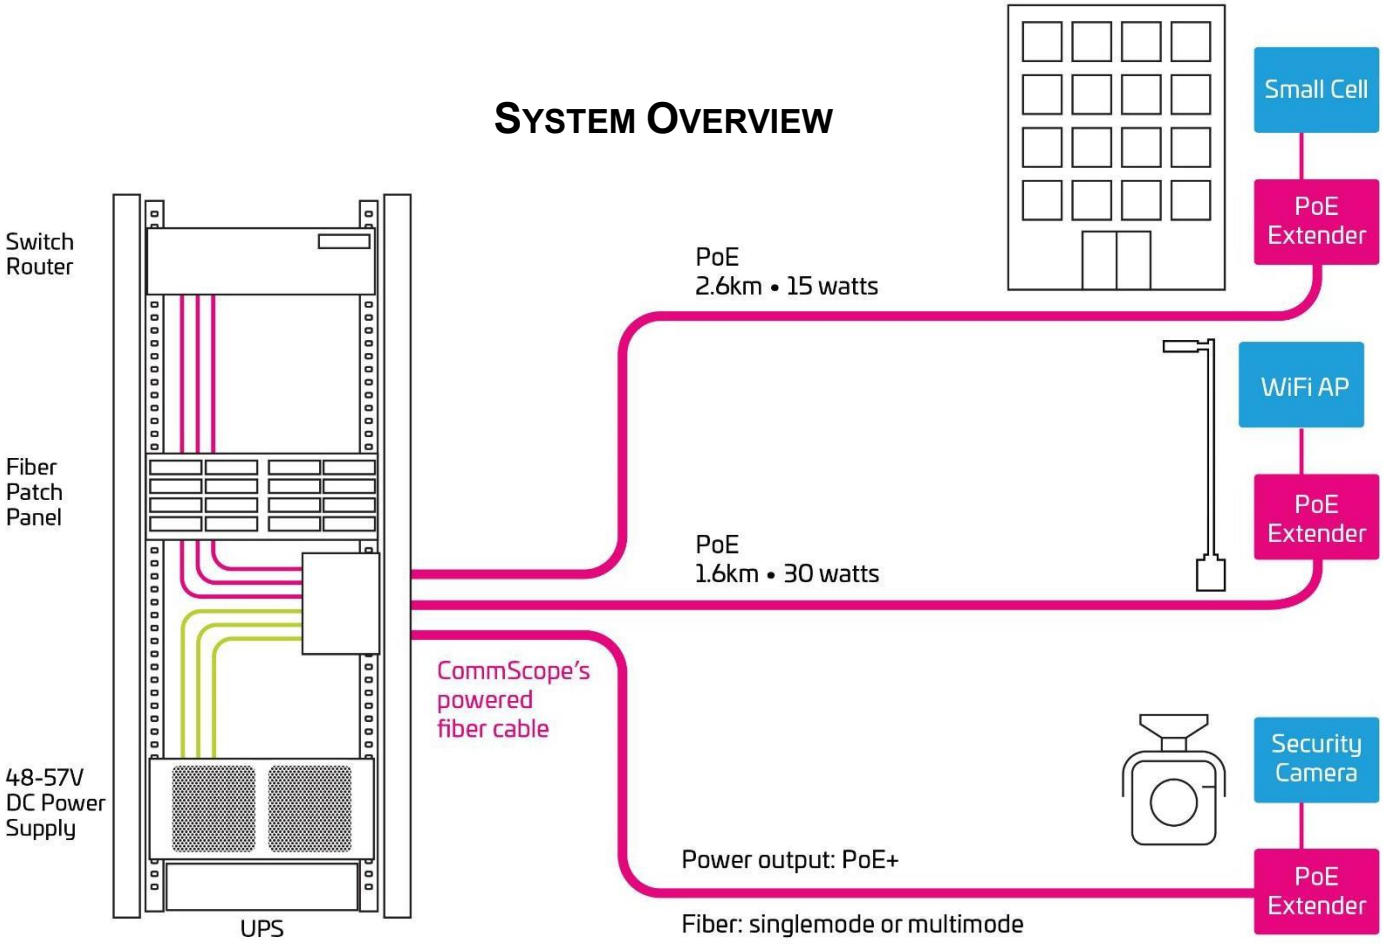
SYSTEM OVERVIEW



APPLICATION DIAGRAM

END OF SECTION 27 15 15

SECTION 27 15 43

COMMUNICATIONS FACEPLATES AND CONNECTORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provides specifications for horizontal workstation cable termination components and outlet housing component. Includes wall-mount, floor-mount, and ceiling-mount components to support the various workstation outlets throughout the cabling plant.

B. Copper Category 6a Connectors UTP

C. Multi-Mode Anaerobic connectors

D. Single-Mode Optical Fiber Pigtail Connector Assemblies/Splice-On Connectors

E. Outlet Housing Components (faceplates etc.)

1.02 RELATED DOCUMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment

1.03 CLOSEOUT SUBMITTALS

A. As-Built Drawings:
   1. Submit all as-built drawings in accordance with the general requirements of the construction documents.
   2. Submit as-built drawings a minimum of two (2) weeks after completion of all Division- 27 work for A/E and Owner reference:

1.04 QUALITY ASSURANCE

A. Qualifications – Manufacturer
   1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.

B. Qualifications – Installer:
   1. At a minimum, seventy-five percent (75%) of the onsite contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

PART 2 PRODUCTS

2.01 COPPER UTP CONNECTORS

A. Basis-of-Design Product: Subject to compliance with requirements:
   1. Berktek/Leviton
   2. Commscope.
   3. Or approved equal

B. Product Options:
   1. The manufacturers noted above shall be the only manufacturers acceptable to the Owner and A/E.

C. Description:
   1. All UTP/STP connectors shall be rated to perform at or above current TIA/EIA performance parameters of the UTP cabling it is terminating within the communications system.
   2. All UTP/STP connectors shall have an eight (8) position, eight (8)-conductor module that accepts RJ-45 plugs.

3. When utilized as part of a channel or permanent link, all high performance modular outlet connectors shall not decrease the horizontal cable elevated performance transmission requirements before and after installation as specified in ANSI/TIA/EIA 568-C Commercial Building Telecommunications Cabling Standard (horizontal cable section) in all noted performance parameters.

D. Accessory Products:
1. Provide any accessory products related to the UTP connectors required to provide a complete and functional infrastructure system.
2. Port RJ-45 jack block out device to safely secure access to unused ports and deter vandalism to jacks.
3. Provide complete with all required mounting hardware and fittings and cables needed.

2.02 SINGLE MODE OPTICAL FIBER PIGTAIL CONNECTORS ASSEMBLIES

A. Manufacturer List:
1. Corning

B. Product Options:
1. The manufacturers noted above shall be the only manufacturers acceptable to the Owner and A/E.

C. Description:
1. Single mode Optical fiber pigtail connector assemblies housed in manufacturers connector panels.
2. FuseLite Splice on Connector is acceptable.
3. Duplex LC style connectors.
4. Maximum insertion loss across mated pair shall be less than 0.3 dB, tested per FOTP-171 Method A. Typical Insertion loss should be maximum of 0.15 dB. Minimum return loss shall be less than 60.5 dB, tested per FOTP-171. Typical return loss should be 60 dB.
5. Pigtails shall have minimum 2 meters of attached cordage.
6. Pigtails shall be assembled and tested by the connector manufacturer.

D. Accessory Products:
1. Provide any accessory products and tool kits related to the termination of the optical fiber connectors to provide a complete and functional infrastructure system.

2.03 MULTIMODE OPTICAL FIBER CONNECTORS (FIELD TERMINATE)

A. Manufacturer List:
1. Corning:
a. Anaerobic adhesive connector

B. Product Options:
1. The manufacturers noted above shall be the only manufacturers acceptable to the Owner and A/E.

C. Description:
1. All indoor multimode optical fiber connectors shall be OM4 LC-type connectors, rated and approved by the manufacturer to perform at the level designated by the optical fiber strands being terminated. Each connector shall allow rapid termination of inter- building, intra-building, and horizontal indoor optical fiber cables.
2. The connector shall be field installable type and contain a mechanical splice.
3. Connector shall have a fiber stub in the ceramic connector ferrule that is bonded in the ferrule micro-hole, the connector shall not require end face polishing in the field.
4. When tested in accordance with FOTP-171, the connector shall be consistently capable of insertion losses 0.1 dB (typical) and shall be 0.5 dB (maximum) when installed in accordance with the manufacturers recommended procedure.

D. Accessory Products:
1. Provide any accessory products and tool kits related to the termination of the optical fiber connectors to provide a complete and functional infrastructure system.

2.04 OUTLET HOUSING COMPONENTS

A. Manufacturer List:
   1. Berktek/Leviton.
   2. Commscope.

B. Product Options:
   1. The manufacturers noted above shall be the only manufacturers acceptable to the Owner and A/E.

C. Description:
   1. All outlet housings at the various technology outlet locations shall provide the designated number modular insert ports as indicated in the drawings.
   2. All flush-mounted faceplates shall be provided per the port configurations shown on the telecom drawings.
   3. Faceplates for wall-mounted phones shall be one (1) port single gang faceplates that have wall-mount lugs allowing vertical phone mounting.
   4. Faceplates for flush floor mounted outlets shall be coordinated with the floor box or poke thru device that will be selected and installed outside the scope of this section.
   5. System furniture faceplates shall be capable of fitting in the furniture system selected by the Owner. Furniture faceplates shall be provided per the port configurations shown on the telecom drawings. Furniture faceplate extenders shall be used (if required) to maintain proper bend radii within the furniture raceway/pathway.
   6. Surface mounted boxes shall be capable of the quantity of outlet jack requirements at each outlet locations indicted in the drawings.
   7. All outlet-housings shall provide a clear TIA/EIA 606-A labeling location for both the individual outlet port and the entire outlet housing location, unless otherwise indicated in the project drawings.

D. Accessory Products:
   1. Provide any accessory products related to the workstation outlet housing components required to provide a complete and functional infrastructure system.

PART 3 EXECUTION

3.01 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section. Examples of work which must be checked include, but are not limited to:
   1. Electrical requirements (conduit installation and capacity)
   2. The telecommunications rooms are the size shown on the project drawings.
   3. Adequate clearances of doors, riser spaces and ceilings for all component of the telecommunications system.
   4. Examine and compare the telecommunications drawings and specifications with the drawings and specifications of other trades. Report any discrepancies between them to the A/E and obtain written instructions for changes or revisions.

3.02 INSTALLATION

A. Process:
   1. Install all connectors and couplers under the guidelines of the manufacturers' recommended instructions and per all TIA/EIA 568C standards, BICSI guidelines, and manufacturer approved industry practices.
   2. The installation and performance parameters of all installed couplers and connectors shall be verified by the trade contractor through TIA/EIA 568C testing procedures.
   3. Color of all outlet housing components shall be coordinated with the Owner before purchase and installation.
   4. All technology outlets located on walls shall be flush mounted, level and plumb.

5. All technology outlets shall be mounted at right angles and parallel to the floor, unless installation requirements or design dictate otherwise.
6. Install blank inserts in outlet housing spaces that are not being filled with cable termination modules. Blank inserts shall match the workstation housing color, unless otherwise indicated in the drawings.
7. All outlets located in systems furniture may be served from a wall adjacent to the furniture cluster or a floor box. If the cable is exposed prior to entering furniture raceway, install spiral wrap tubing to protect the cable per the manufacturer's recommendations.
8. All outlet housings as well as each individual utilized port must be labeled in accordance with the Owner-approved labeling scheme.

3.03 RE-INSTALLATION

A. No additional burden to the owner regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the owner prior to beginning any re-installation work

3.04 CLOSEOUT ACTIVITIES

A. Contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Owner and A/E team.

B. Contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Owner

END OF SECTION 27 15 43

SECTION 27 16 19

COMMUNICATION PATCH CORDS, STATION CORDS, AND CROSS CONNECT WIRE

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provides specifications for Category 6a and optical fiber horizontal cable patching to distribute network signals.

B. Copper Category 6a Patch Cords UTP.

C. Optical Fiber Patch Cords.

1.02 RELATED DOCUMENTS

A. Section 27 05 00 and all divisions of the specification and general provisions of the Construction Documents.

B. Architectural, mechanical, electrical, and all technology drawings.

C. Refer to Structural Seismic Requirement design documents Specifications, if available, for Non-Structural Components for all structural bracing and support of telecommunications equipment.

1.03 CLOSEOUT SUBMITTALS

A. As-Built Drawings:
   1. Submit all as-built drawings in accordance with the general requirements of the construction documents.
   2. Submit as-built drawings a minimum of two (2) weeks after completion of all Division- 27 work for A/E and Contracting Agency reference:

1.04 QUALITY ASSURANCE

A. Qualifications – Manufacturer
   1. Component manufactures shall be ISO 9001:2000 and offer products that are RoHS compliant.

B. Qualifications – Installer:
   1. At a minimum, seventy-five percent (75%) of the onsite contractor provided field technicians shall be factory certified within 12 months by the manufacturer of the selected telecommunications system components being installed. Proof of certification shall be available on site for review at all times for each field technician.

PART 2 PRODUCTS

2.01 COPPER UTP/STP PATCH CORDS

A. Basis-of-Design Product: Subject to compliance with requirements:
   1. Berktek/Leviton.
   2. Commscope.

B. Product Options:
   1. The indicated manufacturers shall be the basis of the design and each assembly selected shall address the particular infrastructure requirements.

C. Description:
   1. Category UTP Copper patch cords for equipment patching (RJ-45 to RJ-45 Cords): Modular RJ45 male plug connector's equipped with (8) eight gold anodized pins shall be factory terminated at each end of the patch cords. Modular plug connectors will be snag free in design or will utilize a molded plastic boot to cover the modular plug tab. Category 6 UTP cords shall be 26 AWG.
   2. All patch cords shall conform to the requirements of the EIA/TIA 568C.2 standard performance parameters and shall also guarantee headroom margin above the minimum EIA/TIA 568C standard NEXT and PSNEXT requirements; and shall provide positive ACR to 5000 MHz-km as part of the connectivity system.
   3. All copper UTP patch cords shall have stranded conductors that match the EIA/TIA 568-C performance characteristics of the category cable specified.

4. Patch cord performance levels shall be equal to or greater than the performance level of the installed UTP cabling system.
5. All copper patch cord lengths for patching inside the telecom rooms are to be provided appropriate to patching from network equipment ports to the copper patch panels ports within the Data Center and IDF.

D. Accessory Products:
1. Provide any accessory products related to the UTP/STP connectors required to provide a complete and functional infrastructure system.
2. Port RJ-45 patch cord lock-in device to safely secure access to patched cords and deter accidental removal to network connection.
3. Provide complete with all required mounting hardware and fittings and cables needed.

2.02 OPTICAL FIBER PATCH CORDS

A. Basis-of-Design Product: Subject to compliance with requirements:
1. Corning.

B. Product Options:
1. The indicated manufacturers shall be the basis of the design and each assembly selected shall address the particular infrastructure requirements.

C. Description:
1. All optical fiber patch cords shall conform to the requirements of the EIA/TIA 568C.3- 1 standard performance parameters for the multimode or single-mode optical fiber and shall have the same manufacturer, cable type, connector and polish as noted for the backbone fiber.
2. All optical patch cords shall have push-pull strain relief boot and duplex clip.
3. All optical fiber patch cord lengths are to be provided appropriate to patching from network equipment ports to the optical fiber patch panels ports within the Data Center and IDF.
4. It is the responsibility of the contractor to verify lengths and counts of optical fiber patch cords with the Contracting Agency prior to purchase.
5. All single-mode patch cord colors are to be industry standard yellow and provided in a duplex configuration.
6. All multi-mode patch cord colors are to be industry standard aqua and provided in a duplex configuration.
7. Any optical fiber patch cords purchased without written authorization by the Contracting Agency are purchased at the contractor’s own risk.

D. Accessory Products:
1. Provide any accessory products related to the optical fiber connectors required to provide a complete and functional infrastructure system.

PART 3 EXECUTION

3.01 EXAMINATION

A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section. Examples of work which must be checked include, but are not limited to:
1. Electrical requirements (conduit installation and capacity)
2. The telecommunications rooms are the size shown on the project drawings.
3. Adequate clearances of doors, riser spaces and ceilings for all component of the telecommunications system.
4. Examine and compare the telecommunications drawings and specifications with the drawings and specifications of other trades. Report any discrepancies between them to the A/E and obtain written instructions for changes or revisions.

3.02 INSTALLATION

A. Process:
   1. Install all horizontal cable per the manufacturer's recommended installation instructions, under the guidelines of TIA/EIA 568 C and BICSI.
   2. Category 6 equipment Patch cords: Provide (2) copper patch cords (one for each end of the cable termination) for every Category cable installed.
   3. Fiber Optic Equipment Patch cords: Provide (2) fiber optic LC duplex patch cords (one for each end of fiber termination) for every pair of fiber strands installed.
   4. All patch cord lengths are to be provided appropriate to patch from rack mounted network equipment ports to the rack mounted horizontal station outlet patch panel ports within the Data Center/IDF and from the workstation outlet to the computer/or other IP end device NIC card/RJ45 port.
   5. Provide new, sealed patch cords in lengths, colors and counts approved in writing by the Contracting Agency.
   6. It will be the responsibility of the communication contractor to provide install all Category 6 and Fiber patch cords per direction and coordination of Contracting Agency IT dept.

3.03 RE-INSTALLATION

A. No additional burden to the Contracting Agency regarding costs, network down-time, and end user interruption shall result from the re-installation of specified components. Scheduling for re-installation work shall be coordinated, in writing, with the Contracting Agency prior to beginning any re- installation work.

3.04 CLOSEOUT ACTIVITIES

A. Contractor shall provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Contracting Agency and A/E team.

B. Contractor to submit all as-built drawings and any test documentation required prior to acceptance by the Contracting Agency.

END OF SECTION 27 16 19

SECTION 28 05 00

COMMON WORK RESULTS FOR ELECTRONIC SAFETY AND SECURITY

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Related Documents
B. Summary and related sections
C. References
D. Definitions
E. System Description and General Responsibilities
F. Coordination
G. Quality Assurance
H. Submittals
I. Delivery, Storage, and Handling
J. Site Conditions
K. Sequencing and Scheduling
L. Warranty
M. Extra Materials
N. Product Options and Substitutions
O. Materials and Equipment
P. Equipment Modification
Q. Fabrication
R. Source Quality Control
S. Firestopping/Sealant Materials
T. Examination
U. Installation
V. Field Quality Control
W. Cleaning
X. Training

1.02 RELATED REQUIREMENTS

A. Section 28 13 00 “Physical Access Control System.”
B. Section 28 16 00 “Intrusion Detection System.”
C. Section 28 23 00 “Video Surveillance System.”

1.03 REFERENCES

A. Codes compliance - Comply with the established project edition of the following codes as applicable:
   1. National Fire Alarm Codes (NFPA 72) NFAC
   2. All Local, State, County or Federal codes and ordinances
B. Standards Compliance - Comply with the following standards as applicable:
   1. American National Standards Institute ANSI
   2. American Society for Testing and Materials ASTM
   3. Electronics Industry Association EIA
   4. Electrical Testing Laboratories ETL
   5. Federal Communications Commission FCC
   6. Institute of Elect. and Electronics Engineers IEEE

7.	National Electrical Contractors Association	NECA
8.	National Electrical Manufacturers Association	NEMA
9.	National Fire Protection Association	NFPA
10.	Occupational Safety Health Act	OSHA
11.	Underwriter's Laboratories	UL

1.04 DEFINITIONS

A. By Others or By Other Trades: By persons or parties other than the Division 28 Contractor. In this context the words “by others or by other trades” shall not be interpreted to mean “not in contract (NIC)”.

B. Certified: Equipment has been tested and found by a nationally recognized testing laboratory to meet nationally recognized standards and found to be safe for use in a specified manner; production is periodically inspected by a nationally recognized testing laboratory; and it bears a label, tag, or other record of certification.

C. Concealed: Not visible or readily accessible such as, embedded in masonry or other construction installed behind wall furring with double partitions or above hung ceilings, in crawl spaces, in shafts.

D. Conveniently Accessible: Capable of being serviced without climbing or crawling under or over obstacles, and with adequate working clearance both front and back.

E. Damage: Visible or invisible abuse that negatively affects performance or appearance and creates defective materials or workmanship.

F. Defective Materials or Workmanship: Operational failures, performance below minimum requirements, evidence that the system will not be reasonably maintainable, errors in documentation, abnormal operations, unsafe conditions, or similar unsatisfactory performance.

G. Contractor: Company holding the contract or agreement with the Contracting Agency or its representative. The Contractor may, when permitted, sub-contract Work described in this Section to which the term contractor may apply.

H. Exposed: Not concealed.

I. Failure: Any deviation from intended system operation and performance, as determined by the Contract Documents and subsequent submittals and the Contracting Agency.

J. Furnish: Purchase and deliver to the Project site complete with every necessary appurtenance, support, and accessory required for operation.

K. Install: Unload at the delivery point at the site and perform every operation necessary to establish secure mounting and correct operation at the proper location in the Project.

L. Labeled: Equipment embodies a valid label, symbol, or other identifying maker of a nationally recognized testing laboratory such as Underwriters’ Laboratories, Inc., the laboratory makes periodic inspections of the production of such equipment, and the labeling indicates compliance with nationally recognized standards or tests to determine safe use in a specified manner.

M. Listed: Equipment is mentioned in a list which is published by a nationally recognized laboratory which makes periodic inspection of the production of such equipment or states that such equipment meets nationally recognized standards or has been tested and found safe for use in a specified manner.

N. Nationally Recognized Testing Laboratory: A testing laboratory, which is approved, in accordance with OSHA regulations, by the Secretary of Labor.

O. Provide: Furnish and install, completely ready for use, including all accessories required for operation.

1.05 SYSTEM DESCRIPTION AND GENERAL RESPONSIBILITIES

A. The work to be performed under this contract includes the furnishing of all labor, materials, and equipment for a video surveillance system, a physical access control system, and an intrusion

detection system. Work shall include all provisions of new electronics controls systems, including, physical access control, video surveillance, and intrusion detection.

B. Combined Prescriptive and Performance Design Requirements
   1. Division 28 includes a combination of prescriptive and performance specifications. Compliance with the performance specifications, as well as coordination and integration of the prescription requirements, will require substantial design work on the part of the Contractor.
   2. The performance requirements are intended to establish overall system performance requirements, satisfy the operational requirements, and establish the inter-coordination requirements for the Division 28 systems.
   3. The prescriptive requirements establish the minimum quality, characteristics, and types of components, equipment, and materials to be used to achieve the stated system performance requirements. The Contractor is advised, however, that prescriptive specifications have not been provided to satisfy all of the specified performance requirements.
   4. The Contractor shall carefully consider all of the requirements for each of the Division 28 systems when preparing its bid. Any questions regarding the intent of these requirements, the scope of the systems or their coordination requirements must be submitted in writing prior to bidding in accordance with the Instructions to Bidders. The Contractor shall have no claim for either extra compensation or extra time on the grounds that it did not understand the scope or the requirements of the Division 28 work, and/or the coordination requirements of the Division 28 work with the work of the other Divisions.
   5. Compliance with the project requirements will be progressively monitored and adjusted through the submittal process, installation period, and performance verification testing.

C. Drawing Interpretation
   1. The Drawings are diagrammatic and indicate the general arrangement of systems and equipment unless indicated otherwise by dimensions or detail drawings. The Drawings installation and schematic diagrams and symbols to outline the Work to be provided. These drawings do not have any dimensional significance, nor do they delineate every item required for the intended Work. No interpretation shall be made from the limitations of symbols and diagrams that any elements necessary for complete Work are excluded.
   2. The Work shall be provided in accordance with the intent expressed on the Drawings and Specifications, and in conformance with the actual building architectural and structural conditions. When in conflict, field conditions take precedence over the Contract Documents.
   3. The meaning of abbreviations shall be the same whether in lower case letters or without periods.
   4. The use of words in the singular shall not be considered as singular where other indications denote that more than one item is referred to.
   5. Details that appear on the Contract Documents which are specific with regard to the dimensioning and positioning of the Work, are intended only for the purpose of establishing general feasibility. They do not replace engineering or field coordination by the contractor for the Work.

D. Provide all parts and equipment for a complete and operational system for the Work of Division 28 as described herein and shown on the drawings.

E. Furnish and install all trenching and backfill, duct banks, conduits, raceways, sleeves, boxes, gutters, shelves, enclosures, shelf and enclosure supports, backboards, pull ropes (in unused or spare conduits) required to make all systems fully operational, including components not shown on the Drawings, but necessary for fully operational systems.

F. Furnish, install, terminate, test, dress, and identify all wire and cable required to make systems fully operational, including all wire and cabling not shown on the Drawings, but necessary for fully operational systems.

G. Recognize that the Work entails integration between individual systems, as well as the design and implementation of many system and component interfaces. Take full responsibility for the complete design, installation, and performance of the total integrated system, including integration between systems and various interfaces, to achieve the specified operational features and system performance requirements.

H. Fully test the systems, demonstrate their satisfactory operation, and train maintenance and operating personnel, as specified in this Section and the Sections governed by this Section.

1.06 COORDINATION

A. Coordinate with the Contracting Agency and all other trades as required to ensure that the entire Work of this Project will be carried out in an orderly, complete, and coordinated fashion.

B. Coordinate installation of lighting and ventilation in all equipment rooms and control stations to avoid any possible interference and to enhance system function.

C. Coordinate with the Work of all applicable Divisions and Drawings for the required electrical and mechanical control interfaces to the work of this section.

D. If applicable, provide coordination drawings of security device plate mounting templates and internal frame conduits to the hollow metal frame manufacturer/supplier to facilitate frame preparation for electronic devices. Rework all frames for which device mounting has not been coordinated at Contractor's expenses.

E. If applicable, obtain product data and wiring schematic information from the Division 8 and 11 Contractors/manufacturers for all approved locking and door monitoring hardware. Coordinate with the Contractors to properly wire, terminate and test all electrically controlled and monitored door/gate hardware.

1.07 QUALITY ASSURANCE

A. Division 28 requires contractors with similar work experience and specific licenses and certifications to perform the work of this section. Contractors must be certified or licensed at the time of bid where Manufacture certification or licensure is required. Required licenses and certifications shall be submitted the contractor's bid package.

B. The Division 28 contractor shall have had experience in the design and installation of similar systems of similar project sizes and similar integration as this project to be considered qualified.

C. The Contractor shall be responsible for all costs incurred including costs incurred by the Contracting Agency and its representatives for failure to provide the experience and key personnel as specified.
   1. Deductive change orders may be issued as a result of the failure to properly engineer the work prior to construction or improperly installed work that results in costs incurred to the Contracting Agency. Examples of incurred costs are rejection of submittals for failure to follow specifications or failure to properly engineer the work; re-inspection of rejected work.

D. The Division 28 contractor shall maintain a local service center with qualified service technicians for the duration of the Warranty.

E. The Division 28 Contractor shall have an active C-7 or C-10 contractor's license, as required by the project scope, issued by the State of California.

F. Key Project Personnel must have work experience with projects of similar size and complexity. Systems experience shall be demonstrated for the Key Project Personnel. R sum s of prospective key personal shall be submitted within 30 days of contract award.
   1. Project Manager Qualifications
      a. Five years' experience with projects of similar size and complexity.
   2. The approved Project Manager shall represent the Contractor at all times in all project matters and shall be responsible for the administrative work including but not limited to, the following:
      a. Representation at all project meetings.
      b. Progress schedule and progress reporting.

c. Payment schedule of values and pay requests.
d. Representation and management of all employees and sub-contractors.
e. Conduction of on-site performance and acceptance testing.

3. The approved Project Engineer shall be qualified and shall be responsible for technical work including but not limited to, the following:
   a. Preparation and signature of all engineering, shop drawings, and product data submittals.
   b. System fabrication, field installation work, and testing.
4. Consider all qualification and experience materials submitted as binding. Obtain the Contracting Agency's approval in writing prior to any deviations from the minimum requirements in organization, personnel, work plan, quality control plan, procurement plan or other declaration within the qualification submittal. Key project personnel substituted prior to or during the Work must meet the specification requirements and obtain the Contracting Agency's approval.

G. Regulatory Requirements and Standards:
1. Obtain and pay for all permits and inspections required by all legal authorities and agencies having jurisdiction for the Work. The certificates of all such permits and inspections shall be delivered to the Contracting Agency.

1.08 SUBMITTALS

A. Submit under provisions of Section 1-06.

B. Contractor is advised that approval or acceptance of product data or shop drawing submittals does not release the contractor from providing all necessary documentation per submittal requirements, nor does it obviate contractor from additional design and coordination throughout the project.

C. Work Plan
1. Submit a work plan for all work to be performed in the existing facility within 15 days of the Notice to Proceed.

D. CPM Schedule
1. Submit a Critical Path Method Schedule within 30 days of the Notice to Proceed.
2. At a minimum show tasks by area such as by building, by floor or other appropriate designations.
3. Include tasks that are not part of the work of this section but that may affect this section such as work by other trades or contractors or Contracting Agency review time.
4. Include tasks that are not part of the work of this section but that may affect this section such as work by other trades or contractors or Contracting Agency review time.

E. Submittal Matrix
1. Prepare a matrix of submittals by type vs. section of all submittals to be made by the Division 28 contractor within 30 days of the Notice to Proceed.
2. Utilize the list of required submittals listed at the end of this section as a starting point. Add columns for expected delivery dates and each specification section. If a listed submittal is not required for a specific section, indicate such with an "N/A" or other means in the column and row cross point.

F. Schedule of Values
1. Submit a Schedule of Values (SOV) based on the CPM schedule and Submittal Matrix that reflect the value of the systems and installation of work for this Division.
2. That approved SOV will be used as a basis for progress payments.

G. Product Data:
1. Product data is required for all materials and equipment. Include complete bill of materials for each section with the product data submittal.
2. Cross-reference submitted items to the Specifications using their related sections and paragraph numbers.

3. Submit complete product data for all system components in a single, bound submittal of one or more volumes. Provide a table of contents and labeled divider tabs for each section. Partial submittals for individual sections will be returned without review.
4. Include descriptive literature, catalog cuts, illustrations, schematics, technical data sheets, and test data necessary for the Contracting Agency to ascertain that proposed equipment and materials comply with specification requirements. Include manufacturer's name, model, catalog or part numbers. Catalog cuts shall be legible and shall clearly identify equipment being submitted.
5. Include required calculations, I/O points lists, system zone schedules, and other tabular data as necessary to clarify system sizing and configuration. Do not, however, consider such submittals as a substitute for complete shop drawings.
6. Disclosure of Product Deviations: Specifically identify and tabulate any and all deviations from the contract documents including all system functions and features. Reference the corresponding specification sections and paragraph/article numbers. All variances and deviations will be reviewed for acceptance or rejection. It will be the Contractor's sole responsibilities to comply with all other contract requirements not revealed in the disclosure of product deviations.

H. Shop Drawings:
1. Shop drawings are required for all systems and component assemblies.
2. AutoCAD ".dwg" files of the Contract Drawings may be made available upon request. These files may be used as a first step in the preparation of shop drawings. Do not consider the drawing plots from such files as a substitute for the shop drawings that are to be prepared by the contractor.
3. Shop drawings will not be accepted or considered unless they are submitted as a complete package for each specification section. Partial submittals covering less than a whole system or with incomplete interfaces to other systems will be rejected.
4. Standard manufacturer's drawings may not be used as shop drawings unless specifically modified for use on this project.
5. Each drawing requires a unique drawing number and revision level. Revisions shall per be dated and referenced per submittal number. Delta numbers and clouds on the drawings shall be used in all instances where changes have been made to the pervious submittal.
6. At a minimum, include the following shop drawings:
    a. Floor Plans: Scaled drawings showing equipment and device locations in plan view. Include wire and cable types and quantities, raceway sizing and routing. Routing information shall indicate where rated assemblies are penetrated. Separate into as many plan series as needed to prevent overlapping information. These drawings shall be fully coordinated with other trades prior to submittal. Show relationships to adjacent surrounding structures.
    b. Equipment and Control Room Plans and Elevations: Scaled, dimensioned drawings showing security equipment layouts in security equipment rooms, electrical/security closets, and control rooms. Include electrical J-boxes and receptacles, power, conduit sizing and routing, metal gutters, wiring ducts, cable trays, and supports. Indicate all other non-security cabinets, enclosures, and equipment within the room. All constraints and clearance requirements shall be shown in dimensioned drawings.
    c. Cabinet, Enclosure, and Rack Elevations: Scaled, dimensioned drawings for each system equipment cabinet, enclosure, and rack showing component and equipment mounting, wire and cable routing and separation, connector and terminal block locations and labeling, and all necessary fabrication details.
    d. System Block Diagrams: Single line block diagrams showing the general relationship between system components and the interconnection between systems. Use these drawings as a reference for the Single line diagrams and point-to-point diagrams by cross-referencing the shop drawing number of those diagrams on these drawings.
    e. Single Line Diagrams: Interconnection diagrams for the riser and trunk wiring between equipment cabinets, enclosures racks and major components. Use the same equipment designations as the floor plans and block diagrams.

f. Point-to-Point Diagrams: Drawings which show the wiring of each component or device of each individual system. Include details of power supply, grounding, shielding, shield grounding, surge protection, fusing, connector pin-outs, terminal assignments, and similar wiring and connection details. Use the same component and device designations as the floor plans and other shop drawings.
g. Device Installation Diagrams: Details which show the installation and wiring termination of each field device in each individual system. Include settings for dipswitches, jumpers, addresses, port assignments, etc. of all devices.
h. All other shop drawings necessary to install, fabricate, locate, identify, test, service, and repair the systems provided.

7. Shop drawings approved by the Contracting Agency OR by the Consultant Engineer is not a release from Contract requirements as defined by the Drawings, Specifications, and governing codes and regulations.

I. Samples:
1. Field Samples:
a. Wires and Cables: Submit a one (1) foot sample length of each wire and cable type to be used with the cable identification clearly shown.
b. Submit all required samples along with the product data submittal for review and approval prior to installation.
c. If all wire samples cannot be submitted at the same time, submit samples with a complete list of all cables to be used noting samples which have been submitted. Update the list with each subsequent sample submittal.
2. Devices/Equipment:
a. If required by Contracting Agency, submit sample assemblies of each of the following devices or equipment along with the product data submittal for review and approval by the Contracting Agency:
1) Substituted products if requested by Contracting Agency.
2) Custom component, board, equipment or assembly.
3. Disposition: Submitted samples become property of the Contracting Agency and will not be returned.
4. Approval of any custom or modified assemblies shall be required. Submit technical information with samples.

J. Test Procedures:
1. Initial Performance Testing: Submit test procedures, forms, and checklists for point-by-point testing. Include a listing for each individual system, each control station and control panel, each equipment room, and each major system component. At a minimum, forms shall include columns for operational/non-operational status, remarks, workmanship, and date corrected. Submit a sample format for approval by the Contracting Agency a minimum of 20 days prior to testing.
2. Performance Verification Testing: Submit test forms which are identical to or similar to the accepted Initial Performance Testing forms. Obtain approval from the Contracting Agency for any changes in test procedure or forms.

K. Test Results:
1. Performance Verification Testing: Submit completed test results prior to or with the request to have the project declared substantially complete by the Contracting Agency.

L. Record (As-Built) Documents:
1. Maintain a current record set of as-built drawings on the job and as construction and installation progress, show the actual installed location of all items, material, and equipment.
2. Accurately record actual routing of all conduits including sizes and types.
3. The as-built drawings shall be available to the Contracting Agency for review and will be required for evaluation of progress payments.

4. Submit as-built shop drawings created from the approved shop drawings and updated from the site as-built drawing set and any other drawings required to depict the as-built conditions of the installed work.

M. Operational Manuals:
1. Submit the required quantity of identical manuals, which shall contain the Theory of Operation, start up, shut down and emergency procedures, and the manufacturer's operating instructions.
2. Subdivide the manual by section with tab dividers. Provide a table of contents which identifies each section and the contents therein.
3. Submit an electronic copy.

N. Maintenance Manuals:
1. Submit a complete set of maintenance documents as described in this Section. For documents of sizes greater than 11 x 17 inches, prints and electronic copy shall be furnished.
2. Manuals shall include the following as a minimum requirement:
   a. Technical system description.
   b. System schematics.
   c. Detailed wiring diagrams to identify cabling, termination, and routing.
   d. Panel assembly drawings to identify location of components, terminal strips, and equipment as required to correlate with system drawings.
   e. Descriptions and drawings as required to maintain equipment from the board to the component level.
   f. Description of software and user programmable functions. Procedures for user programmable functions shall be included.
   g. A complete electronic copy of each unique system program.
3. For systems where the program resides on electronic media or other similar storage medium, furnish a copy of the media, or similar medium, to the Contracting Agency.
4. Where multiple systems are combined into a single integrated system, documentation shall include a description of the integrated system and the details of the interfaces between systems.
5. Provide a list of current telephone numbers and addresses of all material vendors and equipment manufacturers who have supplied components in this Project. Include separate service telephone list and purchasing telephone list cross-referencing with each component.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Protect all materials and equipment from damage during storage at the site and throughout the construction period. Protect equipment and materials during shipment and storage against physical damage, dirt, dust, moisture, cold, rain, and any foreign substances that may damage the equipment.

B. Prevent damage from rain, dirt, sun and ground water by storing the equipment on elevated supports and covering them on all sides with securely fastened protective rigid or flexible waterproof coverings.

C. Protect conduit by storing it on elevated supports and capping the ends with suitable closure material to prevent dirt accumulation.

D. Protect all fabricated and/or installed materials and equipment against dust, dirt, moisture, physical damage, metal debris, and any foreign substances that may damage the equipment.

E. Protect painted surfaces with removable heavy Kraft paper, sheet vinyl or equal, installed at the factory and removed prior to final inspection.
1. Replace equipment determined by the Contracting Agency to be damaged. Repaint and finish damaged paint on equipment and materials with the same quality of paint and workmanship used by manufacturer so that repaired areas are not obvious.

1.10 SITE CONDITIONS

A. Site Investigation
   1. Prior to commencement of work, the Contractor shall perform a site survey of all related existing systems and submit any potential problems of the design documents that may increase the installation cost of the project.
   2. Survey all locations where work is to be performed and verify existing conditions prior to shop drawing submittals.

B. Coordination with Security Personnel
   1. The Contracting Agency will assign a contact person for the contractor to coordinate day to day activities and access into areas. Coordinate all system interruptions and scheduled down time with the contact person.

C. Security Requirements
   1. Any special security requirements will be provided by the Contracting Agency. .

1.11 SEQUENCING AND SCHEDULING

A. General Requirements:
   1. Do not begin the project without the Contracting Agency's acceptance of proposed key project personnel for the Division 28 Work.
   2. Prepare, review, and coordinate with the Contracting Agency an approved construction (CPM) work schedule. Schedule work in areas and at times that will not interfere with scheduled activities as defined by the Contracting Agency.
   3. Provide weekly short term (4-week schedule) updates to Contracting Agency showing day to day progress and impact to occupied areas.
   4. Do not procure any equipment without accepted product data submittals. Do not perform any field installation without accepted shop drawings. Do not begin any extensive software development or programming without accepted system, operational narratives, the required Contracting Agency's coordination, and user's requirements.
   5. Pre-assemble control electronics, control panels, racks, and cabinets off-site as most practical.
   6. Install system control equipment, control panels, cabinets, racks, and consoles only after major construction in the area in which they are to be installed has been completed and areas have been cleaned, painted, and sealed.
   7. After systems installation and prior to point-by-point performance testing, thoroughly pre-test all devices and device wiring for proper performance. Then, thoroughly pre-test each system function in each state or condition under every operating mode.

B. Coordinate all work in the existing facility with the facility contact person.

1.12 WARRANTY

A. The Contractor is to provide a warranty of the work provided under this contract (including, but not limited to, software, hardware, and peripheral equipment) as a system, including interfaces to work by others for one year from the date of Acceptance of the Work. Specific Division 28 sections may require longer warranty periods. Divisions of work among various suppliers, vendors, installers, subcontractors, and other parties will not be recognized or accepted.

B. Extended Warranty: Provide itemized pricing for an Extended Service and Warranty for years 1, 2, and 3 after the initial warranty period. Describe whether all parts and labor are included in this offering.

C. Guarantee to repair and replace defective materials or workmanship during the warranty period including labor and materials.

D. An emergency maintenance (Warranty) request shall be defined as a system or portion of a system failure that affects building safety, security, and operation of critical components, including any access-controlled door, which by failing, prevents entry into a building space through other means or direction. Failure of a single component (i.e., access-controlled door

which does not prevent access to a space through other means or direction, camera, or monitor) is not considered an emergency maintenance request.

E. Respond within four hours to an emergency maintenance request. Provide a twenty-four-hour telephone contact number (24 hours per day, 365 days per year). Service response time is defined as the period between the placing of a service request and the arrival of a qualified technician capable servicing the problem on-site.

F. Maintain a sufficient parts inventory within 50 miles of the project during the warranty period to meet the guaranteed system repair times.

G. Repair and make operational any defective materials or workmanship resulting from an emergency maintenance request within an 8-hour period from the time of the initial arrival of service personnel at the site. Correct non-emergency defective materials or workmanship within four (4) calendar days of receiving notice of the defect.

H. Where the equipment manufacturer's warranty covers a longer time period than that required by these Specifications, the manufacturer's warranty shall govern.

1.13 EXTRA MATERIALS

A. Prior to Acceptance of the Work, deliver to the Contracting Agency all spare parts and extra materials required in each Section. All spare parts and extra materials shall be brand new in their original shipping boxes or packages and shall have one year material warranty remaining at the time of delivery. Extra materials shall be available to the Contractor to use as immediate replacements during the warranty period. All extra materials used for the warranty requirements shall be replaced by the Contractor.

B. Special Tools:
   1. Provide three of each type of security screw bits used.
   2. Provide minimum of one of any specialty tools used.

PART 2 PRODUCTS

2.01 PRODUCT OPTIONS AND SUBSTITUTIONS

A. Comply with the General and Supplementary Conditions and Section 1-06.7.

B. The products named in this section and the sections governed by this section establish minimum qualities that substitutions must meet to be considered acceptable. The specified products have also been used in preparing the drawings and specifications, and therefore establish the basis for equipment sizing, wire and cable design, power consumption, and other design parameters.

C. Substitution requests, if permitted, will be considered only if submitted in strict accordance with the followings:
   1. Cross-reference submitted items to the Specifications using their related Section and paragraph number.
   2. Submit complete product data, descriptive literature, catalog cuts, illustrations, schematics, technical data sheets, and test data necessary for the Contracting Agency to ascertain that proposed equipment and materials comply with specification requirements. Include manufacturer’s name, model, catalog or part numbers. Catalog cuts shall be legible and shall clearly identify equipment being submitted.
   3. Disclosure of Product Deviations: Specifically identify and tabulate any and all deviations from the contract documents including all system functions and features. Reference the corresponding specification sections and paragraph/article numbers. All variances and deviations will be reviewed for acceptance or rejection. It will be the Contractor’s sole responsibilities to comply with all other contract requirements not revealed in the disclosure of product deviations.

D. The Contractor shall take full responsibility for all design, coordination, and cost associated with substitutions including, but not limited to:
   1. Its integration into the total system including physical mounting space, electrical interconnection, signal wiring, power, quality, electromagnetic interference, communication protocols, and similar design considerations.
   2. Any additional materials, equipment, components, accessories, items required for equivalent system operation and performance.
   3. Any necessary changes to branch power circuits, circuit protective devices, and the Work of other trades.
   4. Any modifications to wire, cable, and raceway design.

2.02 MATERIALS AND EQUIPMENT

A. All equipment and materials required for installation under these Specifications shall be new and without blemish or defect.

B. Materials and equipment furnished shall be of current production by manufacturers regularly engaged in the manufacturing of such items, for which replacement parts are available. Specifications are prepared long in advance of project construction; the contractor is to use the newest model of the specified products available at bid time.

C. All material and equipment shall be listed, labeled, or certified by Underwriters' Laboratories, Inc., where such standards have been established. Equipment and material which are not covered by UL Standard will be accepted provided equipment and material is listed, labeled, certified or otherwise determined to meet safety requirements of a nationally recognized testing laboratory. Equipment of a class which no nationally recognized testing laboratory accepts, certifies, lists, labels, or determines to be safe will be considered, if inspected or tested in accordance with national industrial standards such as NEMA or ANSI.

D. All parts of a system shall be the product of one manufacturer. When more than one unit of the same class of equipment or material is required, such units shall be the products of a single manufacturer. Constituent parts which are similar shall be the product of a single manufacturer.

E. All components of an assembled unit need not be products of the same manufacturer; however, all components must be acceptable to the Contracting Agency. Components shall be compatible with each other and with the total assembly for the intended service.

2.03 EQUIPMENT MODIFICATIONS

A. When standard manufactured equipment is modified from its original condition or factory options have been exercised identify the changes as noted below.
   1. Clearly identify the modifications on the shop drawings.
   2. Clearly identify each piece of modified equipment with a label, which states, "This unit has been modified..." and identify the modification or reference. Locate the label so that a service technician or factory service personal will be able to determine the equipment in use is non-standard and that modifications are required for service, testing and replacement.
   3. Identify and describe the modifications on the Record Documents.

B. Equipment modification labels are not required for jumper or switch settings.

2.04 FABRICATION

A. Fabricate enclosures to easily accommodate interconnecting cables entering from above or below through the use of auxiliary gutters, cable trays, and conduits. Protect all metal cabinet edges where conductors cross and conduit ends with protective covering or bushing.

B. Group wires and cables by types, boards and modules, and maintain National Electrical Code clearances throughout the installation, including Class 1, Class 2, communications, and branch circuit power separations. Maintain sufficient and proper separation between microphone-level audio, line-level audio, high-level audio, and video cables.

C. Uniformly organize equipment and cable routing throughout all enclosures, racks, and cabinets. Provide wiring ducts, raceways, wire posts, D rings, wire saddles to route and secure factory

and field wiring. Provide routing for all wiring from point of entry to point of termination to maintain required separation, access to all components, and general organization to the wiring. Neatly dress, route and secure wiring.

D. Mechanically fasten cabinet raceways and cable clamps to enclosure rear panels, rack members, console members, or to other system components. The use of adhesive fasteners (without mechanical fastener) is not permitted. Furnish and install cable support posts where necessary to properly support cables.

E. No splices are permitted in cabinet raceways. Exception: Splice to cable shield when within two inches of cable termination is permitted.

F. Furnish and install metal grounding type outlet strips in each equipment cabinet, enclosure, and rack. Leave a minimum of two unused receptacles at each location for future expansion. Neatly shorten and dress power cords from individual equipment to the outlet strips.

G. Provide protection from accidental contact of all terminals or exposed conductors over 25 volts within enclosures that contain Class 2 wiring. Use non-conductive barriers, heat shrink or other acceptable methods. Tape of any kind is not permitted.

H. Provide an isolated ground bus within each equipment cabinet, enclosure, and rack for single point termination of audio and data shields and grounds.

2.05 SOURCE QUALITY CONTROL

A. Shop Inspections:
   1. The Contracting Agency shall have the right at all times to inspect or otherwise evaluate the Work performed or being performed and shall have access to the premises in which the Work is being performed.
   2. The Contracting Agency may verify the inspections or re-inspect any item. The Contracting Agency reserves the right to reject materials and workmanship found unacceptable during inspections.

B. Shop Test and Demonstration
   1. Shop Test and Demonstration shall be a major milestone that shall commence only after all shop assembly, system integration, and software development and programming is complete. Contracting Agency's approval of the integrated shop test shall be obtained before any system components are shipped to the site for installation.
   2. Perform a point-by-point system demonstration of the Security System components including surveillance system, physical access control system, and intrusion detection system to show all systems functioning and communicating as required.
   3. Notify the Contracting Agency a minimum of 15 working days prior to demonstration so that the Contracting Agency may witness the demonstration.
   4. Conduct the demonstration in strict accordance with the test procedure accepted by the Contracting Agency. Demonstrate full compliance with the required operating modes and sequences of operation under all operating modes. Record demonstration/ test results on a report which shall include a list of all personnel witnessing the demonstration, test methods used, and a record of each specific test made.
   5. If demonstration results are not in compliance with requirements, make necessary hardware and software changes, corrections, repairs, or adjustments at no additional cost to the Contracting Agency. If corrections cannot be made during the scheduled Shop Test and another shop test is required, the Contractor shall pay for all transportation, lodging and expenses of the Contracting Agencys' (maximum seven people) attending the additional tests. This process shall continue until the systems are acceptable to the Contracting Agency.

2.06 FIRESTOPPING/SEALANT MATERIALS

A. Firestop and seal all penetrations of fire walls with minimum three-hour sealant or Fire Stop Putty (FSP). This includes but is not limited to all raceway, conductor, sleeve, and cable tray penetrations where penetrating device does not completely seal the hole.

B. Accepted Products: International Protective Coatings Corp. FlameSafe FSP 1100, Nelson FSP, Domtar Fire-Halt, or approved equal from other manufacturers.

PART 3 EXECUTION

3.01 EXAMINATION

A. Carefully inspect the installed Work by other trades and verify that all such Work is complete to the point where installation of the Work of this division may properly commence.

B. In the event of discrepancy, immediately notify the Contracting Agency. Do not proceed with installation in areas of discrepancy until such discrepancies have been fully resolved.

C. Install all equipment in accordance with all pertinent codes and regulations, the accepted design, and the referenced standards.

3.02 INSTALLATION

A. Equipment Identification:
   1. Install a nameplate on each individual equipment rack, enclosure, boxes, cabinet, and significant equipment item.
   2. Use identifiers and abbreviations defined in the Drawings whenever possible. Use plan designation for labeling, unless indicated otherwise.
   3. Nameplates shall be laminated black phonemic resin with a white core and engraved lettering, a minimum of 1/4” high.
   4. Engrave using upper case letters of uniform height; centered on device, cover plate, or enclosure; with all characters made clearly and distinctly.
   5. All equipment shall have the manufacturer’s name, address, model number and rating on a name plate securely affixed in a conspicuous place. All equipment shall bear labels attesting to Underwriters Laboratories approval where subject to Underwriters Laboratories label service.
   6. Identify all field terminals and relays with device identification. Lettering shall be 3/16” high minimum.

B. Equipment Installation:
   1. Install all equipment in accordance with the manufacturer's recommendations, and accepted shop drawings.
   2. Install all equipment in compliance with CEC requirements, NECA's "Standard of Installation", and recognized industry practices.
   3. If requested, submit structural and seismic mounting load calculations demonstrating adequate support and bracing for seismic zone 4.
   4. Do not attach electrical materials to roof decking, removable or knockout panels, or temporary walls and partitions unless indicated otherwise. Use hangers and other supports to support the equipment and materials, intended for this purpose.
   5. Locate equipment as close as practical to the locations shown on the Drawings.
   6. Maintain minimum 3-foot working clearances on each side of equipment or equipment racks where access is required to inspect, service or adjust.
   7. Check equipment against available mounting space indicated on the drawings. Coordinate location of equipment with existing devices to minimize interference. Bring all conflicts or clearance problems to the attention of the Contracting Agency during the preparation of shop drawings.
   8. Where the Contracting Agency determines that equipment installation is not conveniently accessible for operation and maintenance, remove and reinstall equipment in a conveniently accessible manner at no extra cost.

C. Grounding and Shielding:
   1. Comply with Section 27 05 26.

D. Surge Suppression:
   1. Comply with Section 27 05 26.

3.03 FIELD QUALITY CONTROL

A. Initial Performance Testing:
   1. Initial Performance Testing is to be conducted by the Contractor.
   2. Point-by-point testing shall include the sequential operation of each system and control function in each of its operating modes. All tests are to be conducted and recorded per the accepted procedure and test forms.
   3. Notify the Contracting Agency ten days in advance that this activity will be occurring.

B. Performance Verification Testing:
   1. Performance Verification Testing (PVT) is to be conducted by the Contractor and witnessed by the Contracting Agency.
   2. Schedule point-by-point PVT only after Initial Testing has been satisfactorily completed and all necessary corrections have been made. Provide the Contracting Agency with a minimum of 10 working days' notice with a request to schedule PVT. Submit Initial Performance Test records prior to the scheduled PVT. Failure to submit test results as specified shall be cause to re-schedule testing.
   3. Point-by-point testing shall include the sequential operation of each function in each of its operating modes, in addition to completion of all required performance testing and measurement.
   4. Conduct point-by-point PVT testing in the presence of Contracting Agency. Record test results on the accepted test checklist which shall include a list of all personnel witnessing the tests. If test results are not in compliance with requirements, make necessary changes or adjustments at no additional cost, and arrange for another test. This process shall continue until the systems are acceptable to the Contracting Agency.
   5. Failure of any part of the system which precludes completion of system testing, which cannot be repaired in four (4) hours, shall be cause for terminating the test. Retesting of the entire system shall be rescheduled at the convenience of the Contracting Agency, and Contractor shall bear the Contracting Agency's costs to complete retesting.
   6. PVT will also include inspections for contract document compliance, codes and standards compliance, and workmanship.

3.04 CLEANING

A. Comply with Section 1-06 requirements.

B. Protect equipment during installation against entry of foreign matter on the inside. Vacuum clean all equipment both inside and outside before testing, operating and painting. Clean electrical connections with a suitable solvent prior to assembly.

C. Remove from the premises and dispose of all packing material and debris daily.

D. Upon completion of the Work, remove excess debris, materials, equipment, apparatus, tools and the like and leave the premises clean, neat, and orderly.

E. Thoroughly polish all bright metal or plated Work and remove any pasted labels, dirt, or stains from the equipment.

3.05 TRAINING

A. Provide on-site, project-specific training sessions for system operations, maintenance, and programming with designated total hours as follows:

		Administrative	Operator
1.	Video Surveillance System	8/4/4	4/2/2
2.	Access Control System	8/4/4	4/2/2
3.	Intrusion Detection System	1/NA	1/NA

B. All classroom training is to occur on site at a location provided by the Contracting Agency.

C. All training is to review the existing systems as they apply to the equipment and systems provided under this contract. All personnel being trained are expected to have basic experience for the existing systems.

D. Operator Training:
   1. Train security staff in the operation of the System. Operational training shall include how to monitor and control the systems provided under this contract and how to respond to system events.

E. Administrator Training:
   1. Train Contracting Agency's personnel in the site-specific programming and software trouble shooting of the System. Training will also include all user programmable features. Conduct training sessions using instructors who have been actively involved throughout construction and who are certified in writing by the manufacturers of the specific systems.
   2. Provide a combination of classroom sessions supported by audio/visual aids, and field sessions with personnel participating in hands-on for programming changes, software uploading/downloading, trouble shooting, etc.
   3. Train Contracting Agency's personnel in the basic user level maintenance and troubleshooting of the System. Structure training to identify the equipment and systems that can be serviced or reset by the on duty building engineer, how to identify systems that have failed or not working, and emergency shut down procedures.
   4. Provide a combination of classroom sessions supported by audio/visual aids, and field sessions with personnel participating in hands-on preventative, corrective maintenance, and reactive maintenance.

F. Submit an estimated training schedule 15 days prior to training for approval by the Contracting Agency. Estimate classroom and hands-on hours required for all three types of training (operational, maintenance, and programming). Include a syllabus for each class session. Provide video recording, minimum 720p, of the training sessions on solid-state media.

G. All training materials including Operational and Maintenance (O&M) Manuals shall be reviewed and approved prior to conducting the specific training.

SCHEDULE 280500A
SAMPLE LIST OF DIVISION 28 SUBMITTALS

1. CPM Schedule
2. Submittal Matrix
3. Schedule of Values (SOV)
4. Licenses and certifications
5. Key Project Personnel
6. Product Data
7. Shop Drawings
    a. Floor Plans
    b. Enlarged Control / Equipment Rooms and Elevations
    c. Rack and Cabinet Elevations
    d. Block Diagrams
    e. Single Line Diagrams
    f. Point- to-Point Diagrams
    g. Schematic Diagrams
    h. Installation Diagrams and Details
8. Calculations; UPS, Data
9. Sequence of Operations
10. Samples
11. Test Procedures
12. Test Results
13. Record Documents
    a. Drawings
    b. O&M Manuals
    c. Warranty
14. Extra Materials

SCHEDULE 280500 B
SUMMARY OF REQUIRED LICENSES AND CERTIFICATIONS
This list is provided for the convenience of the Contractor only.

H. Section 28 05 00 Integrated Systems Contractors
   1. Key Personnel Degree or equal
   2. Local Contractors License
   3. Qualifications of licensed electrician performing work onsite.

END OF SECTION 28 05 00

This page intentionally left blank

SECTION 28 16 00
INTRUSION DETECTION SYSTEMS

PART 1 GENERAL

1.01 INTENT

A. Contractor to procure, provide, install, and make fully operational an Intrusion Detection System (IDS) with operational characteristics and capabilities which meet or exceed the product specification and technical performance parameters contained within this document and shown on the project drawings.

B. This IDS shall be installed in the Kitsap County North Road District Operations and Moderate Risk Waste Collection Facility as shown on the project drawings and described in these specifications.

1.02 SECTION INCLUDES

A. An intrusion detection system consisting of control panel, arming/disarming stations, door position sensors, motion detectors, glass-break detectors, and audible / visual notification appliances.

B. Physical access control system shall be integrated with systems specified in:
   1. Section 28 16 00 “Physical Access Control System.”
   2. Section 28 23 00 “Video Surveillance System.”

1.03 RELATED REQUIREMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, apply to this Section.

B. Section 28 05 00 “Common Work Results for Electronic Security Systems.”

C. Section 28 13 00 “Physical Access Control System.”

D. Section 28 23 00 “Video Surveillance System.”

1.04 DEFINITIONS

A. ACS: Above Ceiling Spaces.

B. ACP: Alarm Control Panel

C. DC: Door Contact / Door Position Sensor

D. GB: Glassbreak Detector

E. I/O: Input/Output

F. LAN: Local area network.

G. KYPD: Keypad Arming / Disarming Station

H. PC: Personal computer.

I. PIR: Passive Infrared Detector

J. PVT: Performance Verification Testing

K. RAM: Random Access Memory

L. TCP: Transmission control protocol - connects hosts on the Internet.

M. UPS: Uninterruptible power supply.

N. WAN: Wide area network.

1.05 ACTION SUBMITTALS

A. See Section 28 05 00 Common Work Results for Electronic Security Systems

1.06 INFORMATIONAL SUBMITTALS

A. See Section 28 05 00 Common Work Results for Electronic Security Systems

1.07 CLOSEOUT SUBMITTALS

A. See Section 28 05 00 Common Work Results for Electronic Security Systems

1.08 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with NECA 1.

C. Comply with NFPA 70.

1.09 WARRANTY

A. See Section 28 05 00 Common Work Results for Electronic Security Systems

PART 2 PRODUCTS

2.01 QUALITY ASSURANCE

A. Manufacturer of any major component or system installed as a part of this project and not named as a basis of design shall have been in the business of manufacturing such component or system for a minimum of 5 years immediately preceding the date on this document.

B. Any major component or system installed as a part of this contract and not named as a basis of design shall have been installed in a minimum of 3 successfully completed projects of a similar size and scope. Contractor shall supply reference information with their proposal including project name, project location, and contact information for the system end-user.

2.02 BASIS OF DESIGN

A. Where a specific manufacturer's product is listed below, such product's performance characteristics and capabilities constitute the minimum acceptable, and any suggested alternates shall have characteristics and capabilities which meet or exceed the product named as the basis of design. Contractor may propose alternate products as follows:
   1. See Section 28 05 00 Common Work Results for Electronic Security Systems

2.03 IDS BASIS OF DESIGN TECHNICAL PERFORMANCE SPECIFICATIONS

A. Alarm Control Panel – Match existing. If no existing system or standard, Contractor shall utilize Digital Monitoring Products (DMP), or Contracting Agency approved equivalent.

B. Alarm Expansion Panels – Match existing. If no existing system or standard, Contractor shall utilize Digital Monitoring Products (DMP), or Contracting Agency approved equivalent.

C. Arming / Disarming Station - Match existing. If no existing system or standard, Contractor shall utilize Digital Monitoring Products (DMP), or Contracting Agency approved equivalent.

D. Door Position Sensor – Aritech or Contracting Agency approved equivalent, with sensor type based upon door construction (storefront system, hollow metal, wooden, etc.)

E. Motion Detector – Bosch or Contracting Agency approved equivalent

F. Glassbreak Detector - Bosch or Contracting Agency approved equivalent

G. Hard-Wired Duress Button – United Security Products Hub-2 or Contracting Agency approved equivalent.

H. Audible Notification Appliance – Common off the shelf 30-watt self-contained siren.

I. Visual Notification Appliance – Common off the shelf blue-colored strobe light.

2.04 POWER SUPPLIES

A. The control panel shall be equipped with backup batteries sufficient to provide 24 hours of standby operation and 10 minutes of alarm activation.

PART 3 EXECUTION

3.01 QUALITY ASSURANCE

A. Contractor shall be a factory authorized reseller / installer of all major components installed as a part of this project. Proof of such authorization shall be submitted as a part of the bid package

B. Contractor shall hold a valid alarm contractor license issued by the issuing authority in the State of Washington.

C. Contractor shall have successfully completed a minimum of 3 projects similar in size and scope to this one and shall submit references for such projects with their bid package. Reference shall include project name, location, type of facility, system(s) installed, and end-user contact information. It is expected that substantially the same personnel will be assigned to this project as participated in the referenced projects. This would include the project engineer, project manager, and lead installation technician. If any of these personnel were not involved in the referenced project, Contractor shall supply resumes for these employees documenting their experience and qualifications related to this project.

D. At a minimum, the lead installation technician assigned to this project shall be manufacturer certified in the installation of all major components installed as a part of this project.

3.02 SITE SPECIFIC SCOPES OF WORK

A. Exterior Areas – Provide and install systems, equipment, and infrastructure as shown on project drawings.

B. ROF – Provide and install systems, equipment, and infrastructure as shown on project drawings.

C. HHW - Provide and install systems, equipment, and infrastructure as shown on project drawings.

3.03 EXAMINATION

A. Examine pathway elements intended for IDS cabling. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation and / or operation, and other conditions affecting installation.

B. Examine roughing-in for all components before device installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.04 WIRING

A. Comply with requirements in Section 26 05 33 "Raceways and Boxes for Electrical Systems", and Section 28 05 00 “Common Work Results for Electronic Security Systems”. In case of a discrepancy between the 2 sections, the more stringent requirements shall apply.

3.05 INTRUSION DETECTION SYSTEM INSTALLATION

A. IDS device locations shown on drawings are approximate, and Contractor shall verify final position with the Contracting Agency before any work is done.

B. Install all IDS components per manufacturer’s installation instructions.

C. Install control panel at location as directed by the Contracting Agency.

D. Install key locks on all enclosures

E. Identify system components, wiring, cabling, and terminals according to Section 26 05 53 "Identification for Electrical Systems."

3.06 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Tests and Inspections:
   1. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
   2. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements. Prepare IDS equipment for acceptance and operational testing as follows:
      a. Prepare equipment list described in "Informational Submittals" Article.
      b. Verify operation of all door contacts, motion, and glassbreak sensors.
      c. Verify proper communications for all reporting and restoral signals to central station.

d. Verify proper operation of workstation with PACS headend / software for logging alerts and events.
e. Verify all integration functionality with Surveillance System and PACS.

3. Performance Verification Test Schedule: See Section 28 05 00 Common Work Results for Electronic Security Systems

C. Intrusion detection system will be considered incomplete if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.07 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to TWO (2) visits to Project during normal business hours for this purpose. Tasks shall include, but are not limited to, the following:
1. Check cable connections.
2. Check proper operation of keypads and sensors.
3. Check proper operation of all integration driven functionalities.

3.08 CLEANING

A. Clean installed items using methods and materials recommended in writing by manufacturer.

B. Clean PACS components as needed.

3.09 TRAINING

A. Training on the surveillance system shall be as follows:
1. See Section 28 05 00 Common Work Results for Electronic Security Systems

END OF SECTION 28 16 00

SECTION 28 23 00
VIDEO SURVEILLANCE SYSTEM

PART 1 GENERAL

1.01 INTENT

A. Contractor procure, provide, install, and make fully operational an Electronic Video Surveillance System (EVSS) with operational characteristics and capabilities which meet or exceed the product specification and technical performance parameters contained within this document and shown on the project drawings.

B. This EVSS shall be installed in the Kitsap County North Road District Operations and Moderate Risk Waste Collection Facility as shown on the project drawings and described in these specifications.

1.02 SECTION INCLUDES

A. A video surveillance system consisting of:
   1. Fixed Interior Wall / Ceiling Mount Megapixel Camera
   2. Fixed Exterior Wall / Pole Mount Megapixel Camera
   3. Supplemental Illumination Devices
   4. Digital Video Recording and Management Software (DVRMS)
   5. System Servers (NIC, By Others)
   6. System Workstations / Review Monitor (NIC, By Others)
   7. Power and Data Cabling, Conduit, and Infrastructure

B. Video surveillance system shall be integrated with systems specified in:
   1. Section 28 16 00 Physical Access Control System
   2. Section 28 13 00 Intrusion Detection System

1.03 RELATED REQUIREMENTS

A. Section 28 05 00 Common Work Results for Electronic Security Systems

B. Section 28 13 00 Physical Access Control System

1.04 ABBREVIATIONS AND ACRONYMS

A. CPU = Central Processing Unit

B. DVD = Digital Video Disc

C. DVRMS = Digital Video Recording and Management System

D. FPS = Frames per Second

E. GB = Gigabyte

F. GBPS = Gigabyte per Second

G. HDD = Hard Disk Drive

H. HDMI = High-Definition Media Interface

I. IDS = Intrusion Detection System

J. IPS = Images per Second

K. LAN = Local Area Network

L. MB = Megabyte

M. MBPS = Megabyte per Second

N. NAS = Network Attached Storage

O. LED = Light Emitting Diode

P. PACS = Physical Access Control System

Q. RAID = Redundant Array of Independent Disks

R. RAM = Random Access Memory

S. SAN = Storage Attached Network
T. TCP/IP = Transport Control Protocol / Internet Protocol
U. UPS = Uninterruptable Power Supply
V. USB = Universal Serial Bus
W. PVT = Performance Verification Testing
X. V-LAN = Virtual Local Area Network
Y. VMS = See DVRMS
Z. VSS = Video Surveillance System
AA. WAN = Wide Area Network

1.05 REFERENCE STANDARDS

A. National Television System Committee - NTSC (North America)
B. Joint Photographic Experts Group – JPEG
C. Motion Joint Photographic Experts Group - MJPEG
D. Moving Picture Experts Group - MPEG
E. Underwriters Laboratory – UL
F. Federal Communications Commission – FCC
G. Interference Causing Equipment Standard – ICES (Canada)
H. Institute of Electronic and Electrical Engineers - IEEE
I. International Standards Organization – ISO
J. International Electrotechnical Commission -IEC
K. Restriction of Hazardous Substances Directive (RoHS)

1.06 ACTION SUBMITTALS

A. See Section 28 05 00 Common Work Results for Electronic Security Systems

1.07 INFORMATIONAL SUBMITTALS

A. See Section 28 05 00 Common Work Results for Electronic Security Systems

1.08 CLOSEOUT SUBMITTALS

A. See Section 28 05 00 Common Work Results for Electronic Security Systems

1.09 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. Comply with NECA 1.
C. Comply with NFPA 70.

1.10 WARRANTY

A. See Section 28 05 00 Common Work Results for Electronic Security Systems

PART 2 PRODUCTS

2.01 QUALITY ASSURANCE

A. Manufacturer of any major component or system installed as a part of this project and not named as a basis of design shall have been in the business of manufacturing such component or system for a minimum of 5 years immediately preceding the date on this document.
B. Any major component or system installed as a part of this contract and not named as a basis of design shall have been installed in a minimum of 3 successfully completed projects of a similar size and scope. Contractor shall supply reference information with their proposal including project name, project location, and contact information for the system end-user.

2.02 BASIS OF DESIGN

A. Kitsap County has selected a cloud managed EVSS. As such, all surveillance system equipment shall be by Verkada with no equivalent.

B. Where a specific manufacturer's product is listed below that is not called out as no equivalent, such product's performance characteristics and capabilities constitute the minimum acceptable, and any suggested alternates shall have characteristics and capabilities which meet or exceed the product named as the basis of design. Contractor may propose alternate products as follows:

1. See Section 28 05 00 Common Work Results for Electronic Security Systems

2.03 EVSS BASIS OF DESIGN TECHNICAL PERFORMANCE SPECIFICATIONS

A. Fixed Interior Wall / Ceiling Mount Megapixel Camera – Verkada with no equivalent.

B. Fixed Exterior Wall / Pole Mount Megapixel Camera - Verkada with no equivalent.

C. Interior Pan, Tilt, Zoom (PTZ) Wall / Ceiling Mount Megapixel Camera - Verkada with no equivalent.

D. Exterior Pan, Tilt, Zoom (PTZ) Wall / Pole Mount Megapixel Camera - Verkada with no equivalent.

E. Supplemental Illumination Devices - Verkada with no equivalent.

F. Digital Video Recording and Management Software (DVRMS) - Verkada with no equivalent.

G. System Servers - Verkada with no equivalent.

H. System Workstations / Review Monitor – By Contracting Agency, NIC.

2.04 POWER SUPPLIES

A. All system components to be connected to a UPS providing a minimum of 4 hours back-up power.

B. The control panel shall be equipped with backup batteries sufficient to provide 24 hours of standby operation and 10 minutes of alarm activation.

2.05 CABLING AND INFRASTRUCTURE

A. All cabling and infrastructure to be per Kitsap County standards. Where no standard applies, BICSI, TIA/EIA, and Division 27 Codes and Standards shall apply.

PART 3 EXECUTION

3.01 QUALITY ASSURANCE

A. Contractor shall be a factory authorized reseller / installer of all major components installed as a part of this project. Proof of such authorization shall be submitted as a part of the bid package

B. Contractor shall hold licenses as required by local, state, or federal agencies.

C. Contractor shall have successfully completed a minimum of 3 projects similar in size and scope to this one and shall submit references for such projects with their bid package. Reference shall include project name, location, type of facility, system(s) installed, and end-user contact information. It is expected that substantially the same personnel will be assigned to this project as participated in the referenced projects. This would include the project engineer, project manager, and lead installation technician. If any of these personnel were not involved in the referenced project, Contractor shall supply resumes for these employees documenting their experience and qualifications related to this project.

D. At a minimum, the lead installation technician assigned to this project shall be manufacturer certified in the installation of all major components installed as a part of this project.

3.02 SITE SPECIFIC SCOPES OF WORK

A. Exterior Areas – Provide and install systems, equipment, and infrastructure as shown on project drawings.

B. ROF – Provide and install systems, equipment, and infrastructure as shown on project drawings.

C. HHW - Provide and install systems, equipment, and infrastructure as shown on project drawings.

3.03 EXAMINATION

A. Examine pathway elements intended for EVSS cabling. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation and / or operation, and other conditions affecting installation.

B. Examine roughing-in for all components before device installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.04 WIRING

A. Comply with requirements in Section 26 05 33 "Raceways and Boxes for Electrical Systems."

B. Wiring Method: Install cables in raceways and or conduit unless otherwise indicated.
   1. Except raceways are not required in accessible indoor ceiling spaces and attics, where Contractor shall utilize self-supported J-hooks.
   2. Except raceways are not required in hollow gypsum board partitions.
   3. Conceal raceways and wiring except in unfinished spaces.

C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

D. Splices, Taps, and Terminations: For power and control wiring, use numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

E. For LAN connection and fiber-optic and copper communication wiring, comply with:
   1. Section 27 13 13 "Communications Copper Backbone Cabling"
   2. Section 27 13 23 "Communications Optical Fiber Backbone Cabling"
   3. Section 27 15 13 "Copper Horizontal Cabling."

F. Grounding: Provide independent-signal circuit grounding recommended in writing by manufacturer.

3.05 ELECTRONIC VIDEO SURVEILLANCE SYSTEM INSTALLATION

A. EVSS device locations shown on drawings are approximate, and Contractor shall verify final position with the Contracting Agency before any work is done.

B. Install all EVSS components per manufacturer’s installation instructions.

C. Install control panel at location as directed by the Contracting Agency.

D. Install key locks on all enclosures

E. Identify system components, wiring, cabling, and terminals according to Section 26 05 53 "Identification for Electrical Systems."

3.06 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Tests and Inspections:
   1. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
   2. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements. Prepare IDS equipment for acceptance and operational testing as follows:
      a. Prepare equipment list described in "Informational Submittals" Article.
      b. Verify operation of all cameras.
      c. Verify proper recording and playback functionality.

d. Verify proper operation of workstation with EVSS headend / software for logging alerts and events.
e. Verify all integration functionality with Access Control and Intrusion Detection Systems.

3. Performance Verification Test Schedule: Schedule tests after pretesting has been successfully completed and system has been in normal functional operation for at least 14 days. Provide a minimum of 14 working days' notice of test schedule.
   a. Contractor shall prepare and submit to the Contracting Agency a PVT plan showing a structured and complete testing procedure. This PVT plan shall be submitted to the Contracting Agency a minimum of 14 working days prior to planned start of testing.
   b. PVT plan shall show equipment being tested, means of testing, and pass/fail criteria.
   c. PVT form shall include space for Contractor / Contracting Agency initials on each testing phase, along with a signature page with PVT results and follow-up notes.
4. Should any component of the system fail TWO (2) consecutive PVT tests, the Contractor shall be liable for costs incurred by the Contracting Agency to provide personnel for further PVT testing.

C. Electronic video surveillance system will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.07 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to TWO (2) visits to Project during normal business hours for this purpose. Tasks shall include, but are not limited to, the following:
   1. Check cable connections.
   2. Check proper operation of cameras and VMS
   3. Check proper operation of all integration driven functionalities.

3.08 CLEANING

A. Clean installed items using methods and materials recommended in writing by manufacturer.

B. Clean EVSS components as needed.

3.09 TRAINING

A. See Section 28 05 00 Common Work Results for Electronic Security Systems

END OF SECTION 28 23 00

This page intentionally left blank

SECTION 28 46 21
ADDRESSABLE FIRE-ALARM SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fire-alarm control unit.

B. Manual fire-alarm boxes.

C. System smoke detectors.

D. Non-system smoke detectors.

E. Heat detectors.

F. Notification appliances – Speakers and Strobes

G. Device guards.

H. Firefighters' smoke-control station.

I. Remote annunciator.

J. Addressable interface device.

K. Digital alarm communicator transmitter.

L. Radio alarm transmitter.

1.02 RELATED REQUIREMENTS

A. Section 27 15 13 "Communications Copper Horizontal Cabling" for cables and conductors for fire-alarm systems.

1.03 RELATED DOCUMENTS

A. Section 28 05 00 “Common Work Results For Electronic Safety And Security.”

1.04 DEFINITIONS

A. EMT: Electrical Metallic Tubing.

B. FACP: Fire Alarm Control Panel.

C. HLI: High Level Interface.

D. NICET: National Institute for Certification in Engineering Technologies.

E. PC: Personal computer.

1.05 SCOPE

A. Contractor shall provide design and installation of addressable fire alarm system with voice evacuation. Provide initiating devices, notification speakers and strobes per latest NFPA 72 and Washington state fire code.

1.06 ACTION SUBMITTALS

A. Product Data: For each type of product, including furnished options and accessories.
   1. Include construction details, material descriptions, dimensions, profiles, and finishes.
   2. Include rated capacities, operating characteristics, and electrical characteristics.

B. Shop Drawings: For fire-alarm system.
   1. Comply with recommendations and requirements in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.
   2. Include plans, elevations, sections, details, and attachments to other work.
   3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and locations. Indicate conductor sizes, indicate termination locations and requirements, and distinguish between factory and field wiring.
   4. Detail assembly and support requirements.
   5. Include voltage drop calculations for notification-appliance circuits.

6. Include battery-size calculations.
7. Include input/output matrix.
8. Include statement from manufacturer that all equipment and components have been tested as a system and meet all requirements in this Specification and in NFPA 72.
9. Include performance parameters and installation details for each detector.
10. Verify that each duct detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
11. Provide program report showing that air-sampling detector pipe layout balances pneumatically within the airflow range of the air-sampling detector.
12. Include plans, sections, and elevations of heating, ventilating, and air-conditioning ducts, drawn to scale; coordinate location of duct smoke detectors and access to them.
    a. Show critical dimensions that relate to placement and support of sampling tubes, detector housing, and remote status and alarm indicators.
    b. Show field wiring required for HVAC unit shutdown on alarm.
    c. Show field wiring and equipment required for HVAC unit shutdown on alarm and override by firefighters' control system.
    d. Show field wiring and equipment required for HVAC unit shutdown on alarm and override by firefighters' smoke-evacuation system.
    e. Locate detectors according to manufacturer's written recommendations.
    f. Show air-sampling detector pipe routing.
13. Include voice/alarm signaling-service equipment rack or console layout, grounding schematic, amplifier power calculation, and single-line connection diagram.
14. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of cable and conduits and point-to-point wiring diagrams.

C. General Submittal Requirements:
1. Submittals shall be approved by authorities having jurisdiction prior to submitting them to Architect.
2. Shop Drawings shall be prepared by persons with the following qualifications:
    a. Trained and certified by manufacturer in fire-alarm system design.
    b. NICET-certified, fire-alarm technician; Level III Level IV minimum.
    c. Licensed or certified by authorities having jurisdiction.

D. Delegated-Design Submittal: For notification appliances and smoke and heat detectors, in addition to submittals listed above, indicate compliance with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Drawings showing the location of each notification appliance and smoke and heat detector, ratings of each, and installation details as needed to comply with listing conditions of the device.
2. Design Calculations: Calculate requirements for selecting the spacing and sensitivity of detection, complying with NFPA 72. Calculate spacing and intensities for strobe signals and sound-pressure levels for audible appliances.
3. Indicate audible appliances required to produce square wave signal per NFPA 72.

1.07 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Seismic Qualification Data: Certificates, for fire-alarm control unit, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Field quality-control reports.

1.08 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals.
   1. In addition to items specified in Section 1-11"Operation and Maintenance Data," include the following and deliver copies to authorities having jurisdiction :
      a. Comply with the "Records" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
      b. Provide "Fire Alarm and Emergency Communications System Record of Completion Documents" according to the "Completion Documents" Article in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.
      c. Complete wiring diagrams showing connections between all devices and equipment. Each conductor shall be numbered at every junction point with indication of origination and termination points.
      d. Riser diagram.
      e. Device addresses.
      f. Record copy of site-specific software.
      g. Provide "Inspection and Testing Form" according to the "Inspection, Testing and Maintenance" chapter in NFPA 72, and include the following:
         1) Equipment tested.
         2) Frequency of testing of installed components.
         3) Frequency of inspection of installed components.
         4) Requirements and recommendations related to results of maintenance.
         5) Manufacturer's user training manuals.
      h. Manufacturer's required maintenance related to system warranty requirements.
      i. Abbreviated operating instructions for mounting at fire-alarm control unit and each annunciator unit.

B. Software and Firmware Operational Documentation:
   1. Software operating and upgrade manuals.
   2. Program Software Backup: On magnetic media or compact disk, complete with data files.
   3. Device address list.
   4. Printout of software application and graphic screens.

1.09 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Lamps for Remote Indicating Lamp Units: Quantity equal to 10 percent of amount installed, but no fewer than one unit.
   2. Lamps for Strobe Units: Quantity equal to 10 percent of amount installed, but no fewer than one unit.
   3. Smoke Detectors, Fire Detectors: Quantity equal to 10 percent of amount of each type installed, but no fewer than one unit of each type.
   4. Detector Bases: Quantity equal to two percent of amount of each type installed, but no fewer than one unit of each type.
   5. Keys and Tools: One extra set for access to locked or tamper proofed components.
   6. Audible and Visual Notification Appliances: One of each type installed.
   7. Fuses: Two of each type installed in the system. Provide in a box or cabinet with compartments marked with fuse types and sizes.

1.10 QUALITY ASSURANCE

A. Installer Qualifications: Personnel shall be trained and certified by manufacturer for installation of units required for this Project.

B. Installer Qualifications: Installation shall be by personnel certified by NICET as fire-alarm Level II technician.

C. NFPA Certification: Obtain certification according to NFPA 72 by an NRTL (nationally recognized testing laboratory).

D. NFPA Certification: Obtain certification according to NFPA 72 by a UL-listed alarm company.

E. NFPA Certification: Obtain certification according to NFPA 72 in the form of a placard by an FM Global-approved alarm company.

F. NFPA Certification: Obtain certification according to NFPA 72 by UL listed fire alarm company.

1.11 PROJECT CONDITIONS

A. Perform a full test of the existing system prior to starting work. Document any equipment or components not functioning as designed.

B. Interruption of Existing Fire-Alarm Service: Do not interrupt fire-alarm service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary guard service according to requirements indicated:
   1. Notify Architect Construction Manager Owner no fewer than seven days in advance of proposed interruption of fire-alarm service.
   2. Do not proceed with interruption of fire-alarm service without Architect's Construction Manager's Owner's written permission.

C. Use of Devices during Construction: Protect devices during construction unless devices are placed in service to protect the facility during construction.

D. The project is the renovation of existing office building having existing fire alarm system interconnected with other buildings in the campus. Existing fire alarm system in the renovated office building shall be kept functional throughout the construction time. 'Fire watch' will be required only when the fire alarm system is not functional in the occupied spaces. Based on construction phasing, contractor shall determine times when fire alarm system will be down in occupied spaces and fire watch duration will be based on that. Include cost for necessary fire watch in bid to accomplish fire alarm system installation.

1.12 SEQUENCING AND SCHEDULING

A. Existing Fire-Alarm Equipment: Maintain existing equipment fully operational until new equipment has been tested and accepted. As new equipment is installed, label it "NOT IN SERVICE" until it is accepted. Remove labels from new equipment when put into service, and label existing fire-alarm equipment "NOT IN SERVICE" until removed from the building.

B. Equipment Removal: After acceptance of new fire-alarm system, remove existing disconnected fire-alarm equipment and wiring.

1.13 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace fire-alarm system equipment and components that fail in materials or workmanship within specified warranty period.
   1. Warranty Extent: All equipment and components not covered in the Maintenance Service Agreement.
   2. Warranty Period: Five years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Silent Knight by Honeywell.
   2. Edwards, UTC.
   3. NOTIFIER; a Honeywell company.
   4. SimplexGrinnell LP; a Tyco International company.

2.02 SYSTEM DESCRIPTION

A. Source Limitations for Fire-Alarm System and Components: Components shall be compatible with, and operate as an extension of, existing system. Provide system manufacturer's certification that all components provided have been tested as, and will operate as, a system.

B. Noncoded, UL-certified FM Global-placarded addressable system, with multiplexed signal transmission and voice speaker/strobe evacuation.

C. Automatic sensitivity control of certain smoke detectors.

D. All components provided shall be listed for use with the selected system.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Provide voice evacuation system with speakers and strobes.

2.03 SYSTEMS OPERATIONAL DESCRIPTION

A. Fire-alarm signal initiation shall be by one or more of the following devices and systems:
1. Manual stations.
2. Heat detectors.
3. Smoke detectors.
4. Duct smoke detectors.
5. Carbon monoxide detectors.
6. Automatic sprinkler system water flow.
7. Fire-extinguishing system operation.
8. Dry system pressure flow switch.

B. Fire-alarm signal shall initiate the following actions:
1. Continuously operate alarm notification appliances, including voice evacuation notices.
2. Identify alarm and specific initiating device at fire-alarm control unit, connected network control panels, off-premises network control panels, and remote annunciators.
3. Transmit an alarm signal to the remote alarm receiving station.
4. Unlock electric door locks in designated egress paths.
5. Release fire and smoke doors held open by magnetic door holders.
6. Activate voice/alarm communication system.
7. Switch heating, ventilating, and air-conditioning equipment controls to fire-alarm mode.
8. Activate smoke-control system (smoke management) at firefighters' smoke-control system panel.
9. Activate stairwell and elevator-shaft pressurization systems.
10. Close smoke dampers in air ducts of designated air-conditioning duct systems.
11. Activate preaction system.
12. Recall elevators to primary or alternate recall floors.
13. Activate elevator power shunt trip.
14. Activate emergency lighting control.
15. Activate emergency shutoffs for gas and fuel supplies.
16. Record events in the system memory.
17. Record events by the system printer.
18. Indicate device in alarm on the graphic annunciator.

C. Supervisory signal initiation shall be by one or more of the following devices and actions:
1. Valve supervisory switch.
2. High- or low-air-pressure switch of a dry-pipe or preaction sprinkler system.
3. Alert and Action signals of air-sampling detector system.
4. Elevator shunt-trip supervision.
5. User disabling of zones or individual devices.
6. Loss of communication with any panel on the network.

D. System trouble signal initiation shall be by one or more of the following devices and actions:
1. Open circuits, shorts, and grounds in designated circuits.
2. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
3. Loss of communication with any addressable sensor, input module, relay, control module, remote annunciator, printer interface, or Ethernet module.
4. Loss of primary power at fire-alarm control unit.
5. Ground or a single break in internal circuits of fire-alarm control unit.
6. Abnormal ac voltage at fire-alarm control unit.

7. Break in standby battery circuitry.
8. Failure of battery charging.
9. Abnormal position of any switch at fire-alarm control unit or annunciator.
10. Voice signal amplifier failure.

E. System Supervisory Signal Actions:
1. Initiate notification appliances.
2. Identify specific device initiating the event at fire-alarm control unit , connected network control panels, off-premises network control panels, and remote annunciators .
3. Record the event on system printer.
4. After a time delay of 200 seconds, transmit a trouble or supervisory signal to the remote alarm receiving station.
5. Transmit system status to building management system.
6. Display system status on graphic annunciator.

2.04 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Fire-alarm control unit and raceways shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event ."

2.05 FIRE-ALARM CONTROL UNIT

A. General Requirements for Fire-Alarm Control Unit:
1. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864.
a. System software and programs shall be held in nonvolatile flash, electrically erasable, programmable, read-only memory, retaining the information through failure of primary and secondary power supplies.
b. Include a real-time clock for time annotation of events on the event recorder and printer.
c. Provide communication between the FACP and remote circuit interface panels, annunciators, and displays in each building and provide communication between the buildings.
d. The FACP shall be listed for connection to a central-station signaling system service.
e. Provide nonvolatile memory for system database, logic, and operating system and event history. The system shall require no manual input to initialize in the event of a complete power down condition. The FACP shall provide a minimum 500-event history log.
2. Addressable Initiation Device Circuits: The FACP shall indicate which communication zones have been silenced and shall provide selective silencing of alarm notification appliance by building communication zone.
3. Addressable Control Circuits for Operation of Notification Appliances and Mechanical Equipment: The FACP shall be listed for releasing service.

B. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire-alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.
1. Annunciator and Display: Liquid-crystal type, three line(s) of 80 characters, minimum.
2. Keypad: Arranged to permit entry and execution of programming, display, and control commands and to indicate control commands to be entered into the system for control of smoke-detector sensitivity and other parameters.

C. Initiating-Device, Notification-Appliance, and Signaling-Line Circuits:
1. Pathway Class Designations: NFPA 72, Class A.
2. Pathway Survivability: Level 0.

3. Install no more than total capacity of the panel with addressable devices on each signaling-line circuit. Keep 20% spare capacity.
4. Serial Interfaces:
    a. One dedicated RS 485 port for central-station operation using point ID DACT.
    b. One RS 485 port for remote annunciators, Ethernet module, or multi-interface module (printer port).
    c. One RS 232 port for PC configuration.
    d. One RS 232 port for VESDA HLI connection.
    e. One RS 232 port for voice evacuation interface.

D. Stairwell and Elevator Shaft Pressurization: Provide an output signal using an addressable relay to start the stairwell and elevator shaft pressurization system. Signal shall remain on until alarm conditions are cleared and fire-alarm system is reset. Signal shall not stop in response to alarm acknowledge or signal silence commands.
1. Pressurization starts when any alarm is received at fire-alarm control unit.
2. Alarm signals from smoke detectors at pressurization air supplies have a higher priority than other alarm signals that start the system.

E. Smoke-Alarm Verification:
1. Initiate audible and visible indication of an "alarm-verification" signal at fire-alarm control unit.
2. Activate an approved "alarm-verification" sequence at fire-alarm control unit and detector.
3. Record events by the system printer.
4. Sound general alarm if the alarm is verified.
5. Cancel fire-alarm control unit indication and system reset if the alarm is not verified.

F. Notification-Appliance Circuit:
1. Audible appliances shall sound in a three-pulse temporal pattern, as defined in NFPA 72.
2. Where notification appliances provide signals to sleeping areas, the alarm signal shall be a 520-Hz square wave with an intensity 15 dB above the average ambient sound level or 5 dB above the maximum sound level, or at least 75 dBA, whichever is greater, measured at the pillow.
3. Visual alarm appliances shall flash in synchronization where multiple appliances are in the same field of view, as defined in NFPA 72.

G. Door Controls: Door hold-open devices that are controlled by smoke detectors at doors in smoke-barrier walls shall be connected to fire-alarm system.

H. Remote Smoke-Detector Sensitivity Adjustment: Controls shall select specific addressable smoke detectors for adjustment, display their current status and sensitivity settings, and change those settings. Allow controls to be used to program repetitive, time-scheduled, and automated changes in sensitivity of specific detector groups. Record sensitivity adjustments and sensitivity-adjustment schedule changes in system memory, and print out the final adjusted values on system printer.

I. Transmission to Remote Alarm Receiving Station: Automatically transmit alarm, supervisory, and trouble signals to a remote alarm station.

J. Voice/Alarm Signaling Service: Central emergency communication system with redundant microphones, preamplifiers, amplifiers, and tone generators provided as a special module that is part of fire-alarm control unit.
1. Indicate number of alarm channels for automatic, simultaneous transmission of different announcements to different zones or for manual transmission of announcements by use of the central-control microphone. Amplifiers shall comply with UL 1711.
    a. Allow the application of, and evacuation signal to, indicated number of zones and, at the same time, allow voice paging to the other zones selectively or in any combination.
    b. Programmable tone and message sequence selection.
    c. Standard digitally recorded messages for "Evacuation" and "All Clear."

d. Generate tones to be sequenced with audio messages of type recommended by NFPA 72 and that are compatible with tone patterns of notification-appliance circuits of fire-alarm control unit.

2. Status Annunciator: Indicate the status of various voice/alarm speaker zones and the status of firefighters' two-way telephone communication zones.
3. Preamplifiers, amplifiers, and tone generators shall automatically transfer to backup units, on primary equipment failure.

K. Printout of Events: On receipt of signal, print alarm, supervisory, and trouble events. Identify zone, device, and function. Include type of signal (alarm, supervisory, or trouble) and date and time of occurrence. Differentiate alarm signals from all other printed indications. Also, print system reset event, including same information for device, location, date, and time. Commands initiate the printing of a list of existing alarm, supervisory, and trouble conditions in the system and a historical log of events.

L. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory signals shall be powered by 24-V dc source.
1. Alarm current draw of entire fire-alarm system shall not exceed 80 percent of the power-supply module rating.

M. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.
1. Batteries: Sealed, valve-regulated, recombinant lead acid.

N. Instructions: Computer printout or typewritten instruction card mounted behind a plastic or glass cover in a stainless-steel or aluminum frame. Include interpretation and describe appropriate response for displays and signals. Briefly describe the functional operation of the system under normal, alarm, and trouble conditions.

2.06 PREACTION SYSTEM

A. Initiate Presignal Alarm: This function shall cause an audible and visual alarm and indication to be provided at the FACP. Activation of an initiation device connected as part of a preaction system shall be annunciated at the FACP only, without activation of the general evacuation alarm. Provide monitoring capability to dry pipe pre-action system through flow switch.

2.07 MANUAL FIRE-ALARM BOXES

A. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.
1. Single-action mechanism, breaking-glass or plastic-rod pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.
2. Station Reset: Key- or wrench-operated switch.
3. Weatherproof Protective Shield: Factory-fabricated, clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm.
4. Provide pull stations in bulking room, tire changing, maintenance bay or any hazardous area where the possibility of fire is more.

2.08 SYSTEM SMOKE DETECTORS

A. General Requirements for System Smoke Detectors:
1. Comply with UL 268; operating at 24-V dc, nominal.
2. Detectors shall be four-wire type.
3. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
4. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.

5. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
6. Integral Visual-Indicating Light: LED type, indicating detector has operated and power-on status .
7. Remote Control: Unless otherwise indicated, detectors shall be digital-addressable type, individually monitored at fire-alarm control unit for calibration, sensitivity, and alarm condition and individually adjustable for sensitivity by fire-alarm control unit .
    a. Rate-of-rise temperature characteristic of combination smoke- and heat-detection units shall be selectable at fire-alarm control unit for 15 or 20 deg F (8 or 11 deg C) per minute.
    b. Fixed-temperature sensing characteristic of combination smoke- and heat-detection units shall be independent of rate-of-rise sensing and shall be settable at fire-alarm control unit to operate at 135 or 155 deg F (57 or 68 deg C).
    c. Multiple levels of detection sensitivity for each sensor.
    d. Sensitivity levels based on time of day.

B. Photoelectric Smoke Detectors:
1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
    a. Primary status.
    b. Device type.
    c. Present average value.
    d. Present sensitivity selected.
    e. Sensor range (normal, dirty, etc.).

C. Duct Smoke Detectors: Photoelectric type complying with UL 268A.
1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
    a. Primary status.
    b. Device type.
    c. Present average value.
    d. Present sensitivity selected.
    e. Sensor range (normal, dirty, etc.).
3. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector for smoke detection in HVAC system ducts.
4. Each sensor shall have multiple levels of detection sensitivity.
5. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
6. Relay Fan Shutdown: Fully programmable relay rated to interrupt fan motor-control circuit.

2.09 HEAT DETECTORS

A. General Requirements for Heat Detectors: Comply with UL 521.
1. Temperature sensors shall test for and communicate the sensitivity range of the device.

B. Heat Detector, Combination Type: Actuated by either a fixed temperature of 135 deg F (57 deg C) or a rate of rise that exceeds 15 deg F (8 deg C) per minute unless otherwise indicated.
1. Mounting: Twist-lock base interchangeable with smoke-detector bases.
2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

C. Heat Detector, Fixed-Temperature Type: Actuated by temperature that exceeds a fixed temperature of 190 deg F (88 deg C).
1. Mounting: Twist-lock base interchangeable with smoke-detector bases.

2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

2.10 NOTIFICATION APPLIANCES

A. General Requirements for Notification Appliances: Connected to notification-appliance signal circuits, zoned as indicated, equipped for mounting as indicated, and with screw terminals for system connections.
   1. Combination Devices: Factory-integrated audible and visible devices in a single-mounting assembly, equipped for mounting as indicated, and with screw terminals for system connections.

B. Visible Notification Appliances: Xenon strobe lights complying with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch- (25-mm-) high letters on the lens.
   1. Rated Light Output:
      a. 15/30/75/110 cd, selectable in the field.
   2. Mounting: Wall mounted unless otherwise indicated.
   3. For units with guards to prevent physical damage, light output ratings shall be determined with guards in place.
   4. Flashing shall be in a temporal pattern, synchronized with other units.
   5. Strobe Leads: Factory connected to screw terminals.
   6. Mounting Faceplate: Factory finished, red white .

C. Voice/Tone Notification Appliances:
   1. Comply with UL 1480.
   2. Speakers for Voice Notification: Locate speakers for voice notification to provide the intelligibility requirements of the "Notification Appliances" and "Emergency Communications Systems" chapters in NFPA 72.
   3. High-Range Units: Rated 2 to 15 W.
   4. Low-Range Units: Rated 1 to 2 W.
   5. Mounting: surface mounted and bidirectional.
   6. Matching Transformers: Tap range matched to acoustical environment of speaker location.

2.11 GRAPHIC ANNUNCIATOR

A. Graphic Annunciator Panel: Mounted in an aluminum frame with nonglare, minimum 3/16-inch- (4.76-mm-) thick, clear acrylic cover over graphic representation of the facility. Detector locations shall be represented by red LED lamps. Normal system operation shall be indicated by a lighted, green LED. Trouble and supervisory alarms shall be represented by an amber LED.
   1. Comply with UL 864.
   2. Operating voltage shall be 24-V dc provided by a local 24-V power supply provided with the annunciator.
   3. Include built-in voltage regulation, reverse polarity protection, RS 232/422 serial communications, and a lamp test switch.
   4. Surface mounted in a NEMA 250, Type 1 cabinet, with key lock and no exposed screws or hinges.
   5. Graphic representation of the facility shall be a CAD drawing and each detector shall be represented by an LED in its actual location. CAD drawing shall be at 1/8-inch per foot (10-mm per meter) scale or larger.
   6. The LED representing a detector shall flash two times per second while detector is an alarm.

2.12 REMOTE ANNUNCIATOR

A. Description: Annunciator functions shall match those of fire-alarm control unit for alarm, supervisory, and trouble indications. Manual switching functions shall match those of fire-alarm control unit, including acknowledging, silencing, resetting, and testing.
   1. Mounting: Flush cabinet, NEMA 250, Type 1.

B. Display Type and Functional Performance: Alphanumeric display and LED indicating lights shall match those of fire-alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals.

2.13 ADDRESSABLE INTERFACE DEVICE

A. General:
   1. Include address-setting means on the module.
   2. Store an internal identifying code for control panel use to identify the module type.
   3. Listed for controlling HVAC fan motor controllers.

B. Monitor Module: Microelectronic module providing a system address for alarm-initiating devices for wired applications with normally open contacts.

C. Integral Relay: Capable of providing a direct signal to elevator controller to initiate elevator recall, to circuit-breaker shunt trip for power shutdown.
   1. Allow the control panel to switch the relay contacts on command.
   2. Have a minimum of two normally open and two normally closed contacts available for field wiring.

D. Control Module:
   1. Operate notification devices.
   2. Operate solenoids for use in sprinkler service.

2.14 NETWORK COMMUNICATIONS

A. Provide network communications for fire-alarm system according to fire-alarm manufacturer's written requirements.

B. Provide network communications pathway per manufacturer's written requirements and requirements in NFPA 72 and NFPA 70.

C. Provide integration gateway using BACnet, Modbus for connection to building automation system.

2.15 DEVICE GUARDS

A. Description: Welded wire mesh of size and shape for the manual station, smoke detector, gong, or other device requiring protection.
   1. Factory fabricated and furnished by device manufacturer.
   2. Finish: Paint of color to match the protected device.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions for compliance with requirements for ventilation, temperature, humidity, and other conditions affecting performance of the Work.
   1. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment and wiring are installed, before installation begins.

B. Examine roughing-in for electrical connections to verify actual locations of connections before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 EQUIPMENT INSTALLATION

A. Comply with NFPA 72, NFPA 101, and requirements of authorities having jurisdiction for installation and testing of fire-alarm equipment. Install all electrical wiring to comply with requirements in NFPA 70 including, but not limited to, Article 760, "Fire Alarm Systems."
   1. Devices placed in service before all other trades have completed cleanup shall be replaced.
   2. Devices installed but not yet placed in service shall be protected from construction dust, debris, dirt, moisture, and damage according to manufacturer's written storage instructions.

B. Connecting to Existing Equipment: Verify that existing fire-alarm system is operational before making changes or connections.
   1. Connect new equipment to existing control panel in existing part of the building.
   2. Connect new equipment to existing monitoring equipment at the supervising station.
   3. Expand, modify, and supplement existing control monitoring equipment as necessary to extend existing control monitoring functions to the new points. New components shall be capable of merging with existing configuration without degrading the performance of either system.

C. Install wall-mounted equipment, with tops of cabinets not more than 78 inches (1980 mm) above the finished floor.
   1. Comply with requirements for seismic-restraint devices specified in Section 270548.16 "Seismic Controls for Communications Systems."

D. Manual Fire-Alarm Boxes:
   1. Install manual fire-alarm box in the normal path of egress within 60 inches (1520 mm) of the exit doorway.
   2. Mount manual fire-alarm box on a background of a contrasting color.
   3. The operable part of manual fire-alarm box shall be between 42 inches (1060 mm) and 48 inches (1220 mm) above floor level. All devices shall be mounted at the same height unless otherwise indicated.

E. Smoke- or Heat-Detector Spacing:
   1. Comply with the "Smoke-Sensing Fire Detectors" section in the "Initiating Devices" chapter in NFPA 72, for smoke-detector spacing.
   2. Comply with the "Heat-Sensing Fire Detectors" section in the "Initiating Devices" chapter in NFPA 72, for heat-detector spacing.
   3. Smooth ceiling spacing shall not exceed 30 feet (9 m)
   4. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas shall be determined according to Annex A or Annex B in NFPA 72.
   5. HVAC: Locate detectors not closer than 36 inches (910 mm) from air-supply diffuser or return-air opening.
   6. Lighting Fixtures: Locate detectors not closer than 12 inches (300 mm) from any part of a lighting fixture and not directly above pendant mounted or indirect lighting.

F. Install a cover on each smoke detector that is not placed in service during construction. Cover shall remain in place except during system testing. Remove cover prior to system turnover.

G. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend the full width of duct. Tubes more than 36 inches (9100 mm) long shall be supported at both ends.
   1. Do not install smoke detector in duct smoke-detector housing during construction. Install detector only during system testing and prior to system turnover.

H. Elevator Shafts: Coordinate temperature rating and location with sprinkler rating and location. Do not install smoke detectors in sprinklered elevator shafts.

I. Single-Station Smoke Detectors: Where more than one smoke alarm is installed within a dwelling or suite, they shall be connected so that the operation of any smoke alarm causes the alarm in all smoke alarms to sound.

J. Remote Status and Alarm Indicators: Install in a visible location near each smoke detector, sprinkler water-flow switch, and valve-tamper switch that is not readily visible from normal viewing position.

K. Audible Alarm-Indicating Devices: Install not less than 6 inches (150 mm) below the ceiling. Install bells and speakers on flush-mounted back boxes with the device-operating mechanism concealed behind a grille. Install all devices at the same height unless otherwise indicated.

L. Visible Alarm-Indicating Devices: Install adjacent to each alarm bell or alarm speaker and at least 6 inches (150 mm) below the ceiling. Install all devices at the same height unless otherwise indicated.

M. Device Location-Indicating Lights: Locate in public space near the device they monitor.

3.03 PATHWAYS

A. Pathways above recessed ceilings and in non accessible locations may be routed exposed.
   1. Exposed pathways located less than 96 inches (2440 mm) above the floor shall be installed in EMT.

B. Pathways shall be installed in EMT.

C. Exposed EMT shall be painted red enamel.

3.04 CONNECTIONS

A. For fire-protection systems related to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements in Section 08 71 00 "Door Hardware." Connect hardware and devices to fire-alarm system.
   1. Verify that hardware and devices are listed for use with installed fire-alarm system before making connections.

B. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 36 inches (910 mm) from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.
   1. Alarm-initiating connection to smoke-control system (smoke management) at firefighters' smoke-control system panel.
   2. Alarm-initiating connection to stairwell and elevator-shaft pressurization systems.
   3. Smoke dampers in air ducts of designated HVAC duct systems. Provide required smoke detectors in the space served by the duct for smoke detection and smoke damper shutdown in the event of fire alarm.
   4. Magnetically held-open doors.
   5. Electronically locked doors and access gates.
   6. Alarm-initiating connection to elevator recall system and components.
   7. Alarm-initiating connection to activate emergency lighting control.
   8. Alarm-initiating connection to activate emergency shutoffs for gas and fuel supplies.
   9. Supervisory connections at valve supervisory switches.
   10. Supervisory connections at low-air-pressure switch of each dry-pipe sprinkler system.
   11. Supervisory connections at elevator shunt-trip breaker.
   12. Data communication circuits for connection to building management system.
   13. Data communication circuits for connection to mass notification system.
   14. Supervisory connections at fire-extinguisher locations.
   15. Supervisory connections at fire-pump power failure including a dead-phase or phase-reversal condition.
   16. Supervisory connections at fire-pump engine control panel.

3.05 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 27 05 53 "Identification for Communications Systems."

B. Install framed instructions in a location visible from fire-alarm control unit.

3.06 GROUNDING

A. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.

B. Ground shielded cables at the control panel location only. Insulate shield at device location.

3.07 FIELD QUALITY CONTROL

A. Field tests shall be witnessed by Architect authorities having jurisdiction.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.

D. Perform the following tests and inspections with the assistance of a factory-authorized service representative :
   1. Visual Inspection: Conduct visual inspection prior to testing.
      a. Inspection shall be based on completed record Drawings and system documentation that is required by the "Completion Documents, Preparation" table in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.
      b. Comply with the "Visual Inspection Frequencies" table in the "Inspection" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.
   2. System Testing: Comply with the "Test Methods" table in the "Testing" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
   3. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.
   4. Test audible appliances for the private operating mode according to manufacturer's written instructions.
   5. Test visible appliances for the public operating mode according to manufacturer's written instructions.
   6. Factory-authorized service representative shall prepare the "Fire Alarm System Record of Completion" in the "Documentation" section of the "Fundamentals" chapter in NFPA 72 and the "Inspection and Testing Form" in the "Records" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

E. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.

F. Fire-alarm system will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

H. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.

I. Annual Test and Inspection: One year after date of Substantial Completion, test fire-alarm system complying with visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

3.08 MAINTENANCE SERVICE

A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of manufacturer's designated service organization. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
   1. Include visual inspections according to the "Visual Inspection Frequencies" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
   2. Perform tests in the "Test Methods" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
   3. Perform tests per the "Testing Frequencies" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

3.09 SOFTWARE SERVICE AGREEMENT

A. Comply with UL 864.

B. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for two years.

C. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.

1. Upgrade Notice: At least 30 days to allow Owner to schedule access to system and to upgrade computer equipment if necessary.

3.10 DEMONSTRATION

A. Engage a factory-authorized service representative to train Train Owner's maintenance personnel to adjust, operate, and maintain fire-alarm system.

END OF SECTION 28 46 21

This page intentionally left blank

SECTION 31 10 00
SITE CLEARING

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

This Section includes site clearing, grubbing and stripping, and removal of other unsuitable material within limits of clearing.

PART 2 PRODUCTS - NOT USED.

PART 3 EXECUTION

3.01 PREPARATION

A. Protect existing trees and other vegetation to remain against damage:
   1. Provide silt and construction fencing as shown in the plans.
   2. No construction equipment or activities shall be allowed beyond the construction fencing with the exception of any work absolutely necessary to complete the work and as approved by the Contracting Agency.

1.01 SITE CLEARING

B. Tree Removal
   1. Cut trees as shown on the plans and in accordance with Forest Practices Permit shown in Appendix C. The merchantable trees on site shall be the property of the Contractor.

C. Topsoil Removal
   1. Strip topsoil to 12 inches depth.
      a. Stop topsoil stripping at dripline of trees not designated for removal to prevent damage to main root system.
      b. Separate from underlying subsoil or objectionable material.
   2. Stockpile topsoil for subsequent reuse as amended backfill for planting areas.
      a. Cover with weed barrier material that sheds moisture yet allows air transmission, in approved location, prior to grading
      b. After the completion of planting, any excess unused stockpiled topsoil shall be disposed off-site by the contractor at no expense to the owner.

D. Disposal of Waste Materials
   1. Do not burn combustible materials on site.
   2. Remove all vegetative waste from the site and transport to an appropriate composting facility.
   3. Do not bury organic matter on site.

1.02 ACCEPTANCE

Upon completion of the site clearing, obtain the Contracting Agency's acceptance of the extent of clearing, depth of stripping, and rough grade.

END OF SECTION 31 10 00

This page intentionally left blank

SECTION 31 20 00
EARTHWORK

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. All earthwork shall be in accordance with the Washington State Department of Transportation and American Public Works Association (WSDOT/APWA) Washington State Chapter Standard Specifications for Road, Bridge, and Municipal Construction, current edition, Sections 2-03, 2-06, 2-09, and other sections as specified or applicable.

B. WSDOT/APWA Standard Plans for Road, Bridge and Municipal Construction, Current Edition.

C. This Section includes the following:
   1. Preparing subgrades for walks, pavements, lawns, and plantings.
   2. Excavating and backfilling for buildings and structures.

1.02 REFERENCES

A. Related Sections include the following:
   1. Section 1-07.17 – Utilities and Similar Facilities
   2. Section 1-10 – Traffic Control
   3. WSDOT Standard Specification Sections 2-03, 2-06, and 2-09
   4. Section 31 25 00 – Erosion and Sedimentation Controls Section 31 10 00 – Site Clearing
   5. Section 33 46 00 – Stormwater Management
   6. Appendix B – NKSC Geotech Report Aspect November 2022 Exploration Logs

1.03 DEFINITIONS

A. Additional Excavation: Excavation below subgrade elevations as directed by Contracting Agency's representative. Additional excavation and replacement material will be paid for according to Section 1-09.2(7) for changes in the Work.

B. Excavation below subgrade to remove soft and non-compactable material.

C. Unauthorized Excavation: Excavation below subgrade elevations or beyond indicated dimensions without direction by Contracting Agency's representative. Unauthorized excavation, as well as remedial work directed by Contracting Agency's representative, shall be without additional compensation.

PART 2 PRODUCTS

2.01 SUBMITTALS

A. Materials
   1. Gravel Borrow: Shall consist of granular material, either naturally occurring or process, and shall meet the following requirements for grading and quality:

SCREEN SIZE	PERCENT PASSING
3"	100
1 ½"	70 - 100
¾"	50 - 85
#4	30 – 60
#40	8 – 24
#200	3 - 10
SAND EQUIVALENT	35 MINIMUM

B. Submittals
   1. See Specification Sections 1-04.3(7) & 1-06.1 for submittal requirements.

2. Shoring Design: In accordance with WSDOT Standard Specification Sections 2-09.3(3) and 2-09.3(4). Where shoring (using other than pre-engineered systems) is determined by the Contractor to be necessary, submit proposed excavation shoring method for review at least two weeks prior to commencement of excavation requiring shoring. Submit, all at one time, in a neat orderly form, the following information:
   a. Basic design assumptions.
   b. Design calculations.
   c. The shop drawings to which the shoring system shall be constructed.
   d. Certification of the above by a registered professional civil or structural engineer licensed by the State of Washington.
   e. Submit four (4) copies; one will be returned.
3. When operations affect traffic, traffic control shall be provided for in accordance with Section 1-10 Traffic Control.
4. Dewatering Plan: Submit proposed dewatering method for review at least two weeks prior to commencement of excavation requiring dewatering. Submit, all at one time, in a neat orderly form, the following information:
   a. Basic design assumptions.
   b. Design calculations for discharge and treatment.
   c. The shop drawings to which the dewatering system shall be installed.
   d. Certification of the above by a registered professional civil engineer or hyrogeologist licensed by the State of Washington.
   e. Submit four (4) copies; one will be returned.

PART 3 EXECUTION

3.01 PREPARATION

A. In accordance with WSDOT Standard Specification Sections 2-03 and 2-09.

B. Protect subgrade soils against freezing temperatures or frost, water saturation, construction traffic degradation, or excessive drying. Provide protective insulating materials as necessary to prevent freezing or frost, water saturation, or excessive drying and materials to prevent traffic degradation.

C. Provide erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

D. Before placement of any fill, subgrade shall be inspected by the geotechnical engineer to identify soft, yielding, or unsuitable soils.

3.02 DEWATERING

A. In accordance with WSDOT Standard Specification Sections 2-03 and 2-09.

B. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation.
   1. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.
   2. Install a dewatering system to keep subgrades dry and convey ground water away from excavations as needed. Maintain until dewatering is no longer required. At the termination of dewatering, all wells shall be abandoned in accordance with Washington Administrative Code (WAC) 173-160.

3.03 EXCAVATION, GENERAL

A. In accordance with WSDOT Standard Specification Sections 2-03, 2-09, and 7-08.

3.04 EXCAVATION FOR STRUCTURES

A. Excavate to indicated elevations and dimensions within a tolerance of plus or minus 1 inch. Extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections.

1. Excavations for Footings and Foundations: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing bearing pad. Trim bottoms to required lines and grades to leave solid base to receive other work.
2. Excavation for Underground Tanks, Basins, and Mechanical or Electrical Utility Structures: Excavate to elevations and dimensions indicated within a tolerance of plus or minus 1 inch. Do not disturb bottom of excavations intended for bearing surface.

B. Subgrade preparation: Preparation in accordance with WSDOT Standard Specification Section 2-06. Exposed subgrades shall be prepared by removing loosened soils where practical and recompacting the subgrade surface to a firm, unyielding state, Localized zones of loose granular soils observed within a subgrade shall be compacted to a density commensurate with the surrounding soils. Organic, soft, or pumping soils observed within a subgrade shall be overexcavated and replaced with a suitable structural fill material. Geotextile separator shall be laid on the subgrade prior to structural fill placement.

3.05 UNSUITABLE FOUNDATION EXCAVATION

A. In accordance with WSDOT Standard Specification Section 2-03.3(14)E.

3.06 FILL

A. Native materials shall be used when suitable unless otherwise shown on the Plans, or directed by the Engineer.

B. Place and compact backfill in accordance with WSDOT Standard Specification Sections 2-03.3(14)C Method C and 2-09.3(1)E.

C. Fill
1. Fill materials used to establish grade shall be gravel borrow in accordance with WSDOT Standard Specification Section 9-03.14(1).
2. To ensure uniform bearing conditions for slabs overlying structural fill, the fill shall be no less than 2 feet thick (vertical) and depth of structural fill shall vary by no more than 20% across the slab area.
3. Fill slopes should be compacted by slope rolling and trimming, or should be overfilled and trimmed back to plan grade to expose a firm, smooth surface free of loose material.

3.07 MOISTURE CONTROL

A. The Contractor may use on-site materials for construction of grades in conformance with this Section.
1. The Contractor shall conduct his operation so as to utilize on-site suitable materials by:
   a. Uniformly moisture condition “drying” or “wetting” the subgrade and each subsequent fill or backfill layer before compaction to within 2 percent above or below optimum moisture content.
   b. Remove and replace, or scarify and air-dry, otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.
   c. Limit the areas that are stripped of topsoil and exposed during wet weather. The Contractor is responsible for over-excavation of material beneath subgrade that becomes unsuitable because it is left exposed, saturated, damaged, or adversely affected by the Contractor’s work.
   d. Do no place backfill or fill material on surfaces that are muddy, frozen, contain frost or ice, saturated, soft or exhibit pumping.

END OF SECTION 31 20 00

This page intentionally left blank

SECTION 31 25 14
SOIL EROSION AND SEDIMENT CONTROL

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. In accordance with Standard Specification 8-01.1. Supplement this section with the following:

Kitsap County has applied for a Washington State Department of Ecology NPDES Construction Stormwater General Permit for this project. The County anticipates the permit to be issued prior to the start of construction. The Contractor shall assume and transfer the permit into their name and include in the bid full compliance and administration with the requirements of the General Permit for this Project.

This work shall include the preparation and implementation of a Temporary Erosion and Sedimentation Control (TESC) Plan by the Contractor for this contract.

1.02 SUBMITTALS

A. Delete the first sentence of Standard Specification 8-01.3(1)A and replace it with the following:

The Contractor shall prepare a temporary erosion and sedimentation control (TESC) Plan for the contract and shall submit this TESC Plan to the Engineer 5 days prior to the preconstruction conference.

A TESC Plan consists of a narrative section and plan sheets that meets Ecology's Stormwater Pollution Prevention Plan (SWPPP) requirement in the CSWGP. When the Contracting Agency has developed a TESC Plan for a Contract the narrative is included in the appendix to the Special Provisions and the TESC plan sheets are included in the Contract Plans. The Contracting Agency TESC plan will not include off-site areas used to directly support construction activity.

A Stormwater Pollution Prevention Plan (SWPPP) shall be prepared by the Contractor and submitted for approval by the Engineer. The plan shall consist of the Contractor's complete strategy to meet the requirements of the CSWGP. The SWPPP shall include and modify as necessary the TESC Plan drawings if provided as part of the Contact Plans. The Contractor shall prepare, review and modify the SWPPP as necessary to be consistent with the actual work schedule, sequencing, and construction methods that will be used on the project.

The SWPPP shall document all the erosion and sediment control Best Management Practices (BMPs) proposed, whether permanent or temporary. The plan shall document installation procedures, materials, scheduling, and maintenance procedures for each erosion and sediment control BMP. The Contractor shall submit the SWPPP for the Engineer's approval before any work begins. The Contractor shall allow at least five working days for the Engineer's review of the initial SWPPP or any revisions to the modified SWPPP. Failure to approve all or part of any such plan shall not make the Contracting Agency liable to the Contractor for any work delays. The Contractor may not begin work without an approved Contractor's SWPPP.

Contractor TESC Plans shall include all high visibility fence delineation shown on the Contracting Agency Contract Plans. All TESC Plans shall meet the requirements of the current edition of the WSDOT Temporary Erosion and Sediment Control Manual M 3109 and be adapted as needed throughout construction based on site inspections and discharge samples to maintain compliance with the CSWGP. The Contractor shall develop a schedule for implementation of the TESC work and incorporate it into the Contractor's progress schedule.

The Contractor shall submit their TESC Plan and implementation schedule as Type 2 Working Drawings. At the request of the Engineer, updated TESC Plans shall be submitted as Type 1 Working Drawings.

PART 2 PRODUCTS

2.01 MATERIALS

A. In accordance with Standard Specification 8-01.2.

PART 3 EXECUTION

3.01 CONSTRUCTION REQUIREMENTS

A. In accordance with Standard Specification 8-01.3

3.02 CLEAN UP

A. Clean out sediment control structures that are to remain as permanent measures.

END OF SECTION 31 25 14

SECTION 32 11 23
AGGREGATE BASE COURSES

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. This Section includes providing surfacing under HMA and Portland Cement Concrete pavement as shown in the plans.

1.02 REFERENCES

A. In accordance with WSDOT Standard Specification Sections 4-04.1 through 4-04.3(10).

DETECTABLE WARNING SURFACING

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. The installation of detectable warning surfaces as shown in the plans.

1.02 SUBMITTALS

A. Product Data: Provide data on Detectable Warning Surfaces

B. Samples: Submit a sample indicating construction and colored finish

PART 2 PRODUCTS

2.01 DETECTABLE WARNING SURFACES

A. In accordance with Standard Specification Section 8-14.2 and 9-19.

PART 3 EXECUTION

3.01 CONSTRUCTION REQUIREMENTS

A. Install in accordance with Standard Specification 8-14.3.

B. Field Adjustment:
   1. Locate relative to curb line in compliance with ATBCB PROWAG, Sections 304 and 305.
   2. Orient so dome pattern is aligned with the direction of ramp.

SECTION 32 31 13
CHAIN LINK FENCES AND GATES

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. The installation of chain link fencing and gates as shown in the plans.

PART 2 PRODUCTS

2.01 MATERIALS

A. Vinyl coated chain link fencing in accordance with Standard Specification Section 8-12.2.

PART 3 EXECUTION

3.01 CONSTRUCTION REQUIREMENTS

A. Vinyl coated chain link fencing
   1. In accordance with Standard Specification 8-12.3.

END OF SECTION 32 31 13

SECTION 32 31 13.01
MOTORIZED CANTILEVER SLIDE GATES

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. The installation of 30 feet wide and 40 feet wide motorized cantilever slide gates as shown in the plans.

PART 2 PRODUCTS

2.01 PRODUCTS

A. Fortress Structural Cantilever slide Gate, Tymetal https://www.tymetal.com/industrial-commercial/cantilever-gates/, black

B. Ultra Aluminum Industrial Cantilever Gates, https://www.ultrafence.com/cantilevergates.html, textured black

C. MerchantsMetal, Secure-Trac, https://www.merchantsmetals.com/secure-trac/, black vinyl chain link

PART 3 EXECUTION

3.01 CONSTRUCTION REQUIREMENTS

A. Install in accordance with manufacturers specifications and instructions.

END OF SECTION 32 31 13.01

This page intentionally left blank

SECTION 32 31 37
AUTOMATIC BARRIER GATES

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. The installation of automatic barrier gates, and their concrete foundations, at the Household Hazardous Waste Collection Facility as shown on the plans. This gate is to be manually actuated by facility operators.

1.02 SUBMITTALS

A. Shop Drawings and/or catalog cuts.

B. Detail of concrete foundation as recommended by the manufacturer.

PART 2 PRODUCTS

2.01 MATERIALS

A. DoorKing 1601 Barrier Gate Opener (https://barrier-gate.com/doorking-1601-barrier-gate-operator) with 12-foot-long arm.

B. Parking BOXX BGS-522 (https://parkingboxx.com/barrier-gates) with 12=foot-long arm.

C. LiftMaster Mega Arm High Performance Commercial DC Barrier Gate (https://www.liftmaster.com/ma-mega-arm-barrier-gate-operators/p/MA#spec) with 12-foot-long arm.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with the location identified in the plans and with manufacturer's instructions. See civil plans for location, and electrical plans for actuation switch.

SECTION 32 32 60
MATERIAL STORAGE, BRINE MAKER, SALT STORAGE WALLS AND ROOFS

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. This Section includes the construction of gravity block walls and roofs for material storage, brine maker, and salt storage. These walls include gravity block walls detailed in the Plans and contractor designed walls with roof structures for salt storage, and for brine maker/brine pump and street sweepings storage.

1.02 DEFINITIONS

A. Gravity block walls are a wall system comprised of prefabricated modular reinforced concrete units that derive their stability primarily from their own weight.

1.03 REFERENCES

A. Section 1-05.3 Working Drawings

B. Section 1-06.1 Approval of Materials Prior to Use

C. Section 1-06.4 Handling and Storing Materials

D. WSDOT Standard Specification Sections:
   1. 2-09.3 Structure Excavation Construction Requirements
   2. 6-02.3 Concrete Construction Requirements
   3. 8-24.3 Rock and Gravity Block Wall and Gabion Cribbing Construction Requirements
   4. 9-03 Aggregates

PART 2 PRODUCTS

2.01 APPROVED ROOF STRUCTURE SYSTEMS

A. Roof structures for salt storage, and for brine maker/brine pump and street sweepings storage shall be constructed of only one of the following systems. The Contractor shall arrange to purchase the fabric, roof structure elements and all necessary incidentals from the source identified with each roof system:

1. Britespan Building Systems Inc.
   425 Orbiting Drive, Suite A
   Mosinee, WI 54455
   (800) 407-5846
   info@britespanbuldings.com
   www.britespanbuildings.com

2. ClearSpan Fabric Structures
   1395 John Fitch Blvd
   South Windsor, CT 06074
   (866) 760-1010
   www.clearspan.com

3. Portable Garage Shelter (Division of Sheltervision LLC)
   Minster, OH
   (419) 852-7765
   www.portablegarageshelter.com

2.02 MATERIALS

A. Refer to WSDOT Standard Specification Section 9-03.

B. Typical gravity block wall blocks shall be rectangular prisms with dimensions 2’-5½” by 2’-5½” by 4’-11”. Half-length blocks may to the minimum extent necessary to stack courses and

maintain vertical ends. Special blocks may be used if approved by the Engineer. All dimensions shall be ± ½ ".

Gravity block wall blocks shall be cast with Class 3000 concrete, conforming to the air content requirements of WSDOT Standard Specification Section 6-02.3(2)A. Commercial concrete shall not be used. Gravity block wall blocks will be accepted based on visual inspection, and conformance to WSDOT Standard Specification Section 6-02.3(9) and the specified concrete strength and air content requirements.

Gravity block wall blocks shall have plain, smooth surface finish.

C. Roof structures shall be of the following dimensions:
   1. Salt storage interior dimensions:
      a. Overall: 45 feet long x 30 feet wide x minimum 20 feet high roof
      b. Drive opening: 30 feet wide x 20 feet high
   2. Brine maker/brine pump and street sweepings storage interior dimensions
      a. Overall: 52 feet – 6 inches long x 20 feet wide x minimum 20 feet high roof
      b. Drive opening: 20 feet wide x 20 feet high

PART 3 EXECUTION

3.01 CONSTRUCTION REQUIREMENTS

A. Refer to Construction Requirements of WSDOT Standard Specification Section 8-24.3.

B. WSDOT Standard Specification Section 8-24.3 is supplemented with the following:
   1. After excavating for the wall base, the Contractor shall grade the excavation for a width equal to or exceeding the width of the bottom row of blocks. The base shall be graded to the base elevation shown in the Plans and working drawings as approved by the Engineer.

      The Contractor shall erect the gravity block wall and place the backfill in accordance with the erection sequence as approved by the Engineer. The top of the gravity block wall shall be within two inches of the line and grade shown in the Plans. The backfill shall be compacted in accordance with WSDOT Standard Specification Section 2-03.3(14)C, Method C.

      The Contractor shall repair all large blemishes, honeycombed areas, and chipped surfaces, (25 square inches and larger) on the exposed face of the erected wall using methods and materials as approved by the Engineer.

3.02 SUBMITTALS

A. Working drawings and submittals shall be submitted in accordance with Sections 1-05.3 and 1-06.1.

B. For the walls detailed in the Plans that are not to be designed by the Contractor, the Contractor shall submit Type 2 Working Drawings of the gravity block wall to the Engineer for approval. The working drawings shall include, but not be limited to, the following:
   1. Material approval in accordance with Section 1-06.1.
   2. Plan, elevation, and section views of the wall, showing the layout, batter, and orientation of the blocks.
   3. Dimensions and details of the blocks, including details and locations of block erection lifting loops and inserts, and the features designed to interlock blocks together if the blocks have such features.
   4. Method and equipment used to erect the blocks.
   5. Erection sequence.

   All of the above pieces of the Working Drawings shall be submitted together as a single package. Missing pieces may be grounds for rejection and pieces may not be reviewed by the Engineer separately.

C. For the walls shown in the Plans that are to be designed by the Contractor, the Contractor shall submit the following:

1. Type 2E Working Drawings of the gravity block wall to the Engineer for approval. The working drawings shall include, but not be limited to, the following:
   a. Material approval in accordance with Section 1-06.1.
   b. Plan, elevation, and section views of the wall, showing the layout, batter, and orientation of the blocks.
   c. Dimensions and details of the blocks, including details and locations of block erection lifting loops and inserts, and the features designed to interlock blocks together if the blocks have such features.
   d. Method and equipment used to erect the blocks.
   e. Erection sequence.
2. Type 2E Working Drawings of the roof structure. The Working Drawings shall include, but not be limited to, the following:
   a. Material approval in accordance with Section 1-06.1.
   b. Plan, elevation, and section views of the roof, showing overall dimensions, member materials, member sizes and shapes, connection details, and all other information necessary to construct the roof structure.
   c. For the brine maker/brine pump and street sweepings storage, provide all information necessary to attach the roof structure to the gravity block wall support.
   d. For the salt storage, provide all information necessary to attach the roof structure to the ground outside of the gravity block wall. Show the gravity block wall and indicate clearance between the roof structure and the gravity block wall.
   e. Method and equipment used to erect the blocks.
   f. Erection sequence
3. Type 2E Working Drawings of the design calculations for the gravity block walls and roof structures. The Working Drawings shall include, but not be limited to, the following:
   a. Applicable design code references. Design shall be consistent with the 2021 International Building Code, the Kitsap County Code, and the project geotechnical report
   b. Material design parameters and material specification references
   c. Design loads and load factors
   d. Member loads, capacities, resistance factors and deflections
   e. Connection calculations
   f. Wall soil bearing, sliding, and overturning / eccentricity analysis
   g. Roof foundation design calculations
   h. All other calculations necessary to cover all aspects of the gravity block wall and roof structures.

All of the above pieces of the Working Drawings shall be submitted together as a single package. Missing pieces may be grounds for rejection and pieces may not be reviewed by the Engineer separately.

D. Before physical completion of the project, the Contractor shall furnish the Engineer with an electronic set of as built shop plans. Plan size shall be no smaller than 11 by 17 inches. As-built shop plan shall be legible and clearly indicate changes to the original shop plans and the final details integrated into the project.

SECTION 32 32 61
STRUCTURAL EARTH WALLS

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. This Section consists of constructing structural earth walls (SEW).

1.02 DEFINITIONS

A. Structural earth walls, also known as Mechanically Stabilized Earth (MSE) Walls, are retaining wall systems, whose elements may be proprietary, that employ either metallic (strip or grid type) or geosynthetic (geotextile, strip, or geogrid) tensile reinforcements in the soil mass, and a facing element which is vertical, or near vertical.

1.03 REFERENCES

   15. 9-25 Water
   16. 9-33 Construction Geosynthetic

PART 2 PRODUCTS

2.01 APPROVED RETAINING WALL SYSTEMS

A. Structural earth walls shall be constructed of only one of the following wall systems. The Contractor shall arrange to purchase the concrete blocks, soil reinforcement, attachment devices, joint filler, and all necessary incidentals from the source identified with each wall system:
   1. Allan Block Wall
      Allan Block Wall is a registered trademark of the Allan Block Corporation

      Allan Block Corporation
      7424 W 78th Street
      Bloomington, MN 55439
      (800) 899-5309
      FAX (952) 835-0013
      www.allanblock.com

   2. GEOWALL Structural Earth Retaining Wall System
      GEOWALL is a registered trademark of Basalite Concrete Products, LLC

Basalite Concrete Products, LLC

5. Landmark Retaining Wall System
Landmark Retaining Wall System is a registered trademark of Anchor Wall Systems, Inc.

Anchor Wall Systems, Inc.
5959 Baker Road, Suite 390
Minnetonka, MN 55345-5996
(877) 295-5415
FAX (952) 979-8454
www.anchorwall.com

6. KeyGrid Wall
KeyGrid is a registered trademark of Keystone Retaining Wall Systems, Inc.

Keystone Retaining Wall Systems, Inc.
4444 West 78th Street
Minneapolis, MN 55435
(800) 747-8971
FAX (952) 897-3858
www.keystonewalls.com

2.02 MATERIALS

A. Refer to WSDOT Standard Specification Section 6-13.2.

B. WSDOT Standard Specification Section 6-13.2 is supplemented with the following:
   1. Provide underdrain pipe in accordance with WSDOT Standard Specification Section 9-05.2.

2. Concrete Block Faced Structural Earth Wall Materials
   a. General Materials
      1) Concrete Block
         Acceptability of the blocks will be determined based on the following:
         (a) Visual inspection
         (b) Compressive strength tests, conforming to WSDOT Standard Specification Section 6-13.3(4).
         (c) Water absorption tests, conforming to WSDOT Standard Specification Section 6-13.3(4).
         (d) Manufacturer's Certificate of Compliance, which shall identify the manufacturer, the type and quantity of material being certified, the applicable Specifications being affirmed, and the signature of a responsible corporate official of the manufacturer and include supporting mill tests or documents. A Manufacturer's Certificate of Compliance shall be furnished with each lot of material delivered to the Work and the lot so certified shall be clearly identified in the certificate.
         (e) Freeze-thaw tests conducted on the lot of blocks produced for use in this project, as specified in WSDOT Standard Specification Section 6-13.3(4).
         (f) Copies of results from tests conducted on the lot of blocks produced for this project by the concrete block fabricator in accordance with the quality control program required by the structural earth wall manufacturer.

         The blocks shall be considered acceptable regardless of curing age when compressive test results indicate that the compressive strength conforms to the 28-day requirements, and when all other acceptability requirements specified above are met.

         Testing and inspection of dry cast concrete blocks shall conform to ASTM C 140, and shall include block fabrication plant approval by WSDOT prior to the start of block production for this project.
      2) Mortar
         Mortar shall conform to ASTM C 270, Type S, with an integral water repellent admixture as accepted by the Engineer. The amount of admixture shall be as recommended by the admixture manufacturer. To ensure uniform color, texture, and quality, all mortar mix components shall be obtained from one manufacturer for each component, and from one source and producer for each aggregate.
      3) Geosynthetic Soil Reinforcement
         Geogrid reinforcement shall conform to WSDOT Standard Specification Section 9-33.1, and shall be a product listed in Appendix D of the current WSDOT Qualified Products List (QPL). The values of T_{al} and T_{ult} as listed in the QPL for the products used shall meet or exceed the values required for the wall manufacturer's reinforcement design as specified in the structural earth wall design calculation and working drawing submittal.

         The minimum ultimate tensile strength of the geogrid shall be a minimum average roll value (the average test results for any sampled roll in a lot shall meet or exceed the values shown in Appendix D of the current WSDOT QPL). The strength shall be determined in accordance with ASTM D 6637, for multi-rib specimens.

         The ultraviolet (UV) radiation stability, in accordance with ASTM D 4355, shall be a minimum of 70 percent strength retained after 500 hours in the weatherometer.

         The longitudinal (i.e., in the direction of loading) and transverse (i.e., parallel to the wall or slope face) ribs that make up the geogrid shall be perpendicular to one another. The maximum deviation of the cross-rib from being perpendicular to the longitudinal rib (skew) shall be no more than 1 inch in 5 feet of geogrid

width. The maximum deviation of the cross-rib at any point from a line perpendicular to the longitudinal ribs located at the cross-rib (bow) shall be 0.5 inches.

The gap between the connector and the bearing surface of the connector tab cross-rib shall not exceed 0.5 inches. A maximum of 10 percent of connector tabs may have a gap between 0.3 inches and 0.5 inches. Gaps in the remaining connector tabs shall not exceed 0.3 inches.

The Engineer will take random samples of the geogrid materials at the job site. Acceptance of the geogrid materials will be based on testing of samples from each lot. A “lot” shall be defined as all geogrid rolls sent to the project site produced by the same manufacturer during a continuous period of production at the same manufacturing plant having the same product name. The Contracting Agency will require 14 calendar days maximum for testing the samples after their arrival at the WSDOT Materials Laboratory in Tumwater, WA.

The geogrid samples will be tested for conformance to the specified material properties. If the test results indicate that the geogrid lot does not meet the specified properties, the roll or rolls which were sampled will be rejected. Two additional rolls for each roll tested which failed from the lot previously tested will then be selected at random by the Engineer for sampling and retesting. If the retesting shows that any of the additional rolls tested do not meet the specified properties, the entire lot will be rejected. If the test results from all the rolls retested meet the specified properties, the entire lot minus the roll(s) which failed will be accepted.

All geogrid materials which have defects, deterioration, or damage, as determined by the Engineer, will be rejected. All rejected geogrid materials shall be replaced at no expense to the Contracting Agency.

Except as otherwise noted, geogrid identification, storage and handling shall conform to the requirements specified in WSDOT Standard Specification Section 2-12.2. The geogrid materials shall not be exposed to temperatures less than –20F and greater than 122F.

4) Drainage Geosynthetic Fabric
Drainage geosynthetic fabric shall be a non-woven geosynthetic conforming to the requirements in WSDOT Standard Specification Section 9-33.1, for Construction Geotextile for Underground Drainage, Moderate Survivability, Class B.

b. Proprietary Materials
1) Allan Block Wall
Wall backfill material placed in the open cells of the precast concrete blocks and placed in the one to three foot zone immediately behind the precast concrete blocks shall be crushed granular material conforming to WSDOT Standard Specification Section 9-03.9(3).
2) GEOWALL Structural Earth Retaining Wall System
Connection pins shall be fiberglass conforming to the requirements of Basalite Concrete Products, LLC.
3) KeyGrid Wall
KeyStone connection pins shall be fiberglass conforming to the requirements of Keystone Retaining Wall Systems, Inc.
4) Landmark Retaining Wall
Lock bars shall be made of a rigid polyvinyl chloride polymer conforming to the following requirements:

Property	Value	Specification
Specific Gravity	1.4 minimum	ASTM D 792
Tensile Strength at yield	2,700 psi minimum	ASTM D 638

Lock bars shall remain sealed in their shipping containers until placement into the wall. Lock bars exposed to direct sunlight for a period exceeding two months shall not be used for construction of the wall.

5) Mesa Wall

Block connectors for block courses with geogrid reinforcement shall be glass fiber reinforced high-density polypropylene conforming to the following minimum material specifications:

Property	Specification	Value
Polypropylene	ASTM D 4101 Group 1 Class 1 Grade 2	73 ± 2 percent
Fiberglass Content	ASTM D 2584	25 ± 3 percent
Carbon Black	ASTM D 4218	2 percent minimum
Specific Gravity	ASTM D 792	1.08 ± 0.04
Tensile Strength at yield	ASTM D 638	8,700 ± 1,450 psi
Melt Flow Rate	ASTM D 1238	0.37 ± 0.16 ounces/10 min.

Block connectors for block courses without geogrid reinforcement shall be glass fiber reinforced high-density polyethylene (HDPE) conforming to the following minimum material specifications:

Property	Specification	Value
HDPE	ASTM D 1248 Type III Class A Grade 5	68 ± 3 percent
Fiberglass Content	ASTM D 2584	30 ± 3 percent
Carbon Black	ASTM D 4218	2 percent minimum
Specific Gravity	ASTM D 792	1.16 ± 0.06
Tensile Strength at yield	ASTM D 638	8,700 ± 725 psi
Melt Flow Rate	ASTM D 1238	0.11 ± 0.07 ounces/10 min.

PART 3 EXECUTION

3.01 INSTALLATION

A. Refer to WSDOT Standard Specification Section 6-13.3.

B. WSDOT Standard Specification Section 6-13.3(5) is supplemented with the following:

1. Specific Erection Requirements for Precast Concrete Block Faced Structural Earth Walls

a. Landmark Retaining Wall

When placing each course of concrete blocks, the Contractor shall pull the blocks towards the front face of the wall until the male key of the bottom face of the upper block contacts and fits into the female key of the top face of the supporting block below.

A maximum gap of 1/8-inch is allowed between adjacent concrete blocks, except for the base course set of concrete blocks placed on the leveling pad. A maximum gap of 1-inch is allowed between adjacent base course concrete blocks, provided geosynthetic reinforcement for drains is in place over the gap at the back face of the concrete blocks.

Lock bars shall be installed in the female key of the top face of all concrete block courses receiving geogrid reinforcement. Gaps between adjacent lock bars in the key

shall not exceed 3-inches. The lock bar shall be installed flat side up, with the angled side to the back of the concrete block, as shown in the shop drawings.

Geogrid reinforcement shall be placed and connected to concrete block courses specified to receive soil reinforcement. The leading edge of the geogrid reinforcement shall be maintained within 1-inch of the front face of the supporting concrete blocks below. Geogrid panels shall be abutted for 100 percent backfill coverage with less than a 4-inch gap between adjacent panels.

Backfill shall be placed and compacted level with the top of each course of concrete blocks, and geogrid reinforcement placed and connected to concrete block courses specified to receive soil reinforcement, before the Contractor may continue placing the next course of concrete blocks.

b. Mesa Wall
For all concrete block courses receiving geogrid reinforcement, the fingers of the block connectors shall engage the geogrid reinforcement apertures, both in the connector slot in the block, and across the block core. For all concrete block courses with intermittent geogrid coverage, a #3 steel reinforcing bar shall be placed, butt end to butt end, in the top block groove, with the butt ends being placed at a center of a concrete block.

3.02 SUBMITTALS

A. Working drawings and submittals shall be submitted in accordance with Sections 1-05.3 and 1-06.1.

B. Manufacturer's Certificate of Compliance shall comply with Section 1-06.3.

C. Provide submittals in accordance with WSDOT Standard Specification Section 6-13.3(2).

D. WSDOT Standard Specification Section 6-13.3(2) is supplemented with the following:
1. All pieces of Working Drawings and Manufacturer's Certificate of Compliance shall all be submitted as a single submittal package. Missing pieces may be grounds for rejection and pieces may not be reviewed by the Engineer separately.
2. Material approval in accordance with Section 1-06.1.
3. The following geotechnical design parameters shall be used for the design of the structural earth walls:

Wall No.: 3, 4 and 5

Soil Properties	Wall Backfill	Retained Soil	Foundation Soil
Unit Weight (pcf)	130	130	130
Friction Angle (deg)	36	35	42
Cohesion (psf)	0	0	0

For the Service Limit State, the wall shall be designed to accommodate a differential settlement of 1-inch per 100 feet of wall length.

For the Extreme Event I Limit State, the wall shall be designed for a horizontal seismic acceleration coefficient k_h of 0.085g and a vertical seismic acceleration coefficient k_v of 0.0g.

E. Before physical completion of the project, the Contractor shall furnish the Engineer with an electronic set of as built shop plans. Plan size shall be no smaller than 11 by 17 inches. As-built shop plan shall be legible and clearly indicate changes to the original shop plans and the final details integrated into the project.

END OF SECTION 32 32 61

SECTION 32 32 62
SOLDIER PILE WALLS

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. This Section includes the construction of soldier pile walls.

1.02 DEFINITIONS

A. Soldier pile walls are a type of nongravity cantilever wall that derives lateral resistance through embedment of discrete vertical wall elements (soldier piles) and supports retained soil with facing elements (temporary timber lagging and permanent concrete fascia).

3.01 CONSTRUCTION REQUIREMENTS

A. Refer to WSDOT Standard Specification Section 6-16.3.

B. WSDOT Standard Specification Section 6-16.3(1) is supplemented with the following:
   1. Welding procedures shall be included in the single submittal package indicated below in 3.02.B.1.
   2. WSDOT Standard Specification Section 6-03.3(25) as referenced in this section is modified as follows:
      a. The last paragraph, beginning with “After the Contractor’s welding inspection is complete” is removed and replaced with “The Contractor shall perform ultrasonic welding inspection as detailed in 6-03.3(25)A3.”
      b. WSDOT Standard Specification Section 6-03.3(25)A is supplemented with the following:
         1) The Contractor shall be responsible for all welding inspection and testing performed in both the shop and in the field.

C. WSDOT Standard Specification Section 6-16.3(8) is supplemented with the following:
   1. The surface finish shall be produced with form liners in accordance with WSDOT Standard Specification Section 6-02.3(14)D. The first sentence of WSDOT Standard Specification 6-02.3(14)D shall be replaced with the following: “The concrete finishes listed in the table below shall be accomplished by the use of either a form liner selected from the products listed in the WSDOT Qualified Products List (QPL), or a form liner accepted by the Engineer.” Concrete finish shall be Variable Depth Random Board Finish with boards oriented horizontally. Form liners shall be placed such that vertical joints between liners are randomized and follow ends for boards.
   2. Pigmented sealer shall be constructed in accordance with WSDOT Standard Specification Section 6-02.3(14)C. The last sentence of WSDOT Standard Specification Section 6-02.3(14)C shall be replaced with the following: “If the pigmented sealer material is not listed in the current WSDOT QPL, a sample shall be submitted to the Engineer for acceptance in accordance with WSDOT Standard Specification Section 9-08.3. The color of the pigmented sealer shall be Washington Gray.

3.02 SUBMITTALS

A. Working drawings and submittals shall be submitted in accordance with Sections 1-05.3 and 1-06.1.

B. Refer to WSDOT Standard Specification Section 6-16.3(2).

C. WSDOT Standard Specification Section 6-16.3(2) is supplemented with the following:
   1. Working Drawings indicated for soldier pile walls in WSDOT Standard Specification Section 6-16.3(2) and supplemented herein shall be submitted together as a single submittal package. Missing pieces will be grounds for rejection and pieces will not be reviewed by the Engineer separately.
   2. In addition to the requirements of WSDOT Standard Specification Section 6-16.3(2), the following shall be included in the single submittal package.
      a. Material approval in accordance with Section 1-06.1.
      b. Working Drawings for pigmented sealer specified in WSDOT Standard Specification Section 6-02.3(14)C and supplemented in Section 3.01 above.
      c. Working Drawings for form liners specified in WSDOT Standard Specification Section 6-02.3(14)D and supplemented in Section 3.01 above.
      d. Working Drawings for lagging design details and supporting design calculations specified in WSDOT Standard Specification Section 6-16.3(6)B.
      e. Welding procedures specified in WSDOT Standard Specification Section 6-03.3(25).
      f. A welding inspection and testing plan. The plan shall include the following consistent with the requirements of WSDOT Standard Specification 6-03.3(25):
         1) Sequence of welding, weld inspection and weld testing

2) Location and type of welds to be inspected and tested
3) Type of weld inspection
4) Percentage of each weld, weld type, and weld inspection to be performed.

g. Type 2 Working Drawing per 6-03.3(7) for structural steel, including soldier piles.
h. Type 2E Working Drawings per 6-02.3(16) and 6-02.3(17) for forming plans for concrete fascia panels.
i. Type 2 Working Drawings for shaft installation plan.

3. Weld inspection and testing records specified in WSDOT Standard Specification Section 6-03.3(25) and supplemented above in Section 3.01B. In-progress records shall be supplied to the Engineer upon request. Complete final records shall be submitted no later than two (2) working days after completion of welds.
4. WSDOT Standard Specification Section 6-03.3(7) as referenced in this section is modified as follows:
   a. Remove the last paragraph beginning with “Before physical completion of the project, …” and replace it with “Before physical completion of the project, the Contractor shall furnish the Engineer with an electronic set of as built shop plans. Plan size shall be no smaller than 11 by 17 inches. As-built shop plan shall be legible and clearly indicate changes to the original shop plans and the final details integrated into the project.”

SECTION 32 39 40
SANDER INSERT RACK

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. This Section includes the construction of the Sander Insert Rack shown in the Plans.

1.02 DEFINITIONS

A. The Sander Insert Rack is a steel structure with welded and bolted connections supported by reinforced concrete spread footings and attached to the footings with steel anchor bolts as detailed in the Plans.

B. Catwalk, stairs, and railings, including connection to the Sander Rack, shown in the Plans are not fully engineered and shall be included in the Sander Insert Rack and shall be Contractor deferred submittals.

1.03 REFERENCES

A. Section 1-05.3 Working Drawings

   11. 9-03 Aggregates
   12. 9-06 Structural Steel and Related Materials
   13. 9-07 Reinforcing Steel
   14. 9-08 Paints and Related Materials
   15. 9-20 Concrete Patching Material, Grout, and Mortar
   16. 9-23 Concrete Curing Materials, Bonding Agents, and Admixtures
   17. 9-25 Water

PART 2 PRODUCTS

2.01 MATERIALS

A. Refer to WSDOT Standard Specification Sections:
   1. 6-02.2 Concrete Materials
   2. 6-03.2 Steel Structures Materials
   3. 6-07.2 Painting Materials
   4. 9-01 Cement
   5. 9-03 Aggregates
   6. 9-06 Structural Steel and Related Materials
   7. 9-07 Reinforcing Steel
   8. 9-08 Paints and Related Materials
   9. 9-20 Concrete Patching Material, Grout, and Mortar
   10. 9-23 Concrete Curing Materials, Bonding Agents, and Admixtures
   11. 9-25 Water

B. WSDOT Standard Specification Section 6-02.3 is supplemented with the following:

1. Resin Bonded Anchors
   The resin bonded anchor system shall include the nut, washer, and threaded anchor rod which is installed into hardened concrete with a resin bonding material.

   Resin bonding material used in overhead and horizontal application shall be specifically recommended by the resin manufacturer for those applications.

   Resin bonding material used in submerged liquid environment shall be specifically recommended by the resin manufacturer for this application.

   The resin bonded anchor system shall conform to the following requirements:

   a. Threaded Anchor Rod and Nuts
      Threaded anchor rods shall conform to ASTM A 193 Grade B7 or ASTM A 449, except as otherwise noted, and be fully threaded. Threaded anchor rods for stainless steel resin bonded anchor systems shall conform to ASTM F 593 and shall be Type 304 unless otherwise specified.

      Nuts shall conform to ASTM A 563, Grade DH, except as otherwise noted. Nuts for stainless steel resin bonded anchor systems shall conform to ASTM F 594 and shall be Type 304 unless otherwise specified.

      Washers shall conform to ASTM F 436 and shall meet the same requirements as the supplied anchor rod, except as otherwise noted. Washers for stainless steel resin bonded anchor systems shall conform to ASTM A 240 and the geometric requirements of ASME B18.21.1 and shall be Type 304 Stainless Steel unless otherwise specified.

      Nuts and threaded anchor rods, except those manufactured of stainless steel, shall be galvanized in accordance with AASHTO M 232. Galvanized threaded anchor rods shall be tested for embrittlement after galvanizing, in accordance with WSDOT Standard Specification Section 9-29.6(5).

      Threaded anchor rods used with resin capsules shall have the tip of the rod chiseled in accordance with the resin capsule manufacturer's recommendations. Galvanized threaded rods shall have the tip chiseled prior to galvanizing.

   b. Resin Bonding Material
      Resin bonding material shall be a two-component epoxy resin conforming to Type IV ASTM C 881 or be one of the following:
      1) Vinyl ester resin.
      2) Polyester resin.
      3) Methacrylate resin.

   c. Ultimate Anchor Tensile Capacity
      Resin bonded anchors shall be tested in accordance with ASTM E 488 to have the following minimum ultimate tensile load capacity when installed in concrete having a maximum compressive strength of 6000 pounds per square inch (psi) at the embedment specified below:

Anchor Diameter (inch)	Tensile Capacity (lbs.)	Embedment (inch)
3/8	7,800	3-3/8
1/2	12,400	4-1/2
5/8	19,000	5-5/8
3/4	27,200	6-3/4
7/8	32,000	7-7/8
1	41,000	9
1-1/4	70,000	11-1/4

PART 3 EXECUTION

3.01 CONSTRUCTION REQUIREMENTS

A. Refer to WSDOT Standard Specification Sections 2-09.3, 6-02.3(18), 6-03.3(14), 6-03.3(30), 6-03.3(33), 6-03.3(35), 6-03.3(36), 6-07.3, 9-06.2, 9-06.3, 9-06.5(3), and 9-20.3(2).

B. WSDOT Standard Specification Section 2-09.3 is supplemented with the following:
   1. WSDOT Standard Specification Section 2-09.3(1)C is supplemented with the following:
      a. If the soil in the footing excavation for the Sander Insert Rack is disturbed and becomes unsuitable before placement of the concrete footing, the Contractor shall excavate below the plan grade a maximum of 1 foot, as determined by the Engineer, and backfill with gravel backfill for foundations.
   2. WSDOT Standard Specification Section 2-09.3(2) is supplemented with the following:
      a. Excavation and shoring or extra excavation for the Sander Insert Rack shall be considered Class A.
   3. WSDOT Standard Specification Section 2-09.3(3)B is modified as follows:
      a. The fourth paragraph after the first numbered list, beginning with “The Contractor may omit forms when…” is replaced with the following:
      The Contractor may not omit forms inside excavations and shall not pour concrete against earthen sides of excavations. All concrete shall be formed.

C. WSDOT Standard Specification Section 6-02.3 is modified as follows:
   1. WSDOT Standard Specification Section 6-02.3 is modified as follows:
      a. References to concrete testes by the “Contracting Agency” shall be replaced with concrete tests by the “Contractor”. The Contractor shall, at the cost to the Contractor, hire a third party concrete testing company to perform required tests, including temperature, slump, air content for concrete placed above finished ground (including full height of Sander Insert Rack footing pedestals), and the specified compressive strength at 28 days. Scheduling testing services to be provided for concrete pours shall be coordinated by the Contractor. Concrete shall not be poured without testing.
   2. WSDOT Standard Specification Section 6-02.3(5) is supplemented with the following:
      a. Additional test cylinders for early removal of forms, early backfill, early loading of concrete, or any other reason the Contractor may require are at the sole discretion of the Contractor. Early removal of forms, early backfill of footings and early loading of footings will not be approved without cylinder test results, except as approved in WSDOT Standard Specification Sections 2-09.3(1)E and 6-02.3(17)N.
      b. Acceptance for concrete in Sander Insert Rack footings will not be accepted based on core method.
   3. WSDOT Standard Specification Section 6-02.3(14)C is supplemented with the following:
      The color of the pigmented sealer shall be Washington Gray.
   4. WSDOT Standard Specification Section 6-02.3(18) is supplemented with the following:
      Resin Bonded Anchors:
      The embedment depth of the anchors shall be as specified in the Plans. If the embedment depth of the anchor is not specified in the Plans then the embedment depth shall be as specified in the table of minimum and maximum torque below.

The anchors shall be installed in accordance with the resin manufacturer's written procedure.

Holes shall be drilled as specified in the Plans. Holes may be drilled with a rotary hammer drill when core drilling is not specified in the Plans. If holes are core drilled, the sides of the holes shall be roughened with a rotary hammer drill after core drilling.

Holes shall be prepared in accordance with the resin manufacturer's recommendations and shall meet the minimum requirements as specified herein. Holes drilled into concrete shall be thoroughly cleaned of debris, dust, and laitance prior to installing the threaded rod and resin bonding material. Holes shall not have any standing liquid at the time of installation of the threaded anchor rod.

The anchor nuts shall be tightened to the following torques when the embedment equals or exceeds the minimum embedment specified.

Anchor Diameter (inch)	Minimum Torque (ft-lbs)	Minimum Torque (ft-lbs)	Minimum Embedment (inch)
3/8	12	18	3-3/8
1/2	22	35	4-1/2
5/8	55	80	5-5/8
3/4	106	140	6-3/4
7/8	165	190	7-7/8
1	195	225	9
1-1/4	370	525	11-1/4

When the anchor embedment depth is less than the minimum values specified, the anchor nuts shall be tightened to the torque values specified in the Plans, or as recommended by the resin bonded anchor system manufacturer and approved by the Engineer.

D. WSDOT Standard Specification Section 6-03.3 is supplemented with the following:
   1. WSDOT Standard Specification Section 6-03.3(28)B is supplemented with the following: If an assembly or stage of assembly is not accepted by the Engineer, deficiencies shall be corrected and the assembly or stage of assembly shall be resubmitted to the Engineer for acceptance.
   2. WSDOT Standard Specification Section 6-03.3(30) is supplemented with the following: Paint for the new steel shall be applied in accordance with WSDOT Standard Specification 6-07.3(9). The color of the top coat, whey dry, shall match federal color number AMS-STD 595A 13591 (OSHA Safety Yellow).

3.02 SUBMITTALS

A. Working drawings and submittals shall be submitted in accordance with Sections 1-05.3 and 1-06.1.

B. Manufacturer’s Certificate of Compliance shall comply with Section 1-06.3.

C. The Sander Insert Rack construction submittal shall be a single submittal package to include all required submittal pieces, Working Drawings, materials approval, and Certificates of Compliance as specified in Sections 1-06.1 and 1-06.3, and WSDOT Standard Specification Sections 2-09.3, 6-02.3, 6-03.3, 6-06.3, and 6-07.3 applicable to the pieces of work for construction that require approval prior to construction of the Sander Insert Rack. Catwalk, stairs, and railing shown in the Plans are not fully engineered. The single submittal package shall include Type 2E Working Drawings and calculations for design and construction of the catwalks, stairs, railing, and connection to the Sander Rack; including dimensions necessary for fabrication and construction, details for fabrication and construction, materials, member loading and capacities, references to applicable building codes and OSHA requirements. Missing pieces may be grounds for rejection and separate pieces may not be reviewed separately.

Additional submittals required for pieces of the work that are specified to be submitted during construction of the Sander Insert Rack may be submitted separately.

D. WSDOT Standard Specification 6-02.3 is supplemented with the following:

1. Resin Bonded Anchor information shall be included in the single submittal package indicated in 3.02.C.1:

   The Contractor shall submit items 1 and 2 below to the Engineer for all resin bonded anchor systems. If the resin bonded anchor system and anchor diameter are not listed in the current WSDOT Qualified Products List, the Contractor shall also submit item 3 below to the Engineer.

   For resin bonded anchor systems that are installed in a submerged liquid environment the Contractor shall submit items 1, 2, and 4 below. If the resin bonded anchor system and anchor diameter are not listed in the current WSDOT Qualified Products List, the Contractor shall also submit item 3 below to the Engineer.

   1) The resin manufacturer's written installation procedure for the anchors.
   2) The manufacturer's certificate of compliance for the threaded anchor rod certifying that the anchor rod meets these requirements.
   3) Test results by an independent laboratory certifying that the threaded anchor rod system meets the ultimate anchor tensile load capacity specified in the above table. The tests shall be performed in accordance with ASTM E 488.

   For threaded anchors intended to be installed in submerged liquid environments the Contractor shall submit tests performed by an independent laboratory within the past 24 months which certifies that anchors installed in a submerged environment meet the strength requirements specified in the above table.

2. WSDOT Standard Specification Section 6-02.3(16) is modified as follows:
   The first paragraph of this section is replaced with the following:
   The Contractor shall submit all plans for falsework and formwork as Type 2E Working Drawings.

3. Before physical completion of the project, the Contractor shall furnish the Engineer with an electronic set of as built shop plans. Plan size shall be no smaller than 11 by 17 inches. As-built shop plan shall be legible and clearly indicate changes to the original shop plans and the final details integrated into the project.

END OF SECTION 32 39 40

This page intentionally left blank

SECTION 32 84 00
IRRIGATION

PART 1 GENERAL

1.01 SCOPE

A. This Section specifies all work Contractor shall provide for construction of irrigation systems including furnishing all labor, materials, equipment and services necessary for a functional irrigation system as shown on the Drawings and specified herein. Contractor shall be responsible for protecting existing plant material and re-seeding areas disturbed by construction processes as a part of this work.

1.02 SYSTEM PERFORMANCE REQUIREMENTS

A. Layout of the system as shown on drawings is schematic. Follow as closely as possible. Modify locations as required by plant materials, utilities and other obstructions.

B. Full and complete head to head irrigation coverage is required. Make adjustments to layout, irrigation zone pressure, or as needed, to achieve full coverage of irrigated areas without overspray onto roadways, sidewalks or buildings.

C. Obtain and pay for all permits, approvals and inspections required by the local jurisdictional authorities for the full operation on the system.

D. Contractor shall coordinate all irrigation work with other trades. This includes but is not limited to: location and electrical point of connection at the irrigation controller, irrigation sleeving through walls and under pavement, irrigation water meter installation.

E. Contractors must be Washington State Licensed landscape contractor with at least three years of experience.

1.03 SUBMITTALS

A. Submit product data a minimum of 14 working days before beginning work, unless otherwise approved. Include data for all products to be installed in these systems. Include material showing manufacturer's name, catalog numbers, catalog cuts, technical data manufacturers' installation, operation and maintenance instructions for each product.

B. Point of Connection Water Pressure Test: Test water pressure at the irrigation system point of connection prior to beginning work. Submit results of test to Landscape Architect.

C. Site Inspection Report: Submit statement confirming a site inspection has been conducted, noting discrepancies between ground measures and plans, hazards or site conditions which will interfere with installation or operation of the system prior to beginning of work.

D. Record Drawings
   1. Maintain a complete set of record drawings, corrected daily, to show design and specification changes, and location of system components. Submit copies as requested.
   2. At completion, submit plans at the same scale as the construction plans, indicating the elevations of mainlines, valves, backflow preventers, zone outlines and other system elements, indicate locations with dimensions from building, curb lines or other fixed site features.

E. Submit three sets of keys, hose swivels, quick coupler operating keys, and unique tools or devices needed to access, operate, adjust or maintain the system. Obtain receipt indicating location and custodian of each set.

F. Operating and Maintenance Data:
   1. Submit the name and address of permanent service organizations maintained or trained by the manufacturers that will render service within eight hours of receipt of notification of service request.
   2. Zone Map: Submit an irrigation plan for the site indicating, by varying colors, the area of coverage for each control valve. Indicate the number and location of the valve. The number is to correspond to that on the controller for that zone.
   3. Submit controller timing schedule indicating on a weekly basis the day, time and duration of watering for each control valve.

4. Provide the zone map and controller timing schedule, folded into a plastic envelope, of a size capable of being installed in the door of the controller.
5. Submit operating and maintenance guides for the entire system and for each piece of equipment in the system. Instructions for system winterization are to be included.

1.04 QUALITY ASSURANCE

A. Comply with requirements of utility supplying water for prevention of backflow and back siphonage.

B. Comply with requirements of authority with jurisdiction for irrigation systems.

C. Installer Qualifications: Engage an experienced installer who has completed irrigation systems similar in material, design, and extent to that indicated for projects that have resulted in construction with a record of successful in-service performance.

1.05 PROJECT CONDITIONS

A. Environmental Requirements: Perform work under environmental conditions suitable for the tasks being undertaken.

B. Existing Conditions:
1. Visit the site and note conditions which affect work under this Section.
2. Locate all utilities, subsurface drain lines at ball fields, and piping in the work area. Provide adequate protection during all phases of work.
3. Repair utilities, lines, drain lines, and piping damaged by this work to the satisfaction of the Owner of the line, at no change in Contract Price.
4. Notify the Contracting Agency of unsatisfactory conditions. Proceed with work only after conditions have been corrected.
5. Field Measurements: Take field measurements of irrigated areas to determine if differences occur between plans and ground dimensions. Notify Landscape Architect of differences before proceeding with work.
6. Irrigation is not permitted during the following conditions:
   a. When the temperature is less than 35 degrees F or greater than 90 degrees F.
   b. When the planting area's soil is saturated, frozen, or dry.
   c. When wind velocities are greater than 30 mph.

1.06 SEQUENCING AND SCHEDULING

A. Installation of this irrigation system will be occurring around existing trees. Contractor shall take care to avoid damage to existing tree roots during the installation of the irrigation system.

B. Thirty days prior to beginning work, submit a work schedule to include: dates, location, and type of work to be performed.

1.07 SYSTEM PROTECTION

A. As a part of the warranty under this contract, the contractor is responsible for deactivating and draining the system prior to the onset of the freezing season and for reactivating the system at the onset of spring irrigation season. Each event must be accomplished at least once during the one year warranty.

B. The contractor shall submit a letter to the Owner certifying that the system was winterized and drained, and indicate the date such action was accomplished.

C. The Contractor shall be responsible for any damage resulting from failure to comply.

1.08 SYSTEM FAMILIARIZATION

A. Before final acceptance of the system, the contractor shall provide the necessary keys and/or other tools necessary to operate, drain and activate the system and shall spend sufficient time the Owner to insure that the system operation, maintenance, and winterization can continue after the departure of the Contractor.

B. Tools and Keys
1. Provide three (3) complete sets of tools and keys to Owner (i.e., water keys, quick coupler keys, valve cover keys, and controller keys.

C. Maintenance Manuals: The Contractor shall provide two (2) operation and maintenance manuals. The manuals shall be indexed and tabbed, bound in hardback 3-ring binders. Include the following items/information:
   1. List of authorized distributors and service representatives (in the area), for each item of irrigation equipment: Including websites, Names, email address, and phone numbers.
   2. Guarantee /warranty certificates for all equipment used and Contractors written warranty for entire system (1) year guarantee.
   3. Manufacturer's maintenance sheets, replacement parts list and equipment brochures for all equipment used.
   4. Winterization and spring startup procedures.
   5. A pocket for one copy of the record drawings. This plan shall be added at the time of final inspection.

1.09 WARRANTY

A. Refer to the General and Supplementary General Conditions.

B. Provide comprehensive Two-year irrigation warranty beginning from Date of Substantial Completion to cover all maintenance services and replacement parts.

C. Additional Requirements:
   1. Repair settling of trenches. Include complete restoration of plantings, mulch, grades, pavements or other improvements.
   2. Correct irrigation system problems or damage within five working days of notice until fulfillment of the Two-year irrigation warranty period.

PART 2 PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. As shown on the Drawings or specified herein. Alternate materials will be acceptable if approved in writing by Owner.

B. Other Manufacturers: Submit substitution request in accordance with the requirements of the General Conditions.

2.02 MATERIALS

A. Mainline (pressure pipe): All irrigation mainlines shall be Schedule 40, (IPS Plastic Pipe) pipe as indicated on drawings. The pipe shall conform to commercial standards ASTM 1785. Pipe shall be marked with manufacturer's name, class of pipe and NSF seal. Pipe walls shall be uniform and shiny. Pipe and fittings must be non-toxic, free from taste and odor and self-extinguishing and conform to the following minimums:
   1. Tensile strength 78°F 6000psi
   2. Izod impact strength (notices) 15 ft. lb./in.
   3. Modulus of elasticity 300,000 psi
   4. Compressive strength 8,500 psi
   5. Flexural strength 10,500 psi

B. Lines under paved areas shall be PVC Schedule 40 conforming to standards of ASTM 1785.

C. Lateral Pipe (circuit/zone pipe): Schedule 40 PVC, (IPS Plastic Pipe) pipe as indicated on drawings. The pipe shall conform to commercial standards ASTM D 2241.

D. Poly pipe and fittings shall be thick walled polyethylene pipe specifically designed for connection of irrigation heads to lateral lines.

E. Sleeves: Irrigation sleeves shall be Schedule 40 PVC conforming to standards of ASTM D 1785, minimum 4″.

F. Pipe Fittings:
   1. All PVC pipe fittings shall be solvent weld type except where swing joints, risers, etc., require threaded fittings. All pipe fittings shall conform to standards of ASTM D 2466 (Schedule 80).

G. Jointing Materials:

1. PVC solvent cement, NSF61 approved solvent for PVC through 4-inch, meeting requirements of ASTM D2564.
2. PVC primer and cleaner, compatible for use with PVC pipe.
3. Teflon tape sealer, 3/4 or 1/2-inch wide, or Teflon Dope, shall be used at all threaded joints as needed.

H. Valves:
1. Automatic Valves: Contamination resistant, plastic, flow control, manual bleed. 24 volt, normally closed, solenoid operated, with 150 psi CWP rating, having IPS threads and suitable for underground burial. Manufacturer's limited warranty of not less than (5) years. Acceptable Manufactures: Hunter, Rain Bird, or approved equal.
2. Manual drain valves shall be the non-lubricated type, capable of sealing in either flow direction, with true union end connections and lever type operator. PVC ball valves shall be constructed using a PVC body and ball, Teflon seats and FPM (viton) o-rings. Provide PVC ball valves from Asahi America, Chemtrol Division, NIBCO Inc., or approved equivalent.

I. Valve Boxes:
1. For Control Valves: Locking plastic – by NDS (National Drainage Systems, Camarillo, CA) or approved equivalent with flange type lid on box.
2. For backflow preventers: Locking concrete vault per plan.
3. For manual drain valves: Locking plastic – per plan.
4. For all quick-couplers: Round valve boxes – per plan.

J. Backflow Preventer: Double check type, per plan. Acceptable Manufacturers:
1. Febco
2. Zurn-Wilkins
3. Watts
4. Or approved equal.

K. Automatic Controller: Interior wall mount with wireless Solar Sync Sensor and Solar Sync Receiver per plan. Acceptable Manufacturers:
1. Hunter
2. Rain Bird
3. Or approved equal.

L. Spray and Rotary Heads: Acceptable Manufacturers:
1. Rain Bird
2. Hunter
3. Toro
4. Or approved equal.

M. Drip Irrigation: Acceptable Manufacturers:
1. Rain Bird
2. Hunter
3. Toro
4. Or approved equal.

N. Quick Couplers: Quick couplers shall be per plan

O. Master Valve / Flow Sensor shall be per plan.

P. Low Voltage Control Wire and Connectors:
1. All buried control wire must be insulated copper designed for 24 volts or higher. Minimum size of wire is AWG#14. Common wire shall be of the same size or larger than control wire. Control wire shall be red, common wire shall be white. Size of longer wire runs requiring gauges larger than AWG#14 shall be sized according to electric valve manufacturer's recommendation and irrigation controller's recommendation.
2. To facilitate easier connection to controller terminals, AWG#14 wire may be connected to AWG#18 multi-strand irrigation wire within 6 feet of field controller and actual connection to field controller made with AWG#18.

Q. Other Materials

1. Drain Rock: Washed, round river pea gravel, no fines.
2. Trench Backfill: Masons sand and excavated soil as specified, or shown on drawings.
3. Tracing Wire: The wire shall be yellow insulated copper wire size AWG#12.
4. Swing Joints: Hunter SJ Swing Joint.
5. Valve Keys: 3 feet long (minimum) with tee handle and key end to fit manual valves.

R. Provide other materials, not specifically described but required for a complete and proper installation, as selected by Contractor subject to the approval of Owner.

PART 3 EXECUTION

3.01 EXAMINATION

A. Investigate and determine available water supply pressure and flow characteristics. Report results of pressure test at point of connection to Landscape Architect before beginning installation work.

B. Prior to beginning work, carefully inspect the preparatory work of other trades and verify that such work is acceptable for the installation of this work. Report all unacceptable conditions to Owner. Do not begin work until unacceptable conditions have been resolved. Beginning work constitutes Contractor acceptance of conditions.

3.02 PROTECTION

A. Provide protection for system components at all times. Keep rock, gravel, debris, and all other foreign materials from entering piping, valves and other equipment.

B. Provide barriers, crossings, markers and other devices necessary to protect materials and pedestrians at open trenches, holes, stockpiles, etc.

3.03 INSTALLATION

A. Layout:
1. Layout all work in accordance with plans and details as shown on the drawings.
2. Locate irrigation apparatuses, equipment, etc., in planting areas wherever possible.
3. If minor changes in locations are required due to field conditions, work shall be accomplished by the Contractor at no additional cost to the Owner provided such field adjustments changes require no significant amount of additional irrigation equipment.

B. Trenches:
1. Excavate trench bottoms with uniform slopes, 4″ minimum width. Bottoms shall be smooth and free of rocks or other objects which might damage pipe.
2. Make trenches wide enough to allow for tamping around pipe.
3. Excavate trenches to a depth allowing for pipe slopes to drains, sand setting bed and the following minimum coverage depths:
   a. Pressure Laterals: 12 inch depth minimum.
   b. Pressure Mainlines: 18 inch depth minimum.
   c. Pressure Mainlines Under Paving: 24 inch depth minimum.
   d. Common and Control Wire: Install below mainlines or 18 inches where wire is not in a pipe trench.
4. Do not lay pipe on unstable materials in wet trench or when trench or other conditions are unsuitable.

C. Pipe and fittings:
1. Lay pipe and make connections in accordance with irrigation industry standard practices and manufacturer’s recommendations.
2. Solvent weld all non-threaded joints. Use Teflon tape or Teflon Dope to seal threaded joints as needed. Do not weld in temperatures below 35° F.
3. Slope pipe at 1/2 percent minimum toward drain valves.
4. Clean interior of pipe before installation. Keep pipe clean during and after laying by plugs or other means.
5. No fittings are to be closer than 6″ apart.
6. Set lines 6 inches apart in common trenches whenever possible, side by side, two lines maximum per trench.
7. Where possible, install PVC lines and Valves adjacent to hardscapes in planting areas.

8. Manual drain valves shall be installed at all low points of the irrigation system. A two cubic-foot gravel sump shall be installed at each drain valve.
9. Cut PVC pipe ends at 90 degrees to the pipe length and clean all cutting burrs prior to cementing. Wipe pipe ends clean. Apply primer to both fitting and pipe end. Apply a light coat of cement on the inside of the fitting, and a heavier coat on the outside of the pipe. Insert pipe into fitting and give a quarter turn to set the cement. Wipe excess cement from the outside of the pipe. Test pipe as indicated elsewhere in these specifications. Backfill the center of the pipe lengths until the pressure test is complete.
10. Cure all welded joints at least 15 minutes before moving and 24 hours before water is permitted in the pipe.

D. Sleeves:
1. Install sleeves in all locations where piping and control wiring pass under paved areas and curbs or through walls. Extend sleeve 12 inches beyond edge of paving, curb, or wall. Cap and mark the location with temporary 2″ x 4″ fir stake, 18 inches above grade. Remove stake once pipe and wires have been routed through sleeves and sleeve has been permanently marked by Owner.
2. Set top of sleeve 18-inch minimum (24″ at road crossings) below top of sub-grade below paved, mulched, graveled or other surfaces. Fill (3) inches below, around and above pipe, to top of trench with masons sand. Compact to density required for pavement subgrade.

E. Backfill:
1. Pressure tests shall be observed and approved by the Owner. Backfill trenches after inspection of pressure test as part of the work of this Section.
2. Backfill with the excavated materials approved , consisting of earth, loam, sandy clay, sand or other materials free from stones 1-1/2″ or larger.
3. Tamp trenches to adequately prevent sunken areas due to settlement.
4. Mechanically compact trenches under hardscape in (2) lifts to a dry density equal to 90% of adjacent undisturbed soil.
5. Backfill must conform to adjacent grades without dips, sunken areas, humps, or other surface irregularities.
6. Fill piping with water at approximately 25 psi during backfilling operations.
7. Remove all excess excavated material from the project site.

F. Double Check Valve Assembly:
1. Install in accordance with local code.
2. Use brass manifold for backflow preventer. Include a capped ¾″ blow out tee for quick coupler valve for winterization purposes. Install with test cocks turned to the side to promote drainage during winterization.
3. Provide 6″ of 5/8″ washed gravel at the bottom of the valve box. Provide positive drainage out of the valve box.
4. Double check valve assembly must be tested by a state certified inspector following inspection.

G. Control Wire:
1. Route red control and white common wires from controller to control valves and make connections at each end.
2. Tape control wires together at 10-foot intervals. Provide 24″ expansion loop every 100 feet of wire. Allow 24″ of extra wire at controller and each valve.
3. Splice only at the valves, not between valves or between valve and controller.
4. Route wire below main line wherever possible. Where not routed below mainline, install 4-6 inch wide yellow plastic warning tape 6 inches above the control wire.

H. Automatic Control Valves:
1. Install complete with valve boxes as shown on drawings, no closer than 12″ apart.
2. Thoroughly flush supply lines before installing valves.
3. Install one ball valve/union upstream of the valve in manifold.
4. Use valve box extensions to ensure that box extends 5″ below the bottom of the valve.
5. Leave valve pit with a clean layer of 5/8″ gravel in the bottom of the valve box with 4″ clearance (min.) between gravel and bottom of valve.

I. Master Valve and Flow Sensor:
   1. Install complete master valve and flow Sensor system in valve boxes as shown on drawings.
   2. Flow sensor and master valve shall be direct wired to controller and calibrated to prevent system from running in the event that there is a leak or broken component.
   3. Thoroughly flush supply lines before installing valves.
   4. Install one ball valve/union upstream of the master valve in manifold.
   5. Use valve box extensions to ensure that box extends 5″ below the bottom of the valve.
   6. Leave valve pit with a clean layer of 5/8″ gravel in the bottom of the valve box with 4″ clearance (min.) between gravel and bottom of valve.

J. Irrigation Heads:
   1. Install as shown on drawings and as recommended by manufacturers.
   2. No head shall be closer than 3″ from walk, curb or wall.
   3. Make minor changes in head location as necessary to achieve full head to head coverage. Adjust spray patterns and pressure to achieve coverage and eliminate over-spray onto pavements or buildings.
   4. Flush line before installing irrigation heads.
   5. All irrigation heads must be accessible for adjustment.

K. Tracing wire:
   1. Tracer wire shall be installed on all nonmetallic pipe. All nonmetallic pipe includes all irrigation main lines and laterals. The tracer wire shall be fastened to the top of all nonmetallic pipe at intervals not more than 4 feet on center. The wire shall be long enough to head out of each valve box to finish grade plus two feet. Tracer wires that terminate at the last irrigation head on a lateral shall include six complete wraps around the last irrigation head. Fasten wire to all elbows and bends.

3.04 FIELD QUALITY CONTROL

A. Testing:
   1. Notify Landscape Architect in writing at least three work days prior to all tests and inspections. Inspection reports must be made for all tests.
   2. Thoroughly flush piping before testing and installation of sprinklers.
   3. Hydrostatically test all exposed mainline piping, valves, joints and fittings at 100 psi for one hour prior to inspection by Landscape Architect. If pressure loss occurs, inspect the entire system, make watertight and retest until no pressure loss occurs for a one-hour testing period.
   4. Pressure test must show no pressure loss for the specified period and be approved by the Landscape Architect before backfill of trenches will be allowed.

B. Inspection: Upon completion of the installation and adjusting of the irrigation system, notify the Landscape Architect for a system inspection. At that time, present the following:
   1. Zone by zone system demonstration.
   2. Location of major system components.
   3. Winterization and maintenance procedures.
   4. Procedures for setting the controller, Solar Sync device and master valve/flow sensor.
   5. Location of Zone Map and Controller Schedule.

3.05 ADJUSTING AND TIMING

A. Adjust and balance irrigation system to provide uniform coverage and prevent overspray onto pavements and structures.

B. Set timing on irrigation controller before final inspection. Obtain recommendations of landscaping work installer before setting timing.

3.06 CLEAN UP

A. Area shall be kept free of debris during the course of this project.

B. Remove all debris, dirt, rock, etc. Sweep roadways and wash walls upon completion of work daily.

C. Clean all glue spills off hardscapes, etc.

END OF SECTION 32 84 00

SECTION 32 90 00
PLANTING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Trees.
   2. Shrubs.
   3. Ground cover.
   4. Tree stabilization.
   5. Topsoil
   6. Soil amendments
   7. Mulches
   8. Fertilizer
   9. Tree staking

B. All planting work shall be in accordance with the Kitsap County Code.

1.02 DEFINITIONS

A. Backfill: The earth used to replace or the act of replacing earth in an excavation.

B. Balled and Burlapped Stock: Exterior plants dug with firm, natural balls of earth in which they are grown, with ball size not less than sizes indicated; wrapped, tied, rigidly supported, and drum laced as recommended by ANSI Z60.1.

C. Balled and Potted Stock: Exterior plants dug with firm, natural balls of earth in which they are grown and placed, unbroken, in a container. Ball size is not less than sizes indicated.

D. Bare-Root Stock: Exterior plants with a well-branched, fibrous-root system developed by transplanting or root pruning, with soil or growing medium removed, and with not less than minimum root spread according to ANSI Z60.1 for type and size of exterior plant required.

E. Clump: Where three or more young trees were planted in a group and have grown together as a single tree having three or more main stems or trunks.

F. Container-Grown Stock: Healthy, vigorous, well-rooted exterior plants grown in a container with well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of exterior plant required.

G. Fabric Bag-Grown Stock: Healthy, vigorous, well-rooted exterior plants established and grown in-ground in a porous fabric bag with well-established root system reaching sides of fabric bag. Fabric bag size is not less than diameter, depth, and volume required by ANSI Z60.1 for type and size of exterior plant.

H. Finish Grade: Elevation of finished surface of planting soil in seeded areas or mulch in plant beds.

I. Multi-Stem: Where three or more main stems arise from the ground from a single root crown or at a point right above the root crown.

J. Planting Soil Mix: Imported topsoil; or manufactured topsoil that is modified with soil amendments and perhaps fertilizers to produce a soil mixture best for pant growth.

K. Subgrade: Surface or elevation of subsoil remaining after completing excavation, or top surface of a fill or backfill, before placing planting soil.

L. Subsoil: All soil beneath the topsoil layer of the soil profile, and typified by the lack of organic matter and soil organisms.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Verification: For each of the following:
   1. 5 lb (2.2 kg) of mulch for each color and texture, in labeled plastic bags.

2. Soil mix, in labeled plastic bags.

C. Qualification Data: For qualified landscape Installer.

D. Product Certificates: For each type of manufactured product, from manufacturer, and complying with the following:
   1. Manufacturer's certified analysis for standard products.
   2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.

E. Material Test Reports: For existing surface soil and imported topsoil.

F. Planting Schedule: Indicating anticipated planting dates for exterior plants.

G. Maintenance Instructions: Landscape Maintenance Plan including procedures to be established by Owner for maintenance of exterior plants during a calendar year. Submit before expiration of required maintenance periods.

H. Warranty: Sample of special warranty.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of exterior plants.
   1. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when planting is in progress.

B. Soil-Testing Laboratory Qualifications: An independent laboratory, recognized by the State Department of Agriculture, with the experience and capability to conduct the testing indicated and that specializes in types of tests to be performed.

C. Topsoil Analysis: Engage a qualified soil-testing laboratory stating percentages of organic matter; gradation of sand, silt, and clay content; cation exchange capacity; deleterious material; pH; and mineral and plant-nutrient content of topsoil.
   1. Report suitability of topsoil for plant growth. State-recommended quantities of nitrogen, phosphorus, and potash nutrients and soil amendments to be added to produce satisfactory topsoil. No granular fertilizers shall be used.

D. Provide quality, size, genus, species, and variety of exterior plants indicated, complying with applicable requirements in ANSI Z60.1, "American Standard for Nursery Stock."
   1. Selection of exterior plants purchased under allowances will be made by Landscape Architect, who will tag plants at their place of growth before they are prepared for transplanting.

E. Tree and Shrub Measurements: Measure according to ANSI Z60.1 with branches and trunks or canes in their normal position. Do not prune to obtain required sizes. Take caliper measurements 6 inches (150 mm) above the ground for trees up to 4-inch (100-mm) caliper size, and 12 inches (300 mm) above the ground for larger sizes. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip-to-tip.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver exterior plants freshly dug.
   1. Immediately after digging up bare-root stock, pack root system in wet straw, hay, or other suitable material to keep root system moist until planting.

B. Do not prune trees and shrubs before delivery except as approved by the Contracting Agency. Protect bark, branches, and root systems from sun scald, drying, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of exterior plants during delivery. Do not drop exterior plants during delivery and handling.

C. Handle planting stock by root ball.

D. Deliver exterior plants after preparations for planting have been completed and install immediately. If planting is delayed more than six hours after delivery, set exterior plants and trees in shade, protect from weather and mechanical damage, and keep roots moist.
   1. Heel-in bare-root stock. Soak roots that are in dry condition in water for two hours. Reject dried-out plants.

2. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
3. Do not remove container-grown stock from containers before time of planting.
4. Water root systems of exterior plants stored on-site with a fine-mist spray. Water as often as necessary to maintain root systems in a moist condition.

1.06 PROJECT CONDITIONS

A. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed according to manufacturer's written instructions and warranty requirements.

B. Coordination with Seeding: Plant trees and shrubs after finish grades are established and before seeding unless otherwise acceptable to Landscape Architect.
   1. When planting trees and shrubs after seeding, protect seeded areas and promptly repair damage caused by planting operations.

1.07 WARRANTY

A. Special Warranty: Installer's standard form in which Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Death and unsatisfactory growth, except for defects resulting from lack of adequate maintenance, neglect, abuse by Owner, or incidents that are beyond Contractor's control.
      b. Structural failures including plantings falling or blowing over.
      c. Faulty operation of tree stabilization tree grates.
      d. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   2. Warranty Periods from Date of Substantial Completion:
      a. Trees and Shrubs: Two year.
      b. Ground Cover and Plants: Two year.
      c. Seed Areas: Two year. Guarantee a relatively uniform, acceptable stand of grass with no bare spots over three inches square in seeded areas at time of provisional review (Punchlist). Reseed with the seed and in the manner originally specified any seeded area which fails to vigorously establish a uniform stand for any reason whatsoever. Fill to finish grade with approved topsoil and seed as specified all seeded areas which evidence settlement or erosion. Repeat all such reseeding for one year at Contractor's expense.
   3. Include the following remedial actions as a minimum:
      a. Remove dead exterior plants immediately. Replace immediately unless required to plant in the succeeding planting season.
      b. Replace exterior plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
      c. A limit of one replacement of each exterior plant will be required except for losses or replacements due to failure to comply with requirements.
      d. Provide extended warranty for replaced plant materials; warranty period equal to original warranty period.

1.08 MAINTENANCE SERVICE

A. Maintenance Service for Trees and Shrubs: Provide full maintenance by skilled employees of landscape Installer. Maintain as required in Part 3. Begin maintenance immediately after each area is planted and continue until plantings are acceptably healthy and well established, but for not less than maintenance period below.

B. Maintenance Period: Two years from date of planting completion.

C. Maintenance Service for Ground Cover and Plants: Provide full maintenance by skilled employees of landscape Installer. Maintain as required in Part 3. Begin maintenance immediately after each area is planted and continue until plantings are acceptably healthy and well established, but for not less than maintenance period below.

D. Maintenance Period: Two years from date of planting completion.

E. Maintenance Service for Seeded Areas: Provide full maintenance by skilled employees of landscape Installer. Maintain as required in Part 3. Begin maintenance immediately after each area is planted and continue until plantings are acceptably healthy and well established, but for not less than maintenance period below.

F. Maintenance Period: Two years from date of planting completion.

PART 2 PRODUCTS

2.01 TREE AND SHRUB MATERIAL

A. General: Furnish nursery-grown trees and shrubs complying with ANSI Z60.1, with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock free of disease, insects, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.

B. Provide trees and shrubs of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of trees and shrubs required. Trees and shrubs of a larger size may be used if acceptable to Landscape Architect, with a proportionate increase in size of roots or balls.

C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which shall begin at root flare according to ANSI Z60.1.

D. If formal arrangements or consecutive order of trees or shrubs is shown, select stock for uniform height and spread, and number label to assure symmetry in planting.

2.02 SHADE AND FLOWERING TREES

A. Shade Trees: Single-stem trees with straight trunk, well-balanced crown, and intact leader, of height and caliper indicated, complying with ANSI Z60.1 for type of trees required.
   1. Provide balled and burlapped trees.
   2. Branching Height: One-third to one-half of tree height.

B. Small Spreading Trees: Branched or pruned naturally according to species and type, with relationship of caliper, height, and branching according to ANSI Z60.1; stem form as follows:
   1. Stem Form: Multi-stem.
   2. Provide balled and burlapped trees.

2.03 DECIDUOUS SHRUBS

A. Form and Size: Shrubs with not less than the minimum number of canes required by and measured according to ANSI Z60.1 for type, shape, and height of shrub.
   1. Shrub sizes indicated are sizes after pruning.
   2. Provide container shrubs.

2.04 GROUND COVER PLANTS

A. Ground Cover: Provide ground cover of species indicated, established and well rooted in pots or similar containers, and complying with ANSI Z60.

2.05 PLANTS

A. Vines: Provide vines of species indicated complying with requirements in ANSI Z60.1 as follows:
   1. Two-year plants with heavy, well-branched tops, with not less than 3 runners 18 inches (450 mm) or more in length, and with a vigorous well-developed root system.
   2. Provide field-grown vines. Vines grown in pots or other containers of adequate size and acclimated to outside conditions will also be acceptable.

2.06 TOPSOIL

A. Existing Topsoil shall be retained from existing planting areas to the maximum extent practicable. Existing Topsoil stripped during site clearing shall be stockpiled and amended for reuse as backfill in planting areas. Amendments of existing topsoil shall be calculated based on tests of the soil and amendments and approved by the Engineer. Amended Existing Topsoil shall meet the requirements of Imported Topsoil as described below.

B. Imported Topsoil may be used to supplement Existing Topsoil as needed. Imported Topsoil shall meet the following requirements

1. Cation exchange capacity (CEC) of Topsoil shall be a minimum of 10 milliequivalents CEC/100 g dry soil (U.S. EPA Method 9081).

2. Organic content greater than 10-percent but less than 15-percent as measured on a dry weight basis using AASHTO T 267 Determination of Organic Content in Soils by Loss on Ignition.

3. pH shall be between 6.0 and 7.5.

4. Soluble salt contents shall be less than 3.0 hos/com.

5. Conductivity shall be less than 3 mmhs/cm.

Topsoil shall be 50-percent to 65-percent Sandy Loam and 50-percent to 35-percent Fine Compost by volume. Sandy Loam shall be as defined by the US Department of Agriculture Soil Classification System, meeting the requirements of Table 1; and be free of phyto-toxic materials, and viable seeds, rhizomes or roots of State-listed noxious weeds.

Table 1. Particle Size Analysis for Loam

Sieve Size	Percent Passing
3/4”	100%
1/2”	90-100%
3/8”	85-100%
#4	75-90%
#10	55-75%
#20	45-60%
#30	40-55%
#60	20-40%
#100	20-30%
#200	<30%
#270	<25%
2 µm	<20%

The Fine Compost shall conform to the requirements of Section 9-14.4(8)

Topsoil Submittal Requirements

At least 10 Working Days prior to placement of any soils, the Contractor shall submit the following test results from an independent accredited soils-testing laboratory, for samples gathered and tested less than 90 days prior. The laboratory analysis shall be with a sample size of no less than 2 pounds.

1. Grain size analysis results for Sandy Loam. Using method ASTM D422

2. STA / Washington State Department of Transportation Technical Data Sheet for Compost, from a STA accredited lab.

3. Test results from an accredited soil laboratory for all soil mixes, including the following parameters:
    a. Total and Soluble Nitrogen (NO3 + NH3)
    b. Phosphorus
    c. Potassium
    d. pH

e. Organic Matter % (Loss on Ignition method)
f. Conductivity
g. Calcium
h. Sulfur
i. Boron

4. Recommendations. Fertilizer and amendment recommendations from an accredited Soil Scientist or Agronomist; for the specified plant type and soil application depth.

5. Mix Samples. Two one (1) gallon samples of each soil mix.

Topsoil Acceptance

Contractor shall not place any soils until the Engineer has reviewed and confirmed the following:

1. Deliver tickets must show that the full delivered amount of soil matches the product type, volume and Manufacturer named in the submittals.

2. Delivered product shall be compared to the submitted sample to verify that it matches the submitted sample

The Engineer may inspect any loads of soil and/or delivery tickets on delivery and stop placement if the delivered soil does not appear to match the submittals; and require sampling and testing of the delivered soil before authorizing soil placement. All testing cost shall be the responsibility of the contractor.

2.07 INORGANIC SOIL AMENDMENTS

A. Lime: ASTM C 602, agricultural limestone containing a minimum of 80 percent calcium carbonate equivalent and as follows:
   1. Class: T, with a minimum of 99 percent passing through No. 8 (2.36-mm) sieve and a minimum of 75 percent passing through No. 60 (0.25-mm) sieve.
   2. Class: O, with a minimum of 95 percent passing through No. 8 (2.36-mm) sieve and a minimum of 55 percent passing through No. 60 (0.25-mm) sieve.
   3. Provide lime in form of dolomitic limestone.

B. Sulfur: Granular, biodegradable, containing a minimum of 90 percent sulfur, with a minimum of 99 percent passing through No. 6 (3.35-mm) sieve and a maximum of 10 percent passing through No. 40 (0.425-mm) sieve.

C. Iron Sulfate: Granulated ferrous sulfate containing a minimum of 20 percent iron and 10 percent sulfur.

D. Aluminum Sulfate: Commercial grade, unadulterated.

E. Perlite: Horticultural perlite, soil amendment grade.

F. Agricultural Gypsum: Finely ground, containing a minimum of 90 percent calcium sulfate.

G. Sand: Clean, washed, natural or manufactured, free of toxic materials.

H. Diatomaceous Earth: Calcined, diatomaceous earth, 90 percent silica, with approximately 140 percent water absorption capacity by weight.

I. Zeolites: Mineral clinoptilolite with at least 60 percent water absorption by weight.

2.08 ORGANIC SOIL AMENDMENTS

A. Compost: Well-composted, stable, and weed-free organic matter, pH range of 6.0to 8.5; moisture content 35 to 55 percent by weight;
   1. Medium Compost shall meet the following gradation: 100 percent passing through 1-inch (25-mm) sieve; 90 percent passing through 5/8-inch sieve, 75 percent passing through ¼-inch sieve;

2. Fine Compost shall meet the following gradation: 100 percent passing through a 1-inch sieve; 90 percent passing through a 5/8-inch sieve, 75 percent passing through a 1/4-inch sieve.
3. Soluble salt content of 5 to 10 decisiemens per meter; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:
4. Organic Matter Content: 50 to 60 percent of dry weight.
5. Feedstock: Agricultural, food, or industrial residuals; biosolids; yard trimmings; or source-separated or compostable mixed solid waste.
6. Compst shall have a maximum particle length of 4 inches
7. Medium compost shall have a carbon to nitrogen ratio (C:N) between 18:1 and 35:1. The carbon to nitrogen ratio shall be calculated using the dry weight of "Organic Carbon" using TMECC 04.01A divided by the dry weight of "Total N" using TMECC 04.02D.
8. Maturity shall be greater than 80 percent in accordance with U.S. Composting Council TMECC 05.05-A, "Germination and Root Elongation".
9. Stability shall be 7-mg CO2–C/g OM/day or below in accordance with U.S. Composting Council TMECC 05.08-B "Carbon Dioxide Evolution Rate".
10. The compost product shall originate from organic feedstocks as defined in WAC 173-350 as "Wood waste", "Yard debris", "Post-consumer food waste", "Preconsumer animal-based wastes", and/or "Preconsumer vegetative waste". The Contractor shall provide a list of feedstock sources by percentage in the final compost product.
11. The Engineer may also evaluate compost for maturity using U.S. Composting Council TMECC 05.08-E "Solvita® Maturity Index". Fine compost shall score a number 6 or above on the Solvita® Compost Maturity Test. Medium compost shall score a 5 or above on the Solvita® Compost Maturity Test.

B. Peat: Sphagnum peat moss, partially decomposed, finely divided or granular texture, with a pH range of 3.4 to 4.8.

C. Peat: Finely divided or granular texture, with a pH range of 6 to 7.5, containing partially decomposed moss peat, native peat, or reed-sedge peat and having a water-absorbing capacity of 1100 to 2000 percent.

D. Wood Derivatives: Decomposed, nitrogen-treated sawdust, ground bark, or wood waste; of uniform texture, free of chips, stones, sticks, soil, or toxic materials.
   1. In lieu of decomposed wood derivatives, mix partially decomposed wood derivatives with ammonium nitrate at a minimum rate of 0.15 lb/cu. ft. (2.4 kg/cu. m) of loose sawdust or ground bark, or with ammonium sulfate at a minimum rate of 0.25 lb/cu. ft. (4 kg/cu. m) of loose sawdust or ground bark.

E. Manure: Well-rotted, unleached, stable or cattle manure containing not more than 25 percent by volume of straw, sawdust, or other bedding materials; free of toxic substances, stones, sticks, soil, weed seed, and material harmful to plant growth.

2.09 FERTILIZER

A. General: Approved brands conforming to applicable State fertilizer laws. Uniform in composition, dry, free-flowing, delivered to the site in original unopened containers, each bearing the manufacturer's guaranteed analysis. All fertilizers must be EPA approved.

B. No fertilizer is to be used within 200 feet of or in a biofiltration swale or stormwater management facility. Topsoil may be considered for use as an amendment in barren areas within the 200 foot zone if approved by the Engineer.

C. Fertilizer shall not be used unless a need is established for the site as shown by a soil test. The test shall establish the need, formulation, and application rate.

D. Trees, Shrubs and Ground Cover: Formula 4.2.2 "Transplanter" as manufactured by Pacific Agro Co., with Hercules Nitroform and W.R. Grace's "Magamp" and trace elements. Apply at rate of:

Trees:	8 oz.
Shrubs:	4 oz.
Ground Cover:	2 oz.

E. Agriform Tablets: Planting tablets, 21-gram size, as manufactured by Agriform International Chemicals, Inc., 20-10-5 analysis. Apply at the rate of:

Trees:	4 tablets
Shrubs:	1 tablet
Ground Cover:	1 tablet

2.10 MULCHES

A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:
   1. Type: Medium to fine ground Douglas Fir. Provide in ornamental (i.e. non-enhancement/mitigation) plant beds to a depth of 2″.

B. Arborist Wood Chip Mulch shall be coarse ground wood chips (approximately ½" to 6" along the longest dimension) derived from the mechanical grinding or shredding of the above-ground portions of trees. It may contain wood, wood fiber, bark, branches, and leaves; but may not contain visible amounts of soil. It shall be free of weeds and weed seeds Including but not limited to plants on the Island County Noxious Weed list available at: http://extension.wsu.edu/island/nrs/noxious/weed-list/, and shall be free of invasive plant portions capable of re-sprouting, including but not limited to horsetail, ivy, clematis, knotweed, etc. It may not contain more than 1/2% by weight of manufactured inert material (plastic, concrete, ceramics, metal, etc.).

2.11 TREE STABILIZATION MATERIALS

A. Stakes and Guys:
   1. Upright and Guy Stakes: Rough-sawn, sound, new hardwood, redwood, or pressure-preservative-treated softwood, free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal (38-by-38-mm actual) by length indicated, pointed at one end.
   2. Flexible Ties: Straps of length required to reach stakes. “Gro-Straight” tree ties in required lengths and of uniform color.

B. Root-Ball Stabilization Materials:
   1. Proprietary Devices: Proprietary at- or below-grade stabilization system to secure each new planting by root ball; sized as indicated and per manufacturer’s written recommendations.
      a. Products:
         1) Flexible ties and “Gro-Straight” tree ties in required lengths and of uniform color.
         2) Planter anchors: Cast in place concrete deadman, 6" x 18" with three galvanized u-bolts as detailed.

2.12 MISCELLANEOUS PRODUCTS

A. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer’s written instructions.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas to receive exterior plants for compliance with requirements and conditions affecting installation and performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities, and lawns and existing exterior plants from damage caused by planting operations.

B. Provide erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Landscape Architect’s acceptance of layout before planting. Make minor adjustments as required.

D. Lay out exterior plants at locations directed by Landscape Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

E. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

F. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

G. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.

H. Planting Areas: Apply 'Roundup' in all planting areas in accordance with manufacturer's recommendations and as necessary to remove weed growth.

Scarify upper 1 inch layer of organic matter using Rotara with counter rotating vertical tines. Remove spoils by rolling or scraping with lightweight front-end loader and dispose of on site as directed.

Spade surface with multi-shovel type machine in 2 directions. Restore finish grade with an orchard type level with roller using lightweight tractor.

Following installation of irrigation piping, add specified soil amendments and incorporate into soil to a minimum six inch depth with multiple passes using Rotara with counter-rotating vertical tines and soil packer bar.

Rake, float, drag, roll, and perform all necessary operations to remove surface irregularities and to provide a firm, smooth surface with positive surface drainage.

Remove all rocks, sticks and other debris 1″ and larger in planting areas and seeded areas and dispose of on site as directed. Box drag and hand rake all seeded areas.

Finish grade after preparation of topsoil shall be 1/2″ below adjacent paved surfaces unless otherwise specified or detailed.

3.03 PLANTING AREA PREPARATION

A. Loosen subgrade of planting beds to a minimum depth of 6 inches (150 mm). Remove stones larger than 1 inch (25 mm) in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

B. Finish Grading: Grade planting beds to a smooth, 3% minimum slope (mounded where surrounding grade is less than 3%), uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

C. Before planting, restore planting beds if eroded or otherwise disturbed after finish grading.

3.04 EXCAVATION FOR TREES AND SHRUBS

A. Pits and Trenches: Excavate circular pits with sides sloped inward. Trim base leaving center area raised slightly to support root ball and assist in drainage. Do not further disturb base. Scarify sides of plant pit smeared or smoothed during excavation.
   1. Excavate approximately three times as wide as ball diameter for balled and burlapped stock.
   2. Excavate at least 12 inches (300 mm) wider than root spread and deep enough to accommodate vertical roots for bare-root stock.
   3. If drain tile is shown or required under planted areas, excavate to top of porous backfill over tile.

B. Obstructions: Notify Landscape Architect if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.
   1. Hardpan Layer: Drill 6-inch- (150-mm-) diameter holes, 24 inches (600 mm) apart, into free-draining strata or to a depth of 10 feet (3 m), whichever is less, and backfill with free-draining material.

C. Drainage: Notify Landscape Architects if subsoil conditions evidence unexpected water seepage or retention in tree or shrub pits.

D. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.05 TREE AND SHRUB PLANTING

A. Before planting, verify that root flare is visible at top of root ball according to ANSI Z60.1.

B. Set balled and burlapped stock plumb and in center of pit or trench with top of root ball as detailed adjacent finish grades.
   1. Remove burlap and wire baskets from tops of root balls and partially from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
   2. Place planting soil mix around root ball in layers, tamping to settle mix and eliminate voids and air pockets. When pit is approximately one-half backfilled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed. Water again after placing and tamping final layer of planting soil mix.

C. Set container-grown stock plumb and in center of pit or trench with top of root as detailed adjacent finish grades.
   1. Carefully remove root ball from container without damaging root ball or plant.
   2. Place planting soil mix around root ball in layers, tamping to settle mix and eliminate voids and air pockets. When pit is approximately one-half backfilled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed. Water again after placing and tamping final layer of planting soil mix.

D. Compost Mulching and River Rock Mulching: Apply 2-inch (50-mm) average thickness of mulch. Do not place mulch within 3 inches (75 mm) of trunks or stems.

3.06 TREE AND SHRUB PRUNING

A. Remove only dead, dying, or broken branches. Do not prune for shape.

B. Prune, thin, and shape trees and shrubs as directed by Landscape Architect.

C. Prune, thin, and shape trees and shrubs according to standard horticultural practice. Prune trees to retain required height and spread. Unless otherwise indicated by Landscape Architect, do not cut tree leaders; remove only injured or dead branches from flowering trees. Prune shrubs to retain natural character.

3.07 TREE STABILIZATION

A. Trunk Stabilization: Unless otherwise indicated, provide trunk stabilization as follows:
   1. Upright Staking and Tying: Stake trees of 2- through 5-inch (50- through 125-mm) caliper. Stake trees of less than 2-inch (50-mm) caliper only as required to prevent wind tip-out. Use a minimum of 2 stakes of length required to penetrate at least 18 inches (450 mm) below bottom of backfilled excavation and to extend dimension shown above grade. Set vertical stakes and space to avoid penetrating root balls or root masses.
   2. Use 2 stakes for trees up to 12 feet (3.6 m) high and 2-1/2 inches (63 mm) or less in caliper; 3 stakes for trees less than 14 feet (4.2 m) high and up to 4 inches (100 mm) in caliper. Space stakes equally around trees.
   3. Support trees with bands of flexible ties at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.
   4. Support trees with two strands of tie wire encased in hose sections at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.

3.08 GROUND COVER AND PLANT PLANTING

A. Set out and space ground cover and plants as indicated.

B. Dig holes large enough to allow spreading of roots and backfill with planting soil.

C. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.

D. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.

E. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.09 PLANTING BED MULCHING

A. Mulch backfilled surfaces of planting beds and other areas indicated.
   1. Mulch: Apply 3-inch average thickness of mulch, and finish level with adjacent finish grades. Do not place mulch against plant stems.

3.10 PLANT MAINTENANCE

A. Tree and Shrub Maintenance: Maintain plantings by pruning, cultivating, watering, weeding, restoring planting saucers, adjusting and repairing root-ball stabilization, and resetting to proper grades or vertical position, as required to establish healthy, viable plantings. Spray or treat as required to keep trees and shrubs free of insects and disease. Restore or replace damaged tree wrappings.

B. Ground Cover and Plant Maintenance: Maintain and establish plantings by watering, weeding, mulching, and other operations as required to establish healthy, viable plantings.

C. Seeded Areas: Minimize unnecessary traffic over seeded areas until established. Maintain by watering, continuous weeding, reseeding, fertilizing, rolling and top dressing, and other necessary operations to establish and maintain an even, dark green, deep rooted, thick and vigorous stand of grass. Hand water or provide a temporary irrigation system for any areas (including rough grass) that are not irrigated, until establishment. Contractor's temporary irrigation method must be capable of watering all areas once per day.

3.11 CLEANUP AND PROTECTION

A. During planting, keep adjacent paving and construction clean and work area in an orderly condition.

B. Protect exterior plants from damage due to landscape operations, operations by other contractors and trades, and others. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.

3.12 DISPOSAL

A. Disposal: Remove surplus soil and waste material, including excess subsoil, unsuitable soil, trash, and debris, and legally dispose of them off Owner's property.

END OF SECTION 32 90 00

This page intentionally left blank

SECTION 33 08 55

COMMISSIONING OF FUEL FACILITY SYSTEMS

PART 1 GENERAL

1.01 SUMMARY/APPLICABILITY

A. This specification defines the requirements and procedures for startup and commissioning of fuel facility systems. It covers requirements for safety, Contracting Agency scheduling and coordination, device testing, system flushing and cleaning, demonstration of indicated and specified system performance and final acceptance and reporting.

1.02 SUBMITTALS

A. Submit the following in accordance with Section 1-06
   1. Preconstruction Submittals
      a. Commissioning Plan
   2. Test Reports
      a. Piping Flushing Checklist
      b. Piping Cleaning Checklist
      c. Control Valve Checklist
      d. Commissioning Report
   3. Certificates
      a. Certification of Completion
      b. Disposal of Waste Materials

1.03 SAFETY

A. Prior to any on-site commissioning activities, the following safety procedures shall be accomplished in all fueling areas to be commissioned under this specification section: testing/operation of emergency eyewash facilities, placement of Contractor-provided portable eyewash units within 100 feet or 10 seconds from the fueling point, verification of proper grounding throughout system, coordination with Contracting Agency Fire and Safety Office and Fuels personnel, placement of Contractor-provided spill pads, placement of Contractor-provided fire extinguishers capable of extinguishing a fuel fire. Ensure that all radios/devices at all Class I, Division 1 areas are intrinsically safe.

1.04 SYSTEM SUPPLIER INVOLVEMENT

A. The System Supplier is defined in Specification Section 33 52 10 SERVICE PIPING FUEL SYSTEMS. The Contractor and the System Supplier shall work together to prepare the work plan, commissioning plan, test reports and final reports. They shall both be present during all commissioning activities and shall coordinate and schedule the work during construction, testing, calibration and acceptance of the system, and operator training. The System Supplier shall be responsible to the Contractor for scheduling all Contractor, sub-Contractor, and manufacturer's service personnel during system startup and final commissioning.

1.05 COMMISSIONING PLAN

A. The Contractor shall submit a detailed written plan with input from the system supplier for implementation of system commissioning. The commissioning plan shall specify a detailed plan incorporating in an sequenced manner all work specified in PART 3 EXECUTION of this specification section. The plan shall be submitted for Contracting Agency approval 90 calendar days prior to commencement of fuel system commissioning. The plan shall include:
   1. Personnel. List of Contractor's personnel by trade, list of key personnel, list of safety equipment, list of miscellaneous equipment such as two-way radios, and personnel transportation vehicles.
   2. Performance Testing. Detailed equipment startup procedures and schedules to perform all system tests under each operating scenario in accordance with paragraph entitled "Performance Tests".
   3. Test forms. Develop all test forms required for documenting the fuel system commissioning work. The format of the test forms shall follow the sequencing and

terminology of the commissioning plan and shall furnish data grids and ample areas for test data recording.

4. Schedule. Schedules shall generated listing dates and durations of all commissioning activities as well as regular coordination and safety meetings and dates of key events for Contracting Agency participation.
5. Fuel. Quantities of fuel needed for all commissioning activities and fuel delivery schedules. Plan shall include requirements and schedules for Contracting Agency-provided materials and equipment.
6. Contingency plans. Information on spill and fire contingencies, along with the required Contracting Agency Fire and Safety Office involvement and approvals.
7. Coordination with Contracting Agency. Description of how Contractor and system supplier shall implement system start-up in coordination with ongoing Contracting Agency operations. Plan shall incorporate all phasing and work restriction requirements of the Contract Documents.

1.06 CERTIFICATION OF COMPLETION

A. As a prerequisite to fuel system commissioning, the Contractor shall submit a Certificate of Completion that certifies all work provided on the fuel system, except for field painting, has been inspected and approved by the specified approving authorities. Further, the Contractor shall certify on this certificate that all specified checks and inspections have been successfully completed prior to commissioning. The Contractor shall give the Contracting Agency Representative at least 45 calendar days notice prior to commencement of fuel system commissioning. The Contractor shall submit the Certificate of Completion to the Contracting Agency Representative at least 7 calendar days prior to commencement of system commissioning. The Contracting Agency Representative shall then be responsible for scheduling Contracting Agency representatives for participation in the inspection, performance testing, and final approval activities. Any contractual deficiencies observed shall be corrected by the Contractor without cost to Contracting Agency.

1.07 COMMISSIONING REPORT

A. Contractor shall prepare a commissioning report that documents the execution of the approved commissioning plan. All items of work specified in the commissioning plan shall be carried out and reported in this report unless otherwise approved by the Contracting Agency Representative. Include as a part of this report verification letters of approved fuel storage tank hydrostatic tests and the piping hydrostatic tests, as generated under other specification sections. The commissioning report shall include the final settings of the control valves and pressure and flow switches and a copy of the strip chart graphs with an explanation of what each graph indicates and what the system is doing.

PART 2 PRODUCTS

2.01 DESIGN CONDITIONS

A. Temporary flushing lines and equipment shall be equal in strength, stability, and materials to the associated permanent components; however, temporary spools may be carbon steel.

2.02 CONTRACTOR PROVIDED MATERIALS AND EQUIPMENT

A. The Contractor shall provide all material, equipment and labor required for proper start-up of the system(s), except for that specified to be Contracting Agency furnished. Equipment shall include but not be limited to the following:
   1. Temporary strainers.
   2. Pipe spools.
   3. Flow meters.
   4. Pressure Gages.
   5. Electronic sensors and strip recorders for pressure and flow recording are included in the PCP. This equipment shall be used to monitor and record the system during the "Equipment Test" and "Performance Testing" portions of this Specification Section.

Recorded data shall be used by the Contractor and equipment factory representatives to achieve final control valve and equipment adjustments. Recorded data shall include:

1) Fueling pumps discharge pressures.
2) Supply Venturi flow rates.
3) Back Pressure Control Valve upstream pressures.
4) Back Pressure Control Valve downstream pressures.
5) Return Venturi flow rates.

6. The Contractor must have on hand sufficient filter/separator elements and cartridges to adequately clean the system. During cleaning operation specified in paragraph below, "Cleaning, Testing and Sampling", Contractor shall provide a flow versus pressure drop graph for each filter. Contractor shall change elements and cartridges per manufacturer's recommended maximum DP at the actual flow rate, or when pressure drop is less than previously graphed or fails to increase properly.
7. Refueled tanker trucks for flushing and draining of the system.
8. The Contractor shall be responsible for providing the electrical power from a source identified by Contracting Agency to the testing locations.
9. Temporary filtration/strainers.

PART 3 EXECUTION

3.01 PRELIMINARY REQUIREMENTS

A. All activities listed in paragraph "PART 3 EXECUTION" shall be performed sequentially in the order they are presented. Prior to any on-site commissioning activities, the Contractor shall ensure that all requirements of the paragraph entitled "Safety" are satisfied. Project shall be substantially complete and Contractor's work area shall be free of debris, trash and obstacles. Perform the following activities prior to receipt of fuel:

B. Electrical Preparations. Prior to energizing the electrical equipment, verify that short-circuit links have been removed from current transformer and that secondary circuits have been connected. Verify all electrical transmitter connections and ensure proper calibration. Verify all electrical equipment meets Class I Division 1 requirements. Verify correct rotation of all motors prior to testing. Verify paddle type flow switches by physically actuating vanes and checking outputs. Conduit explosion-proof sealoffs shall be poured after initial electrical checks but before fuel receipt.

C. Emergency Fuel Shutoff (EFSO) System Testing. Prior to initial fuel receipt, verify that each switch will trip the circuit breaker of the fuel pumps and de-energize the EFSO relay and close the main emergency fuel shut-off valve.

D. Storage Tanks. Verify operation of tank level alarms.

E. Piping System. Ensure that all piping weld integrity and coating inspections have been performed per the applicable specifications. Include verification of approved test results for information in the commissioning report. Evacuate all accumulated water from piping low point drains, valve cavities, and equipment drains. Verify all bolted connections are tightness tested to required torque using a calibrated torque wrench. Verify that all pressure gauges are properly located and installed. Ensure that piping's cathodic protection system is tested and operational. Ensure that pipe marking and identification is provided as specified. Ensure that piping system thermal relief provisions are installed and operating as designed. Verify the correct installation of piping expansion loops, joints, and supports.

1. Float Piping Systems. For floats over-water piping installations, ensure compliance with the Contractor's previously approved spill control plans.

3.02 PREPARATIONS FOR FLUSHING

A. Upon completion of the construction to the satisfaction of the Contracting Agency Representative, the Contractor shall make the following preparations for system flushing.

B. Protection Of Equipment. The following components shall be removed from the system prior to start of flushing operations and, where applicable, replaced with pipe spools of internal diameter equal to the item removed.

1. Control valves.

2. Flow and pressure sensors which are exposed to the system flush.
3. Fuel meters. After flushing, the above items shall be reinstalled in the system and the spool sections turned over to the Contracting Agency Representative.

C. Water Draw-Off. Remove any accumulated water from storage tanks' sumps and bottoms. Drain water and return fuel via filtration to storage tank. Repeat process until all water is removed.

3.03 INITIAL FUEL RECEIPT

A. General. Utilize one storage tank for initial fuel receipt to isolate contaminated fuel. Initial receipt of fuel shall be done by gravity if possible. The Contractor shall station personnel throughout piping system at high point vents to bleed air. All flanges and equipment will be periodically inspected for leaks during filling procedures.

B. Storage Tanks. Receipt flow rate into storage tank shall not exceed 3 feet per second (FPS), as measured in the main receipt piping.

C. Components. Ensure that filter/separators and other vessels are filled slowly by closing outlet valves and venting through air eliminators. Downstream valves shall be throttled to maintain a packed condition in vessels throughout initial fill of piping system. Differential pressure across strainers and filters shall be continuously monitored. Any time a strainer or filter DP reaches 20 psig, it shall be cleaned or replaced.

D. Fuel Quality. Fuel used during initial receipt shall be considered contaminated and shall be positively isolated, with blind flanges or closed, padlocked manual valves, from any truck fueling operations. Fuel isolation shall continue until all flushing and cleaning is completed.

E. Fuel Receipt.
1. Receipt by Commercial Truck. Coordinate with Contracting Agency personnel to schedule quantity of trucks required. Contractor's personnel shall be positioned at the unloading facility, at the utility enclosure, and at the receipt tank, all in radio contact. Contractor shall provide a written summary of truck receipt procedures to the Contracting Agency Representative. If truck unloading system is newly constructed, perform initial receipt, flushing, and testing prior to performance testing.

F. Initial Low Point Flush. Perform an initial low point flush operation by flushing each low point drain through a portable basket strainer for 10 seconds at a system pressure of 30 psig. Repeat flush until basket strainer collects no additional debris.

G. Storage Tank and Piping Hydrostatic Tests with Fuel. After initial receipt of fuel into storage tanks, perform tank hydrostatic tests with fuel per Specification Section 33 52 10 Fuel-Oil System. Remaining system piping shall be packed with fuel, following procedures outlined in paragraph "General" above. Perform piping hydrostatic tests with fuel per the applicable specifications, ensuring the piping system is completely vented of air through the piping high point vent system. Contractor shall submit a tank and piping testing checklist to ensure the requirements of this and other applicable specifications are met.

3.04 FLUSHING

A. The intent of the flushing operation is to remove bulk solids and water from the system. Flushing procedures shall precede cleaning procedures. All new fuel piping, pier and float piping, utility enclosure piping, supply and return lines from the storage tanks, shall be flushed with fuel.

B. Flushing Requirements. Begin flushing of fuel system pipelines at low flow rates using one delivery pump. Slowly increase flushing flow rate with additional pumps until a +/-12 FPS fuel velocity is achieved or to full flow capacity for a minimum of 30 minutes. For gravity, suction, or other non-pumped piping segments, minimum flushing volume shall be four times the pipe volume. Flushing shall continue until the fuel being delivered is free of construction debris to the satisfaction of the Contracting Agency Representative. Samples of fuel shall be taken and tested by the designated Contracting Agency agency and shall be free of gross contamination and visible free water.

C. Fueling System Piping. The flushing of system pipelines shall be accomplished by pumping fuel from one storage tank through the fueling system piping. After high-speed flush of main system piping, all piping laterals shall be flushed with at least one refueling truck (5000 gallons) of fuel. Air shall be bled from system high points. The procedure shall be continued until the fuel being delivered into the tanks is acceptable to the Contracting Agency Representative. After the main piping system has been flushed to the satisfaction of the Contracting Agency Representative, and periodically during the flushing operation, the Contractor shall flush all high point vents and low point drains for a minimum of 10 seconds at a pressure of 30 psig. Remove any accumulated water from storage tank sumps and bottoms. Strainers shall be kept clean in order to insure maximum flow rate. All accumulated material from the strainers shall be reviewed and identified, including source if possible. Upon completion of the first flushing operations, the strainers shall be cleaned, reinstalled, and remain in the system. In addition, baskets from all strainers shall be removed and cleaned.

D. Float Piping. Float piping must be hydrostatically tested with fresh water per the applicable specification. After testing, flush piping with fresh water at 12 FPS for 30 minutes. Drain all water from piping system and refill with product. Perform flushing with product at 12 FPS for 30 minutes. After approval by the Contracting Agency Representative.

E. Piping Flushing Checklist. The Contractor shall generate a comprehensive matrix of all new piping sections in the system. Matrix shall serve as an Contracting Agency's piping inventory and a checklist for all Contractor-provided flushing operations. Column entries shall include pipe section name, location, diameter, approximate length, flushing fuel velocity and volume achieved and acceptable results of sampling.

3.05 CLEANING, TESTING, AND SAMPLING

A. After the completion of the initial flushing and cleaning, all new piping shall be cleaned in accordance with the procedure specified hereafter. The intent of this cleaning operation is to remove trace solids and water from the system.

B. Preparation for Cleaning. Filter elements shall be installed in the filter/separators. Adjust filter/separator flow control valve. Valves and equipment removed for flushing shall be reinstalled. Tanks shall be drained, vapor freed and cleaned per the tank cleaning specification. Transfer the contents from one storage tank to the other through the filter/separators for the purposes of cleaning. Provide temporary filtration as required to prevent cross-contamination of fuel.

C. Cleaning Requirements. Pump fuel through all new piping sections in the system. Fuel velocity during all cleaning operations shall be full pumping capacity. Minimum cleaning volume through non-pumped piping segments shall be four times the pipe volume. Cleaning shall continue until Contracting Agency Representative certifies that the fuel contains 2 milligrams per gallon or less of particulate and 10 parts per million or less of free water. Perform sampling at all system discharge points, at tanks, and throughout piping system. Sampling and testing shall be done by an independent testing laboratory.

D. Cleaning Procedure. During cleaning procedure periodically bleed air through high point vents and flush low point drains for a minimum of 10 seconds at a system pressure of 30 psig. Monitor pressure drop through the filter/separators during each cleaning operation and provide flow vs. pressure drop graphs. Any time filter/separator DP reaches its maximum allowable value, vessel elements should be replaced.

E. Piping Cleaning Checklist. The Contractor shall generate a comprehensive matrix of all new piping sections in the system. Matrix shall serve as a checklist for all Contractor-provided cleaning operations. Column entries shall include pipe section name, location, diameter, approximate length, fuel velocity and volume achieved, and acceptable results of sampling.

3.06 CONTROL VALVE ADJUSTMENT

A. All control valve settings shall be checked and field adjusted from the factory settings at start-up as necessary to provide a smooth operation.

B. Control Valve Checklist. The Contractor shall generate a comprehensive matrix of all control valves in the system. Matrix shall serve as a checklist of all required control valve features, settings, and functions as specified. Submit matrix with commissioning "Final Reports".

3.07 EQUIPMENT TESTS

A. After completion of flushing, cleaning, and control valve and electrical component adjustments, the equipment tests and performance tests specified hereinafter shall be performed. After cleaning is complete and prior to performance testing, field adjust automatic control valves and automatic pump controls. For final adjustment of installed electrical control equipment the Contractor shall provide an experienced electrical engineer, factory representative of control panel manufacturer. Both the mechanical and electrical components shall be adjusted concurrently. Tests will be witnessed by Contracting Agency representatives.

B. Emergency Fuel Shutoff System (EFSO). With one fueling pump operating, test each "Emergency Stop" pushbutton station to verify that the pumps stop and fuel control valve of each dispenser close. Demonstrate operation of the EFSO station at the control center. Repeat this procedure for each fueling pump. Conduct tests for both the automatic and manual modes. With all the fueling pumps circulating fuel through the system, push an "Emergency Stop" pushbutton station, ensure all pumps stop, and emergency fuel control valves close at each dispenser.

3.08 PERFORMANCE TESTS

A. During performance testing, the Contractor shall demonstrate that all portions of the fuel system are operating as designed and specified. Tests shall be performed under all operating scenarios. Additional tests may be required by the Contracting Agency Representative to fully demonstrate system performance. These tests shall be accomplished by the Contractor at no additional cost to Contracting Agency. The Contractor shall notify the Contracting Agency Representative 15 calendar days in advance of the test to permit arrangement for the use of Contracting Agency furnished items. Record required data necessary to prepare reports specified in paragraph entitled "Commissioning Report".

B. Fuel Receipt Systems (for Gasoline and for DFM).
   1. Drop tank systems. Demonstrate the following features:
      a. Tank overfill valve closure upon tank high level condition.
      b. Level alarm actuation.
      c. On/off staging of pumps by tank level alarms/probes.
      d. Pump shutdown on tank low level condition.
      e. Tank leak detection system performance (remove probes and actuate by dipping into water/fuel test buckets).
      f. Manual start/stop pushbutton control.
      g. Tank gauging system.
      h. Pump shutdown upon no-flow condition signal from flow switch.
      i. Receipt meter performance.

C. Demonstrate all other tank features and functions per the applicable specifications.

D. Marine Fueling Systems. Demonstrate the following features:
   a. Performance of dispenser meters and verification of proper calibration.
   b. Performance of filter/separators.
   c. Dispensing hose/nozzle assembly function and operating range.
   d. Operation of vents, drains, air eliminators, and hose connections.

E. Satisfactory Performance. In the event a portion of the system or any piece of equipment fails to meet the test, the Contractor shall make the necessary repairs or adjustments and repeat the Performance Test until satisfactory performance is obtained. Measured flow rates should be within 5 percent of design. Tank level gauging and alarm measurements should be within 5 of design. Any component found not to be working as specified shall be repaired/replaced by the Contractor at no additional cost to Contracting Agency. The determination of satisfactory performance shall be made by the Contracting Agency representatives. The system shall be filled with fuel and shall be operable and leak-free prior to acceptance. The Contractor shall be

responsible for any leaks in the new or modified portions of the system. Anything wet with fuel is considered to be leaking.

3.09 TRAINING / INSTRUCTION FOR GOVERNMENT PERSONNEL

A. The contracting authority should provide one or two key personnel from their "operations" and "maintenance" departments to participate in all phases of system commissioning. The Contractor and System Supplier will be responsible for coordinating the involvement and training of these individuals during the startup process, including hands-on familiarization and adjustment of devices, valves, and components.

B. In addition, the Contractor and System Supplier shall conduct an 8-hour formal training session at the conclusion of system performance testing. This session shall include initial classroom system presentations as well as a complete system walk-through. The function, operation and maintenance procedures for all system devices and components will be explained. Training shall be videotaped and submitted in CD ROM or DVD format.

3.10 PROJECT CLOSEOUT

A. Ensure that As-Built drawings, equipment warranty documentation, and other project closeout activities are completed per the requirements of the applicable specifications.

SECTION 33 14 16
SITE WATER UTILITY DISTRIBUTION PIPING

PART 1 GENERAL

1.01 DESCRIPTION

A. This work-in consists of construction water main in accordance with the Stand Plans, at the location shown in the plans.

1.02 SUBMITTALS

A. Product Data: Provide data on pipe materials, pipe fittings, valves and accessories.

PART 2 PRODUCTS

2.01 WATER PIPE

A. In accordance with Section 7-09.2 of the Standard Specifications

PART 3 EXECUTION

3.01 CONSTRUCTION REQUIREMENTS

A. In accordance with Section 7-09.3 of the Standard Specifications.

END OF SECTION 33 14 16

This page intentionally left blank

SECTION 33 16 00
STORAGE TANKS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Underground water tanks for containment and storage of water from floor drains inside the HHW and ROF buildings.

1.02 RELATED REQUIREMENTS

A. Section 31 20 00 “Earthwork.”

B. Section 03 30 00 “Concrete.”

1.03 REFERENCES

A. Underground Water Tanks in the United States:
   1. American Concrete Institute (ACI) standard ACI 318, Building Code Requirements for Structural Concrete.
   2. ANSI/AWWA D120 - Thermosetting Fiberglass-Reinforced Plastic Tanks.
   3. Tank manufacturer shall be recognized by Underwriters Laboratories as a manufacturer of tanks listed to the UL-1316 standard.

1.04 SUBMITTALS

A. Submit under provisions of Section 01300 - Administrative Requirements.

B. Product Data: Submit manufacturer's data sheets on each product to be used, including, but not limited to, the following:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation manual and operating guidelines.

C. Shop Drawings: Tank manufacturer shall submit the following for review and approval prior to fabrication of the tanks:
   1. Detailed shop drawings of each tank complete with all accessories supplied by the manufacturer.
   2. Detailed shipping, handling and installation instructions.

1.05 QUALITY ASSURANCE

A. Tank installations in the United States:
   1. Regulatory Requirements: Comply with applicable requirements of the laws, codes, ordinances, and regulations of Federal, State, and local authorities having jurisdiction.

1.06 DELIVERY, STORAGE, AND HANDLING

A. General: Comply with tank manufacturer's Installation and Operating Guidelines recommendations for delivery, storage, and tank handling.

1.07 WARRANTY

A. Warranty: Provide manufacturer's standard limited warranty.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Tank installations in the United States:
   1. Acceptable Manufacturer: Xerxes Corporation.

B. Substitutions:
   1. Requests for substitutions will be considered in accordance with provisions of Section 1-06.7 - Product Requirements.

2.02 UNDERGROUND WATER TANKS

A. Tank Design - Fiberglass reinforced plastic (FRP) tanks:
   1. The tank size, fittings and accessories shall be as shown on the drawings.

2. Tank shall be manufactured with structural ribs which are fabricated as in integral part of the tank wall.
3. Tank shall be manufactured with a laminate consisting of resin and glass fiber reinforcement only. No sand/silica fillers or resin extenders shall be used.
4. Tank shall be vented to atmospheric pressure.
5. Tank shall be capable of handling liquids with specific gravity up to 1.1
6. Tank shall be compatible with liquids identified in the manufacturer's standard limited warranty.

B. Loading Conditions - Tank shall meet the following design criteria:
1. Internal Load - Tank shall be designed to withstand a 5-psig (35 kPa) air-pressure test with a 5:1 safety factor.
2. Surface Loads - Tank shall be designed to withstand surface H-20 and HS-20 axle loads when properly installed according to manufacturer's current Installation Manual and Operating Guidelines.
3. External Hydrostatic Pressure - Tank shall be designed for 7 feet (2.1 m) of overburden over the top of the tank, the hole fully flooded, and a safety factor of 5:1 against general buckling.

C. Stormwater Detention Applications:
1. Governing Standards, as applicable:
a. ANSI/AWWA D120 - Thermosetting Fiberglass-Reinforced Plastic Tanks.
b. American Concrete Institute (ACI) standard ACI 318, Building Code Requirements for Structural Concrete.
c. Tank manufacturer shall be recognized by Underwriters Laboratories (UL) as a manufacturer of tanks listed to the UL-1316 standard.
2. Tank Accessories:
a. Tank Anchoring:
1) Anchor straps shall be as supplied by tank manufacturer and designed for a maximum load of 25,000 lbs (11340 kg).
2) Galvanized turnbuckles shall be supplied by the tank manufacturer.
3) Prefabricated concrete anchors shall be supplied by the tank manufacturer, designed to the ACI 318 standard, manufactured with 4,000 psi concrete and shall have adjustable anchor points.
b. Access Openings:
1) All access openings shall have a diameter of 24 inches or 30 inches (610 mm or 762 mm), complete with riser, lid and necessary hardware.
c. Attached Access Risers:
1) Attached access risers shall be PVC or FRP as supplied by tank manufacturer.
2) Attached access risers shall be 24 inches or 30 inches (610 mm or 762 mm) diameter
3) Access risers shall be attached to access openings during installation utilizing adhesive or FRP bonding kits as supplied by the tank manufacturer.
d. Piping and Fittings:
1) Tank shall be equipped with factory-installed threaded fittings, or pipe stubs.
2) PVC piping shall at a minimum meet the requirements of ANSI Schedule 40.
3) All flanged nozzles shall be flanged and flat-faced, and conform to Class 150 bolting patterns as specified in ANSI/ASME/ B16.5.
4) Carbon steel and stainless steel NPT fittings shall withstand a minimum of 150 foot-pounds (203 NM) of torque and 1,000 foot-pounds (1356 NM) of bending, both with a 2:1 safety factor.

e. Manway Openings:
1) The standard manway shall be flanged, 22 inches (559 mm) I.D. and complete with gaskets, bolts and cover.
2) Manway openings shall be designed to withstand 5-psig (35 kPa) test pressure with a 5:1 safety factor.

f. Ladders: Ladders shall be the standard FRP ladder as supplied by tank manufacturer.
g. Pumps and accessories: Provide pump and pump accessories for 20 amp pump with 2-inch piping connection for pumping water from the tank.

PART 3 EXECUTION

3.01 TESTING

A. Tank shall be tested according to the tank manufacturer's Installation Manual and Operating Guidelines in effect at time of installation.

3.02 INSTALLATION

A. Tank shall be installed according to the tank manufacturer's Installation Manual and Operating Guidelines in effect at time of installation.

SECTION 33 31 23.01
OSS EFFLUENT TRANSPORT PIPING

PART 1 GENERAL

1.01 DESCRIPTION

A. The construction of OSS effluent transport pipe sewerage force main as shown in the plans, Appendix C, and Kitsap Public Health District regulations.

PART 2 PRODUCTS

2.01 FORCE MAIN PIPE MATERIALS

A. Polyfusion HDPE 2” diameter effluent transport pipe

B. PVC Schedule 40 2” diameter effluent transport pipe in accordance with WSDOT specification 9-30.1(5)B

C. PVC Schedule 3034 sleeving pipe in accordance with WSDOT specification 9-30.1(5)A

PART 3 EXECUTION

3.01 INSTALLATION

A. In accordance with the plans, details of Appendix C, and Kitsap Public Health District Regulations.

B. Install a minimum of 3’ below finish grade.

SECTION 33 34 13
SEPTIC TANKS AND PUMP CHAMBERS

PART 1 GENERAL

1.01 SUBMITTALS

A. Septic installer certification with Kitsap Public Health.

B. Shop Drawings: Catalog cut of tanks and chambers.

C. Provide project Record of Construction information to the designer.

PART 2 PRODUCTS

2.01 SEPTIC TANK

A. Tank Capacity: 1,000 gallon.

B. Hagerman tanks or equivalent.

2.02 PUMP CHAMBER

A. Tank Capacity: 1,000 gallon.

B. Hagerman tanks or equivalent.

2.03 SUBMERSIBLE CENTRIFUGAL PUMP SYSTEM

A. Furnish pumps, connecting pipes, check valves, float switches, service valved, risers, threaded unions, and control panel and panel conduit and conductors as shown in the plans and Appendix C.

B. Liberty 280 pump or equivalent.

2.04 CONNECTING PIPE MATERIALS

A. 4’ diameter PVC Plastic Pipe Schedule 3034.

2.05 BACKFILL MATERIALS

A. Tank and Chamber Backfill Material: Gravel borrow per Standard Specification 9-03.14(1).

2.06 CONTROL PANEL SYSTEM

A. Furnish control panel, conduit, and conductors as shown in the plans, OSS details of Appendix C

B. SJE Rombus Simplex or equivalent.

PART 3 EXECUTION

3.01 INSTALLATION

A. In accordance with Kitsap Public Health District standards.

SECTION 33 46 00
STORMWATER MANAGEMENT

PART 1 GENERAL

1.01 SUBMITTALS

The Contractor shall submit Type 2E Working Drawings and supporting calculations to the Engineer in accordance with Section 1-05.3 and Section 6-02.3(25)A for the Stormwater Detention Vault. The Contractor shall not begin installation prior to receiving approved Working Drawings from the Engineer.

The following items shall be submitted unless specified otherwise herein.

A. Preconstruction Submittals
   1. The precast manufacturer shall submit a copy of their quality control/assurance manual, which establishes quality control procedures.

B. Drawings
   1. Section 6-02.3(28)A, items 1 through 6
   2. Drawings shall show the design loads and standards have been met.
   3. Details for all precast components included base, top, side, and end walls, sediment baffle wall, including reinforcement details for pipe knockouts.
   4. Complete, site specific, itemized bar list for all steel reinforcement. Details of steel reinforcing size and placement shall be submitted with a professional engineering stamp and calculations.
   5. The drawing for submittal shall show locations and dimensions to all penetrations and special embed items. Product dimensions and thicknesses shall be shown, and the drawing shall be to a common architectural scale with the precast producer's information in the title block.
   6. The vault drawings shall include a concrete placement plan identifying joint types, joint locations, and concrete placement sequence.
   7. Erection and backfill procedure.

C. Precast Concrete Unit Data
   1. Anchorage, Lifting Inserts and Devices
      a. For anchors, lifting inserts and other devices, the precast concrete producer shall provide product data sheets and proper installation instructions upon request.
   2. Accessory Items
      a. For items including, but not limited to sealants, gaskets, pipe entry connectors, steps, racks, and other items installed before or after delivery, the precast concrete producer shall include proper installation instructions and relevant product data upon request.

D. Design Data
   1. The precast concrete producer shall supply submittals showing design loading and material specifications for supplied products. At a minimum, the following shall be shown on the submittals:
      - Live load used in design
      - Vertical and lateral earth loads used in design
      - Depth of soil fill on the structure
      - Water table depth used in calculations
   2. Upon request, the precast concrete producer shall supply precast concrete unit design calculations and concrete mix design proportions and appropriate mix design test data. Structural design calculations shall be sealed by a licensed professional engineer in the state of this project.

E. Test Reports
   1. Upon request, the precast concrete producer shall supply copies of material certifications and/or laboratory test reports, including mill tests and all other test data, for Portland cement, blended cement, pozzolans, ground granulated blast-furnace slag, silica fume, aggregate, admixtures, and curing compound proposed for use on this project.

2. Upon request, the precast concrete producer shall submit copies of test reports showing that the mix has been successfully tested to produce concrete with the properties specified and will be suitable for the project conditions. Such tests may include compressive strength, plastic air content, temperature of freshly mixed concrete, and slump of freshly mixed concrete. Special tests for precast concrete items shall be clearly detailed in the specifications
3. Upon request, the precast concrete producer shall supply copies of in-plant QA/QC inspection reports.

1.02 PRECAST CONCRETE VAULT DESIGN

The precast unit design shall meet the following design criteria:

A. Precast Concrete Unit Design

Design standard precast concrete units to withstand design load conditions in accordance with the applicable industry design standards. Design must also consider stresses induced during handling, shipping, and installation in order to avoid product cracking or other handling damage. Design loads for precast concrete units shall be indicated on the shop drawings, and designed by a licensed professional engineer.

Vault Design

Loads:

The vault shall be designed for a live load of HS-25 (AASHTO Load Factor

Design method, LFD) and a fire truck outrigger load of 43,000 pounds, applied to an area of 24 inches by 24 inches located on 16-foot centers, where it will produce the maximum moment in the vault lid.

Standards: ASTM C857 "Minimum Structural Design Loading for Underground Precast Concrete Utility Structures", ACI-318-05 Building Code, and ASTM C88 "Underground Precast Concrete Utility Structures".

Vault shall be designed for saturated soil loading. with a minimum cover of 2 feet and a max cover of 5 feet.

The Contractor shall provide the vault design and method of shoring the vaults for the Engineer's approval. The vault design shall satisfy the design criteria and professional engineer's certification, as specified herein.

Geotechnical design parameters (e.g. lateral earth pressures; bearing, passive lateral and sliding resistances; skin friction for buoyancy; etc.) are discussed in the Geotechnical Engineering, see Section 1-02.4(2).

The groundwater table shall be assumed to be above the top elevation of the vault.

PART 2 PRODUCTS

2.01 MATERIALS

Reinforcement

Reinforcing Bars: ASTM A 615, Grade 60, deformed.

Steel-welded Wire Fabric: ASTM A 185, plain, cold drawn.

Supports for Reinforcement: Provide supports for reinforcement, including bolsters, chairs, spacers, and other devices for spacing, supporting and fastening reinforcing, complying with CRSI recommendations.

Ladders, Covers and Risers

Vault access ladders shall be made of polypropylene coated steel materials and meets requirements of AASHTO M199.

A. Joints and Sealants
   1. Joints and sealants between adjacent units shall be of the type and configuration indicated on the shop drawings meeting specified design and performance requirements.

B. Concrete Mix Design
   1. Concrete type

a. For non machine cast products, the concrete shall be self-consolidating concrete which produces minimal bugholes and does not segregate.

2. Concrete Proportions
   a. Selection of proportions for concrete shall be based on current self- consolidating concrete mix design techniques. At a minimum, ACI 211.1 shall be used.
   b. Upon request the precast concrete producer shall submit a mix design for each strength and type of concrete that will be used. Submitted mix designs shall include the quantity, type, brand and applicable data sheets for all design constituents as well as documentation indicating conformance with applicable reference specifications.
3. Durability and Performance Requirements
   a. Concrete Compressive Strength
      1) Precast concrete units shall have a 28-day compressive strength of 6000 psi for SCC.
   b. Water-Cementitious Ratio
      1) Concrete that will be exposed to freezing and thawing shall contain air and shall have a water-cementitious ratio of 0.45 or less. Concrete which will not be exposed to freezing, but which is required to be leak resistant, shall have a water-cementitious ratio of 0.48 or less. For corrosion protection, reinforced concrete exposed to deicer salts, brackish water or seawater shall have a water-cementitious ratio of 0.40 or less.
   c. Air Content
      1) The air content of concrete that will be exposed to freezing conditions shall be within the limits given below

Nominal Maximum Aggregate size (in)	Air Content %	
	Severe Exposure	Moderate Exposure
3/8	6.0 to 9.0	4.5 to 7.5
1/2	5.5 to 8.5	4.0 to 7.0
3/4	4.5 to 7.5	3.5 to 6.5
1	4.5 to 7.5	3.0 to 6.0
1-1/2	4.5 to 7.0	3.0 to 6.0
*For specified compressive strengths greater than 5000 psi, air content may be reduced 1%		

C. Impermeable Layer: Group A-4 in accordance with ASTM D3282.

2.02 OUTLET STRUCTURES FOR STORMWATER PONDS

A. Precast Concrete: Reinforced, integrated lift rings, in accordance with ASTM C913.

B. Corrugated Metal: Galvanized sheet steel in accordance with ASTM A929/A929M with helical lock seams.

C. Trash Racks: Cast iron, heavy duty bar screen.

D. Concrete Base: See Section 03 30 00.

PART 3 EXECUTION

3.01 DELIVERY, STORAGE, AND HANDLING

A. Handling

Precast concrete units shall be handled and transported in a manner to minimize damage. Lifting devices or holes shall be consistent with industry standards. Lifting shall be accomplished with methods or devices intended for this purpose as indicated on the shop drawings. Upon request, the precast concrete producer shall provide documentation on acceptable handling methods for the product.

B. Storage

Precast concrete units shall be stored in a manner that will minimize potential damage.

C. Delivery

Precast concrete units shall be delivered to the site in accordance with the delivery schedule. Upon delivery to the jobsite, all precast concrete units shall be inspected by the customer's agent for quality and final acceptance.

The delivery of the precast concrete units shall be scheduled to meet the traffic control requirements of Section 1-07.23(1). Delivery of precast concrete units, staging and placement, shall be coordinated with traffic control plans.

D. Final Acceptance

Upon final acceptance, the customer's agent acknowledges and understands the appropriate methods for handling the accepted precast concrete unit(s). Upon acceptance by the customer or customer's agent, the precast concrete manufacturer is not responsible for replacing damaged product resulting from improper handling practices on the job site.

3.02 MANUFACTURERS

Approved Fabricators

The following manufacturer are approved for fabrication of precast reinforced concrete vault structures when designed, fabricated, and constructed in accordance with these Specifications:

Oldcastle Precast
P.O. Box 588
Auburn, WA 98002

Granite Precasting and Concrete, Inc.
4116 Bakerview Spur
Bellingham, WA 98226

H2 Pre-Cast Inc.
3835 N Clemons
East Wenatchee, WA 98802

Or an approved substitute manufacturer. An approved substitute manufacturer shall be defined as a manufacturer meeting the requirements of these specifications, and the following Quality Assurance and Manufacturing criteria:

A. Quality Assurance

The precast concrete producer shall demonstrate adherence to the standards set forth in the plant Quality Control Manual. The precast concrete producer shall meet the requirements written below. The precast concrete producer shall provide a limited warranty for their product of at least 2 years in length.

B. Qualifications, Quality Control and Inspection
   1. The precast producer shall maintain a permanent quality control department.
   2. The precast concrete producer shall have a quality control program which is audited for compliance annually by persons outside that plant's employee structure.
   3. Upon request, the precast concrete producer shall supply a copy of their quality control manual.

C. Quality Control
   1. The precast concrete producer shall show that the following quality control tests are performed as required and in accordance with the ASTM International standards indicated.
      a. Concrete Testing
         1) Slump: A slump test shall be performed at least once per day per mix design used. Slump tests shall be performed in accordance with ASTM C 1611 for self-consolidating concrete.

2) Temperature: The temperature of fresh concrete shall be measured each time a slump, air content, or compressive strength tests are made. Temperature shall be measured in accordance with ASTM C 1064.
3) Compressive Strength: At least four compressive strength specimens shall be made each day for each mix design unless otherwise specified. In accordance with ASTM C 31, C 39, C 192.
4) Air Content: Tests for air content shall be performed if the mix design specifies air entrainment. The air content will be measured in accordance with ASTM C 231. The Air Content shall be measured once per day per mix design.
5) Density (Unit Weight): Tests for Density (Unit Weight) shall be performed monthly for each mix design used at a minimum. Tests shall be in accordance with ASTM C 138

b. Aggregate Testing
1) A full set of aggregate tests shall be performed on each aggregate at least annually by an independent testing agency or an in house test lab. These tests will include gradations (ASTM C136), Soundness (ASTM C 88), Organic Impurities (ASTM C 40), Sand Equivalent for fine aggregates only (ASTM D 2419)
2) Potential reactivity shall be performed once per each aggregate source, and when aggregate sources change (ASTM C 1260 or C 1293)
3) Monthly, at a minimum, gradations shall be performed per ASTM C 33.
4) Aggregate Moisture tests: Moisture tests on aggregates shall be performed in accordance with ASTM C 70 or ASTM C 566. Fine aggregate moisture content tests shall be performed at least once per day if there are no moisture meters, otherwise it shall be performed once per month. Alternatively the speedy moisture test is acceptable (ASTM D 4944).

c. Preplacement Check
1) All products shall be inspected for accuracy after the concrete forms have been removed. Checks shall include, but not be limited to, dimensional checks, finishing, insert locations, squareness, honeycombing, cracking, marking, coatings, racking, hole size and location. Postplacement checks may require a corrective action report.
2) Preplacement checks shall be documented and initialed by the inspector. A drawing with verifications of the above criteria can be used as documentation.

d. Postplacement Check
1) All products shall be inspected for accuracy after the concrete forms have been removed. Checks shall include, but not be limited to, dimensional checks, finishing, insert locations, squareness, honeycombing, cracking, marking, coatings, racking, hole size and location. Postplacement checks may require a corrective action report.
2) Postplacement checks shall be documented and initialed by the inspector. A drawing with verifications of the above criteria can be used as documentation.

2. Copies of the test results and Inspections above shall be available upon request.

D. Outside Inspection

The customer or customer’s agent (specifier) may place an inspector in the plant when the units covered by this specification are being manufactured. The precast concrete producer shall give notice of 3 days prior to the time the precast concrete units will be available for plant inspection

3.03 MANUFACTURING

Manufacturing shall conform to the producer’s acceptable quality control manual

A. Forms
1. Forms for manufacturing precast concrete units shall be of the type and design consistent with industry standards and practices. They should be capable of consistently providing uniform products and dimensions. Forms shall be constructed so that the forces and vibrations to which the forms will be subjected cause no damage to the precast concrete unit.

2. Forms shall be cleaned of concrete build-up after each use.
3. Form release agents shall be applied according to the manufacturer's recommendations and shall not be allowed to build up on the form casting surface.

B. Reinforcement
1. Cages of reinforcement shall be fabricated by tying the bars, wires or welded wire reinforcement. The tolerances for concrete cover shall be 3/8 in. or as specified in the design. Welding shall be allowed only for ASTM A 706 rebar.
2. Positive means shall be taken to assure that the reinforcement does not move significantly during the casting operations.

C. Embedded Items

Embedded items shall be positioned at locations specified in the design documents. Inserts and other embeds shall be held rigidly in place so that they do not move significantly during casting operations.

D. Concrete
1. Concrete Mixing
a. Mixing operations shall produce batch-to-batch uniformity of strength, consistency and appearance
2. Concrete placing
a. Concrete shall be placed in a manner in which it flows and consolidates without segregation or air entrapment. The freefall of concrete shall be kept to a minimum.
b. Cold Weather Concreting
1) Recommendations for cold weather concreting are given in detail in ACI 306 R. Adequate equipment shall be provided for heating concrete materials and protecting concrete during freezing or near- freezing temperatures. All concrete materials, reinforcement, and forms shall be free from frost. In cold weather, the temperature of the concrete at the time of placement shall not be below 45 degrees F. Concrete that freezes before it reaches a compressive strength of 500 psi shall be discarded.
c. Hot Weather Concreting
1) Recommendations for hot weather concreting are given in detail in ACI 305 R. During hot weather excessive concrete temperatures and water evaporation shall be minimized. The temperature of concrete at the time of placing shall not exceed 95 degrees F.
3. Concrete Curing
a. Curing operations shall commence immediately following the initial set of the concrete and completion of surface finishing.
b. Curing by moisture retention
1) Precast products shall be protected from drafts and wind to prevent plastic shrinkage cracking.
2) Moisture shall be prevented from excessively evaporating from exposed surfaces until adequate strength for stripping the precast concrete unit from the form is reached.
c. Curing with Heat and Moisture
1) Concrete shall not be subjected to steam or hot air until after the concrete has attained its initial set. If hot air is used, precautions shall be taken to prevent moisture loss from the concrete. The temperature of the concrete shall not be permitted to exceed 150 degrees F. The temperature gain shall not exceed 40 degrees F per hour.
4. Surface Finish
a. The surface finish shall be as specified on the contract documents and/or approved shop drawings.
5. Stripping Precast Concrete Units from Forms

Precast concrete units shall not be removed from the forms until the concrete reaches the compressive strength for stripping required by design. Stripping strengths shall be routinely measured to ensure product has attained sufficient strength for safe handling.

6. Patching and Repair
   a. Repairing Minor Defects

      Defects that will not impair the functional use or expected life of the precast concrete unit may be repaired by any method that does not impair the product
   b. Repairing Honeycombed Areas

      When honeycombed areas are to be repaired, all loose material shall be removed and the areas cut back into essentially horizontal or vertical planes to a depth at which coarse aggregate particles break under chipping rather than being dislodged. Proprietary repair materials shall be used in accordance with the manufacturer's instructions. Otherwise, the area shall be saturated with water. Immediately prior to repair, the area should be damp, but free of excess water. A cement-sand grout or an approved bonding agent shall be applied to the chipped surfaces, followed immediately by consolidating an appropriate repair material into the cavity.
   c. Repairing Major Defects

      Defects in precast concrete products which impair the functional use or the expected life of products shall be evaluated by qualified personnel to determine if repairs are feasible and, if so, to establish the repair procedure.
7. Shipping Precast Concrete Units

   Precast concrete units shall not be shipped until they have reached at least 70% of their specified 28-day design strength, unless damage will not result, impairing the performance of the product.

The Contractor shall submit a dewatering and water quality plan for the Engineer's approval at least 10 calendar days prior to dewatering. Included in these plans shall be intended placement of Best Management Practices (BMP's) to be used for sediment and erosion control. The approved erosion control system shall be in place prior to beginning dewatering.

The Contractor shall remove, treat, and discharge excess water from the work area as necessary to complete the work described. Standards for quality of water leaving the work site shall meet the requirements the Clean Water Act, and the Construction General Stormwater Permit. The Contractor shall monitor and adjust dewatering operations as necessary during construction to ensure the above standards of water quality are met at all times.

Examination

Prior to installation of the precast concrete vault, the Contractor shall examine the vault for compliance with dimensional and size requirements, including installation tolerances, true and level bearing surfaces, and other conditions affecting performance of precast concrete units. Any dimensional sizes and finishes not in accordance with the requirements shall be corrected by the Contactor, prior to installation.

Finish formed surfaces of precast concrete shall be a smooth finish. Small surface holes caused by air bubbles, normal color variations, and form joint marks, and minor chips and spalls will be tolerated. Major or unsightly imperfections, honeycombs, irregular surfaces, or structural defects are not permitted.

The Contractor shall provide a representative from the precast vault manufacturer to be on-site full-time during vault base preparation and installation of the vault to ensure proper installation of their product.

Identify pickup points of precast concrete units and orientation in structure with permanent markings, complying with markings indicated on final shop drawings. Imprint casting date on each precast unit on a surface that will not show in the finished structure.

Excavation for Vault and installation

Excavation, shoring, and backfill shall meet the requirements of Section 2-09.

Install precast units level, plumb, square, and true. Shore and brace precast concrete units to maintain location, stability, and alignment until permanent connections are installed. The correct placement of the storm vault is important in order to form a smooth surface.

Backfilling should be done after vault is completely assembled making certain to compact the backfill progressively from the bottom to the top surface.

Joint sealant, pipe-entry connectors and other penetrations shall be sealed according to manufacturer's requirements to ensure the integrity of the system to resist leaking.

All risers, covers, conduit of specific sections of vaults is the responsibility of the Contractor and shall be performed in accordance with Section 7-05.3.

Erection

The Contractor shall erect and backfill the precast reinforced concrete structures in accordance with the erection sequence specified in the shop drawings approved by the Engineer.

Casting

The Contractor shall notify the Engineer at least five working days in advance of beginning fabrication of the structures for this project.

The Contractor shall mark the following information, using waterproof paint, on the inside of a vertical leg of each section of the structure:

Design Loads

Span and Rise dimension

Job Number

Fabrication Date

Manufacturer's Name and Trademark

Install warning signs as approved by OSHA, warning of entrance to confined space area. Install at each access riser.

Base Preparation

The subgrade shall be compacted in accordance with Method C per Section 2-03.3(14)C and must be approved by the Engineer prior to installation of crushed surfacing vault base material.

Vault Cleaning

Vault shall be cleaned and left free of debris at the approval of the Engineer prior to activation of the vault.

3.04 POND CONSTRUCTION

A. Fill to contours and elevations indicated using unfrozen materials.

B. Systematically fill to allow maximum time for natural settlement. Do not fill over porous, wet, frozen, or spongy subgrade surfaces.

C. Maintain optimum moisture content of fill materials to attain required compaction density.

3.05 POND OUTLET CONSTRUCTION

A. Form concrete base pad according to drawings, trowel top surface level.

B. Precast Structure: Place structure sections plumb and level, trim to correct elevations.

C. Corrugated Structure: Install elbow fitting and sections plumb and level, trim to correct elevations.

END OF SECTION 33 46 00

SECTION 33 46 02
STORMWATER HYDRODYNAMIC SEPARATOR

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. The installation of stormwater hydrodynamic separator as shown on the plans.

1.02 SUBMITTALS

A. Detail Drawing provided by manufacturer.

PART 2 PRODUCTS

2.01 MATERIALS

A. In accordance with 6-20.2 unless otherwise indicated by the manufacturer.

B. Contech Engineered Solutions LLC, CDS3020-6-C Inline CDS.

C. Or approved equal

PART 3 EXECUTION

3.01 CONSTRUCTION REQUIREMENTS

A. Install in accordance with and with manufacturer's instructions.

B. In accordance with Standard Specification 6-20.3.

END OF SECTION 33 46 02

SECTION 33 46 03
STORMWATER OIL SEPARATOR

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. The installation of stormwater oil separator as shown on the plans.

1.02 SUBMITTALS

A. Shop drawing provided by manufacturer.

PART 2 PRODUCTS

2.01 MATERIALS

A. In accordance with 6-20.2 unless otherwise indicated by the manufacturer.

B. Contech Engineered Solutions LLC, Vortclarex VCL 30.

C. Or approved equal.

PART 3 EXECUTION

3.01 CONSTRUCTION REQUIREMENTS

A. Install in accordance with and with manufacturer's instructions.

B. In accordance with Standard Specification 6-20.3.

END OF SECTION 33 46 03

This page intentionally left blank

SECTION 33 46 04
STORMWATER BIOFILTRATION VAULT

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. The installation of stormwater biofiltration vault as shown on the plans.

1.02 SUBMITTALS

A. Shop Drawings.

PART 2 PRODUCTS

2.01 MATERIALS

A. In accordance with 6-20.2 unless otherwise indicated by the manufacturer

B. BioClean MWS-L-4-6.33’-10”-V-UG Stormwater Biofiltration System.

C. Or approved equal.

PART 3 EXECUTION

3.01 CONSTRUCTION REQUIREMENTS

A. Install in accordance with and with manufacturer’s instructions.

B. In accordance with Standard Specification 6-20.3.

END OF SECTION 33 46 04

SECTION 33 52 10

FUEL-OIL SYSTEM

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fuel-oil and diesel-fuel-oil distribution systems and the following:
   1. Pipes, tubes, and fittings.
   2. Piping and tubing joining materials.
   3. Piping specialties.
   4. Valves.
   5. Horizontal, steel, fuel-oil ASTs.
   6. Insulated, steel, fuel-oil ASTs.
   7. Fuel-oil AST accessories.
   8. Fuel-oil storage tank piping specialties.
   9. Fuel-oil storage tank pumps.
   10. Liquid-level gauge system.
   11. Leak-detection and monitoring system.
   12. Concrete bases (for day tanks and pump sets).

1.02 RELATED REQUIREMENTS

A. Section 23 00 00 “General Mechanical Requirements”

B. Section 31 20 00 “Earthwork”

1.03 REFERENCES

A. General: Requirements of following codes and standards, as referenced herein are made a part of this Specification as if they were fully stated.

B. API: American Petroleum Institute.
   1. API Specification 12P: Fiberglass Reinforced Plastic Tanks.
   2. API Standard 650: Welded Steel Tanks for Oil Storage.
   3. API RP 1615: Installation of Underground Petroleum Storage Systems.
   4. API Standard 2000: Venting Atmospheric and Low-Pressure Storage Tanks.

C. ASME: American Society of Mechanical Engineers.
   1. ASME B16.3: Malleable Iron Threaded Fittings.
   2. ASME B31.4: Pipeline Transportation Systems for Liquid Hydrocarbons and Other Liquids.
   3. ASME B31.9: Building Services Piping.
   4. ASME B36.10M: Welded and Seamless Wrought Steel Pipe.

D. ASTM: American Society for Testing and Materials.

1.04 DEFINITIONS

A. AST: Aboveground storage tank.

B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

D. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

E. FPM: Vinylidene fluoride-hexafluoropropylene copolymer rubber.

F. FRP: Glass-fiber-reinforced plastic.

G. UST: Underground storage tank.

H. Carrier Piping: Piping that contains fuel oil exclusively.

I. Secondary Containment Piping System: System that contains carrier piping and prevents fuel leakage from carrier piping into surrounding soil and/or water. System may be either boxed-in trench or double-walled piping.

J. Acronyms Used:
1. AST Aboveground Storage Tank
2. DDC Direct Digital Controls
3. FOCP Fuel Oil Control Panel
4. FOP Fuel Oil Pump
5. FOR Fuel Oil Return
6. FOS Fuel Oil Supply
7. FOT Fuel Oil Tank
8. FOCV Fuel Oil Control Valve
9. FOV Fuel Oil Vent
10. FPM Vinylidene fluoride-hexafluoropropylene copolymer rubber
11. HOA or H/O/A Hand / Off / Automatic
12. PLC Programmable Logic Controler
13. PLLD Pressurized Line Leak Detection
14. WAC Washington Administrative Code
15. UST Underground Storage Tank

1.05 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design restraint and anchors for fuel-oil piping, ASTs, and equipment, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Seismic Performance: Factory-installed support attachments for AST shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.

1.06 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, and dimensions of individual components and profiles. Also include, where applicable, rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
   1. Piping specialties.
   2. Valves: Include pressure rating, capacity, settings, and electrical connection data of selected models.
   3. Each type and size of fuel-oil storage tank. Indicate dimensions, weights, loads, components, and location and size of each field connection.
   4. Fuel-oil storage tank accessories.
   5. Fuel-oil storage tank piping specialties.
   6. Fuel-oil storage tank pumps.
   7. Fuel maintenance system.
   8. Liquid-level gauge system.
   9. Leak-detection and monitoring system.

B. Shop Drawings: For facility fuel-oil piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.
   1. Shop Drawing Scale: 0.25 inch per foot.
   2. For fuel-oil storage tanks and pumps, include details of supports and anchors.

C. Delegated-Design Submittal: For fuel-oil piping and equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Detail fabrication and assembly of anchors and seismic restraints.
   2. Design Calculations: Calculate requirements for selecting seismic restraints.
   3. Detail fabrication and assembly of pipe anchors, hangers, supports for multiple pipes, and attachments of the same to building structure.

1.07 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans and details, drawn to scale, on which fuel-oil piping is shown and coordinated with other installations, using input from installers of the items involved.

B. Site Survey: Plans, drawn to scale, on which fuel-oil piping and tanks are shown and coordinated with other services and utilities.

C. Qualification Data: For qualified professional engineer.

D. Seismic Qualification Certificates: For ASTs, accessories, and components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

E. Brazing Certificates: Provide.

F. Welding Certificates: Provide.

G. Field Quality-Control Reports: Provide.

H. Warranty: Provide sample of special warranty.

1.08 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fuel-oil equipment and accessories to include in emergency, operation, and maintenance manuals.

1.09 MATERIALS MAINTENANCE SUBMITTALS

A. Extra Materials: Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Fuel Filters : Provide one spare filter for all fuel filter locations.

1.10 QUALITY ASSURANCE

A. Brazing: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.

B. Steel Support Welding Qualifications: Provide.

C. Procedures and Personnel: Qualify procedures and personnel according to AWS D1.1/D1.1M, “Structural Welding Code - Steel.”

D. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. ASME: Comply with ASME B31.9, “Building Services Piping,” for fuel oil piping materials, installation, testing, and inspecting.

G. EPA: Comply with requirements of the EPA and of state and local authorities having jurisdiction. Include recording of fuel oil storage tanks and monitoring of tanks and piping.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Transportation: Lift and support fuel-oil storage tanks only at designated lifting or supporting points, as shown on Shop Drawings. Do not move or lift tanks unless empty.

B. Piping Protection: Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

C. Pipe Coatings: Store pipes and tubes with protective PE coating to avoid damaging the coating and to protect from direct sunlight.

D. Sunlight: Store PE pipes and valves protected from direct sunlight.

1.12 COORDINATION

A. Concrete Bases: Coordinate sizes and locations of concrete bases with actual equipment provided.

1.13 WARRANTY

A. Special Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components of fuel-oil storage tanks and flexible, double-containment piping and related equipment that fail in materials or workmanship within specified warranty period.
   1. Storage Tanks:
      a. Failures include, but are not limited to, the following when used for storage of fuel oil at temperatures not exceeding 150 degrees F
         1) Structural failures including cracking, breakup, and collapse.
         2) Corrosion failure, including external and internal corrosion of steel tanks caused by reaction of tank with soil environment.
      b. Warranty Period: 10 years from date of Substantial Completion.
   2. Flexible, Double-Containment Piping and Related Equipment:
      a. Failures due to defective materials or workmanship for materials installed together, including piping, dispenser sumps, entry boots, and sump mounting adapters.
      b. Warranty Period: 30 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PIPES, TUBES, AND FITTINGS

A. Fuel Pipe: Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
   1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.

2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M, for butt and socket welding.
3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
   a. Material Group: 1.1.
   b. End Connections: Threaded or butt welding to match pipe.
   c. Lapped Face: Not permitted underground.
   d. Gasket Materials: Asbestos free, ASME B16.20 metallic, or ASME B16.21 nonmetallic, gaskets compatible with fuel oil.
   e. Bolts and Nuts: ASME B18.2.1, cadmium-plated steel.
5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.
   a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.

B. Vent Piping:
1. Belowground: ASTM A53/A53M standard weight, zinc-coated steel with zinc-coated malleable iron fittings ASME B16.3.
2. Aboveground: Schedule 40 fiberglass reinforced pipe and fittings suitable for fuel oil systems.

2.02 DOUBLE-CONTAINMENT PIPE AND FITTINGS

A. Flexible, Double-Containment Piping: Comply with UL 971.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Franklin Fueling APT pipe
   b. Perma-Pipe.
2. RTRP: ASTM D 2996 or ASTM D 2997 carrier and containment piping and mechanical couplings to seal carrier and containment piping or individually bonded joints.
   a. Minimum Operating-Pressure Rating for RTRP NPS 2 and NPS 3: 150 psig.
   b. Minimum Operating-Pressure Rating for RTRP NPS 4 and NPS 6: 125 psig. Compliance with UL 971 is not required for NPS 6 and larger piping.
   c. Fittings: RTRF complying with ASTM D 2996 or ASTM D 2997, and made by RTRP manufacturer; watertight sump entry boots, termination, or other end fittings.
3. Include design and fabrication of double-containment pipe and fitting assemblies with provision for field installation of cable leak-detection system in annular space between carrier and containment piping.

2.03 PIPING SPECIALTIES

A. Flexible Connectors: Comply with UL 567.
1. Metallic Connectors:
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Flexicraft.
      2) Circuit Hydraulics.
      3) Penflex.
      4) Metraflex.
   b. Listed and labeled for aboveground and underground applications by an NRTL acceptable to authorities having jurisdiction.
   c. Stainless steel bellows with woven, flexible, bronze or stainless steel, wire-reinforcing protective jacket.
   d. Minimum Operating Pressure: 50 psig.
   e. End Connections: Socket, flanged, or threaded end to match connected piping.
   f. Maximum Length: 30.00 inches.
   g. Swivel end, 50-psig maximum operating pressure.
   h. Factory-furnished anode.

2. Nonmetallic Connectors:
    a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
        1) Flexicraft.
        2) Circuit Hydraulics.
        3) Penflex.
        4) Metraflex.
    b. Listed and labeled for underground applications by an NRTL acceptable to authorities having jurisdiction.
    c. PFTE bellows with woven, flexible, bronze or stainless steel, wire-reinforcing protective jacket.
    d. Minimum Operating Pressure: 150 psig.
    e. End Connections: Socket, flanged, or threaded end to match connected piping.
    f. Maximum Length: 30.00 inches.
    g. Swivel end, 50-psig maximum operating pressure.
    h. Factory-furnished anode.

B. Manual Air Vents:
1. Body: Bronze.
2. Internal Parts: Nonferrous.
3. Operator: Screwdriver or thumbscrew.
4. Inlet Connection: NPS 1/2.
5. Discharge Connection: NPS 1/8.
6. CWP Rating: 150 psig.
7. Maximum Operating Temperature: 225 degrees F.

C. Dielectric Unions: Union comprised of steel female pipe thread end and copper solder-joint end conforming to dimensional, strength, and pressure requirements of ASME B16.39, Class 1. Steel parts shall be galvanized or plated. Union shall have a water-impervious insulation barrier capable of limiting galvanic current to 1 percent of short-circuit current in a corresponding bimetallic joint. When dry, it shall be able to withstand a 600 V breakdown test.

D. Differential Pressure Gauges: Dwyer series 4000 Capsuhelic differential pressure gauge, plus or minus 3 percent accuracy of full scale, gauge shall be diaphragm actuated dial type, 5-inch outside diameter with white dial, black figures and graduations, and pointer zero adjustment, brass housing, high and low pressure taps, operating range shall register midpoint on dial, submit dial ranges for review.

E. Line Leak Detection Flow Switch: Provide spring-loaded poppet flow switch with bronze body and bonnet, threaded connections, 400-psig rated at 100 degrees F, Teflon shuttle, 316 stainless steel spring, UL listed, single-pull double-throw contacts make or break at 5 gpm flow, 0.5 psi pressure drop at 25 gpm, 2-inch size. Basis of design is Gems series FS 200 model 27103.

F. Vacuum Breakers: Brass body, 300 psig rated, spring-loaded ball check vacuum breaker, 3/4-inch MPT inlet and 1/2-inch FPT outlet, stainless steel ball, EPN O-ring seat. Ball unseats to relieve vacuum at less than 2 inches mercury vacuum. Preferred Utilities VB model 11826.

G. Flow Indicator: Provide steel body construction, 150 psig rated flanged flow indicator with sealed glass window and propeller behind the glass. The visual verification of the propeller rotating shall be verification of flow. The glass shall be held in place with a steel bolted flange retainer. The glass shall be tempered Borosilicate, the propeller shall be of Ryton, the seals shall be Viton, the entire assembly shall be ASME rated at 285 psig at 100 degrees F. OPW model 152 1RF-0202 (two inch size).

H. Fuel Oil Pressure Transducer (Fuel Control Panel Interface): Provide with range to match application. Total output error shall be less than plus or minus 0.5 percent of operating range from minus 20 to 180 degrees F. Ashcroft model K1 for pressure applications. Ashcroft model IXLdp for differential pressure applications.

2.04 JOINING MATERIALS

A. Joint Compound and Teflon-Impregnated Tape: Suitable for fuel oil.

B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

C. Brazing Filler Metals: Alloy with melting point greater than 1,000 degrees F complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.

D. Bonding Adhesive for Fiberglass Piping: As recommended by fiberglass piping manufacturer.

2.05 MANUAL FUEL-OIL SHUTOFF VALVES

A. Valve Schedule: See valve schedule in Part 3 for where each valve type is applied in various services.

B. General Requirements for Metallic Valves, NPS 2 and Smaller for Liquid Service: Comply with UL 842.
   1. CWP Rating: 125 psig
   2. Threaded Ends: Comply with ASME B1.20.1.
   3. Dry-seal Threads on Flare Ends: Comply with ASME B1.20.3.
   4. Tamperproof Feature: Locking feature for valves indicated in the valve schedule.
   5. Service Mark: Initials “WOG” shall be permanently marked on valve body.

C. General Requirements for Metallic Valves, NPS 2-1/2 and Larger: Comply with UL 842.
   1. CWP Rating: 125 psig
   2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
   3. Tamperproof Feature: Locking feature for valves indicated in the valve schedule.
   4. Service Mark: Initials “WOG” shall be permanently marked on valve body.

D. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. BrassCraft.
      b. Conbraco.
      c. McDonald, A. Y.
   2. Body: Bronze, complying with ASTM B 584.
   3. Ball: Chrome-plated bronze.
   4. Stem: Bronze; blowout proof.
   5. Seats: Reinforced TFE; blowout proof.
   6. Packing: Threaded-body pack-nut design with adjustable-stem packing.
   7. Ends: Threaded, or socket as indicated in the valve schedule.
   8. CWP Rating: 600 psig.
   9. Service Mark: Initials “WOG” shall be permanently marked on valve body.

2.06 SPECIALTY VALVES

A. Pressure Relief Valves: Comply with UL 842.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Anderson Greenwood.
      b. Fulflo Specialties.
      c. Webster Fuel Pumps & Valves.
   2. Listed and labeled for fuel-oil service by an NRTL acceptable to authorities having jurisdiction.
   3. Body: Brass, bronze, or cast steel.
   4. Springs: Stainless steel, interchangeable.
   5. Seat and Seal: Nitrile rubber.
   6. Orifice: Stainless steel, interchangeable.
   7. Factory-Applied Finish: Baked enamel.
   8. Maximum Inlet Pressure: 150 psig

9. Relief Pressure Setting: 60 psig

B. Emergency Shutoff Valves: Comply with UL 842.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Morrison.
      b. Conley.
      c. EMCO Wheaton.
      d. Environ.
      e. OPW.
   2. Listed and labeled for fuel-oil service by an NRTL acceptable to authorities having jurisdiction.
   3. Double poppet valve.
   4. Body: ASTM A 126, cast iron.
   5. Disk: FPM.
   6. Poppet Spring: Stainless steel.
   7. Stem: Plated brass.
   8. O-Ring: FPM.
   9. Packing Nut: PTFE-coated brass.
   10. Fusible link to close valve at 165 degrees F.
   11. Thermal relief to vent line pressure buildup due to fire.
   12. Air test port.
   13. Maximum Operating Pressure: 50 psig.

C. Mechanical Leak Detector: Comply with UL 842.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. FE Petro.
      b. Red Jacket Pumps.
      c. Vaporless Manufacturing.
   2. Listed and labeled for fuel-oil service by an NRTL acceptable to authorities having jurisdiction.
   3. Body: ASTM A 126, cast iron.
   4. O-Rings: Elastomeric compatible with fuel oil.
   5. Piston and Stem Seals: PTFE.
   6. Stem and Spring: Stainless steel.
   7. Piston Cylinder: Burnished brass.
   8. Indicated Leak Rate: Maximum 3 gph at 10 psig.
   9. Leak Indication: Reduced flow.

D. Anti-Spill Valves: Where product piping extends below top of primary tank, piping shall include shutoff valve and a normally closed safety valve; safety valve shall be an approved anti-siphon valve with thermal relief.

E. Backpressure Control Valves:
   1. Main Boiler Supply Header: Pilot operated backpressure control valve, Fisher model 63EG with 6358EB stainless steel pilot regulator, 1-inch flanged connections, steel body, 416 stainless steel disk and seat, nitrile elastomer, rated for 150 psig. Capable of flowing 35 gpm of fuel oil with 75 psig inlet and 0 psig outlet pressures.
   2. Day Tank Supply Header: Spring-loaded diaphragm-operated backpressure control valve, Preferred Utilities model V, 1-inch FPT inlet and outlet connections, cast iron body, rated for 250 psig maximum inlet pressure, spring rated for 5-20 psig backpressure range, Viton valve seat, stainless steel valve plug, Teflon composition diaphragm, adjustment screw on top, FPT vent opening in spring case. Each valve capable of flowing 14 gpm of fuel oil with 10 psig inlet and 1.5 psig outlet pressures.

F. Solenoid Valves:

1. Day Tank Fill Valves: Bronze body, threaded end connections, normally closed (apply power to open), 120 volt 60 Hz AC, malleable iron coil enclosure with female, threaded conduit connection, stainless steel valve stem and spring, valve orifice seal metal to metal, Viton valve stem seal. 3/4-inch FPT with 1/2-inch orifice, maximum shutoff pressure is 30 psig, valve CV shall be no less than 3.5, capable of flowing 10 gpm at 8.2 psi pressure drop, Magnatrol model 33NV13.
2. Mechanical Line Leak Detection Solenoid Valves: Bronze body, threaded end connections, normally closed (apply power to open), 120 volt 60 Hz AC, malleable iron coil enclosure with female, threaded conduit connection, stainless steel valve stem and spring, valve orifice seal metal to metal, Viton valve stem seal, 2-inch FPT with 2-inch orifice, maximum shutoff pressure is 100 psig, valve CV shall be no less than 48, capable of flowing 25 gpm at 0.3 psi pressure drop. Magnatrol model 36AV47.
3. Day Tank to Generator Fuel Oil Supply: Bronze body, threaded end connections, normally open (apply power to close), 24 volt DC, 18 watts, malleable iron coil enclosure with female, threaded conduit connection, stainless steel valve stem and spring, valve orifice seal metal to metal, Viton valve stem seal, 1-inch FPT with 1-inch orifice, maximum shutoff pressure is 50 psig, valve CV shall be no less than 13, capable of flowing 4.5 gpm at 0.12 psi pressure drop. Magnatrol model 18ARV24.

2.07 HORIZONTAL, STEEL, FUEL-OIL AST (FT-1 AND FT-2)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Ace Tank.
   2. Modern Welding.
   3. Xerxes.
   4. Containment Solutions.

B. Description: UL 142 and NFPA 30 standards double-wall, horizontal steel tank; with primary- and secondary-containment walls and interstitial space.

C. Construction: Fabricated with welded, carbon steel; suitable for operation at atmospheric pressure and for storing fuel oil with specific gravity up to 1.1 and with maintained temperature up to 150 degrees F. Minimum 15 psig tank design working pressure.

D. Supports: Manufacturer’s standard structural steel welded to tank.
   1. Number of Supports: As recommended by manufacturer.

E. Capacities and Characteristics: See Equipment Schedule on Drawings.

2.08 SHOP PAINTING OF AST

A. Prime Coat: Apply manufacturer’s standard prime coat to exterior steel surface of AST and supports.

B. Exterior Surface Preparation: Prepare exterior steel surface of AST and tank supports.

C. Shop Cleaning: After fabrication, blast clean according to SSPC-SP 6/NACE No. 3

D. Surface Cleaning: After cleaning, remove dust or residue from cleaned surfaces.

E. Rust: If surface develops rust before prime coat is applied, repeat surface preparation.

F. Prime Coat: Apply manufacturer’s standard prime coat to shop-cleaned, dry surface same day as surface preparation.

G. Epoxy Finish: Apply manufacturer’s standard two-component, epoxy finish coats.

2.09 FUEL-OIL AST ACCESSORIES

A. Tank Manholes: 22.00-inch-minimum diameter; bolted, flanged, and gasketed; centered on top of tank.

B. Tank Manholes: 22.00-inch-minimum diameter; bolted, flanged, and gasketed; on top and at side of tank.

C. Tank Openings: Threaded pipe connection fittings on top or sides of tank as indicated, for fill, supply, return, vent, sounding, and gauges. Include cast-iron plugs for shipping.

D. Striker Plates: Inside tank, on bottom below fill, vent, sounding, gauge, and other tube openings.

E. Lifting Lugs: For handling and installation.

F. Ladders: Carbon-steel ladder inside tank, anchored to top and bottom, and located as indicated. Include reinforcement of tank at bottom of ladder.

G. Ladders: Carbon-steel ladder outside tank, anchored to top and side wall. Comply with requirements in Section 05 50 00 “Metal Fabrications” for exterior steel ladder.

H. Supply Tube: Extension of supply piping fitting into tank, terminating 6.00 inches above tank bottom and cut at a 45-degree angle.

I. Sounding and Gauge Tubes: Extension of fitting into tank, terminating 6.00 inches above tank bottom and cut at a 45-degree angle.

J. Tank shall have appropriate warning signs as required by NFPA 704 and local regulations.

2.10 FUEL-OIL STORAGE TANK PIPING SPECIALTIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Morrison Bros.
   2. OPW.
   3. Preferred Utilities.
   4. Universal Valve Company.

B. Fitting Materials: Cast iron, malleable iron, brass, or corrosion-resistant metal; suitable for fuel-oil service.
   1. Surface, Flush-Mounted Fittings: Waterproof and suitable for truck traffic.
   2. Aboveground-Mounted Fittings: Weatherproof.

C. Locking Fill Boxes: Flush mounting, with locking-type inner fill cap for standard padlock and threaded fill-pipe connection.

D. Supply and Sounding Drop Tubes: Fuel-oil supply piping or fitting, inside tank, terminating 6.00 inches above bottom of tank, and with end cut at a 45-degree angle.

E. Pipe Adapters and Extensions: Compatible with piping and fittings.

F. Suction Strainers and Check Valves: Bronze or corrosion-resistant metal components.

G. Foot Valves and Anti-Siphon Valves: Poppet-type, bronze or corrosion-resistant metal components.

H. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

I. Metal Manholes: 22.00-inch- minimum diameter frame and cover. Furnish manhole units of adequate size for access to fittings if size is not indicated.

J. Monitoring Well Caps: Locking pipe plug and manhole.

2.11 EMERGENCY FUEL SHUT-OFF (EFSO) STATION

A. Station housing shall be a galvanized steel enclosure with a hinged glass front and an open bottom. Paint the enclosure red. Mounting hardware shall be corrosion resistant. Mount an emergency pushbutton inside the station housing. Pushbutton shall be accessible through the hinged front. Pushbutton shall be a single unit with a jumbo mushroom operator, 1-NC and 1-NO contact. During activation, the pushbutton shall de-energize fuel pumps and maintain contact until deactivated by a key release. Mount a caution sign beside the emergency shutdown station, with red 2 inch letters stating "EMERGENCY SHUTDOWN". The sign shall have white background and be of noncorrosive construction.

2.12 FUELING EQUIPMENT - DIESEL FUEL

A. Subject to compliance with the Contract Documents, the following Manufacturers are acceptable:

1. Remote dispensers:
   a. Gilbarco, Inc. (Gasboy).
   b. Tokheim (Dover Fueling Solutions).
   c. Wayne Fueling Systems LLC.

B. Dispensing Unit (DFD-1). Unit and unit hardware shall be the factory fabricated type that conforms to UL 87 or UL 87A, except as modified herein. Unit housing and housing top shall be constructed of stainless steel or powder-coated galvannealed in accordance with UL 87 or UL 87A. Materials for unit components that will be in direct contact with the fuel shall be stainless steel or nickel plated aluminum. Unit shall be lighted, single sided, with one hose outlet suitable for single product delivery flow rate of up to 60 gallons per minute. Unit housing shall include a locking mechanism of the panel access.

C. Dispenser must include 2.0-inch solenoid valve, explosion proof switch, dual element filter assembly with pressure gauge, and deck-mounted stainless steel hose reel with electric power rewind hose return including push button operation from front of dispenser, all rated for 50 psi maximum working pressure.
   1. Accounting Meter and Display
      a. Provide unit with positive displacement rotary type meter and the manufacturer's standard control functions.
      b. Fuel meter unit must be mechanical registration type with 5-digit resettable register, eight-digit accumulative volume totalizer (in gallons).
   2. Interlocks
      a. Provide each unit with interlock switch and valve arrangement that prevents flow of product until meter is reset and dispenser on/off switch is activated.
   3. Nozzle, Hose, and Couplers
      a. Diesel Fuel Rated Flexible Rubber Hose. Provide diesel fuel rated, static dissipating synthetic rubber hose for fuel transfer, with spiral-plied synthetic fabric with helix wire reinforcement, -30 to 180 degrees F, 150 psi working pressure, 1.5 inch inside diameter, 2.03 inch nominal outside diameter, and a 4 inch bending radius. Provide hose reel with spring rewind and 50 feet of hose capacity.
      b. Nozzle. Provide 1.5-inch NPT inlet fuel dispensing nozzle for heavy duty, high-flow delivery service, automatic-shutoff type, rated for 50 PSI maximum pressure with service temperature range of minus 20 degrees F to 140 degrees F, aluminum body, stainless steel main stem, including "green" color coding for Diesel fuel, right angle design, and replaceable spout with dust plug.
   4. Safety Breakaway Device. Provide UL listed emergency breakaway device designed to retain liquid on both sides of breakaway point where indicated. Breakaway device shall have pressure balancing chamber to override line pressure to prevent nuisance breaks caused by a restriction in delivery hose diameter.
   5. Emergency Shutoff Valve. Provide valve that conforms to UL 842. Valve shall provide complete shutoff of a fuel line in the event a dispenser is dislocated or overturned due to a sudden impact. Valve shall include a secondary poppet to limit spillage from the dispenser after a knockdown or during installation.
   6. Dispenser Sump. Provide a sump under each dispensing unit. Each sump shall provide convenient service access to piping components enclosed in the sump. Sump shall be constructed of stainless steel. Dispenser shall be chemically compatible with the fuel to be handled by the dispensing unit and any connecting piping. Sump shall prevent fuel from escaping and prevent rain water from entering the sump. Sump shall provide a liquidtight termination point for secondary containment piping that allows for the anticipated expansion and contraction of the piping system. Sump shall mount directly to the bottom of the dispensing unit with a centering ring or stabilizer bar to assure proper shearing action for the emergency shutoff valve.
   7. Accessories. Equip each assembly with accessories such as built-in air eliminators, line check valves, fuel filters, solenoid valve, and lockable housing.
   8. Provide normally closed solenoid valve, bronze body, 0 to 100 psig maximum pressure differential, continuous duty Class H standard coil, 30 watts at 120 volt AC, with integral

relief allowing valve to relieve expansion pressure in opposite direction of flow, enclosure rated for hazardous location (NEMA 4X), CSA approval for hazardous locations as indicated on the drawings.

2.13 FUELING EQUIPMENT - GASOLINE FUEL DISPENSERS

A. Subject to compliance with the Contract Documents, the following Manufacturers are acceptable:
   2. Remote dispensers:
      a. Gilbarco, Inc. (Gasboy).
      b. Tokheim (Dover Fueling Solutions).
      c. Wayne Fueling Systems LLC.

B. Dispensing Unit (GFD-1). Unit and unit hardware shall be the factory fabricated type that conforms to UL 87 or UL 87A, except as modified herein. Unit housing and housing top shall be constructed of stainless steel or powder-coated galvannealed in accordance with UL 87 or UL 87A. Materials for unit components that will be in direct contact with the fuel shall be stainless steel or nickel plated aluminum. Unit shall be lighted, single sided, with one hose outlet suitable for single product delivery flow rate of up to 20 gallons per minute. Unit housing shall include a locking mechanism of the panel access.

C. Dispenser must include 2.0-inch solenoid valve, explosion proof switch, dual element filter assembly with pressure gauge, and deck-mounted stainless steel hose reel with electric power rewind hose return including push button operation from front of dispenser, all rated for 50 psi maximum working pressure.
   1. Accounting Meter and Display
      a. Provide unit with positive displacement rotary type meter and the manufacturer's standard control functions.
      b. Fuel meter unit must be mechanical registration type with 5-digit resettable register, eight-digit accumulative volume totalizer (in gallons).
   2. Interlocks
      a. Provide each unit with interlock switch and valve arrangement that prevents flow of product until meter is reset and dispenser on/off switch is activated.
   3. Nozzle, Hose, and Couplers
      a. Gasoline Fuel Rated Flexible Rubber Hose
         1) Provide gasoline fuel rated, static dissipating synthetic rubber hose for fuel transfer, with spiral-plied synthetic fabric with helix wire reinforcement, -30 to 180 degrees F, 150 psi working pressure, 1.5 inch inside diameter, 2.03 inch nominal outside diameter, and a 4 inch bending radius. Provide hose reel with spring rewind and 50 feet of hose capacity.
      b. Nozzle
         1) Provide fuel dispensing nozzle for heavy duty, high-flow delivery service, automatic-shutoff type, rated for 50 PSI maximum pressure with service temperature range of minus 20 degrees F to 140 degrees F, aluminum body, stainless steel main stem. Nozzle must be provided with vacuum assist vapor recovery components.
   4. Safety Breakaway Device. Provide UL listed emergency breakaway device designed to retain liquid on both sides of breakaway point where indicated. Breakaway device shall have pressure balancing chamber to override line pressure to prevent nuisance breaks caused by a restriction in delivery hose diameter.
   5. Emergency Shutoff Valve. Provide valve that conforms to UL 842. Valve shall provide complete shutoff of a fuel line in the event a dispenser is dislocated or overturned due to a sudden impact. Valve shall include a secondary poppet to limit spillage from the dispenser after a knockdown or during installation.
   6. Dispenser Sump. Provide a sump under each dispensing unit. Each sump shall provide convenient service access to piping components enclosed in the sump. Sump shall be constructed of stainless steel. Dispenser shall be chemically compatible with the fuel to be handled by the dispensing unit and any connecting piping. Sump shall prevent fuel from

escaping and prevent rain water from entering the sump. Sump shall provide a liquid tight termination point for secondary containment piping that allows for the anticipated expansion and contraction of the piping system. Sump shall mount directly to the bottom of the dispensing unit with a centering ring or stabilizer bar to assure proper shearing action for the emergency shutoff valve.

7. Accessories. Equip each assembly with accessories such as built-in air eliminators, line check valves, fuel filters, solenoid valve, and lockable housing.
8. Provide normally closed solenoid valve, bronze body, 0 to 100 psig maximum pressure differential, continuous duty Class H standard coil, 30 watts at 120 volt AC, with integral relief allowing valve to relieve expansion pressure in opposite direction of flow, enclosure rated for hazardous location (NEMA 4X), CSA approval for hazardous locations as indicated on the drawings.

2.14 DISPENSER FUEL CONTROL SYSTEM

A. Provide a complete Dispenser Fueling Control System that is fully operational and coordinated with the existing Control System in the moorage office. The fueling control system must include controls, audible and visual alarms, and interoperability with all fueling system components including the tank management system with tank inventory level, fuel pumps, associated leak detection systems, fuel dispensers, emergency fuel shutoff (EFSO) pushbuttons, and electronic communications to the moorage office fuel systems control panels, as indicated on the drawings and as specified in this and other sections of the specifications.

2.15 FUEL

A. Diesel Fuel Oil: ASTM D 975, Grade Low Sulfur, high volatility.

2.16 LABELING AND IDENTIFYING

A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6.00 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30.00 inches deep; colored yellow.

2.17 CONCRETE MANHOLES

A. Precast Concrete Manhole Sections: ASTM C 478, base and concentric-cone sections with integral ladder or steps.

B. Cast-Iron Frame and Cover: Heavy-duty, water-resistant, cast-iron manhole frame, gasket, and bolted cover; 24.00-inch-diameter, inside opening dimension; 8.00-inch frame riser height.

2.18 SOURCE QUALITY CONTROL

A. Pressure Test and Inspection: Pressure test and inspect fuel-oil storage tanks, after fabrication and before shipment, according to ASME and the following:
   1. Horizontal, Double-Wall Steel ASTs: UL 142, STI F921, and STI R931.
   2. FRP USTs: UL 1316.

B. Tank Markings: Affix standards organization’s code stamp.

PART 3 EXECUTION

3.01 EXAMINATION

A. Initial Investigation: Examine roughing-in for fuel-oil piping system to verify actual locations of piping connections before equipment installation.

B. Corrections: Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 EARTHWORK

A. Excavation, Trenching, and Backfilling: Comply with requirements in Section 31 20 00 “Earthwork”for excavating, trenching, and backfilling.

3.03 PREPARATION

A. Equipment Isolation: Close equipment shutoff valves before turning off fuel oil to premises or piping section.

B. Safety: Comply with NFPA 30 and NFPA 31 requirements for prevention of accidental ignition.

3.04 PIPE ROUTING

A. General: Protect piping material from entry of foreign materials with temporary end caps. Maintain in place until installation. During installation, protect piping systems from entry of foreign materials by use of temporary covers, completing sections of work, and isolating parts of completed system.

B. Vent Pipe: Support vent pipe at building wall and terminate minimum 12.00 feet above grade and 5.00 feet from building opening, or as detailed on Drawings. Terminate with UL approved weatherproof, spark arrestor, and vent cap.

C. Pipe Assembly: Place unions and flanges where necessary to permit easy disconnection of piping and apparatus. Each connection having a threaded end valve shall have a union.

3.05 OUTDOOR PIPING INSTALLATION

A. Underground Piping: Install underground fuel-oil piping buried at least 18.00 inches below finished grade. Comply with requirements in Section 31 20 00 “Earth Moving” for excavating, trenching, and backfilling.

B. Steel Piping with Protective Coating:
   1. Apply joint cover kits to pipe after joining, to cover, seal, and protect joints.
   2. Replace pipe having damaged PE coating with new pipe.

C. Scope: Install double-containment, fuel-oil pipe at a minimum slope of 1 percent downward toward fuel-oil storage tank sump.

D. Vet Piping: Install vent pipe at a minimum slope of 2 percent downward toward fuel-oil storage tank sump.

E. Entry Boots: Assemble and install entry boots for pipe penetrations through sump sidewalls for liquid-tight joints.

F. Tank Connections: Install metal pipes and tubes, fittings, valves, and flexible connectors at piping connections to AST and UST.

G. Changes in Direction: Install fittings for changes in direction in rigid pipe.

H. System Components: Install system components with pressure rating equal to or greater than system operating pressure.

I. Pressure Gauges: Install pressure gauge on suction and discharge from each pump. Pressure gauges are specified in Section 23 05 19 “Meters and Gauges for HVAC Piping.”

3.06 VALVE INSTALLATION

A. Shutoff Valves: Install manual fuel oil shutoff valves on branch connections to fuel oil appliance.

B. Valve Locations: Install valves in accessible locations. Install valves with stems upright or horizontal, not inverted. Valve installations shall allow for operation and repair.

C. Protection: Protect valves from physical damage.

D. Metal Tags: Install metal tag attached with metal chain indicating fuel oil piping systems.

E. Identification: Identify valves as specified in Section 23 05 53 “Identification for HVAC Piping and Equipment.”

F. Safety Valves: Install oil safety valves at inlet of each oil-fired appliance.

G. Pressure Relief Valves: Install pressure relief valves in distribution piping between the supply and return lines.

H. Low Points: Install one-piece, bronze ball valve with hose end connection at low points in fuel-oil piping.

I. Air Vents: Install manual air vents at high points in fuel-oil piping.

J. Emergency Shutoff Valves: Install emergency shutoff valves at dispensers.

3.07 PIPING JOINT CONSTRUCTION

A. Burrs: Ream ends of pipes and tubes and remove burrs.

B. Pipe Preparation: Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to “Quality Assurance” Specification.
   1. Bevel plain ends of steel pipe.
   2. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

E. Brazed Joints: Construct joints according to AWS’s “Brazing Handbook,” “Pipe and Tube” Chapter.

F. Flanged Joints: Install gasket material, size, type, and thickness for service application. Install gasket concentrically positioned.

G. Flared Joints: Comply with SAE J513. Tighten finger tight, then use wrench according to fitting manufacturer’s written recommendations. Do not over tighten.

H. Fiberglass-Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer’s written instructions.

3.08 FUEL-OIL AST INSTALLATION

A. Fuel Oil Tank Requirements: Provide fuel oil tanks in accordance with following:
   1. NFPA 30 and NFPA 30A.
   2. Manufacturer’s instructions.
   3. International Fire Code, Chapters 27 and 34.
   4. API RP 1615.
   5. Clean and flush tanks prior to delivery to site. Seal until pipe connections are made.
   6. Pipe Connections: Provide piping connections to tanks with unions and swing joints. Provide venting to API 2000.
   7. Wiring: Provide wiring and conduit for gauge and monitor; run wiring in electrical conduit. See electrical sections of this Project Specification for product and installation requirements.
   8. Cleaning: Clean and flush day tank after installation. Seal until pipe connections are made.
   9. Fuel Oil: Fill each tank and verify high-level alarm functions. Verify overfill protection device functions. Contracting Agency will provide product.

B. Tank Supports: Install tank bases and supports. Mount aboveground tanks on steel support saddles and stands.

C. Piping Connections: Connect piping and vent fittings.

D. Grounding: Install ground connections.

E. Leak Detection: Install tank leak-detection and monitoring devices.

F. STI R912: Install steel ASTs according to STI R912.

G. STI R942: Install insulated and concrete-vaulted steel ASTs according to STI R942.

H. Fill Tanks: Fill storage tanks with fuel oil. Contracting Agency will provide product. Verify high-level alarm functions. Verify overfill protection device functions.

I. Additional Venting: Provide aboveground storage tanks with additional venting that shall relieve excessive internal pressure caused by exposure to fire as required by International Fire Code 3404.2.7.4. Underground storage tanks shall meet requirements of International Fire Code 3404.2.11.

3.09 LIQUID-LEVEL GAUGE SYSTEM INSTALLATION

A. Liquid Level Gauge: Install liquid-level gauge system. Locate panel inside building where indicated.

3.10 LEAK-DETECTION AND MONITORING SYSTEM INSTALLATION

A. General: Install leak-detection and monitoring system. Install alarm panel inside building where indicated.
   1. Double-Wall, Fuel-Oil Storage Tanks: Install probes or use factory-installed integral probe in interstitial space.
   2. Double-Containment, Fuel-Oil Piping: Install leak-detection sensor probes in fuel-oil storage tank containment sumps and at low points in piping
   3. Install liquid-level gauge.

3.11 CONNECTIONS

A. Location: Install piping adjacent to equipment to allow service and maintenance.

B. Unions: Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment having threaded pipe connection.

C. Flanges: Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.

D. Equipment Connections: Connect piping to equipment with ball valve and union. Install union between valve and equipment.

E. Flexible Piping Connections: Install flexible piping connectors at final connection to burners or oil-fired appliances that must be moved for maintenance access.

3.12 LABELING AND IDENTIFYING

A. General: Nameplates, pipe identification, and signs are specified in Section 23 05 53 “Identification for HVAC Piping and Equipment.”

B. Buried Fuel Oil Piping and Tanks:
   1. Piping: Over underground fuel oil distribution piping. Detectable aluminum foil plastic-backed tape or detectable magnetic plastic tape manufactured specifically for warning and identification of buried piping. Tape shall be detectable by an electronic detection instrument. Provide tape in rolls, 3.00 inches minimum width, yellow in color, with warning and identification imprinted in bold black letters continuously and repeatedly over entire tape length. Warning and identification shall read “CAUTION – BURIED FUEL OIL PIPING BELOW.” Provide permanent code and letter coloring unaffected by moisture and other substances contained in trench backfill material. Bury tape with printed side up at a depth of 12.00 inches below top surface of earth or top surface of sub-grade under pavements, except 6.00 inches below sub-grade under pavements and slabs. Terminate tracer wire in an accessible area and identify as “tracer wire” for future use with plastic-laminate sign.
   2. Fuel Oil Storage Tanks: Install two-dimensional grid of warning tape at 12.00 inches on center over each UST.
   3. Buried Fuel Oil Storage Tank Identification: Label fill reports and access manholes associate with underground storage tanks. Provide permanent labeling in the form of engraved or painted lettering. Labeling is to include the tank identification tag and the product stored in the tank.

3.13 FIELD PAINTING OF AST

A. General: Prepare and touch up damaged exterior surface of AST and supports as specified in “Shop Painting of AST” Specification.

B. Preparation: Prepare exterior steel surface of AST and tank supports.

C. Field Cleaning: After fabrication, blast clean according to SSPC-SP 6/NACE No. 3

D. Final Cleaning: After cleaning, remove dust or residue from cleaned surfaces.

E. Rust: If surfaces develop rust before prime coat is applied, repeat surface preparation.

F. Surface Preparation and Finish: Prepare surface of AST and supports and apply painting systems according to specifications in Section 09 96 00 “High-Performance Coatings” for severe environment high-gloss finish for ferrous metal.

3.14 FIELD PAINTING OF ABOVEGROUND PIPING

A. General: Comply with requirements in 09 90 00 "Painting and Coating" for painting interior and exterior fuel-oil piping.

B. Exposed Exterior Piping: Paint exposed, exterior metal piping, valves, and piping specialties, except components with factory-applied paint or protective coating.
   1. Alkyd System: MPI EXT 5.1D.
      a. Prime Coat: Alkyd anticorrosive metal primer.
      b. Intermediate Coat: Exterior alkyd enamel matching topcoat.
      c. Topcoat: Exterior alkyd enamel (gloss).
      d. Color: Gray.

C. Exposed Interior Piping: Paint exposed, interior metal piping, valves, and piping specialties, except components with factory-applied paint or protective coating.
   1. Latex Over Alkyd Primer System: MPI INT 5.1Q.
      a. Prime Coat: Alkyd anticorrosive metal primer.
      b. Intermediate Coat: Interior latex matching topcoat.
      c. Topcoat: Interior latex (gloss).
      d. Color: Gray.
   2. Alkyd System: MPI INT 5.1E.
      a. Prime Coat: Alkyd anticorrosivemetal primer.
      b. Intermediate Coat: Interior alkyd matching topcoat.
      c. Topcoat: Interior alkyd (gloss).
      d. Color: Gray.

D. Damage and Touchup: Repair marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

3.15 CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer’s written instructions and according to seismic codes at Project.
   1. Construct concrete bases of dimensions indicated, but not less than 4.00 inches larger in both directions than supported unit.
   2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18.00-inch centers around the full perimeter of the base.
   3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
   4. Place and secure anchorage devices. Use supported equipment manufacturer’s setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   5. Install anchor bolts to elevations required for proper attachment to supported equipment.
   6. Use 3,000-psig, 28-day, compressive-strength concrete and reinforcement as specified in Section 03 30 00 “Cast-in-Place Concrete.”

3.16 FIELD QUALITY CONTROL

A. Manufacturer’s Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

3.17 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
   1. NFPA: Testing shall be in accordance with NFPA 30 and NFPA 31.
   2. Testing: Prior to application of test pressure, remove or valve off piping components that may be damaged by test and provide a calibrated test gauge in system. Maintain test pressure for at least one hour. In event of leakage, locate and repair leak by re-welding and repeat test. Materials and equipment shall be subject to inspection at installation site by Contracting Agency.

B. Piping Test: Before final acceptance of Work, test each system as if in service to demonstrate compliance with Contract requirements. Furnish electricity, instruments, connecting devices, and personnel for tests. Correct defects in Work provided by Contractor and repeat tests until work complies with Contract requirements. Contracting Agency will furnish fuel for pipe testing and flushing provided by Contractor. Contractor shall be responsible for test fuel losses greater than 10 percent.

C. Pneumatic Test: Pneumatically test each pipe system to 25 psig and examine joints with soap solution. Gradually increase to 50 psig and hold for one hour.

D. Hydrostatic Tests: Upon completion of pneumatic testing, hydrostatically test each pipe system at 1.5 times maximum system operating pressure, but in no case more than 275 psig in accordance with ASME B31.3 and API RP 1110, with no leakage or reduction in gauge pressure for four hours.

E. Flushing: Thoroughly flush piping before placing in operation. Flush piping, including branch piping, at a minimum velocity of 8.00 feet per second.

F. Secondary Containment Piping Test: Secondary containment piping system shall undergo a 3 to 5-psi minimum air pressure/soap test upon completion of installation to confirm secondary containment integrity. This testing shall comply with manufacturer's published installation instructions.

G. Protective Coating Systems: Inspect protective coating systems with a holiday tester just prior to placement in ground. Holidays revealed shall be promptly repaired. Steel piping coating system shall be given a holiday test with a voltage of 100 to 200 times mil thickness of coating.

H. Steel Fuel Oil Storage Tanks: Test tanks for leaks by applying internal air pressure and using soapsuds, linseed oil, or equivalent material on external welds. For horizontal tanks, test pressure shall be not less than 3 or more than 5 psig. For vertical tanks, test pressure shall be not less than 1.50 psig or more than 2.50 psig. During testing, tank shall be provided with a pressure relief device. Pressure testing shall be for duration of one hour, or for the duration specified in the listing procedures of the specific manufacturer's tank.

I. Leak Detection: Test leak detection monitoring system in accordance with manufacturer's testing procedure.

J. Additional Tests and Procedures:
   1. Inspect and test fuel-oil piping according to NFPA 31, "Tests of Piping" Paragraph; and according to requirements of authorities having jurisdiction.
   2. Test liquid-level gauge for accuracy by manually measuring fuel-oil levels at not less than four different depths while filling tank and checking against gauge indication.
   3. Test leak-detection and monitoring system for accuracy in accordance with manufacturer's testing procedures and by manually operating sensors and checking against alarm panel indication.
   4. Start fuel-oil transfer pumps to verify for proper operation of pump and check for leaks.
   5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
   6. Bleed air from fuel-oil piping using manual air vents.

K. Fuel Oil System Minimum Requirements: Fuel-oil piping and equipment will be considered defective if it does not pass tests and inspections.

L. Test and Inspection Reports: Prepare test and inspection reports.

3.18 OUTDOOR PIPING SCHEDULE

A. Underground Fuel-oil Piping shall be one of the Following: Size indicated is carrier-pipe size.
   1. Flexible, double-containment piping.
   2. Rigid, double-containment piping.

B. Underground Fuel-Oil-Tank Fill and Vent Piping shall be the Following:
   1. NPS 2 and Smaller: Steel pipe, steel or malleable-iron threaded fittings, and threaded joints. Coat pipe and fittings with protective coating for steel piping.
   2. NPS 2-1/2 and Larger: Steel pipe, steel welding fittings, and welded joints. Coat pipe and fittings with protective coating for steel piping.

C. Aboveground Fuel-Oil Piping shall be the Following:
   1. NPS 2 and Smaller: Steel pipe, steel or malleable-iron threaded fittings, and threaded joints.

3.19 ABOVEGROUND MANUAL FUEL-OIL SHUTOFF VALVE SCHEDULE

A. Distribution Piping Valves for Pipe NPS 2 and Smaller shall be the Following:
   1. Two-piece, full-port, bronze ball valves with bronze trim.

B. Valves in Branch Piping for Single Appliance shall be the following:
   1. Two-piece, full-port, bronze ball valve with bronze trim.

3.20 DEMONSTRATION

A. General: Engage a factory-authorized service representative to train Contracting Agency's maintenance personnel to adjust, operate, and maintain liquid-level gauge systems, leak-detection and monitoring systems, fuel-oil pumps.

END OF SECTION 33 52 10

SECTION 41 23 13.13
BRIDGE CRANE EQUIPMENT

PART 1 GENERAL

1.01 FURNISHED BY CONTRACTOR INSTALLED BY CONTRACTOR (FCIC)

A. Bridge Cranes shall be Furnished by Contractor, Installed by Contractor (FCIC).

1.02 RELATED DOCUMENTS

A. Equipment items are listed below by Equipment I.D. Tag.
   1. Bridge Crane 10 ton,
      a. Repair and Fabrication Shop Equipment I.D. Tag: FS-17 (Qty. (1)
   2. Bridge Crane 1.5 ton,
      a. Snow Plow Removal/Install Equipment I.D. Tag: SP-01 (Qty. (1)

B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.03 SUMMARY

A. The work required under this section shall include the designing, manufacturing, shipping, installation and field testing of a top running, single girder, overhead traveling bridge crane with one trolley hoist.

B. Related Sections:
   1. Structural Steel
   2. Special Coating
   3. Electrical Requirements
   4. Basic Electrical Materials and Methods

   1. Specification No. 70 for Top Running & Under Running Single Girder Electric Overhead Traveling Cranes.

B. American National Standard (ANSI)
   1. ANSI B-30.16 Overhead Hoists

C. Occupational Safety and Health Administration (OSHA)
   1. Par. 1910.179 Overhead & Gantry Cranes

D. Hoist Manufacturers Institute (HMI)

E. National Electric Code (NEC)
   1. NEC (Latest Edition Article 610 Cranes and Hoists)

F. American Institute of Steel Construction (AISC)

G. Specification for the Design, Fabrication, and Erection of Structural Steel for Buildings

H. American Society for Testing and Materials (ASTM)
   1. A36/A36M - Specification for Carbon Structural Steel

I. American Welding Society (AWS)
   1. D1.1 - Structural Welding Code - Steel
   2. D14.1 - Overhead Cranes

1.05 SUBMITTALS

A. Shop Drawings and Equipment Data
   1. Submit for approval, Shop Drawings showing complete details and dimensions.
   2. Manufacturers catalog data.
   3. Wiring schematics – ship with crane

B. Operation and Maintenance Manuals
   1. Equipment function, normal operating characteristics, and limiting conditions.
   2. Assembly, installation, alignment, and maintenance instructions. +

3. Lubrication and maintenance instructions.
4. Guide to “troubleshooting”.
5. Parts list.
6. As-built drawing.
7. Test results.

C. Manufacturer’s Reference:

1. Prime Manufacturer: Specifications are based on equipment identified herein by manufacturer's name and model to establish acceptable standards of quality, performance, features, and construction.

   Kone Cranes Inc.

   8735 S 212th Street

   Kent, WA 98031-1921

   Phone: (253) 872-9696

   Website: https://www.konrcranes.com/

   10ton (20,000 lbs.) Overhead Bridge Crane Model:

   Repair / Fabrication Shop: CXTSke10-TON

   1.5ton (3,000 lbs.) Underhung Bridge Crane Model:

   Medium to Large Covered Packing Structure: CXT1.5-TON

D. Other manufacturers: Contingent upon compliance with these specifications and documentation requirements set forth in SUBMITTALS, equipment produced by other manufacturers may be considered as equal.

1.06 QUALITY ASSURANCE

A. Manufacturers shall have documented experience for ten (10) years, having successfully designed and built installations of similar scope.

B. Manufacturer shall be responsible for providing equipment of highest quality and workmanship that will perform specific functions reliably and safely.

1.07 PROJECT CONDITIONS

A. Examination of Site: The Subcontractor shall examine the site and become familiar with all conditions that may affect the work covered by the specifications. Failure to do so shall not lessen the subcontractor’s responsibility or entitle the Subcontractor to additional compensation for work not included in the bid.

1.08 WARRANTY

A. Warranty and Maintenance services shall be provided by the Subcontractor at no additional cost to the Owner for one (1) year after final system acceptance. These services shall consist of manufacturer’s factory-trained representatives providing emergency repair service with on-site response within 24 hours of call, all test equipment and hardware necessary for maintenance and repair work and installation of any hardware modifications designed to improve system performance or eliminate known problems or deficiencies.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Hoists, trolleys, bridge end trucks, drives and controls shall all be from one suppler and shall meet the requirements of this specification.

2.02 CRANE SUMMARY

A. Bridge Crane #1, Bldg. C Fabrication Shop (Qty 1) Equipment Tag # FS-17

1.	Capacity:	10-Tons
2.	Duty Class:	CMAA Class C
3.	Span:	29’-6” (See Structural for Final)
4.	Runway Length	48’-6”
5.	Steel:	AISC Hot Rolled WF Shapes

6. Bridge Girder Deflection: L/600
7. End Trucks: Dual drive with rotating axles. Motors shall include AC magnetic disc brakes per CMAA requirements.
8. Hoist: 10-ton, Electric wire rope hoist
9. Lift: 20'-0”
10. Trolley: Motor driven with drive wheels each side and AC magnetic brakes per CMAA requirements.
11. Trolley Speed: 0 - 65 ft/min stepless (variable frequency drive)
12. Hoist Speed: 20 / 3.3 ft/min two speed contactor control
13. Bridge Speed 0 – 100 ft/min stepless (variable frequency drive)
14. Voltage: 480 V 3 Ph 60 Hz, 115-volt control.
15. Environment: Normal, indoor application.
16. Bumpers: Rubber bumpers on end trucks and trolley per CMAA requirements.
17. Limit Switches: Hoist with geared upper and lower limit switch and block operated upper limit, overload limit switch set at 115% of full load. Trolley and bridge with travel limit switches.

B. Bridge Crane #2, Snow Plow Removal/Install (Qty 1) Equipment Tag #SP-01
1. Capacity: 1.5-Tons
2. Duty Class: CMAA Class C
3. Span: 8’-0” (See Structural for Final)
4. Runway Length 234’-0”
5. Steel: AISC Hot Rolled WF Shapes
6. Bridge Girder Deflection: L/600
7. End Trucks: Dual drive with rotating axles. Motors shall include AC magnetic disc brakes per CMAA requirements.
8. Hoist: 2-ton, Electric wire rope hoist
9. Lift: 20'-0”
10. Trolley: Motor driven with drive wheels each side and AC magnetic brakes per CMAA requirements.
11. Trolley Speed: 0 - 65 ft/min stepless (variable frequency drive)
12. Hoist Speed: 6.5 ft/min stepless (With ASR 15 ft/min)
13. Bridge Speed 0 – 100 ft/min stepless (variable frequency drive)
14. Voltage: 480 V 3 Ph 60 Hz, 115-volt control.
15. Environment: Normal, indoor application.
16. Bumpers: Rubber bumpers on end trucks and trolley per CMAA requirements.
17. Limit Switches: Hoist with geared upper and lower limit switch and block operated upper limit, overload limit switch set at 115% of full load. Trolley and bridge with travel limit switches.

2.03 RUNWAY ELECTRIFICATION

A. The runway conductors shall be Figure-8, rolled galvanized steel bar as supplied by Duct-o-wire Corporation. The minimum capacity of the conductor bar shall be sized to carry the necessary ampere load without undue heating.

B. Four-conductor configuration shall be provided with all brackets, hangers, splice covers, power feeds, expansion gap assemblies and collectors as required by Conductix, Insul8 or Duct-o-wire.

2.04 RUNWAY BEAMS AND RAILS

A. Runway supports, runway beams and end stops shall be supplied and installed by the metal building provider and are not included in this section.

B. Rails shall be ASCE rails, sized according to the crane wheel loads and shall be supplied and installed by the crane manufacturer.

C. The runway rails shall be attached to the runway beams using hook bolts, rail clips or clamps, as determined by the crane manufacturer.

2.05 EQUIPMENT

A. Hoist and Trolley
   1. Top riding single girder crane shall utilize the CXT low head room trolley hoist as manufactured by Konecranes, Inc.
   2. The hoist shall be equipped with an electro-mechanical load-limiting device that shall prevent lifting more than 115% of the rated load.
   3. Hoisting motor(s) shall be two-speed/two winding squirrel cage type with a speed ratio of 6:1.
   4. Hoisting motor(s) shall be totally enclosed with IP55 protection, minimum class F insulation, Klixon type bimetal switch for thermal protection and shall have a 60% ED rating.
   5. Trolley shall be furnished with an adjustable frequency inverter drive and two-step or infinitely variable speed control for smooth acceleration and deceleration.
   6. Trolley motors shall be inverter duty motors with minimum class “F” insulation and motor enclosures shall be TENV [totally enclosed non-ventilated].
   7. Rotary cam type limit switch equipped with 4 micro-switches shall be provided. Limit switch shall provide upper and lower limit of hoist travel, hoist slow down prior to reaching upper limit and phase sequence supervision at upper limit.
   8. Hoist motor brake shall be DC disc type with adequate torque to stop and hold over 125% of the hoist rated load.
   9. Large diameter rope drum with minimum of 36:1 drum to wire rope diameter ration. Groove depth shall be at least 35% of rope diameter. The rope drum shall be equipped with a rope guide to help keep the rope aligned in the grooves of the drum.
   10. Wire rope shall be constructed from galvanized steel having a minimum safety factor of 5.
   11. Hoist reeving shall be single reeved. Lateral hook drift shall not exceed 1/8 inch per foot of vertical travel on single reeved models.
   12. The hoist nameplate is to carry a CSA US rating. The actual hoist control enclosure rating shall be at least equivalent to IP55 / NEMA 4 type.
   13. Hooks shall be made of forged alloy steel and shall be fitted with a spring-loaded flipper-type safety latch.
   14. Hoist shall have a duty rating suitable for the load class and load cycles of the application (reference appendix A).
   15. AGMA quality class 12 machine cut, hardened and precision ground hoist gearing. The gears inside the hoist gearboxes on models up to 5-ton capacity are lubricated by semi-fluid grease. On models over 5-ton capacity the gears inside the hoist gearbox are lubricated with semi-fluid grease or oil.
   16. AGMA quality class 10, hardened and precision ground trolley drive gearing, lubricated by semi-fluid grease.
   17. Trolleys shall have safety drop lugs and energy absorbing bumpers.

B. Bridge Girder
   1. Bridge girders shall be constructed from welded box girders or Structural beams, Steel, ASTM A36, A50 or A992, as required.

C. End Trucks and Bridge Drive
   1. End trucks shall be designed in accordance with CMAA specifications as applicable for the type crane.
   2. End trucks shall be bolted (not welded) to bridge girder.
   3. Bridge drive shall be dual motor (A-4 arrangement per CMAA)
   4. Bridge drive shall be designed to stop bridge within CMAA specifications.
   5. End trucks shall be equipped with rail sweeps and energy-absorbing rubber bumpers.
   6. Travel limit switches to be provided as necessary for safe operation.
   7. Bridge shall be furnished with an adjustable frequency inverter drive and two-step or infinitely variable speed control for smooth acceleration and deceleration.
   8. Bridge motors shall be inverter duty motors with minimum class “F” insulation and motor enclosures shall be TENV [totally enclosed non-ventilated].
   9. AGMA quality class 10, hardened and precision ground bridge drive gearing, lubricated by semi-fluid grease.

10. Bridge girder shall be per 1.01B above, as applicable.
11. Bridge girders shall be constructed from welded box girders or Structural beams, Steel, ASTM A36 A50 or A992, as required.

D. Power Supply
1. Power supply for the hoist shall be 480 Volt, 3 Phase, 60 Hz. All power required for the operation of the hoist, trolley, and end trucks shall be developed from this source.
2. Runway electrification shall be 4-bar safety type rigid conductors as manufactured by Insul-8, Duct-O-Wire Company or Wampfler. Wall mounted disconnect switch and power to runway conductors provided by Electrical Contractor.
3. Cross bridge electrification shall be flat cable style festoon system with terminal box, multi-conductor cord, plug connectors (when available) and accessories. Cables are to be hardwired when plug connectors are not available.

E. Controls
1. Six-way operation, plug-in pushbutton pendant suspended from independent festoon track.
2. Pendant shall include Start (momentary) button, Emergency Stop (push to maintain-turn to release) that controls a mainline contactor in the bridge panel.
3. Pushbutton shall be clearly marked with hoist, trolley and bridge travel directions.
4. Hoist shall be 2 speed magnetic reversing type (standard) or variable frequency inverter control (optional) and the trolley and bridge controls shall be variable frequency inverter control (standard).
5. Electrical control enclosures shall be IP55 or NEMA 4 type. Pushbutton enclosure shall be non-corrosive, nonconductive and have a rating of IP65, NEMA 4X, 4 or 5.

PART 3 EXECUTION

3.01 INSTALLATION AND INSPECTION (IF APPLICABLE TO MANUFACTURER)

A. Inspect structure and crane rail erection for conformance with reviewed shop drawings and contract documents prior to installation of equipment. Bring nonconforming work to the attention of the customer prior to proceeding with crane installation. Non-conforming runway structure or installation must be corrected prior to load testing of crane system. Costs of delays or additional work due to nonconforming runway structure will be reimbursed by the Owner.

B. Bridge crane shall be installed in conformance with manufacturer's instructions and inspected by a manufacturer's representative. Provide all necessary accessories to make bridge crane complete, usable, and capable of meeting the operating requirements specified in the Operating Requirements. Test, adjust and clean equipment for acceptance by Owner.

3.02 TESTING

A. All crane equipment shall be operated through a complete lift and lowering cycle and through a complete travel of the bridge and trolley to determine that the equipment shall perform smoothly and safely and that pendant cable length is sufficient to permit operation from desired floor levels. All tests shall be carried out with the bridge crane equipment loaded at 100 percent of capacity, not to exceed 125 percent of capacity. The bridge crane provider shall provide the test weight loads. Any defects shall be corrected by the bridge crane provider without any expense to the Owner.

SECTION 44 13 20
MOBILE FUME EXTRACTOR EQUIPMENT

PART 1 GENERAL

1.01 FURNISHED BY CONTRACTOR INSTALLED BY CONTRACTOR (FCIC)

A. Mobile Fume Extractor Equipment shall be Furnished by Contractor, Installed by Contractor (FCIC)

1.02 SYSTEM DESCRIPTION

A. Equipment item is listed below by Equipment I.D. Tag.
   1. Mobile Fume Extractor.
      a. Equipment I.D. Tag: FS-16 (Qty. 1)

B. Mobile Fume Extractor Equipment (s)
   1. This section includes the specifications for the Mobile Fume Extractor Equipment (s) being installed for removal of the outgassing from welding repair work, across the site and areas as noted in the Bid Specifications and Bid Drawing Package.
      a. Mobile Fume Extractor Equipment – Description of System(s)
         1) The configurations for Mobile Fume Extractor are described below.
            (a) Standalone equipment for mobile repair services on an assortment of Cars and Light / Heavy Duty Trucks.

C. Seismic Calculations
   1. For seismic calculations, Reference general seismic design criteria noted on Sheet S0.1 Division 1 – General, A.9.

D. List of Applicable Forms
   1. The General Conditions, Supplementary Conditions, Instructions to Bidders, Bid Form, all apply to these bid items.

1.03 DESCRIPTION OF WORK

A. List of Work
   1. The extent of the Work is shown on the drawings and is defined to include (but not by way of limitations) all labor, materials, freight, unloading, equipment, taxes, permits and supervision required for equipment and installation.

B. Coordination
   1. Contractor’s Responsibility: It will be the Contractor's responsibility to verify and establish a detailed installation schedule.
   2. Field Check: ALL BUILDING AND EQUIPMENT LAYOUT DIMENSIONS SHALL BE FIELD CHECKED AND VERIFIED BY CONTRACTOR PRIOR TO START OF INSTALLATION. NOTIFY THE CONSULTANT AND OWNER OF ANY DISCREPANCIES OR CONDITIONS AFFECTING MATERIALS AND/OR INSTALLATION WITHIN TEN (10) DAYS. IF A CONDITION EXISTS AND THE CONSULTANT OR OWNER IS NOT NOTIFIED THE ADDITIONAL COST TO CORRECT THE INSTALLATION IN ACCORDANCE WITH THE REQUIREMENTS OF THE OWNER WILL BE THAT OF THE CONTRACTOR.
   3. Delivery and Unloading: The Mobile Fume Extractor Contractor shall be responsible for coordinating the delivery and unloading of the equipment to the job-site with the General Contractor to eliminate demurrage charges, unless authorized by the Owner or the Consultant. In order to eliminate disruption to the ongoing operations and prevent interference of dock access by trucks entering and leaving the site, temporary staging of materials will be provided outside of the building at a location designated by the Owner. The Mobile Fume Extractor Contractor shall provide storage facilities (i.e., covers, closed containers) to protect equipment from the elements (i.e., dust, dirt, rain, ice, snow, etc.) as necessary. Interior staging of equipment will be kept to a minimum so as not to disrupt ongoing operations.

1.04 QUALITY ASSURANCE

A. Standards
   1. Equipment Standards: The equipment covered by these Specifications shall be designed, assembled, tested and installed in accordance with the latest applicable standards, including:
   2. American National Standards Institute (ANSI).
   3. International Building Code (IBC)
      a. International Building Code including current Building Code Amendments. (2015 Edition)
   4. Materials
      a. All materials furnished shall be new, free from defects, and UL-Approved where such approval is granted to the equipment to be furnished.
   5. Federal Inspection
      a. Latest published applicable Federal Specifications.
   6. OSHA
      a. Applicable OSHA Specifications.
   7. Building and Safety Codes
      a. Any applicable local building and safety codes pertaining to the Work.

B. Workmanship
   1. Trade Methods: Use the best trade methods throughout. Work evidencing substandard workmanship shall be corrected or replaced by the Contractor at the Contractor's expense, per the General Conditions.

C. Touch Up Paint: The method for the touch up of paint shall follow specifications section 3.02 Field Painting.

D. Guarantees
   1. WARRANTY:
      a. Warranty shall be the manufacturer's standard warranty and shall be specified by the Contractor in the contents of the proposal.
      b. The contractor shall provide an extended warranty for a period of three (3) years from Date of Acceptance.
      c. QUALITY OF MATERIALS AND EQUIPMENT: The Contractor guarantees the material and equipment delivered under the Contract to be free from defects in design or workmanship and against damages caused prior to final inspection. Unless otherwise specified, this guarantee extends for a period of three (3) years from the Date of Acceptance for both labor and materials.
      d. REPAIRING DEFECTS: The Contractor shall promptly repair or replace all defective or damaged items delivered under the Contract. The Mobile Fume Extractor Contractor may elect to have any replaced item returned to his/her plant at his/her expense.

1.05 SUBMITTALS

A. Product Data: Submit latest edition of Mobile Fume Extractor data sheet and outline drawing with the proposal.

B. Shop Drawings:
   1. Shop Drawings, as stated in the General Conditions, shall include, but need not be limited to:
   2. Installation Plan: Proposed installation plan of equipment, including location and dimensions of new equipment clearly identified. It will be the Contractor's responsibility to verify and establish a detailed installation schedule per the General Conditions.
   3. Dimensions: Plan views showing all equipment dimensions along with any aisle clearance dimensions.
   4. Bill of Materials: Bill of Materials per the General Conditions.
   5. Approved Shop Drawings
   6. It will be the Contractor's responsibility to obtain approved shop drawings signed by the Consultant and/or Owner per the General Conditions prior to fabrication.

C. Manufacturer's Reference:
1. Prime Manufacturer: Specifications are based on equipment identified herein by manufacturer's name and model to establish acceptable standards of quality, performance, features, and construction.

IAP Air Products

2544 Highway 70 East

Cookeville, TN 38506

Phone: (888) 372-0050

Website: https://www.IAP-AirProducts.com/

Mobile Fume Extractor Model: Boxair M1 unit with FA-0610-S 6"x10' Fume Arm.

D. Other manufacturers: Contingent upon compliance with these specifications and documentation requirements set forth in SUBMITTALS, equipment produced by other manufacturers may be considered as equal.

PART 2 PRODUCTS

2.01 MOBILE FUME EXTRACTOR EQUIPMENT GENERAL

A. The Contractor shall provide the following:
1. List of Required Items
a. New Mobile Fume Extractor as shown on the drawings, including freight, unloading, installation, touch-up painting, cleaning, and other equipment necessary to complete the system.

B. Quantity and Capacity
1. See drawings for equipment location and configuration.

C. Standard Designs
1. Components shall be of standard design and fabrication by the manufacturer so that all may be replaced or purchased at a future date without special charges or extended deliveries.

D. The Bill of Materials for this Work is to be determined by the Contractor from the bid drawings and contents of the Specifications. Mobile Fume Extractor Contractor to verify all information.

E. Codes
1. The Mobile Fume Extractor shall be designed and installed to the exact standards of the manufacturer and in all cases shall conform to applicable codes.

F. Install
1. The shipment of the Mobile Fume Extractor shall include all components to allow immediate install upon receipt.

G. Touch Up
1. The Mobile Fume Extractor Contractor shall touch up any other Contractor's work damaged during the process per section 3.02 Field Painting.

2.02 MOBILE FUME EXTRACTOR

A. General: Equipment Tag # FS-16 Mobile Fume Extractor (Qty. 1)
1. Description: Mobile Fume Extractor typically used in commercial Vehicle Maintenance and Repair Shops for capturing outgassing byproduct from the welding process.
2. Physical Data:
a. Overall Dimensions:
1) Width: 31"
2) Length: 50"
3) Overall Length: 65"
b. Nominal Airflow: 700 cfm
c. Motor: 1.5 hp
d. Compressed Air: 90 psi
e. Power Requirements: 120V, 50/60 Hz 1ph

f. Fume Arm Inlet Plate: 6”
g. Fume Arm: 6”x10’

B. Features and Construction:
1. Filtration Efficiency: 99.9%
2. Filter Gauge: Integrated
3. Three Filters: Washable Pre-Filter, Cartridge
4. Decibel Rating: 74dB@3 ft / 72.5dB@6.5ft / 71db@10ft
5. Manual air pulse jet cartridge cleaning system
6. Dust Drawer
7. Casters and Brakes
8. 2-year Manufacturer’s warranty

C. Finish: Manufactures Standard

PART 3 EXECUTION

3.01 EXAMINATION

A. Coordination
1. Each Contractor must give careful consideration to the ongoing facility operations and the work of other contractors during the entire project and shall organize his/her work so that it will not interfere with ongoing operations or interfere with or delay the work of others. Minimal disruption to ongoing operations is a priority. It is imperative that the schedule be maintained with any changes coordinated promptly with the General Contractor, Owner, and Consultant.

B. General Description
1. The Mobile Fume Extractor shall be installed complete in all details and in accordance with the specifications, manufacturer's recommendations, and the drawings.

C. Installation Routine
1. Installation shall include unloading, checking and security of equipment prior to installation, touch up and cleaning. The Contractor shall provide storage facilities (i.e., covers, closed containers) to protect equipment from the elements (i.e., dust, dirt, rain, snow, etc.). Contractor shall use a transfer system to bring materials inside the building that is supplied by the Contractor. Contractor to ensure no damage to the overhead door, floor, facility or equipment.

D. Tools and Equipment
1. The Contractor shall be responsible to provide all tools and equipment necessary for a complete and satisfactory installation.

E. Permits and Inspection (as required)
1. Contractor shall obtain, and pay for, all necessary permit fees and inspections required by the State or local municipalities.

F. Damaged Materials
1. Claims, due to freight damage, are the responsibility of Mobile Fume Extractor Contractor. This includes any damage that is not evident at the time of the unloading of the equipment (i.e., concealed damage). Should such damage be uncovered, the Contractor must act promptly to repair/replace damaged equipment to minimize any delay to the schedule. Any added cost due to a delay is the responsibility of the Contractor.

G. Debris Disposal
1. It shall be the responsibility of the Mobile Fume Extractor Contractor to remove any debris resulting from his/her work on each and every workday to a pre-designated disposal area. This shall include all waste generated by the installer or any of his/her personnel, shipping containers, and/or construction materials. The Contractor shall broom clean the area each work day to leave the work area clean and allow the Owner access to scrub the floor. This will include organizing the materials not yet incorporated in the Work. At the completion of the work the Contractor shall remove all of his/her waste materials and rubbish from and about the project, as well as all his/her tools.

H. Clearance
   1. The Contractor shall be responsible for maintaining all clearances specified on the drawings.

I. Modifications
   1. The Contractor shall be responsible for the suitability of any Mobile Fume Extractor component modifications required after installation begins. All modifications must be submitted and approved by the Owner and Consultant prior to beginning Work. Modifications done by others must be approved by the Contractor prior to modification. The Contractor shall be responsible for such a modification by others.

J. Contractor's Survey of Damage
   1. The Contractor shall conduct a survey of his/her work each and every workday morning and note any and all damages observed. Any damages must be reported to the General Contractor and the Owner by 9:00 a.m. Damages not reported within this time frame will be the contractor's responsibility.

3.02 FIELD PAINTING

A. Cleaning
   1. All surfaces to be painted must be thoroughly cleansed of rust, scale, oil, grease, dirt, welding flash and all other forms of dirt detrimental to good painting practices.

B. Touch-Ups
   1. After the installations are complete, the Contractor shall touch-up any components that were damaged but only with owners/representative approval. Finish to match factory finish.

Kitsap	Power Equipment Operators	Motor Patrol Graders	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators	Mucking Machine, Mole, Tunnel Drill, Boring, Road Header And/or Shield	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators	Oil Distributors, Blower Distribution & Mulch Seeding Operator	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators	Outside Hoists (Elevators and Manlifts), Air Tuggers, Strato	$75.51	15J	11G	8X	View
Kitsap	Power Equipment Operators	Overhead, bridge type Crane: 20 tons through 44 tons	$76.11	7A	11H	8X	View
Kitsap	Power Equipment Operators	Overhead, bridge type: 100 tons and over	$77.56	7A	11H	8X	View
Kitsap	Power Equipment Operators	Overhead, bridge type: 45 tons through 99 tons	$76.79	7A	11H	8X	View
Kitsap	Power Equipment Operators	Pavement Breaker	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators	Pile Driver (other Than Crane Mount)	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators	Plant Oiler - Asphalt, Crusher	$75.51	15J	11G	8X	View
Kitsap	Power Equipment Operators	Posthole Digger, Mechanical	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators	Power Plant	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators	Pumps - Water	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators	Quad 9, Hd 41, D10 And Over	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators	Quick Tower: no cab, under 100 feet in height base to boom	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators	Remote Control Operator On Rubber Tired Earth Moving Equipment	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators	Rigger and Bellman	$72.22	7A	11H	8X	View

Kitsap	Power Equipment Operators	Rigger/Signal Person, Bellman(Certified)	$75.53	7A	11H	8X	View
Kitsap	Power Equipment Operators	Rollagon	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators	Roller, Other Than Plant Mix	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators	Roller, Plant Mix Or Multi-lift Materials	$75.51	15J	11G	8X	View
Kitsap	Power Equipment Operators	Roto-mill, Roto-grinder	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators	Saws - Concrete	$75.51	15J	11G	8X	View
Kitsap	Power Equipment Operators	Scraper, Self Propelled Under 45 Yards	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators	Scrapers - Concrete & Carry All	$75.51	15J	11G	8X	View
Kitsap	Power Equipment Operators	Scrapers, Self-propelled: 45 Yards And Over	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators	Service Engineers: Equipment	$75.51	15J	11G	8X	View
Kitsap	Power Equipment Operators	Shotcrete/Gunite Equipment	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators	Shovel, Excavator, Backhoe, Tractors Under 15 Metric Tons	$75.51	15J	11G	8X	View
Kitsap	Power Equipment Operators	Shovel, Excavator, Backhoe: Over 30 Metric Tons To 50 Metric Tons	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators	Shovel, Excavator, Backhoes, Tractors: 15 To 30 Metric Tons	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators	Shovel, Excavator, Backhoes: Over 50 Metric Tons To 90 Metric Tons	$77.54	15J	11G	8X	View
Kitsap	Power Equipment Operators	Shovel, Excavator, Backhoes: Over 90 Metric Tons	$78.33	15J	11G	8X	View
Kitsap	Power Equipment Operators	Slipform Pavers	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators	Spreader, Topsider & Screedman	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators	Subgrader Trimmer	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators	Tower Bucket Elevators	$75.51	15J	11G	8X	View
Kitsap	Power Equipment Operators	Tower Crane: over 175' through 250' in height, base to boom	$78.36	7A	11H	8X	View
Kitsap	Power Equipment Operators	Tower crane: up to 175' in height base to boom	$77.56	7A	11H	8X	View
Kitsap	Power Equipment Operators	Tower Cranes: over 250' in height from base to boom	$79.13	7A	11H	8X	View
Kitsap	Power Equipment Operators	Transporters, All Track Or Truck Type	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators	Trenching Machines	$75.51	15J	11G	8X	View
Kitsap	Power Equipment Operators	Truck Crane Oiler/Driver: 100 tons and over	$76.11	7A	11H	8X	View
Kitsap	Power Equipment Operators	Truck crane oiler/driver: under 100 tons	$75.53	7A	11H	8X	View
Kitsap	Power Equipment Operators	Truck Mount Portable Conveyor	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators	Vac Truck (Vactor Guzzler,	$76.09	15J	11G	8X	View

		Hydro Excavator)					
Kitsap	Power Equipment Operators	Welder	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators	Wheel Tractors, Farmall Type	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators	Yo Yo Pay Dozer	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Asphalt Plant Operators	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Assistant Engineer	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Barrier Machine (zipper)	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Batch Plant Operator, Concrete	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Boat Operator	$76.79	7A	11H	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Bobcat	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Brokk - Remote Demolition Equipment	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Brooms	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Bump Cutter	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Cableways	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Chipper	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Compressor	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Concrete Finish Machine - Laser Screed	$72.20	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Concrete Pump - Mounted Or Trailer High Pressure Line Pump, Pump High Pressure	$75.51	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Concrete Pump: Truck Mount With Boom Attachment Over 42 M	$76.77	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Concrete Pump: Truck Mount With Boom Attachment Up To 42m	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Conveyors	$75.51	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Cranes Friction: 200 tons and over	$79.13	7A	11H	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Cranes, A-frame: 10 tons and under	$72.22	7A	11H	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Cranes: 100 tons through 199 tons, or 150' of boom (including jib with attachments)	$77.56	7A	11H	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Cranes: 20 tons through 44 tons with attachments	$76.11	7A	11H	8X	View

Kitsap	Power Equipment Operators-Underground Sewer & Water	Cranes: 20 tons through 44 tons with attachments	$76.11	7A	11H	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Cranes: 200 tons- 299 tons, or 250' of boom including jib with attachments	$78.36	7A	11H	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Cranes: 300 tons and over or 300' of boom including jib with attachments	$79.13	7A	11H	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Cranes: 45 tons through 99 tons, under 150' of boom(including jib with attachments)	$76.79	7A	11H	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Cranes: Friction cranes through 199 tons	$78.36	7A	11H	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Cranes: through 19 tons with attachments, a-frame over 10 tons	$75.53	7A	11H	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Crusher	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Deck Engineer/Deck Winches (power)	$76.09	15J	11G	8X	View
Kitsap	Power Equipment Operators-Underground Sewer & Water	Derricks, On Building Work	$76.77	15J	11G	8X	View

	Silts and Clays Liquid Limit 50% or More		MH	ELASTIC SILT SANDY or GRAVELLY ELASTIC SILT ELASTIC SILT WITH SAND ELASTIC SILT WITH GRAVEL
			CH	FAT CLAY SANDY or GRAVELLY FAT CLAY FAT CLAY WITH SAND FAT CLAY WITH GRAVEL
			OH	ORGANIC CLAY SANDY or GRAVELLY ORGANIC CLAY ORGANIC CLAY WITH SAND ORGANIC CLAY WITH GRAVEL
Highly Organic Soils			PT	PEAT and other mostly organic soils

"WITH SILT" or "WITH CLAY" means 5 to 15% silt and clay, denoted by a "-" in the group name; e.g., SP-SM • "SILTY" or "CLAYEY" means >15% silt and clay • "WITH SAND" or "WITH GRAVEL" means 15 to 30% sand and gravel. • "SANDY" or "GRAVELLY" means >30% sand and gravel. • "Well-graded" means approximately equal amounts of fine to coarse grain sizes • "Poorly graded" means unequal amounts of grain sizes • Group names separated by "/" means soil contains layers of the two soil types; e.g., SM/ML.

Soils were described and identified in the field in general accordance with the methods described in ASTM D2488. Where indicated in the log, soils were classified using ASTM D2487 or other laboratory tests as appropriate. Refer to the report accompanying these exploration logs for details.

1. Estimated or measured percentage by dry weight
2. (SPT) Standard Penetration Test (ASTM D1586)
3. Determined by SPT, DCPT (ASTM STP399) or other field methods. See report text for details.

GEOTECHNICAL LAB TESTS

MC	=	Natural Moisture Content
PS	=	Particle Size Distribution
FC	=	Fines Content (% < 0.075 mm)
GH	=	Hydrometer Test
AL	=	Atterberg Limits
C	=	Consolidation Test
Str	=	Strength Test
OC	=	Organic Content (% Loss by Ignition)
Comp	=	Proctor Test
K	=	Hydraulic Conductivity Test
SG	=	Specific Gravity Test

CHEMICAL LAB TESTS

Organic Chemicals

BTEX	=	Benzene, Toluene, Ethylbenzene, Xylenes
TPH-Dx	=	Diesel and Oil-Range Petroleum Hydrocarbons
TPH-G	=	Gasoline-Range Petroleum Hydrocarbons
VOCs	=	Volatile Organic Compounds
SVOCs	=	Semi-Volatile Organic Compounds
PAHs	=	Polycyclic Aromatic Hydrocarbon Compounds
PCBs	=	Polychlorinated Biphenyls

Metals

RCRA8	=	As, Ba, Cd, Cr, Pb, Hg, Se, Ag, (d = dissolved, t = total)
MTCA5	=	As, Cd, Cr, Hg, Pb (d = dissolved, t = total)
PP-13	=	Ag, As, Be, Cd, Cr, Cu, Hg, Ni, Pb, Sb, Se, Tl, Zn (d=dissolved, t=total)

FIELD TESTS

PID	=	Photoionization Detector
Sheen	=	Oil Sheen Test
SPT[2]	=	Standard Penetration Test
NSPT	=	Non-Standard Penetration Test
DCPT	=	Dynamic Cone Penetration Test

COMPONENT DEFINITIONS

Descriptive Term		*Size Range and Sieve Number*
Boulders	=	Larger than 12 inches
Cobbles	=	3 inches to 12 inches
Coarse Gravel	=	3 inches to 3/4 inches
Fine Gravel	=	3/4 inches to No. 4 (4.75 mm)
Coarse Sand	=	No. 4 (4.75 mm) to No. 10 (2.00 mm)
Medium Sand	=	No. 10 (2.00 mm) to No. 40 (0.425 mm)
Fine Sand	=	No. 40 (0.425 mm) to No. 200 (0.075 mm)
Silt and Clay	=	Smaller than No. 200 (0.075 mm)

ESTIMATED[1] PERCENTAGE

% by Weight		*Modifier*	*% by Weight*		*Modifier*
<1	=	Subtrace	15 to 25	=	Little
1 to <5	=	Trace	30 to 45	=	Some
5 to 10	=	Few	>50	=	Mostly

MOISTURE CONTENT

Dry	=	Absence of moisture, dusty, dry to the touch
Slightly Moist	=	Perceptible moisture
Moist	=	Damp but no visible water
Very Moist	=	Water visible but not free draining
Wet	=	Visible free water, usually from below water table

RELATIVE DENSITY

Non-Cohesive or Coarse-Grained Soils

Density[3]		*SPT*[2] *Blows/Foot*	*Penetration with 1/2" Diameter Rod*
Very Loose	=	0 to 4	≥ 2'
Loose	=	5 to 10	1' to 2'
Medium Dense	=	11 to 30	3" to 1'
Dense	=	31 to 50	1" to 3"
Very Dense	=	> 50	< 1"

CONSISTENCY

Cohesive or Fine-Grained Soils

Consistency[3]		*SPT*[2] *Blows/Foot*	*Manual Test*
Very Soft	=	0 to 1	Penetrated >1" easily by thumb. Extrudes between thumb & fingers.
Soft	=	2 to 4	Penetrated 1/4" to 1" easily by thumb. Easily molded.
Medium Stiff	=	5 to 8	Penetrated >1/4" with effort by thumb. Molded with strong pressure.
Stiff	=	9 to 15	Indented ~1/4" with effort by thumb.
Very Stiff	=	16 to 30	Indented easily by thumbnail.
Hard	=	> 30	Indented with difficulty by thumbnail.

GEOLOGIC CONTACTS

APPLICATION GENERAL PROPOSAL

Application Type:
- ☐ New
- ☐ Repair (no building permit needed)
- ☐ Modification (building permit needed)
- ☐ Building Clearance with Compliance

Application Use Type:
- ☑ Residential
- ☐ Multi-Family
- ☐ Community
- ☑ Commercial

Application Water Type:
- ☑ Public Water
- ☐ Private Water (residential only)

☑ *This is a Redesign (describe what is being changed) OR a Building Clearance with Compliance (describe proposal)*

Increased design flow from 240 gpd to 360 gpd

APPLICANT/AGENT & DESIGNER ACKNOWLEDGEMENT

I certify that (1) the information contained in this application is true and accurate to the best of my knowledge; (2) the application represents my intended use of this property; and (3) any related building permits for which I apply for will be consistent with the plans and specifications contained in this application.

I acknowledge and understand that I, along with my contractors, are responsible for adhering to the conditions of approval of this application and are responsible for conforming to applicable Kitsap County Board of Health ordinances and Washington State Department of Health regulations for onsite sewage systems and water supply.

I acknowledge and understand that the design, location, and construction of my onsite sewage system and/or well is/are critical and of a sensitive nature, and I agree to protect these areas as required by the regulations.

I understand that once this application is submitted and/or approved, any changes to, or variations from, the information or conditions related to this plan may require a revised application submittal and/or could result in the revocation, denial, or suspension of this application or a related building permit and that this application will fully expire within 3 (three) years and 30 (thirty) days from the original date of application submittal.

I understand that I have the right to appeal the Health Officer's decision concerning this application pursuant to the regulations, and that approval of this application does not guarantee that a building permit will be issued.

EXPIRES 11/25/2023

Site Plan Requirements Checklist		
All site plans shall be clearly and accurately drawn to 1"=20', 30', 40' or 50' scale on paper no larger than 11" x 17" and must indicate all of the following information. Use this checklist to ensure all necessary elements are included in the site plan.		
Parcel Number		
Shown	N/A	General Property Information:
☐		Property lines and dimensions.
☐		Elevations of property and the direction of natural drainage (or contour lines).
☐	☐	Cut banks 5' or more in height.
☐		Site plan scale and North arrow.
☐	☐	Streams, creeks, wetlands with surface water, marine waters, lakes and ponds and their associated high-water lines.
Shown	N/A	Existing Property Improvements:
☐	☐	Location and labels of all existing structures.
☐	☐	Location of all existing public and private wells and their well radii, including those wells on adjacent properties within 100' of property lines.
☐	☐	Location of all existing drainfields, including the 10' "No Build Zone" as well as the locations of existing drainfields on adjacent properties within 100' of any well.
☐	☐	Identify all stormwater zones around wells and septic systems.
☐	☐	Location of existing drainage facilities, including all sub-surface infiltration systems.
☐	☐	Location of all existing and abutting roadways, driveways, and easements.
☐	☐	Location of all existing water, sewer and utility lines.
Shown	N/A	Proposed Property Improvements:
☐	☐	Location and dimensions of all proposed structures or building envelopes in relation to property lines, other structures, etc.
☐	☐	Location of all proposed public and private wells, including their 100' well radii and all water lines.
☐	☐	Location of all proposed septic tanks, pump tanks, pre-treatment units, and drainfields, including the 10' "no build" zone.
☐	☐	Identify all stormwater zones around wells and septic systems.
☐	☐	Location of all proposed parking areas, driveways, sidewalks, & road approaches.
☐	☐	Location of all proposed water, sewer and utility lines.

Parcel is on the corner of Bond Rd and Lamrid Road

Lamrid Rd is the first right turn off of Bond going toward Kingston

It is a new road and has no signs but it is constructed.

You will note the road only allows right turns in to and out of Lamrid Rd

Drain field area lines just off of Lamrid Rd

Note three pink and blue ribbons on the left of Lamrid Rd lying between soil logs 1 & 3 and fairly close to Bond Rd

DRINKING WATER / ONSITE SEWAGE WAIVER REQUEST FORM

Waiver Request From (Please check the following in regard to which Regulations are the subject of the waiver):

- [x] **Local Septic Regulations (KCBOH Ordinance No. 2008A-1)**
- [ ] **Local Drinking Water Regulations (KCBOH Ordinance No. 1999-6)**

Section I. *(Completed by Applicant)*

(1) Name: OTAK Inc

(2) Site Address: Corner of Bond Rd and Lamrid Rd

(3)Tax Parcel No.: 062602-2-064-2007

(4) Regulatory Requirement: 246-272A-0230(2)(g)(I) Table IV Treatment standard B with timed dosing for soil types 3-6 with <24" vertical separation

(5) Waiver Requested: Treatment standard E pressure with timed dosing type 4 soils 18" separation

(6) Waiver Justification and Mitigation: No well or surface water within 200' down slope of drainfield
No reduction in Table IV horizontal setbacks -
Meets method 1 - system to have M&M with annual inspections
No additional waivers - no increase in loading rate and dosing volumes within 5% lateral to lateral

Section II. *(Completed by Kitsap Public Health Officer)*

(7) Review Criteria: Class B antena

(8) Mitigation Measures (in addition to those proposed in Section I.:

(9) Comments/Conditions of Approval: meets Class B.

(10) Type of Waiver: ☐ Class A ☒ Class B ☐ Class C ☐ Local

Section III. *(Completed by Kitsap Public Health Officer)*

This Waiver Request has been reviewed according to the applicable provisions of Chapter 246-272 WAC or KCBOH Ordinance No. 2008A-1 or 1999-6. The review criteria applied, and the mitigation measures proposed and/or required, have been evaluated for their ability to provide public health protection at least equal to that provided by the regulations.

This Waiver Request is: ☒ **Approved/Granted** (Subject to the above Conditions of Approval)
☐ **Denied**
☐ **Accepted for Non-Conforming Onsite Sewage System**

Re; Designed Sewage flow for Kitsap County North Maintenance Shop
On the corner of Bond Rd and Lamrid Rd
Tax Parcel # 062602-2-064-2007

Projected Personnel In Future Years

Road Operations

3 Supervisors
3 Mechanics
30 Staff generally gathering equipment and materials at the beginning and end of each day

Household Hazardous Waste Collection Facility

5 Staff

This would be eleven full time on site staff and 30 at the beginning and end of each day.
Counting the 30 part time employees as five full time employees this would constitute an equivalent of 16 individuals.

16 individuals X 15 gallons per day per person would demonstrate a sewage load of 240 gpd.

Designer is recommending an additional 50% allowance for any extreme periods, making the actual design load to be 360 gpd.

Thank you;

Notice of Pending Building Site Application with Public Water Supply

02/02/2023

OTAK INC
11241 Willow Rd #200
Redmond, WA 98052

Tax ID: 062602-2-064-2007
Site Address: 23026 BOND RD NE
Memo #: 123027
Water Source Type: Public
Water System Name: North Peninsula

Dear Applicant,

This checklist expires on 12/15/2025.

Your Building Site Application has been reviewed and a determination made that the soils and/or septic system plans have been given preliminary approval. However, the items listed below need to be submitted for review prior to final approval of your application may be granted. Your application has been placed in our pending files.

1. A current, three-year water availability letter from an approved public water system must be submitted. The water availability letter must be for a **Binding** commitment for water service, and must not expire 90 days prior to the building site application expiration date.

For prompt review, please submit documentation to ossdw@kitsappublichealth.org.

Please be aware that further review of your application cannot proceed until these items are submitted to the Health District. Additional information may be requested in the future based upon continued review.

You may track the status of your application online at www.kitsappublichealth.org; click on the "Application status" button on the bottom of the page.

If you have any questions regarding this pending letter you may contact me at 360-728-2334 or christine.bronder@kitsappublichealth.org.

Thank you for your cooperation.

Sincerely,

Christine Bronder

APPLICATION GENERAL PROPOSAL

Application Type:
- ☑ New
- ☐ Repair (no building permit needed)
- ☐ Modification (building permit needed)
- ☐ Building Clearance with Compliance

Application Use Type:
- ☐ Residential
- ☐ Multi-Family
- ☐ Community
- ☑ Commercial

Application Water Type:
- ☑ Public Water
- ☐ Private Water (residential only)

☐ *This is a Redesign (describe what is being changed) OR a Building Clearance with Compliance (describe proposal)*

APPLICANT/AGENT & DESIGNER ACKNOWLEDGEMENT

I certify that (1) the information contained in this application is true and accurate to the best of my knowledge; (2) the application represents my intended use of this property; and (3) any related building permits for which I apply for will be consistent with the plans and specifications contained in this application.

I acknowledge and understand that I, along with my contractors, are responsible for adhering to the conditions of approval of this application and are responsible for conforming to applicable Kitsap County Board of Health ordinances and Washington State Department of Health regulations for onsite sewage systems and water supply.

I acknowledge and understand that the design, location, and construction of my onsite sewage system and/or well is/are critical and of a sensitive nature, and I agree to protect these areas as required by the regulations.

I understand that once this application is submitted and/or approved, any changes to, or variations from, the information or conditions related to this plan may require a revised application submittal and/or could result in the revocation, denial, or suspension of this application or a related building permit and that this application will fully expire within 3 (three) years and 30 (thirty) days from the original date of application submittal.

I understand that I have the right to appeal the Health Officer's decision concerning this application pursuant to the regulations, and that approval of this application does not guarantee that a building permit will be issued.

Site Plan Requirements Checklist

All site plans shall be clearly and accurately drawn to 1"=20', 30', 40' or 50' scale on paper no larger than 11" x 17" and must indicate all of the following information. Use this checklist to ensure all necessary elements are included in the site plan.

Parcel Number

Shown	N/A	General Property Information:
☐		Property lines and dimensions.
☐		Elevations of property and the direction of natural drainage (or contour lines).
☐	☐	Cut banks 5' or more in height.
☐		Site plan scale and North arrow.
☐	☐	Streams, creeks, wetlands with surface water, marine waters, lakes and ponds and their associated high-water lines.
Shown	**N/A**	**Existing Property Improvements:**
☐	☐	Location and labels of all existing structures.
☐	☐	Location of all existing public and private wells and their well radii, including those wells on adjacent properties within 100' of property lines.
☐	☐	Location of all existing drainfields, including the 10' "No Build Zone" as well as the locations of existing drainfields on adjacent properties within 100' of any well.
☐	☐	Identify all stormwater zones around wells and septic systems.
☐	☐	Location of existing drainage facilities, including all sub-surface infiltration systems.
☐	☐	Location of all existing and abutting roadways, driveways, and easements.
☐	☐	Location of all existing water, sewer and utility lines.
Shown	**N/A**	**Proposed Property Improvements:**
☐	☐	Location and dimensions of all proposed structures or building envelopes in relation to property lines, other structures, etc.
☐	☐	Location of all proposed public and private wells, including their 100' well radii and all water lines.
☐	☐	Location of all proposed septic tanks, pump tanks, pre-treatment units, and drainfields, including the 10' "no build" zone.
☐	☐	Identify all stormwater zones around wells and septic systems.
☐	☐	Location of all proposed parking areas, driveways, sidewalks, & road approaches.
☐	☐	Location of all proposed water, sewer and utility lines.

Parcel is on the corner of Bond Rd and Lamrid Road

Lamrid Rd is the first right turn off of Bond Rd going toward Kingston

It is a new road and has no signs but it is constructed.

You will note the road only allows right turns in to and out of Lamrid Rd

Drain field area lines just off of Lamrid Rd

Note three pink and blue ribbons on the left of Lamrid Rd lying between soil logs 1 & 3 and fairly close to Bond Rd

3 Supervisors
3 Mechanics
30 Staff generally gathering equipment and materials at the beginning and end of each day

Household Hazardous Waste Collection Facility

5 Staff

This would be eleven full time on site staff and 30 at the beginning and end of each day.
Counting the 30 part time employees as five full time employees this would constitute an equivalent of 16 individuals.

16 individuals X 15 gallons per day per person would demonstrate a sewage load of 240 gpd.

Thank you;

Notice of Pending Building Site Application

01/26/2023

OTAK INC
11241 Willow Rd #200
Redmond, WA 98052

Tax ID: 062602-2-064-2007
Site Address: 23026 BOND RD NE
Memo #: 129814
Water Source Type: Public
Water System Name: Unknown

Dear Applicant,

The Health District has conducted a preliminary review of your Building Site Application with respect to Kitsap County Board of Health Ordinance No. 2008A-01, Rules and Regulations Governing Onsite Sewage Systems, and has determined that the following information is needed to continue our review:

1. The proposed drainfield does not have the capacity to support the proposed use for the facilities. Please submit a redesign with an expanded drainfield and reserve drainfield.

For prompt review, please submit documentation to ossdw@kitsappublichealth.org.

Please be aware that further review of your application cannot proceed until these items are submitted to the Health District. Additional information may be requested in the future based upon continued review.

You may track the status of your application online at www.kitsappublichealth.org; click on the "Application status" button on the bottom of the page.

If you have any questions regarding this pending letter you may contact me at 360-728-2334 or christine.bronder@kitsappublichealth.org.

Thank you for your cooperation.

Sincerely,

Christine Bronder

General Provisions

No changes to these General Provisions may be made without further approval of the Office of the Attorney General

DOCUMENTS, NON-EXCLUSIVE, COMPLIANCE WITH LAW, WORK

1. A copy of this Permit must be on the job site, protected from the elements, at all times during any Permit Holder activity, construction or improvement Work as authorized by this Permit. "Work" under this Permit shall include the use of WSDOT-owned right-of-way as authorized herein.
2. The Permit Holder shall be responsible for compliance with all applicable federal, state, tribal and local laws, ordinances and regulations, that affect work being performed pursuant to this Permit. The Permit Holder shall defend and indemnify WSDOT and the State of Washington against any claims that may arise because the Permit Holder (or any of its employees or subcontractors) violated a legal requirement.
3. The Permit Holder agrees that all Work shall be performed and completed to the satisfaction of WSDOT. All material and workmanship shall conform, in the sole discretion of WSDOT, to WSDOT's Standard Specifications for Road, Bridge, and Municipal Construction, current edition and amendments thereto, unless WSDOT has agreed in writing to a different standard, and shall be subject to WSDOT inspection. All WSDOT inspections of Work within WSDOT-owned highway right-of-way or upon state highway right-of-way under WSDOT jurisdiction, are solely for the benefit of WSDOT and not for the benefit of the Permit Holder, Permit Holder's contractor (if any), or any third party.
4. Upon approval of this Permit, the Permit Holder agrees to and shall diligently proceed with the Work and comply with all of the terms, provisions, and exhibits attached herein. Unless specified otherwise by WSDOT, or agreed to in writing by WSDOT, the work authorized by this Permit shall begin, be completed, or shall expire by the dates as agreed to by this Permit and its provisions, as indicated on page 1.

RIGHT OF ENTRY NON-EXCLUSIVE

5. Subject to the terms of this Permit, WSDOT hereby grants to the Permit Holder, its authorized agents, contractors, subcontractors, and employees, a right of entry upon WSDOT-owned highway right-of-way or upon state highway right-of-way under WSDOT jurisdiction, onto which access is necessary to construct, operate and/or maintain the completed Work.

   If WSDOT has approved any limited access breaks, or inner corridor access breaks, for the Work, the Permit Holder shall strictly comply with the terms and conditions of such approval.

WSDOT NOTIFICATION: SURVEY MONUMENTS, HIGHWAY SIGNS, FENCES, LANDSCAPING

6. Unless authorized by WSDOT or other affected property owner in writing, the Permit Holder shall assure that all public and private property, including but not limited to traffic signal equipment, signs, guide markers, lane markers, fences, mailboxes, guardrail, barriers, and utilities, are not impacted, damaged, destroyed, or removed. If any such property is damaged, destroyed, or removed without prior written authorization, the Permit Holder shall notify WSDOT's representative immediately of such impact, damage, destruction or removal. The Permit Holder shall replace, repair, or fully restore any private or public property that is damaged, destroyed, or removed to WSDOT's sole satisfaction.
7. The Permit Holder shall not disturb, remove, or destroy any existing Survey Monument before first obtaining a Washington State Department of Natural Resources (DNR) permit. The Permit Holder agrees that resetting Survey Monuments shall be the sole responsibility, and at the sole expense, of the Permit Holder. Such resetting of any Survey Monument shall be performed by or under the direct supervision of a Licensed Professional Land Surveyor. The Permit Holder shall notify WSDOT in writing within ten (10) calendar days of any Survey Monument that has been disturbed, removed, destroyed, or reset, and shall restore the Survey Monument to its original place and condition at the Permit Holder's sole expense within ten (10) calendar days of its disturbance, damage or destruction.

   If Permit holder does not perform the resetting work as required herein, WSDOT may perform such work and the Permit Holder agrees to fully reimburse and make payment to WSDOT within thirty (30) calendar days of the date of WSDOT's detailed invoice pursuant to Section 26 – Invoice and Payments, herein. If WSDOT chooses not to make the repairs, WSDOT may initiate an action to revoke this Permit.

   A listing of Survey Monuments can be found at the WSDOT's Geographic Services Office Website: http://www.wsdot.wa.gov/monument/searchBroad.aspx

DISTURBANCE OF EXISTING RIGHT-OF-WAY VEGETATION

8. Unless otherwise authorized by WSDOT's representative in writing prior to the start of any Work, this Permit does not authorize the Permit Holder, its' employees, contractors, or agents, any right to cut, spray, retard, remove, destroy, disfigure, or in any way modify the physical condition of any vegetative or landscaping material located on WSDOT owned highway right-of-way or upon state highway right-of-way under WSDOT jurisdiction. Should the Permit Holder anticipate that its' Work will alter the appearance of WSDOT-owned highway right-of-way vegetation or landscaping material, the Permit Holder shall notify the WSDOT representative listed in Special Provision 1 to obtain WSDOT's prior written approval of the Permit Holder's proposed Work. If WSDOT allows the Permit Holder to modify WSDOT-owned highway right-of-way vegetation, it agrees that any vegetation cutting and/or trimming activities shall be conducted in such a manner that WSDOT-owned highway right-of-way vegetation and landscaping material appearance or functionality will not be altered or damaged. Should the Permit Holder alter or damage the appearance of WSDOT-owned highway right-of-way vegetation and landscaping without WSDOT's prior written approval, the Permit Holder is subject to penalties provided for in RCW's 47.40.070, 47.40.080, and 4.24.630, as applicable.

REMOVAL OF TIMBER

9. This Permit is issued pursuant to the applicable terms of RCW 47.12.140 (Severance and Sale of Timber and other personalty - Removal of nonmarketable materials). This Permit does not authorize the Permit Holder, its' employees, contractors, or agents, any right to cut or remove any trees or timber located on WSDOT right-of-way or upon state highway right-of-way under WSDOT jurisdiction without prior written approval from WSDOT.

MERCHANDISING

10. It is unlawful for any person to build, erect, establish, operate, maintain, or conduct along and upon the right-of-way of any state highway any platform, box, stand, or any other temporary or permanent device or structure used or to be used for the purpose of receiving, vending, or delivering any milk, milk cans, vegetables, fruits, merchandise, produce, or any other thing or commodity of any nature unless a permit therefore has first been obtained from WSDOT. WSDOT shall in each instance determine where any platform, box, stand, or any other temporary or permanent device or structure shall be permitted pursuant to RCW 47.32.110.

EROSION CONTROL AND DRAINAGE

11. All discharges to WSDOT right-of-way or upon WSDOT highway right-of-way under WSDOT jurisdiction, if allowed, shall conform to State and Local water quality regulations and shall meet WAC 173-201A (Water Quality Standards for Surface Waters of the State of Washington).
12. During construction of this work, the Permit Holder shall comply with all provisions of the WSDOT Highway Runoff Manual, or WSDOT approved equivalent plan, and implement Best Management Practices (BMP's) to mitigate erosion.

CULTURAL RESOURCES

13. If any archaeological or historical resources are revealed in the Work vicinity, the Permit Holder shall immediately STOP Work, notify WSDOT's Representative and retain a United States Government Secretary of the Interior's qualified archaeologist. Said archaeologist shall evaluate the site and make recommendations to WSDOT regarding the continuance of the Work.

COMPLIANCE WITH CLEARZONE GUIDELINES

14. The Permit Holder hereby agrees that the Work described in this permit is in compliance with WSDOT's Clear Zone Guidelines pursuant to Chapter 1600 of WSDOT's Design Manual (M 22-01) and any revisions thereto. For any Work performed on a managed access state highway within an incorporated city or town, the Permit Holder may use the applicable city or towns clear zone guidelines if the city or town has their own published clear zone guidelines.

PERMIT EXTENSION AND ASSIGNMENT

15. The expiration date of this Permit may not be extended without WSDOT's prior written approval.
16. This Permit shall not be deemed or held to be an exclusive one and shall not prohibit WSDOT from granting permits or franchise rights; or entering into other agreements with other public or private companies or individuals, nor shall it prevent WSDOT from using any of its highways, streets, or public places, or affect its right to full supervision and control over all or any part of them, none of which is hereby surrendered.

MAINTENANCE DEFIENCIES

17. The Permit Holder shall correct any maintenance deficiency related to, or contributed to in any way by, the Work within thirty (30) consecutive calendar days upon receiving written notice of such deficiency from WSDOT, unless WSDOT authorizes in writing a different time period. Should the Permit Holder fail to correct a deficiency within the prescribed time period after receiving written notice of the deficiency from WSDOT, WSDOT reserves the right to perform the necessary maintenance work to preserve WSDOT right-of-way or upon state highway right-of-way under WSDOT jurisdiction or for the protection of the traveling public including bicycles or pedestrians. If WSDOT performs maintenance work as provided herein, the Permit Holder agrees to fully reimburse and make payment to WSDOT within thirty (30) calendar days of the date of WSDOT's detailed invoice pursuant to Section 26 – Invoice and Payments, herein. It WSDOT chooses not to make the repairs; WSDOT may initiate an action to revoke this Permit.

INTERFERENCE WITH OTHER PROJECTS

18. The Permit Holder agrees to schedule and perform the Work herein in such a manner as not to interfere with any WSDOT maintenance or other activities on WSDOT right-of-way or upon state highway right-of-way under WSDOT jurisdiction, including any WSDOT authorized construction activities that may be occurring in the general vicinity of the Work authorized by this Permit.

INSURANCE

19. Insurance (Applicable on a case by case basis)

    The Permit Holder shall provide proof of insurance coverage prior to performing any Work within State-owned highway right of way, as follows:

    - Commercial General Liability covering the risks of bodily injury (including death), property damage, and personal injury, including coverage for contractual liability, with a limit of not less than $5 million per occurrence and in the aggregate; OR
    - Business Automobile Liability (owned, hired, or non-owned) covering the risks of bodily injury (including death) and property damage, including coverage for contractual liability, with a limit of not less than $1 million per accident; OR
    - Employers Liability covering the risks of Permit Holder's employees' bodily injury by accident or disease, with limits of not less than $1 million per accident for bodily injury by accident and $1 million per employee for bodily injury by disease.

    WSDOT and the State shall be expressly named as an additional insureds under these general liability and automobile liability policies, by endorsing these policies with form CG2010 1185 or CA2048 (as appropriate), which shall contain no additional limitations with respect to completed operations or ongoing operations coverages, nor shall there be any limitation with respect to the negligence of WSDOT and the State. These policies shall be primary and non-contributory with respect to WSDOT and the State, and shall contain a waiver of subrogation in favor of WSDOT and the State. The Permit Holder shall furnish WSDOT proof of these insurance requirements prior to performing any Work under the Permit. A forty-five (45) calendar day written notice shall be given to the Department prior to termination of or any material change to the policy(ies) as such relate(s) to this Permit.

MODIFICATION OR REVOCATION OF THE PERMIT BY WSDOT

20a. Modification: If this Permit is modified in writing by WSDOT, the Permit Holder will have thirty (30) calendar days from the date of the written notice to modify the Work as required by WSDOT. If the modifications cannot be made within thirty (30) calendar days, the Permit Holder shall request from WSDOT, in writing, during the prescribed time period, an extension of time in which to make the modifications. Any extension of time shall be made in writing and is solely within WSDOT's discretion.

Should the Permit Holder breach any of the conditions or requirements of the permit or if WSDOT determines that emergency maintenance of the Work is required to (1) protect any aspect of the state highway right-of-way or upon state highway right-of-way under WSDOT jurisdiction, or (2) secure the safety of the traveling public due to a failure of the Permit Holder's Work or its maintenance thereof, WSDOT may perform the emergency maintenance work without the Permit Holder's prior approval, and the Permit Holder agrees to reimburse WSDOT's actual direct and related indirect costs and expenses for performing the emergency maintenance work pursuant to the provisions of Section 26 - Invoice and Payments. WSDOT will notify the Permit Holder of the emergency work performed as soon as practicable.

20b. Revocation: If the Permit is revoked and the Permit Holder fails to return the property back to its original condition, as solely determined by WSDOT, WSDOT shall perform such Work at the Permit Holder's sole cost and expense, and the Permit Holder shall reimburse WSDOT's actual direct and related indirect costs and expenses for performing the Work pursuant to the provisions of Section 27 - Invoice and Payments.

20c. Plan Corrections: WSDOT reserves the right to require changes or corrections due to plan omissions or details not in conformance with WSDOT's Standard Specifications, Standard Plans, Design Manual, or Project Special Provisions.

MODIFICATION OF THE PERMIT BY THE PERMIT HOLDER

21. If the Permit Holder desires to modify this permit and/or the Work, it shall notify the WSDOT Representative listed in Exhibit A, Special Provisions, in writing of all proposed changes for WSDOT's prior written approval. WSDOT agrees to provide written acceptance or rejection of the proposed change(s) to the Permit Holder within Ten (10) business days.

ADDITIONAL PERMIT CONDITIONS

22. The Permit Holder shall not excavate or place any obstacle within the limits of state highway right-of-way in such a manner as to interfere with WSDOT's construction, operation, and maintenance of the State Highway right-of-way or the public's travel thereon without WSDOT's prior written approval and/or as may be provided in this Permit.

23. Upon completion of all Work, the Permit Holder shall immediately remove all rubbish and debris from WSDOT right-of-way or upon state highway right-of-way under WSDOT jurisdiction, leaving WSDOT right-of- way in a neat, presentable, and safe condition, to WSDOT's sole satisfaction. Any Work-related rubbish and debris clean up, or any necessary slope treatment to restore and/or protect WSDOT right-of-way or upon state highway right-of-way under WSDOT jurisdiction, not done within seven (7) calendar days of Work completion, will be done by WSDOT at the expense of the Permit Holder, unless otherwise approved in writing by WSDOT prior to the expiration of the (7) day period.

    The Permit Holder agrees to reimburse WSDOT's actual direct and related indirect costs and expenses for performing the Work pursuant to the provisions of Section 26 - Invoice and Payments.

24. The Permit Holder agrees to maintain, at its sole expense, its Work under this Permit in a manner satisfactory to WSDOT, in WSDOT's sole discretion.

25. WSDOT shall in no way be held liable for any damage to the Permit Holder by reason of any such work by or authorized by WSDOT, its agents or representatives, or by the exercise of any rights by WSDOT upon roads, streets, public places, or structures in question.

EXTENSION OF THE EXPIRATION DATE

26. If requested by the Permit Holder, the Expiration Date of this Permit may be extended by WSDOT after review of the contributing circumstances.

INVOICE AND PAYMENTS

27. If WSDOT deems it necessary to perform Work as provided for in this Permit by WSDOT forces or its' contractor, including but not limited to any modification, repair, clean up or removal of the Work authorized under this Permit:

    a. WSDOT will assign a reimbursable account to the Permit Holder as a means of invoicing the Permit Holder for the costs associated with the Work performed by WSDOT.

    b. WSDOT will provide a detailed invoice, including direct and related indirect costs, to the Permit Holder for the Work performed by WSDOT or its contractor(s), and the Permit Holder agrees to pay WSDOT within thirty (30) calendar days of receipt of an invoice.

    c. The Permit Holder agrees that if payment is not made to WSDOT as herein agreed, WSDOT may charge late fees, interest and/or refer the debt to a Collection Agency, all in accordance with Washington State Law.

OTHER PERMITS AND APPROVALS

28. The Permit Holder shall be responsible for securing all necessary permits, including but not limited to, federal, state, and local regulatory, tribal, environmental, archeological, and railroad permits and permits from the Washington State Department of Ecology, the Washington State Department of Fish and Wildlife, and/or the U.S. Army Corps of Engineers prior to beginning the Work authorized by this Permit. The Permit Holder shall be responsible for mitigation measures where wetlands have been disturbed and agrees that it is solely responsible for any fines imposed for noncompliance with the permit(s) conditions or for failure to obtain the required permits. In addition, the Permit Holder, on behalf of itself and its contractors, officers, officials, employees, and agents, agrees to indemnify, hold harmless, and defend, at its sole cost and expense, WSDOT and its officers, officials, employees, and agents from any and all fines, costs, claims, judgments, and/or awards of damages to regulatory agencies, persons, and/or property, arising out of, or in any way resulting from, the Permit Holder's failure to (1) obtain any required permit for the Permit Holder Work or (2) comply with permit conditions.

INDEMNIFICATION, WAIVER, VENUE, AND ATTORNEYS FEES

29. The Permit Holder, its successors and assigns, shall indemnify, defend at its sole cost and expense, and hold harmless the State of Washington, its officers, employees, and agents from all claims, suits, demands, actions for damages (both to persons and/or property), expenses, regulatory fines, and/or suits in law and in equity that (1) arise out of or are incident to, or alleged to arise out of or are incident to, any acts or omissions of the Permit Holder, its agents, contractors, subcontractors, employees, invitees, successors, assigns and/or any other person in the use of the WSDOT-owned highway right-of-way or upon state highway right-of-way under WSDOT jurisdiction as authorized by the terms and conditions of this Permit, or (2) are caused by the breach of any of the terms or conditions of this Permit by the Permit Holder, its successors and assigns, and its contractors, subcontractors, agents, employees, invitees and/or any other person. The Permit Holder, its successors and assigns, shall not be required to indemnify, defend, or hold harmless the State of Washington, its' officers, employees and/or agents, if the claim, suit, or action for damages (both to persons and/or property) is caused by the sole acts or omissions of the State of Washington, its' officers, employees and/or agents; provided that, if such claims, suits, or actions result from the concurrent negligence of (1) the State of Washington, its officers, employees and/or agents, and (2) the Permit Holder, its agents, contractors, subcontractors, employees, invitees, successors, assigns and/or any other person or involves those actions covered by RCW 4.24.115, the indemnity provisions provided herein shall be valid and enforceable only to the extent of the acts or omissions of the Permit Holder, its agents, contractors, subcontractors, employees, invitees, successors, assigns and/or any other person.

30. The Permit Holder agrees that its obligations under this Permit extend to any claim, demand, and/or cause of action brought by, or on behalf of, any of its' employees or agents while performing Work under this Permit while located on or off WSDOT-owned highway right of way or upon state highway right of way under WSDOT jurisdiction. For this purpose, the Permit Holder, by mututal negotiation, hereby waives, with respect to the State of Washington only, any immunity that would otherwise be available to it against such claims under the Industrial Insurance provisions in chapter 51.12 RCW.

31. The indemnification and waiver provided for in Sections 29 and 30 shall survive the termination of this Permit.

32. In the event that the Permit Holder or WSDOT deems it necessary to institute legal action or proceedings to enforce any right or obligation under this Permit, the Permit Holder and WSDOT agree that any such action or proceedings shall be brought in the superior court situated in Thurston County, Washington. Further, the Permit Holder agrees that it shall be solely responsible for its own attorney's fees and costs and agrees that it shall not seek nor be entitled to recovery of such attorney's fees and costs.

NONAPPLICABILITY OF RELOCATION ASSISTANCE/EMINENT DOMAIN

33. The Permit Holder acknowledges that this Permit does not at any time entitle the Permit Holder, its successors or assigns, to assistance under the Relocation Assistance - Real Property Acquisition Policy (Chapter 8.26 RCW). Further, the revocation or other termination of this Permit shall not be deemed a taking by WSDOT under the laws of eminent domain.

EXHIBIT "A"

This page intentionally left blank

Washington State Department of Transportation

Special Provisions

These Special Provisions, in no way, relieve the responsibility of the Permit Holder or their authorized agents, contractor's, subcontractor's and employees (hereinafter called the Permit Holder) to meet the requirements of, but not limited to, WSDOT Standard Specifications and Standard Plans.

Applicable provisions are denoted by (☑)

☑ **1. WSDOT REPRESENTATIVE** ***(Applicable to All Projects)***

No Work under this Permit shall be performed until the PERMIT HOLDER is authorized in writing by letter or by email to begin Work, by the following WSDOT Representative:

NAME: Duke Stryker and Jeff Smiley

TITLE: Area 2 Maintenance Superintendent and Assistant Superintendents

ADDRESS: 8293 SE Spring Creek Road

CITY: Port Orchard

STATE: WA ZIP CODE: 98367

PHONE: 360-874-3051 CELL:

EMAIL: Stryked@wsdot.wa.gov, and SmileyJ@wsdot.wa.gov

☑ **2. PRE-CONSTRUCTION CONFERENCE.** *(Applicable to ALL Projects)*

Prior to the beginning of construction, a Pre-Construction Conference shall be held at which WSDOT Representative, the Permit Holder Representative(s), and Permit Holder's contractor shall be present.

☐ **3. INSPECTION.** *(Applicable to ALL Projects)*

Upon completion of work, the Permit Holder shall request a Preliminary Final Inspection for Conditional Acceptance and Conditional Approval by WSDOT.

☐ **4. UNSUITABLE MATERIALS.** *(Applicable to ALL Projects)*

If determined necessary by WSDOT, unsuitable, hazardous, or contaminated materials encountered during any excavation shall be removed and replaced to the satisfaction of WSDOT at the Permit Holder 's expense. The replacement material shall be free-draining and granular, or other materials as determined by WSDOT's Construction Representative in accordance with the Standard Specifications.

☐ **5. LANDSCAPING ON STATE RIGHT-OF-WAY** *(Applicable to Counties and Limited Access in All Cities)*

- **PLANTINGS.**
  If the Permit Holder desires to plant and/or cultivate any shrubs, trees, hedges, or other domestic or native ornamental growth on WSDOT owned highway right-of-way that is more extensive than regular WSDOT vegetation, the Permit Holder shall obtain a Roadside Vegetation Permit (DOT Form 220-018) from WSDOT for the maintenance of the plantings.
- **IRRIGATION SYSTEMS.**
  If the Permit Holder desires to install an irrigation system, the Permit Holder may be required to obtain additional approval. The Permit Holder shall be responsible for water and electrical costs.

☐ **6.TRAFFIC CONTROL PLAN** *(Applicable to all City Projects within Limited Access Areas and/or City Projects within Managed Access Areas involving WSDOT maintained Traffic Signals, Freeway Ramps, or Ferry Traffic. Applicable to all other City Projects when WSDOT assistance is requested by the City. Applicable to all County Projects)*

Prior to construction and/or maintenance of this facility, the Permit Holder shall submit Traffic Control Plans to WSDOT for Review and Approval at least ten (10) days in advance of the time that signing and other traffic control devices will be required. These TCP's shall be in compliance with The Manual on Uniform Traffic Control Devices (MUTCD) for Streets and Highways – Part 6 (Temporary Traffic Control) https://mutcd.fhwa.dot.gov/pdfs/2009r1r2/part6.pdf and Washington modifications thereto. All TCP's shall be site specific, unless allowed otherwise by WSDOT.

The primary function of work zone traffic control is to allow vehicles, cyclists, and pedestrians to move safely and easily through or around work areas while still allowing for safe and efficient work operations to be conducted. Effective temporary traffic control enhances traffic safety and efficiency. Drivers and pedestrians need to be guided in a clear and positive manner while approaching and navigating temporary traffic control zones.

- **MODIFICATION, REVOCATION, OR SUSPENSION OF APPROVED TRAFFIC CONTROL PLANS**
  WSDOT reserves the right to modify or revoke any Traffic Control Plan at any time due to unexpected emergencies or safety and operational problems for the traveling public. All costs and time delays associated with modification or revocation shall be borne by the Permit Holder. WSDOT shall in no way be held liable for any delays, costs, or other damages to the Permit Holder by reason of any such WSDOT action.
- **PERMITTED HOURS FOR LANE CLOSURES / WSDOT NOTIFICATION**
  The working hours within WSDOT owned highway right-of-way or highway right-of-way under WSDOT jurisdiction for this project are restricted per the Approved Traffic Control Plan(s). Any extension of these hours must be requested in writing and approved prior to construction. Weekend or Holiday (including Canadian Holidays-Skagit & Whatcom Counties) work is not permitted without written permission from WSDOT. Five (5) working days notification shall be given to WSDOT's Representative prior to any lane closure.
- **HAZARD PROTECTION**
  All hazards to vehicular, pedestrian, and bicycle traffic shall be marked by warning signs, barricades, and lights.
- **STORAGE OF EQUIPMENT AND MATERIALS**
  All lanes shall be open and the shoulders shall be clear of construction equipment and materials during non-working hours. The Work Zone Clear Zone (WZCZ) applies during working and non-working hours. The WZCZ applies only to temporary roadside objects introduced by the Contractor's operations and does not apply to pre-existing conditions or permanent work. Those work operations that are actively in progress shall be in accordance with adopted and approved Traffic Control Plans, and other Contract or Permit requirements.

  During nonworking hours, equipment or materials shall not be within the WZCZ unless they are protected by permanent guardrail or temporary concrete barrier. The use of temporary concrete barrier shall be permitted only if WSDOT approves the installation and location.

  During actual hours of work, unless protected as described above, only materials absolutely necessary to construction shall be within the WZCZ and only construction vehicles absolutely necessary to construction shall be allowed within the WZCZ or allowed to stop or park on the shoulder of the roadway.

  The Contractor's non-essential vehicles and employee's private vehicles shall not be permitted to park within the WZCZ at any time unless protected as described above.

  Deviation from the above requirements shall not occur unless the Contractor has requested the deviation in writing, and WSDOT has provided written approval.

☑ **7. WORKER VISIBILITY** *(Applicable to Counties and Limited Access in All Cities)*

- **FLAGGER APPAREL**
  Traffic Control Supervisors, Flaggers, Spotters, and others performing Traffic Control Labor of any kind shall comply with the following: (1) During daylight hours with clear visibility, workers shall wear a high-visibility ANSI/ ISEA 107-2010 Class 2 or 3 vest or jacket, and hardhat meeting the high-visibility headwear requirements of WAC 296-155-305; and (2) During hours of darkness (½ hour before sunset to ½ hour after sunrise) or other low visibility conditions (snow, rain, fog, etc.), workers shall wear a high-visibility ANSI/ISEA 107-2010 Class 2 or 3 vest or jacket, high-visibility lower garment meeting ANSI/ISEA 107-2010 Class E, and hardhat meeting the high-visibility headwear requirements of WAC 296-155-305.
- **APPAREL - OTHER CONTRACTOR PERSONNEL**
  The Permit Holder and/or the Contractor shall require all other personnel in WSDOT owned highway right-of-way or highway right-of-way under WSDOT jurisdiction under their control (including Service Providers, Subcontractors, and lower tier Subcontractors) that are on foot in the work zone and are exposed to vehicle traffic or construction equipment to wear the high-visibility apparel meeting Performance Class 2 or 3 requirements of the ANSI/ISEA 107-2010 publication titled "American National Standard for High Visibility Safety Apparel and Headwear."

☐ **8. DIRECTIONAL BORING OPERATIONS** *(Applicable to Counties and Limited Access in All Cities)*

- To prevent loss of ground and settlement, or possible damage to overlying structures, pipe installation operations shall be conducted in such a manner that restricts the excavation of materials to only those materials that are physically displaced by the casing. The Permit Holder shall control the advance rate, monitor the volume of material excavated and adjust the advance rate, as required, to avoid loss of ground, over excavation, and surface heave.
- During the bore, the Permit Holder shall monitor and calculate the volume of the spoils quantities removed, taking in consideration the swelling factor for the material. This will be measured against the calculated volume of the casing to ensure over-excavation has not occurred.
- If caving or sloughing occurs the Permit Holder shall modify the construction method to prevent further sloughing or caving. The soil shall be stabilized and the void outside the pipe in the area of the caving shall be filled with grout or other approved material.

- The pipes shall be installed without damage to traveled lanes and shoulders, or other facilities above the pipe. Damage to existing facilities as a result of the Permit Holder's operations shall be repaired to the satisfaction of WSDOT at the Permit Holder's expense. The repair procedure shall be proposed by the Permit Holder and approved by WSDOT.
- Removal of material from the pipe by washing or sluicing will not be permitted.
- All concrete, steel, lumber, and other manmade materials shall be removed from the insertion and receiving pits. The pit backfill shall restore contours to the pre-existing condition.

☐ **9. CRANE BOOM WITHIN WSDOT RIGHT-OF-WAY.** *(Applicable to Counties and Limited Access in All Cities)*

This Permit provides the Permit Holder temporary use of WSDOT's airspace right of way; no permission is granted for use of WSDOT's right of way at the ground level.

Unloaded crane swings, including "weather vaning" will be permitted as shown in the Exhibits.

Crane load swings within thirty (30) feet of the paved edge of WSDOT highway right-of-way or ramps are prohibited and will be cause for immediate revocation of Permit.

No use other than operating or "weather vaning" one (1) construction tower-crane booms within WSDOT's airspace right of way is permitted without the prior written approval from WSDOT.

Signs, display lights, or advertising media/materials are not permitted unless they comply with Chapter 47.42 RCW and Chapter 468-66 WAC and are completely detailed on a separate plan sheet which requires specific prior written authorization by WSDOT. Advertising signs or banners shall not be allowed on any portion or parts of the cranes operating within WSDOT right-of-way.

☐ **10. CRANE OPERATIONS WITHIN WSDOT RIGHT OF WAY.** *(Applicable to Counties and Limited Access in All Cities)*

The Permit Holder shall:

- Comply with all applicable federal, state and local laws, ordinances, and regulations, including environmental requirements that are in force or which may hereafter be in force. The Permit Holder shall also secure all necessary permits and licenses for the use of WSDOT's right of way authorized by this Permit.
- Provide WSDOT with a crane safety and operations plan for approval and receive safety and operations plan approval from WSDOT prior to operating any crane within WSDOT's right-of-way. The plan shall:
  1) List how the Permit Holder will comply with applicable state and federal laws.
  2) Ensure that crane operators will not swing loads within thirty (30) feet of the paved edge of WSDOT highway or ramps.
  3) Designate the individual responsible to oversee and perform Permit Holder's crane operations and safety measures.
  4) Provide names and telephone contact numbers affording 24-hour, 7-day-a-week contact.
  5) Show any suitable crane "limit" switches installed and provide specific details describing how the Permit Holder will ensure compliance with the safety and operations plan.

The plan shall be submitted to WSDOT's Representative for written approval prior to the start of any Crane Operations. The plan shall:

- Designate a signal person and a safety officer to oversee crane operations. The officer, signal person or any construction person on-site shall have authority to stop the operation of the crane if a load appears that it will swing any closer than thirty (30) feet from the paved edge of WSDOT highway or ramps.
- Require a daily pre-lift meeting by the crane operator, signal person, and designated safety officer to discuss their operating plan prior to commencing daily crane operations.
- Ensure that the signal person shall remain in continuous sight of, or in direct communication with, the crane operator in accordance with WAC 296-155-5245.
- Provide a crane operations safety training program for all employees who will access the Permit Holder's construction site.
- Secure access to the project site to prevent unauthorized entry during non-operating hours and take steps to prevent unauthorized crane operation during non-operating hours, such as locking/disabling the crane operator's controls and disconnecting electrical power to the crane.
- Post emergency or after-hour contact telephone numbers on a WSDOT approved sign attached to State Highway right-of-way fence and a sign at the entrance to Permit Holder's construction site.
- Provide evidence of crane inspection certified by state/federal regulators as applicable.
- Ensure a minimum vertical crane boom clearance of eighty (80) feet as measured from the highest point of the roadway finished grade to the lowest point on the boom arm.

☐ **11. REMOVAL OF MONITORING WELLS.** *(Applicable to Counties and Limited Access in All Cities)*

In accordance with the timeline stated in WAC 173-160-151 the Permit Holder shall notify WSDOT Representative in writing at least five (5) days prior to the removal of any Wells to allow WSDOT staff to monitor and review said removal. The Permit Holder shall remove the Wells at its expense in accordance with WAC 173-160 and any amendments thereto.

Further, upon termination of this Permit under any provision hereof, the improvements constructed by the Permit Holder on the premises shall be removed by the Permit Holder at Permit Holder's expense in accordance to WAC 173-160 and the Permit Holder shall restore the premises to the original condition prior to Permit Holder's operations.

☐ **12. ADVERTISING SIGNS.** *(Applicable to Counties and Limited Access in All Cities)*

Any advertising adjacent to state highways must be in compliance with the Scenic Vistas Act of 1971, Chapter 47.42 RCW and Chapter 468-66 WAC. Violation of this section of the statutes will be sufficient cause for cancellation of this Permit. Advertising signs are allowed off State Highway right-of-way, subject to Local Codes and Regulations.

☐ **13. AS-BUILT CONSTRUCTION PLANS** *(Applicable on a case by case basis)*

The Permit Holder shall provide WSDOT representative(s), listed in Special Provision (1), with detailed as-built drawings within ninety (90) calendar days of Work completion, if the originally approved Permit construction plans have been revised during the course of construction or if WSDOT requires modifications.

☐ **14. FINAL INSPECTION** *(Applicable on a case by case basis)*

Upon completion of the Work, as proposed in Exhibit X - Plans, the Permit Holder shall notify WSDOT's representative, listed in Special Provision (1), in writing within ten (10) calendar days to obtain WSDOT's final inspection of the Work. Should WSDOT require any changes to the Work, Permit Holder agrees to make such modification as WSDOT deems necessary, in its sole discretion. Permit Holder shall make all such modifications at its sole cost and expense.

Olympic Region Traffic Management Center (TMC) Requirements

The Olympic Region Traffic Management Center (TMC) is the central resource for tracking highway traffic activity reporting relative to all maintenance, construction, and other highway work activities that are or will be occurring in the Region. The TMC is staffed 24 hours a day seven days a week. Traffic impact activities to be called in and reported by the permit holder include, but are not limited to, the following:

- Any lane closure on a state highway.
- Any shoulder closure on a state highway in the more urban higher traffic volume areas.
- Any work activity of any kind on a state highway limited access freeway.
- Any work activity that may or does cause traffic delays or other distractions to the traveling public on a state highway.

The permit holder shall call the TMC at (253) 538-3300 each time a possible traffic impact activity is about to commence or occurs. The permit holder shall call the TMC 30 minutes in advance of the activity commencing, during the activity if conditions arose that initially did not require the call-in, and at the conclusion of any activity that was reported. Information that shall be provided to the TMC each time an activity begins shall include the following:

- Name of caller,
- State Route (SR) number,
- SR milepost if known, or other description adequately describing the location of the activity (e.g. nearest intersection),
- Brief description of the activity that is about to start,
- The expected duration of the activity that is about to occur,
- Permit number allowing the work,
- Contact names and phone number(s) that allow for direct communication between the TMC and the person(s) onsite that is/are in charge of the activity that is occurring.

Please note the TMC number listed above is to be used for official state business only, and is not a public number to be used for inquires or other reporting of activities on the state highway system. Call 911 for emergencies, or other activities such as reporting a disabled vehicle on the shoulder.

RE **N**orth **K**itsap **S**ervice **C**enter
Site **D**evelopment **A**ctivity **P**ermit **(SDAP) 22-03979**
PLAN ACCEPTANCE

We have reviewed and accept for construction the civil site plans for the above referenced project. This permit must be issued within **365** days from the date of approval letter, per Kitsap County Code 12.10.055. Per the Department of Community Development/Public Works (DCD/PW) SDAP Procedure, the following documents must be uploaded to SMARTGov prior to issuing the permit placard:

1. Final Approved Plan Set
2. Final Approved Drainage Report, if revised after 90% design stage
3. Construction Stormwater Pollution Prevention Plan (SWPPP)
4. Certificate of Liability Insurance

After construction is complete the following must be uploaded to SMARTGov in order for DCD to complete the permit close-out:

1. Inspection Dates
2. Project As-builts

Please be aware of the following requirements by other agencies associated with the proposed construction

1. This project includes the construction of rock walls or other retaining facilities that either exceed four feet in height or sustain a surcharge. A separate building permit with an engineered design is required for such walls.
2. The site plan indicates that greater than 1 acre will be disturbed during construction and may require a National Pollutant Discharge Elimination System Stormwater Construction permit from the Washington State Department of Ecology. More information about this permit can be found at: http://www.ecy.wa.gov/programs/wq/stormwater/construction/ or by calling Josh Klimek at (360) 407-7451, email josh.klimek@ecy.wa.gov
   This permit is required prior to issuance of the Site Development Activity Permit. Please be aware that the minimum time between first public notice and permit issuance is 37 days.

Kitsap County Department of Community Development

Notice of Administrative Decision

Date: 04/14/2023

To: Kitsap County Public Works, jdean@kitsap.gov
Authorized Agent: Sierra Carson, sierra.carson@otak.com
Project Manager: Jeff Massie, jeff.massie@otak.com
Interested Parties and Parties of Record

RE: Permit Number: 22-05515
Project Name: Kitsap County Public Works North Kitsap Service Center
Type of Application: Administrative Conditional Use Permit (ACUP)

The Kitsap County Department of Community Development has **APPROVED** the land use application for **Permit #22-05515 Kitsap County Public Works North Kitsap Service Center Administrative Conditional Use Permit (ACUP)**, **subject to the conditions outlined in this Notice and included Staff Report**.

THE DECISION OF THE DEPARTMENT IS FINAL, UNLESS TIMELY APPEALED TO THE KITSAP COUNTY HEARING EXAMINER ON OR BEFORE 14 DAYS FROM THE DATE OF DECISION PER KITSAP COUNTY CODE 21.04.290.

The written appeal shall be made on, or attached to, an appeal form titled: *'Appeal/Objection of an Administrative Decision'* found on DCD's website, through the Online Permit Application Portal: https://app.oncamino.com/kitsapcounty/login.

Please note affected property owners may request a change in valuation for property tax purposes, notwithstanding any program of revaluation. Please contact the Assessor's Office at 360-337-5777 to determine if a change in valuation is applicable due to the issued Decision.

The complete case file is available for review by contacting the Department of Community Development; if you wish to view the case file or have other questions, please contact help@kitsap1.com or (360) 337-5777.

Port Orchard, WA 98366

Decision Summary
Approved subject to conditions listed under section 13 of this report.

VICINITY MAP

1. **Background**
   The North Kitsap Service Center is comprised of two facilities located on one project site: North Kitsap Road Operations Facility (ROF); and the North Kitsap Household Hazardous Waste Collection Facility (HHWCF). The two facilities have separate functions and funding sources but are co-located for project delivery and operational efficiencies. The name "North Kitsap Service Center" was adopted by the County as part of the public outreach project branding effort and to shorten the title of the overall project.

2. **Project Request**
   The proposed North Kitsap Service Center includes both a new Roads Operation Facility building and a Household Hazardous Waste Collection Facility (HHWCF). A minimum of 95 parking stalls will be provided for County-owned work vehicles, County staff vehicles, and HHWCF customers.

   The proposed Road Operations Facility is a 15,108 square foot industrial building, which

provides administrative offices for up to three supervisory personnel, crew dispatch, training, locker and washroom areas for 30 operation employees, and a vehicle and equipment maintenance shop. In addition to the operations building, the Road Operations Facility also includes 14,041 square feet of covered parking/materials storage, a 2,880 square foot equipment and vehicle wash bay, and an uncovered vehicle and equipment fueling station.

An 8,584 square foot HHWCF industrial building will also be located on the parcel for the temporary consolidation and storage of household wastes collected from the public until ultimate disposal by the County's vendors.

The project has been designed to avoid impacts to all environmentally sensitive areas on site. The required wetland and stream buffers have been maintained. The project has been designed to meet all landscaping and buffer requirements to mitigate potential impacts to surrounding residential properties. A 30-foot minimum solid screening buffer has been provided along the perimeter of the site adjacent to residential areas.

3. SEPA (State Environmental Policy Act)

The State Environmental Policy Act (SEPA), found in Chapter 43.21C RCW (Revised Code of Washington), is a state law that requires the County to conduct an environmental impact review of any action that might have a significant, adverse impact on the environment. The review includes the completion of an Environmental Checklist by the applicant and a review of that checklist by the County. If it is determined that there will be environmental impacts, conditions are imposed upon the applicant to mitigate those impacts below the threshold of "major" environmental impacts. If the impacts cannot be mitigated, an environmental impact statement (EIS) must be prepared. The decision following environmental review, which may result in a Determination of Nonsignificance (DNS), Mitigated DNS, or the necessity for an EIS is called a threshold determination. A separate notice of the threshold determination is given by the County. If it is not appealed, it becomes part of the hearing record as it was issued, since it cannot be changed by the Hearing Examiner.

Pursuant to WAC 197-11-355, the optional DNS process was utilized for this project. The SEPA Comment period previously occurred concurrent with the Notice of Application dated January 23, 2023. A Determination of Nonsignificance (DNS) was issued on March 21, 2023. SEPA noted the following information/SEPA mitigation conditions have been imposed and are listed under conditions at the end of this report.

The SEPA appeal period expired April 4, 2023. No appeals were filed; therefore, the SEPA determination is final.

4. Physical Characteristics

The subject property is 15.64 acres in size and is currently undeveloped. The property is forested and generally rolling, with moderate change in grade across the site. The property was created through a binding site plan initiated by Arness Tree Farms, the previous owner.

Table 1 - Comprehensive Plan Designation and Zoning

Comprehensive Plan: LAMIRD (Limited Area of More Intense Rural Development) Zone: Rural Employment Center	Standard	Proposed
Minimum Density	NA	NA
Maximum Density	0	
Minimum Lot Size	NA	NA
Maximum Lot Size	NA	NA
Minimum Lot Width	NA	NA
Minimum Lot Depth	NA	NA
Maximum Height	35 feet	35 feet - conditioned
Maximum Impervious Surface Coverage	85%	85% maximum conditioned
Maximum Lot Coverage	NA	NA

Applicable footnotes:

19. These zones are not intended to accommodate population growth and therefore do not have allowed density. However, limited new residential uses may occur in these zones which support the intent of these zones to provide employment and services. Therefore, up to one dwelling unit may be allowed per existing parcel for the limited residential uses allowed in Chapter 17.410.

Staff Comment: No newly created lots or residential uses are proposed.

Table 2 - Setback for Zoning District

	Standard	Proposed
Front South (Access) West (Adjacent to Bond NE Road) North (Adjacent to NE Rova Road) *Property has three fronts	20 feet	~30’ from South (Access) ~50’ from West (Bond Road) ~200’ from NE Rova Road

South	Commercial/Storage	Rural Employment Center (REC)
East	Single-Family Residences	Rural Residential (RR)
West	Undeveloped Land	Rural Residential (RR) and Rural Employment Center (REC)

Table 4 - Public Utilities and Services

	Provider
Water	Kitsap PUD #1
Power	Puget Sound Energy
Sewer	Kitsap County
Police	Kitsap County Sheriff
Fire	North Kitsap Fire & Rescue
School	North Kitsap School District #400

5. Access

The proposal includes two entrances off Bond Road for the facility. The driveway entrance is for the North Kitsap Household Hazardous Waste Collection Facility closer to Bond Road. Further down on the same side entrance is the driveway entry for the North Kitsap Road Operations Facility.

6. Site Design

Three structures are proposed. The proposed stormwater facilities include three detention ponds with stormwater wetlands and a detention vault. The proposed Road Operations Facility proposes a 15,108 square foot building, which provides administrative offices for up to three supervisory personnel, crew dispatch, training, locker and washroom areas for 30 operation employees, and a vehicle and equipment maintenance shop. Also included in the Road Operations Facility is 14,041 square feet of covered parking/materials storage, a 2,880 square foot equipment and vehicle wash bay, and an uncovered vehicle and equipment fueling station. The third structure is an 8,584 square foot Household Hazardous Waste Collection Facility (HHWCF). 95 parking stalls will be provided for County vehicles, County staff vehicles, and HHWCF customers.

Site design is analyzed further under Section 10 of this report.

7. Policies and Regulations Applicable to the Subject Proposal

The Growth Management Act of the State of Washington, RCW 36.70A, requires that the County adopt a Comprehensive Plan, and then implement that plan by adopting development regulations. The development regulations must be consistent with the Comprehensive Plan. The Comprehensive Plan process includes public involvement as required by law, so that those who are impacted by development regulations have an opportunity to help shape the Comprehensive Plan which is then used to prepare development regulations.

Kitsap County Comprehensive Plan, adopted June 30, 2016.

The following Comprehensive Plan goals and policies are most relevant to this application:

Capital Facilities and Utilities Goal 1. Define types of public facilities, establish standards for levels of service for each type of public facility and determine what capital improvements are needed in order to achieve and maintain the standards for existing and future populations, with a plan to repair or replace existing public facilities as necessary.

Capital Facilities and Utilities Policy 1. Coordinate provision of utilities with future development by designating appropriate sites for utility facilities and ensuring their availability.

Capital Facility and Utilities Goal 8. Ensure utilities are provided in an efficient, coordinated and timely manner between Utility providers to meet the needs of the County's future population.

Capital Facility and Utilities Policy 27. Minimize the visual impact of utility facilities on view corridors, vistas and adjacent properties by developing design standards for cellular towers, antennas and other types of utility facilities.

The County's development regulations are contained within the Kitsap County Code. The following development regulations are most relevant to this application:

Code Reference	Subject
Title 12	Storm Water Drainage
Title 13	Water and Sewers
Title 14	Buildings and Construction
Title 17	Zoning
Chapter 18.04	State Environmental Policy Act (SEPA)
Chapter 20.04	Transportation Facilities Concurrency Ordinance
Chapter 21.04	Land Use and Development Procedures

8. Documents Consulted in the Analysis

Applicant Submittals	Dated or date stamped
Administrative CUP Application	November 9, 2022
Environmental (SEPA) Checklist	November 9, 2022
Site Plan	November 9, 2022
Project Narrative	November 9, 2022
Final Health District Approval	January 9, 2023
Final Geotechnical Engineering Report	October 7, 2022
Suquamish Tribe Comments	April 3, 2023
Arborist Report	November 9, 2022
Hydrogeological Model Report	February 6, 2023
Critical Areas Report	November 9, 2022
Cultural Resources	November 9, 2022
Landscape Plans	November 9, 2022
Critical Aquifer Recharge Area Assessment	February 6, 2023
Stormwater Drainage Report 90% Design	February 10, 2023

Staff Communication	Dated
Dev. Services & Engineering Memo	March 13, 2023

9. Public Outreach and Comments

Four virtual open house events with residents in the immediate area and constituents of the North Kitsap district were held. The meetings were well attended with an average attendance of 35 and overall attendance of 140. In addition, meeting videos have been posted on the project page on the County's website. 370 views of the meetings have occurred. In addition to the meeting videos, project related information, reports and studies have been posted to the project page as they have been completed, to inform the public of the project.

The Suquamish Tribe provided comments during the SEPA Appeal Period to consider when permit conditions are being developed. The comments sought to have full dispersion or infiltration of stormwater. This is desirable as it most resembles the natural runoff condition from the uplands towards into the stream channel.

County response: The stormwater system is designed in accordance with the Department of Ecology and Kitsap County stormwater manuals. The project discharges approximately 150' upland, through undisturbed forest duff, into an unnamed Type N (non-fish bearing), ephemeral stream. The Type N stream was evaluated and categorized by two separate biologists (Ecological Land Services and OTAK). Gamble Creek is approximately ¼ mile downstream of the project discharge location. A significant proportion of site runoff will be mitigated, after water quality and rate control mitigation, in the Category 4wetland via some infiltration and some groundwater interflow.

10. Analysis

a. Planning/Zoning

The subject property is zoned Rural Employment Center (REC) which requires a Administrative Conditional Use Permit (ACUP) per Kitsap County Code 17.410.046.408 for Public facilities greater than 300 square feet. "Public facilities" is defined in 17.110.640 as streets, roads, highways, sidewalks, street and road lighting systems, traffic signals, domestic water systems, stormwater infrastructure, sanitary sewer systems, pump houses, waste handling facilities designated as public facilities in the comprehensive solid waste management plan, public works storage facilities and road sheds, and utilities such as power, fiber-optic, gas, phone and cable television. This does not include wireless communication facilities as defined in this title.

The project meets all the zoning setbacks required in Kitsap County Code 17.420 Density, Dimensions, Design. Please see Table 2 on page 3.

Kitsap County Code 17.415.400 requires public facilities to meet the following criteria:

A. Public facilities of any size shall meet the following criteria:

1. These provisions do not apply to wireless communication facilities, which are specifically addressed in Chapter 17.530.

   Staff Comment: No wireless communication facilities are proposed in this application.

2. The erection, construction, alteration, or maintenance of overhead or underground utilities by a public utility, municipality, governmental agency, or other approved party shall be permitted in any zone.

   Staff Comment: The use is allowed in the REC zone with an Administrative Conditional Use Permit.

3. In the forest resource lands (FRL) zone, public facilities shall not inhibit forest practices.

Staff Comment: The submitted proposal is not within the FRL zone.

4. In the mineral resource overlay (MRO), public facilities shall not inhibit mineral resource extraction, processing, or production.

Staff Comment: The proposal is not within the MRO zone.

5. Water towers which exceed the height requirements of the zone in Chapter 17.420, solid waste collection, or transfer and/or handling sites in any zone shall be subject to a conditional use permit (C).

Staff Comment: No water towers are proposed within this application. The submitted proposal is for a hazardous waste facility not a solid waste collection, transfer, and/or handing site which has greater usage. Hazardous waste will come from residents dropping off household hazardous wastes (e.g. used paint, florescent bulbs, pesticides, cleaners, etc).

6. Utility transmission and distribution lines and poles may exceed the height limits otherwise provided for in this title.

Staff Comment: No utility transmission and distribution lines are proposed.

7. The public facility shall not substantially interfere with or detract from the intent of the zone district, as determined by the director.

Staff Comment: The Rural Employment Center (REC) zone provides for isolated areas of industrial and commercial type uses in the rural areas of Kitsap County. The REC is not required to principally serve the existing and projected rural population, but rather to promote the rural economy by providing and creating jobs close to home. The project meets this intent through the ACUP.

8. The public facility shall provide a solid screening buffer to mitigate impacts on the visual character of a neighborhood as seen from rights-of-way or adjacent properties. Landscaping shall be installed and maintained in conformance with the requirements of Chapter 17.500.

Staff Comment: The proposal includes a landscaping plan that include a solid screen buffer around the project. The project is conditioned for a solid screen fence.

9. Noise, odor, dust and light impacts shall be mitigated from adjacent properties consistent with Section 17.105.110, Obnoxious things.

Staff Comment: The project is conditioned for artificial outdoor lighting shall be arranged so that the lighting is fully recessed or fully shielded from side view and directed downward and away from surrounding properties. No more than one foot-candle of illumination shall leave the property boundary. Lighting shall be the minimum necessary for safety purposes and be compatible with the rural character of the area. Light standards (poles) shall not exceed 20 feet in height.

In addition, Site operation will be limited to daytime working hours (approximately 7:30am-4:30pm), except in the case of an emergency operations, such as a snow event where operations may change to 24 hours for a limited duration of time. This will mitigate noise impacts.

10. Additional review for stormwater management may be required consistent with Title 12, Storm Water Drainage.

Staff Comment: The proposal has been reviewed for Title 12 elements and have conditioned the project appropriately. In addition, the project will require a Site Development Activity Permit (SDAP) in which Stormwater will be further reviewed.

b. Lighting

Artificial outdoor lighting shall be arranged so that the lighting is fully recessed or fully shielded from side view and directed downward and away from surrounding properties. No more than one foot-candle of illumination shall leave the property boundary. Lighting shall be the minimum necessary for safety purposes and be compatible with the rural character of the area. Light standards (poles) shall not exceed 20 feet in height.

c. Off-Street Parking

The proposed project meets the parking standards of Kitsap County Code Chapter 17.490 Off Street Parking and Loading.

Table 5 - Parking Table

Use Identified in 17.490.030	Standard	Required Spaces	Proposed Spaces/Existing Spaces
*Manufacturing, Research, Testing, Processing and Assembly Facilities *Closest use to North Household Hazardous Waste Collection Facility (HHWCF) *Professional Office Closest use for North Kitsap Road Operations Facility	1 per 1,000 square feet Proposed facility is 8,584 square ft 1 per 300 square feet of gross floor area	8.5 required round up to 9 50.36 spaces required – round to 50	

	Proposed Road Operations Facility is 15,108 square ft		
Total		9+50= 59 spaces	95 proposed

d. Signage

Any sign proposed for the subject property will require a sign permit.

e. Landscaping

All proposed buffers and plantings will comply with KCC 17.500, Landscaping. A minimum 30-foot buffer has been provided along the perimeter to screen the proposed development. This buffer meets the solid screening requirements found in KCC 17.500.027 by providing at least two rows of evergreen trees offset by 10 feet and conditioned for a six foot tall solid screening fence.

Table 6 - Landscaping Table

	Required	Proposed
Required Landscaping (Sq. Ft) 15% of Site	15%	22%
Required Buffer(s) 17.500.025		
North	Solid Screening Buffer	Solid Screening Buffer
South	Solid Screening Buffer	Solid Screening Buffer
East (Bond Rd)	Solid Screening Buffer	Solid Screening Buffer
West	Solid Screening Buffer	Solid Screening Buffer
Street Trees	No	No

f. Frontage Improvements

No frontage improvements were required for this project.

g. Design Districts/Requirements

The subject property is not within a Design District.

h. Development Engineering/Stormwater

Development Engineering has reviewed the above land use proposal and finds the concept supportable in its approach to civil site development with nine conditions. These comments are based on a review of the Preliminary Drainage Report and Preliminary Engineering Plans accepted for review December 12, 2022 to Kitsap County Development Engineering.

i. Environmental

The critical area map is shown below. The property has two wetlands and one unnamed stream on site. Wetland C requires a 50' buffer. In addition, Wetland A is an offsite wetland with a 150' buffer protruding into the subject property. The onsite unnamed stream has an 150' buffer. All project activity will also be located outside of the wetland and stream buffers. Because the project is meeting all buffer requirements, no mitigation is required.

The project is located within a Category II Critical Aquifer Recharge Area. The application includes a Critical Aquifer Recharge Area Assessment prepared by Aspect Consulting dated February 6, 2023. The report concluded "the vulnerability of both aquifers to long-term cumulative and short-term risk from contamination from the proposed Project is considered to be low, provided that the project is designed in accordance with the 2019 Stormwater Management Manual for Western Washington (SMMWW; Ecology, 2019), including applicable BMPs and the recommendations in this report are observed." The project is conditioned to follow the recommendations of this report. The project has been reviewed for Title 12, Stormwater Management and conditionally approved.

There was also a Conceptual Hydrogeologic Model Report prepared by Aspect consulting dated February 6, 2023. The report proposed the implementation of Best Management Practices (BMPs) to eliminate and/or mitigate significant risks to groundwater quality and nearby water supply wells as a result of the planned improvements for the facility. The project is conditioned to follow the recommendations of the report.

The application also includes a Geotechnical Engineering Report prepared by Aspect Consulting dated October 7, 2022. The report concluded, "based on our geotechnical evaluation of the Site that included data review, a Site reconnaissance, subsurface

explorations, and geotechnical engineering analyses, the Project is feasible from a geotechnical perspective—provided the recommendations contained here are properly incorporated into the Project final design and construction." The project shall be conditioned to follow the recommendations of the report.

Also submitted was a Cultural Resources Assessment prepared by Cultural Resource Consultants dated April 15, 2021. The assessment was conducted to determine potential effects of this project on cultural resources. Investigations included pedestrian survey and excavation of 12 shovel probes. A ca. 1890s to 1910s glass bottle scatter (45KP318) was identified in a road cut in the southwest corner of the project location. The surface scatter was of low density and in a disturbed context. It is recommended as ineligible for listing on historic registers. No other cultural resources were identified within the project location. No additional cultural resources investigation is recommended at this time. A determination of "no historic properties affected" is recommended. The project is conditioned that if project activities result in the discovery of archaeological materials, project staff should halt work in the immediate area and contact the technical staff at DAHP and representatives of identified area Tribes.

An Arborist Report prepared by John Lewis ISA Arborist/TRAQ certified was submitted. The report assessed trees within a prescribed area provided by OTAK along Bond Rd. NE, Lamird Rd. and NE Rova Rd for the North Kitsap Service Center project in early development of utilities and roads with the objective of retaining as many viable, healthy trees as possible in lieu of the impending development. This parcel was previously an active timber forest from the 1950's and is mostly populated with Douglas firs (90%) interspersed with a few Western redcedars, White pines and Alders. Additionally, there are some young and semi-mature Cottonwoods located near the wetlands and stream. Due to extensive root damage from clearing and grading for the creation of Lamird Rd. and the installation of water lines along Bond Rd. NE, the report recommended most of trees in the areas impacted by early construction will need to be removed. However, vegetation off the Rova Rd. area of this assessment reveals an opportunity to preserve and maintain natural vegetation. The project is conditioned to follow the recommendations of the report.

j. Access, Traffic and Roads

Adequate vehicular access is proposed via NE Gunderson Rd, a county-maintained Right of Way.

k. Fire Safety

Kitsap County Fire Marshal's office has reviewed the project and approved with one condition.

l. Solid Waste

Solid waste review will occur under the Site Development Activity Permit.

m. Water/Sewer

Potable water is proposed to be provided by Kitsap Public Utility District; sanitary sewage disposal is proposed to be provided by an on-site septic system.

n. Kitsap Public Health District

A building site application will be required during the building permit reviews. There are no known closed or abandoned landfills within 1,000 ft of this parcel. Additionally, there are no known Site Hazard Assessments performed by KPHD at this parcel.

11. Review Authority

The Director has review authority for this Administrative Conditional Use Permit application under KCC, Sections 17.540.020 and 21.04.100. The Kitsap County Commissioners have determined that this application requires review and approval of the Director. The Director may approve, approve with conditions, or deny an Administrative Conditional Use Permit.

12. Findings

1. The proposal is consistent with the Comprehensive Plan.

2. The proposal complies or will comply with requirements of KCC Title 17 and complies with or will comply with all other applicable provisions of Kitsap County Code and all other applicable regulations, including all applicable development standards and design guidelines, through the imposed conditions outlined in this report.

3. The proposal is not materially detrimental to existing or future uses or property in the immediate vicinity.

4. The proposal is compatible with and incorporates specific features, conditions, or revisions that ensure it responds appropriately to the existing character, appearance, quality or development, and physical characteristics of the subject property and the immediate vicinity.

13. Decision

Based upon the analysis above and the decision criteria found in KCC 17.540.040.A, the Department of Community Development recommends that the Administrative Conditional Use Permit (ACUP) request for the North Kitsap Service Center be **approved**, subject to the following 30 conditions:

a. Planning/Zoning

1. All required permits shall be obtained prior to commencement of land clearing, construction and/or occupancy.

2. This permit shall comply with all Kitsap Public Health District regulations and conditions of approval.

3. Landscaping shall be installed and maintained in conformance with the requirements of Kitsap County Code (KCC) 17.500. Landscaping shall be installed and inspected prior to requesting a final inspection or guaranteed by means of an assignment of funds or bonded in the amount of 150 percent of the cost of installation. Proposal shall include a solid screening fence.

4. Any and all signage design and location (including exempt signs) shall comply with Kitsap County Code (KCC) 17.510 and be reviewed and approved by the Department of Community Development prior to installation. Signage may require a separate permit.

5. The recipient of any administrative conditional use permit shall file a Notice of Land Use Binder with the county auditor prior to any of the following: initiation of any further site work, issuance of any development/construction permits by the county, or occupancy/use of the subject property or buildings thereon for the use or activity authorized. The Notice of Land Use Binder shall serve both as an acknowledgment of, and agreement to abide by the terms and conditions of the administrative conditional use permit and as a notice to prospective purchasers of the existence of the permit. The Binder shall be prepared and recorded by the Department at the applicant's expense.

6. The uses of the subject property are limited to the uses proposed by the applicant and any other uses will be subject to further review pursuant to the requirements of the Kitsap County Code (KCC). Unless in conflict with the conditions stated and/or any regulations, all terms and specifications of the application shall be binding conditions of approval. Approval of this project shall not, and is not, to be construed as approval for more extensive or other utilization of the subject property.

7. The decision set forth herein is based upon representations made and exhibits contained in the project application (Permit #22-05515). Any change(s) or deviation(s) in such plans, proposals, or conditions of approval imposed shall be subject to further review and approval of the County and potentially the Hearing Examiner.

8. The authorization granted herein is subject to all applicable federal, state, and local laws, regulations, and ordinances. Compliance with such laws, regulations, and ordinances is a condition to the approvals granted and is a continuing requirement of such approvals. By accepting this/these approvals, the applicant

represents that the development and activities allowed will comply with such laws, regulations, and ordinances. If, during the term of the approval granted, the development and activities permitted do not comply with such laws, regulations, or ordinances, the applicant agrees to promptly bring such development or activities into compliance.

9. This Administrative Conditional Use Permit approval shall automatically become void if no development permit application is accepted as complete by the Department of Community Development within four years of the Notice of Decision date or the resolution of any appeals.

10. Any violation of the conditions of approval shall be grounds to initiate revocation of this Administrative Conditional Use Permit.

11. Construction plans and profiles for all roads, storm drainage facilities and appurtenances prepared by the developer's engineer shall be submitted to Kitsap County for review and acceptance. No construction shall be started prior to said plan acceptance.

12. Site operation will be limited to daytime working hours (approximately 7:30am-4:30pm), except in the case of emergency operations, such as a snow event where operations may change to 24 hours for a limited duration of time.

13. Artificial outdoor lighting shall be arranged so that the lighting is fully recessed or fully shielded from side view and directed downward and away from surrounding properties. No more than one foot-candle of illumination shall leave the property boundary. Lighting shall be the minimum necessary for safety purposes and be compatible with the rural character of the area. Light standards (poles) shall not exceed 20 feet in height.

b. Development Engineering

14. The information provided demonstrates this proposal is a Large Project as defined in Kitsap County Code Title 12 and as such will require a Full Drainage Site Development Activity Permit (SDAP) from Development Engineering.

15. Stormwater quantity control, quality treatment, and erosion and sedimentation control shall be designed in accordance with Kitsap County Code Title 12 effective at the time of SDAP application. The submittal documents shall be prepared by a civil engineer licensed in the State of Washington. The submittal requirements shall be in accordance with Kitsap County Code in effect at the time of SDAP application. (SDAP #22-03979 being reviewed concurrently)

16. The site plan indicates that greater than 1 acre will be disturbed during

construction. This threshold requires a National Pollutant Discharge Elimination System (NPDES) Stormwater Construction permit from the State Department of Ecology. More information about this permit can be found at: http://www.ecy.wa.gov/programs/wq/stormwater/construction/html or by calling Josh Klimek at (360) 407-7451, email joshklimek@ecy.wa.gov This permit is required prior to issuance of the SDAP. Processing time for NPDES permit is a minimum of 37 days.

17. This project includes the construction of a detention vault, which requires a building permit issued by the Department of Community Development. A Structural Engineer, registered in the State of Washington, shall design the vault and prepare the construction drawings. In addition, a geotechnical engineering analysis of the vault design is required. That analysis shall be prepared by a Civil Engineer licensed in the State of Washington, and knowledgeable in the practice of soils engineering and mechanics. The analysis shall address the effects of groundwater infiltration, seepage, potential slip planes, and changes in soil bearing strength. The proposed facilities shall be designed following the recommendations of the geotechnical analysis.

18. If the project proposal is modified from that shown on the site plan approved for this permit application, Development Engineering will require additional review and potentially new conditions.

19. This project includes the construction of rock walls or other retaining facilities that either exceed four feet in height or sustain a surcharge. A separate building permit with an engineered design is required for such walls. This note shall be placed on the face of the final construction drawings.

20. Rock and retaining walls shall meet all applicable setback requirements of Vol. II, Chapter 9 of the Kitsap County Stormwater Drainage Manual.

c. Environmental

21. Permit approval subject to chapter 19.300.315 of Kitsap County Code, which states that buffers or setbacks shall remain undisturbed natural vegetation areas except where the buffer can be enhanced to improve its functional attributes. Refuse shall not be placed in buffers.

22. A 150-foot native vegetation buffer shall be retained along the perimeter of the stream as depicted on the approved site plan. In addition, a building or impervious surface setback line of 15 feet is required from the edge of the buffer.

23. A 50-foot native vegetation buffer must be maintained along the delineated wetland boundary as depicted on the approved site. In addition, a building or

impervious surface setback line of 15 feet is required from the edge of the buffer.

24. Prior to occupancy, the common boundary between the STREAM and WETLAND buffer and the adjacent land shall be permanently identified with critical area buffer signs. A total of 50 (10 for wetland and 40 for stream) Critical Area Ordinance (CAO)signs shall be placed along the designated boundary spaced approximately 50-feet apart, visual from sign to sign. Signs must be attached to existing trees with diameter breast height greater than 4 inches. Alternative methods include 4x4 posts, metal posts or split rail fencing. Signs are provided at issuance and installation of the signs is required prior to final inspection and Certificate of Occupancy (CO).

25. The proposal occurs within a Category II Critical Aquifer Recharge Area. The proposed operation and design features described in the Hydrogeological Report - prepared by Aspect consulting dated February 6, 2023. are hereby incorporated as proposed mitigation measures for aquifer protection.

26. The project shall follow the recommendations of the Critical Aquifer Recharge Area Assessment prepared by Aspect Consulting dated February 6, 2023.

27. The project shall follow the recommendations of the Geotechnical Engineering Report prepared by Aspect Consulting dated October 7, 2022.

28. If project activities result in the discovery of archaeological materials, project staff should halt work in the immediate area and contact the technical staff at DAHP and representatives of identified area Tribes.

29. The project shall follow the recommendations of the Arborist Report was submitted prepared by John Lewis ISA Arborist/TRAQ certified.

d. Traffic and Roads

None

e. Fire Safety

30. Fire Department access consisting of 20' unobstructed with shall be provided throughout site. Access, fire hydrant placement, and fire flow will be determined at time of SDAP review. During building plan review it may be determined at fire sprinklers, fire alarms, and additional fire code permit may be required.

f. Solid Waste

None

g. Kitsap Public Health District
None

  Coverage under the Construction Stormwater General Permit

This page intentionally left blank

STATE OF WASHINGTON
DEPARTMENT OF ECOLOGY
PO Box 47600, Olympia, WA 98504-7600 • 360-407-6000

May 5, 2023

Jacques Dean
Kitsap County Public Works Road Department
507 Austin Ave
Port Orchard, WA 98366

RE: Coverage under the Construction Stormwater General Permit

Permit number:	**WAR312437**
Site Name:	**North Kitsap Service Center**
Location:	**Along NE Rova Rd and State Route 307/Bond Rd NE Poulsbo, WA County: Kitsap**
Disturbed Acres:	**8.5**

Dear Jacques Dean:

The Washington State Department of Ecology (Ecology) received your Notice of Intent for coverage under Ecology's Construction Stormwater General Permit (CSWGP). This is your permit coverage letter. Your permit coverage is effective May 5, 2023.

Retain this letter as an official record of permit coverage for your site. You may keep your records in electronic format if you can easily access them from your construction site. You can get the CSWGP, permit forms, and other information at Ecology's CSWGP eCoverage Packet webpage[1]. Contact your Permit Administrator, listed below, if you want a copy of the CSWGP mailed to you. Please read the permit and contact Ecology if you have any questions.

Electronic Discharge Monitoring Reports (WQWebDMR)
This permit requires you to submit monthly discharge monitoring reports (DMRs) for the full duration of permit coverage (from the first full month of coverage to termination). Your first sampling and reporting period will be for the month of **June** and your first DMR must be submitted by **July 15, 2023**.

[1] http://www.ecology.wa.gov/eCoverage-packet

You must submit your DMRs electronically using Ecology's secure online system, WQWebDMR. To sign up for WQWebDMR go to Ecology's WQWebPortal guidance webpage[2]. If you have questions, contact the portal staff at (360) 407-7097 (Olympia area), or (800) 633-6193/Option 3, or email WQWebPortal@ecy.wa.gov.

Appeal Process

You have a right to appeal coverage under the general permit to the Pollution Control Hearing Board (PCHB). Appeals must be filed within 30 days of the date of receipt of this letter. Any appeal is limited to the general permit's applicability or non-applicability to a specific discharger. The appeal process is governed by chapter 43.21B RCW and chapter 371-08 WAC. "Date of receipt" is defined in RCW 43.21B.001(2). For more information regarding your right to appeal, please reference Ecology's Focus Sheet: *Appeal of General Permit Coverage*[3].

Annual Permit Fees

RCW 90.48.465 requires Ecology to recover the costs of managing the permit program. Permit fees are invoiced annually until the permit is terminated. Termination conditions are described in the permit. For permit fee related questions, please contact the Water Quality Fee Unit at wqfeeunit@ecy.wa.gov or (800) 633-6193/Option 2.

Ecology Field Inspector Assistance

If you have questions regarding stormwater management at your construction site, please contact your Regional Inspector, Charles Hackel of Ecology's Northwest Regional Office in Shoreline at charles.hackel@ecy.wa.gov, or (425) 213-9832.

Questions or Additional Information

Ecology is here to help. Please review our Construction Stormwater General Permit webpage[4] for more information. If you have questions about the Construction Stormwater General Permit, please contact your Permit Administrator, Melinda Wilson at melinda.wilson@ecy.wa.gov, or (360) 870-8290.

Sincerely,

Jeff Killelea, Manager
Program Development Services Section

Appraisal of Timber, S.A. Newman Firm, August 2018

This page intentionally left blank

APPRAISAL OF TIMBER

Within a 14± Acre Proposed Acquisition Area on Real Property legally described as that portion of Section 6, Township 26 North, Range 2 East, W.M., Kitsap County, Washington, described as Parcel II in Exhibit "A" of that title report dated January 30, 2018 issued by Pacific Northwest Title; order no. 32163844

Portion of Kitsap County Tax Parcel 062602-1-018-2006

Report date: August 23, 2018
Date of Valuation: August 7, 2018

under *Uniform Standards of Professional Appraisal Practice* (USPAP)
and (if applicable) guidelines of *RCO Policy Manual 3, Section 5*
when used with report of lead property appraiser

Prepared exclusively for:
Client: Richards & Associates, its principal Gary D. Lyman, MAI and, as additional intended user, Kitsap County, a Washington domestic corporation

Re: Cruise and appraisal of timber within proposed acquisition area on property owned by Arness Tree Farms Inc., a Washington corporation; portion of parcel 062602-1-018-2006

Dear Mr. Lyman:

At your request, our firm has prepared an appraisal to estimate the contributory value of merchantable timber located within a 14± acre proposed acquisition area on an 81.86-acre unit of real property located in the northern part of Kitsap County, Washington. A fee simple estate in this timber is valued in conformance with the *Uniform Standards of Professional Appraisal Practice* (USPAP) and, if applicable, guidelines of *RCO Policy Manual 3, Section 5* when used with report of lead property appraiser.

Permitted users; functions. This cruise and timber appraisal have been prepared for the sole and exclusive use of our firm's client Richards & Associates, its principal Gary D. Lyman, MAI and, as additional intended user, the firm's client Kitsap County, a Washington domestic corporation. The sole function of the cruise and timber appraisal is to assist the lead property appraiser in establishing the market value contribution of the proposed acquisition area in order to establish a purchase offer by your client in a voluntary transaction.

Indications of contributory timber value: The timber is described in detail in this report. Based upon our timber cruise, investigation and analysis of available information, the estimated contributory market value of merchantable timber within proposed acquisition area under a **Class IV-General** forest practice (i.e., with prospective near term land use conversion) totals **Ninety-Three Thousand Dollars ($93,000)** as of August 7, 2018.

This value estimate is a *net* figure, adjusted and reduced for costs of harvest, log haul, marketing and other costs. When existent, timber valuable principally as an amenity or is legally non-harvestable, where existent, is customarily valued as a unit with the underlying land. This estimate also adjusts for any uncertainty in marketplace about extent of permitted volume at prospective harvest dates; marketing and management costs; prospective time lag to receipt of timber or log sale proceeds; and risk and profit to landowner in resale of timber commodity.

As a general guideline lead appraisers do, once concluding a highest and best use, usually opt to include the value contribution of on-site timber based on either a Class III (or Class IV-General without land use conversion) or Class IV-General (with land use conversion) forest practice. Market practices vary, however, in areas transitioning from resource oriented to other uses: hence, III and IV-G often serve as parameters. If corresponding timber on land sales used as comparables is valued as a unit within the underlying land, however, a similar practice potentially applies to the subject timber to avoid "double counting" of this asset component. The lead appraiser ultimately estimates value contribution based on review of prevailing practices in locale and property sale comparables.

As discussed, total property value is expected to be maximized under a Class IV-General conversion forest practice, depending on the trade-off between diminished land value as a result of timber cutting, and foregone stumpage value by leaving this timber uncut. A sales comparison or other market analysis of the lead property appraiser might also assist in corroborating this determination.

RCW 76.09.060(3)(d) as amended July 2007 prohibits conversion to a land use other than "commercial forest product operations within six years after approval of the forest practices application or notification without the consent of the county ... to which the forest practices operations would have been subject if the application had stated an intent to convert." Actual permitted harvest in land use conversions is subject to county review on a case-by-case basis. A harvest compliant with conversion guidelines—a Class IV-General conversion forest practice—is generally more restrictive than permitted under other classes of forest practice.

On-site timber. A representative of the S. A. Newman Firm cruised merchantable timber within proposed acquisition area of this property on August 7, 2018. The "variable radius plot: method of estimating merchantable timber volume by species is the most typical method employed in the private sector for similar properties in the subject market area. As documented in Addendum C, sampling accuracy at one standard deviation averages 8.3 percent (based on net board feet per acre, combined for all species); 6.6% based on basal area per acre.

Extraordinary assumptions or hypothetical conditions: This appraisal is not subject to any extraordinary assumption within the meaning of Standards Rule 1-2(f) of USPAP or hypothetical condition under Standards Rule 1-2(g).

The indicated estimate of market value is subject to the conditions and comments presented in this report of 64 pages. Please feel free to phone us at 425/259-4411 (fax 425/258-4435) if you have any questions. Thank you.

Respectfully Submitted,

S. A. NEWMAN FIRM

Timothy D. Newman, MAI, CF

CERTIFICATION OF APPRAISER

I certify that, to the best of my knowledge and belief:

The statements of fact contained in this report are true and correct and no important facts have been withheld.

The reported analyses, opinions, and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.

I have no present or prospective interest in the property that is the subject of this report and no personal interest with respect to the parties involved.

I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.

We have performed no services, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment [a disclosure status required by the Ethics Rule of USPAP].

Our firm's engagement in this assignment was not contingent upon developing or reporting predetermined results.

Our firm's compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal. Moreover, this appraisal assignment is not based on a requested minimum or maximum valuation, a specific valuation, or the approval of a loan.

The appraisal was developed and the appraisal report prepared (when used with report of lead property appraiser) in conformance with the Appraisal Standards Board's *Uniform Standards of Professional Appraisal Practice*; and also prepared in conformity with the Code of Professional Ethics and Standards of Professional Practice of the Appraisal Institute.

Richard B. Klein personally inspected the appraised property that is the subject of this report on behalf of the S. A. Newman Firm on the ground on August 7, 2018. Timothy D. Newman did not inspect this site. Adam L. Jewell assisted in researching delivered log values and logging costs. No other persons assisted in preparing the analyses, conclusions and other opinions concerning real property which are set forth in this appraisal report.

Our firm has not revealed the findings and results of such report to anyone other than the client named herein, and our firm will not do so until authorized in writing by said party, or until required to do so by due process of law. The use of this report is, however, subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

In my opinion, the estimated market value contribution of the timber being appraised under the alternative forest practices scenarios indicated is as stated in the letter of transmittal attached hereto as of the date specified therein. This report is subject to a specified extraordinary assumption and a hypothetical condition as communicated in the letter of transmittal attached hereto.

As of the date of this report, Timothy D. Newman has completed the requirements under the continuing education program of the Appraisal Institute; and is licensed as a Certified Real Estate Appraiser (General Classification) under RCW 18.140. Current certification expires February 27, 2019. A statement of the appraiser's qualifications, including education, technical training and experience, is attached hereto.

DEFINITIONS AND STANDARDS

As used herein:

(1) "Market value" is "the most probable price, as of a specified date, in cash, or in terms equivalent to cash, or in other precisely revealed terms, for which the specified property rights should sell after reasonable exposure in a competitive market under all conditions requisite to a fair sale, with the buyer and seller each acting prudently, knowledgeably, and for self-interest, and assuming that neither is under undue duress." [*The Dictionary of Real Estate Appraisal*, 6th Edition, 2015, p. 141.]

(2) "Cash equivalent" means a price expressed in terms of cash as distinguished from a price that is expressed all or partly in terms of the face amount of notes or other securities that cannot be sold at their face amount. The cash equivalent price of a sale property may differ from its contract price and should represent the present worth at time of sale of all cash and other considerations paid for the real property or timber as opposed to other portions of stated consideration that may be paid for services, fees, and/or other non-realty items.

(3) "Extraordinary assumption" means an assignment-specific assumption as of the effective date regarding uncertain information used in an analysis which, if found to be false, could alter the appraiser's opinions or conclusions. [Source: USPAP, 2018-2019 edition, p. 3.]

(4) "Highest and best use" means the reasonably probable and legal use of vacant land or an improved property that is physically possible, legally permissible, appropriately supported, financially feasible, and that results in the highest value. [Source: the *Appraisal of Real Estate*, Fourteenth ed., Appraisal Institute 2013].

(5) "Hypothetical condition" means a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for purposes of analysis. [Source: USPAP, 2018-2019 edition, p. 4.]

(6) "Jurisdictional Exception" means an assignment condition established by applicable law or regulation, which precludes an appraiser from complying with a part of USPAP. [Source: USPAP, 2018-2019 edition, p. 4.]

(7) "Sales comparison approach" means a method of estimating property value by comparing the property being appraised to similar properties that have been sold near the date of value, applying appropriate units of comparison, and making adjustments to the sale prices of the comparables based on the elements of comparison.

(8) "Fee simple estate" means the absolute ownership unencumbered by any other interest or estate, subject only to the limitations imposed by the governmental powers

of taxation, eminent domain, police power, and escheat. Source: *The Dictionary of Real Estate Appraisal, Fifth edition*, Appraisal Institute 2010, p. 78.

(9) "Site index" measures the potential productivity of the land for growing timber. A site index indicates the height an average dominant tree of a given species will attain on that site in a well stocked stand in a period of 50 years. Sources of site indices: USDA Natural Resources Conservation Service and S. A. Newman Firm.

(10) "Stumpage value" means the estimated value of merchantable trees which have not been severed from the land.

(11) "Log value" means the value of logs which have been severed from the land and delivered (a "delivered log"), either to a processing mill site or to a place of lading for export.

(12) "Logging cost" means the estimated sum of those costs, including truck haul, severance tax, and a factor for risk and profit to the logger, which are required to convert stumpage into logs delivered at a processing mill site or at a place of lading for export.

(13) "Conversion return approach" means the method of estimating stumpage value by deducting logging costs from log value. This method of valuing stumpage assumes that the value of a tree equals the price that it will command delivered at a processing mill site or at a place of lading for export, less the logging costs to be incurred in converting it from stumpage to delivered logs.

(14) "Sales comparison approach" means a method of estimating either property value or stumpage value by comparing the property or timber being appraised to similar properties that have been sold near the date of value, applying appropriate units of comparison, and making adjustments to the sale prices of the comparables based on the elements of comparison.

(15) Cruising standards: Variable radius plot cruise in merchantable timber stands specified in a later report section.

(16) Size specifications: Cruised and graded in variable log lengths minimum top diameter for sawlogs = 5 inches, inside bark. All live trees containing at least one sixteen foot log to a 5-inch top diameter are assumed to be merchantable.

GENERAL LIMITING CONDITIONS

This appraisal is subject to the following general limiting conditions:

The legal description for the subject property is derived from records furnished by the client and is assumed to be correct. A title report on the subject property has not been made available to the appraiser. No opinion as to title is rendered, which is assumed to be marketable.

Any sketches or maps in this report are included solely to assist the reader in visualizing the property, and are not surveys. We have not surveyed the property or established corners, and assume no responsibility in connection with such matters.

It is assumed, for the purpose of this appraisal, that Kitsap County and Washington State Department of Natural Resources will grant a permit for the cutting and removal of this timber. Trees required to be left uncut as a condition of receiving a development permit are excluded herein.

The appraisal estimates the market value of the indicated timber but does not analyze the relationship between the value of these assets and that of stock or other securities or partnership interests through which the assets may be held.

The statements of value and all conclusions shall apply as of the date shown herein. The value of standing timber is volatile and can change quickly.

Log market contacts, profit expectations, and perceptions of the offered timber typically vary widely among different prospective purchasers. Hence, amounts bid or offered in sales of standing timber also vary widely among these parties at any given date.

This report must be used in its entirety. Reliance on any portion of the report independent of others, may lead the reader to erroneous conclusions regarding the opinion of value. The S. A. Newman Firm does not authorize the partial re-printing of or out-of-context quoting from this report.

While reasonable care has been exercised in preparing and compiling estimates of timber volume and grade and other information contained herein, the S. A. Newman Firm (a) makes no warranties and/or representations as to the type, quality, quantity and/or suitability of timber located on the Property; (b) makes no express or implied warranties of merchantability or fitness for a particular purpose; and (c) makes no warranties and/or representations about whether, when or to what extent forest practices permit(s) will be issued to permit the harvest of this timber. In addition, S. A. Newman, Forest Engineers, Inc. has not performed a soil survey. Statements concerning site drainage and operability of the terrain by yarding equipment are opinions only.

When applicable species grades are allocated between timber deemed to be exportable as unprocessed logs ("exp") and timber deemed to be converted domestically ("dom"). This allocation is based on the actual distribution in the regional marketplace for a given grade and species as of the date of appraisal. A given allocation adjusts for differences in log length, surface clearness, and other quality size characteristics among various stands. The distribution of subject timber by a particular purchaser may differ from the assumed allocation.

Permitted users; functions. This cruise and timber appraisal have been prepared for the sole and exclusive use of our firm's client Richards & Associates, its principal Gary D. Lyman, MAI and, as additional intended user, the firm's client Kitsap County, a Washington domestic corporation. The sole function of the cruise and timber appraisal is to assist the lead property appraiser in establishing the market value contribution of the proposed acquisition area in order to establish a purchase offer by your client in a voluntary transaction.

Neither all nor any part of the contents of this report shall be conveyed to any person or entity, other than the above named parties, through advertising solicitation materials, public relations, news, sales, or other media without the written consent and approval of the author(s), particularly as to valuation conclusions, the identity of the appraiser or firm with which the appraiser is connected, or any reference to the Appraisal Institute. Further, the appraiser or firm assumes no obligation, liability, or accountability to any party except our client Richards & Associates and its principal Gary D. Lyman, MAI. If this report is placed in the hands of anyone but the client, client shall make such party aware of all the assumptions and limiting conditions of the assignment.

While reasonable care has been exercised in preparing the information and opinions herein, prospective purchasers and third parties are urged to retain their own experts and conduct and rely solely upon their own inspection and analysis of the property and its future prospects. The appraiser is in no way responsible for any costs incurred to discover or correct any deficiency in the property. The appraiser assumes that there are no hidden or unapparent conditions of the property or subsoil which would render it more or less valuable. Description of environmentally critical areas illustrate certain reported on-site conditions but is not intended to describe all environmentally critical areas which might exist.

We have been provided no information regarding the presence or absence of hazardous waste on the subject property. None was observed during our inspection. This report assumes the absence of any and all hazardous waste on the subject property. If hazardous waste is found to be present on the subject property, we reserve the right to change the valuation contained in this report.

Extraordinary assumptions or hypothetical conditions: This appraisal is not subject to any extraordinary assumption within the meaning of Standards Rule 1-2(f) of USPAP or hypothetical condition under Standards Rule 1-2(g).

PART II – FACTUAL DATA
Timber Cruise Summary

Description of Merchantable Timber on Selected Property Owned By:
Arness Tree Farms Inc., a Washington corporation

Legal Description: A 14± acre proposed acquisition area mapped on attachment in Addendum B, being part of Section 6, Township 26 North, Range 2 East, W.M., Kitsap County, Washington, described as Parcel II in Exhibit "A" of that title report dated January 30, 2018 issued by Pacific Northwest Title; order no. 32163844; being a portion of Kitsap County tax parcel 062602-1-018-2006.

Estimated total acres: 81.86 acres (source: assessor records).
Proposed acquisition area: approximately 14 acres
Merch. acres within proposed acquisition area: 10.4±
Cruise intensity: 16 variable radius plots, two-thirds of trees therein fully measured and graded
Cruised by: Richard B. Klein, August 7, 2018

Cruise Summary: Estimated net volume in thousands of board feet and projected harvest volume under a Class IV-General forest practice as of cruise date:

Species	Unadjusted Field Net[1]	Adjusted Net Volume[2]	Class IV-General Harvest[3]
Douglas fir	202	197	138
Hemlock	19	18	13
R. Cedar	42	34	24
Alder	32	31	22
Cottonwood	3	3	0
Totals	298	283	197

Log grade composition by species is itemized in a following log value analysis in Addendum C along with other cruise detail.

[1]Source: cruise by representative of the S. A. Newman Firm. Unadjusted field net and cruise detail in Addendum C are unadjusted for minor hidden defect and prospective breakage. Volumes shown exclude timber within no-cut riparian buffer under WAC 222-30-021 and unstable areas.

[2]Adjusted net volume adjusts for hidden defect and minor prospective breakage based on species, age, timber size, site conditions and projected harvest methods. Also of note: Statistical sampling error on red cedar as a stand alone species shown in Addendum C is sharply higher than that of principal species Douglas fir. Harvest volume for red cedar projected for appraisal purposes is, moreover, typically adjusted more significantly because of (i) greater uncertainty and variation about extent of hidden defect; and (ii) normal variation in empirical cut-out disproportionately skews value outcome on this higher valued species.

[3]Projected harvest volume under a Class IV-General forest practice excludes timber on those portions of site projected as environmentally critical under the county's critical areas ordinance and timber (if any) potentially more valuable as an amenity than as stumpage. Such timber is valued as a unit with the underlying land. When applicable, a Class III forest practice typically excludes only minor wildlife reserve and green recruitment trees to the extent required under WAC 222-30-020.

Description of Timber/Physiography

Description of timber types: Douglas fir composes about 70% of on-site timber volume; average to very good quality and moderately limby to clear; averages 16" dbh with average bole length of 60 feet. Red cedar composes about 12% of projected harvest volume; averages 15" dbh with average bole length of 49 feet.

Physiography: U.S. NRCS maps principal soil within proposed acquisition area as Poulsbo gravelly sandy loam, 0 – 6% slopes, a "moderately deep, moderately well drained soil" formed in glacial till. Permeability is rated as moderately rapid above the hardpan and very slow through it. Forested and scrub-type wetland on two strips as delineated by Ecological Land Services in mapping in Addendum B. Based on a 50-year site curve, mean site index for Douglas fir on the Poulsbo series averages 121 feet; above average in forest site productivity. Annual precipitation averages 35 inches [source: NOAA].

Access: Bond Road N.E., a paved county road, borders northwest side of proposed acquisition area and the remainder property. NE Rova Road borders north side of acquisition area. Interior is unroaded.

Harvest Regulatory Constraints

Land use conversions. RCW 76.09.060(3)(d) as amended July 2007 prohibits conversion to a land use other than "commercial forest product operations within six years after approval of the forest practices application or notification without the consent of the county ... to which the forest practices operations would have been subject if the application had stated an intent to convert." Actual permitted harvest in land use conversions is subject to county review on a case-by-case basis. A harvest compliant with conversion guidelines—a Class IV-General forest practice—is generally more restrictive than permitted under other classes of forest practice. In particular, harvest is generally prohibited on those parts of a site regulated under the county critical areas ordinance such as steep slopes, other geologically hazardous areas, wetland and frequently flooded areas.

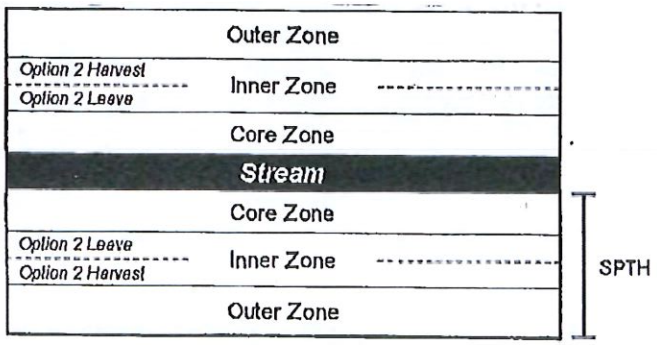
Forest Practices. RCW 76.09 and WAC 222 regulate forest land use and forestry operations on private lands and public lands under State jurisdiction, including road construction and maintenance, timber harvesting, reforestation and use of forest chemicals. A permit to perform major forest practices is subject to review by the Washington State Departments of Natural Resources, Ecology, Fish and Wildlife, and (under a Class IV-General forest practice) by Kitsap County.

In western Washington the "Forest and Fish Rules" (WAC 222-30-021) require a three-zone riparian harvest buffer along either side of a fish-bearing stream (figure below). The total combined buffer width is one site potential tree height (SPTH), which is 90-200 feet depending on site quality. The zone adjacent to the stream is a 50-foot no-harvest core zone. This is followed by the inner zone, in which two partial harvest

options are allowed subject to minimum tree count and basal area requirements. Option 1 allows thinning from below throughout the inner zone to a minimum of 57 conifers per acre. Option 2 divides the inner zone into two portions, allowing the trees furthest from the stream to be removed (up to a minimum distance of 80 feet from the stream) while the trees in the portion closest to the stream are retained. The final zone is the outer zone, in which partial harvest is allowed with a minimum retention of 20 conifers per acre that are at least 12" in diameter.

In addition to the above described riparian protective measures, a 50-foot no-harvest buffer is generally prescribed each side of type N stream for a distance greater than or equal to fifty percent of a type N water length upstream from confluence with fish-bearing water, where type N water is less than 1,000 feet in length. Additional 50-foot "no-harvest" buffer on each side of type N stream is required greater than 1,000 feet upstream from confluence with fish bearing water ranging from 19 to 45% of stream length above 1,000-foot mark.

The goal of the Westside buffer rules is to put the development of riparian stands on a trajectory toward a desired future condition (DFC) of mature forest structure intended to provide high quality riparian habitat. This DFC is defined as "the stand conditions of a mature riparian forest at 140 years of age" (WAC 222-16-010). In addition to this ecological goal, the FFR also have the concurrent economic goal of "maintaining commercial forest management as an economically viable use of lands suitable for that purpose." RCW 77.85.180.



FFR buffers for Western WA.

These rules were revised on August 12, 2009 to require slightly larger buffer zones and more trees to be left alongside streams and rivers in the state during timber harvests and other activities. In February 2010 a fixed width, no harvest buffer by site productivity was made optionally available to forest practices applicants under an "Alternate Plan" to standard forest practices rules. The fixed width buffer generally assumes no harvest in core and inner zones and also no harvest in a small portion of outer zone.

RMAP status. State DNR regulates road construction, maintenance and abandonment under WAC 222-24. On some sites, the cost of such work is substantial and therefore materially affects value. When applicable, a landowner or its successor in interest is generally liable for performing uncompleted maintenance or abandonment work prescribed under an approved plan for the property at issue. In this instance interior of proposed acquisition area is unroaded. When existent, spur roads determined to be "orphaned" (if any) are defined as a road or railroad grade "not used for forest practice activities since 1974. WAC 222-24-052(4). Landowners generally are not obligated to repair or abandon such roads.

Watershed Analysis. The forest practices rules allow for special regulations, i.e. watershed prescriptions, within watershed analysis units ("WAU") where a qualified multi-disciplinary team completed an approved resource assessment under WAC 222-22. The subject parcel sits within the Bangor-Port Gamble #150203. No formal resource assessment nor analysis has been performed in this WAU; thus standard forest practices apply.

Wildlife and other issues. In addition to riparian restrictions intended to protect fish habitat and water quality, certain restrictions potentially apply to forest practices to protect terrestrial and avian wildlife. The northern spotted owl (STOC) is listed as state endangered (SE) and federally threatened (FT). The subject sits, however, outside of a spotted owl special emphasis area (SOSEA) under permanent rules adopted on May 22, 1996 to protect habitat of this species. The Port Gamble quad of public data release map issued by State of Washington Department of Fish and Wildlife ("WDFW") indicates, moreover, that the site sits outside of a management circle of established territory for this species. And, it lacks sufficient habitat for this species. The undersigned also consulted the Washington State Department of Natural Resources "Resource" maps to corroborate PHS map data. The resource map also does not identify any rare plants or archeological issues of concern. Timber harvesting is expected to be unaffected by plants or archeological issues.

PART III – DATA ANALYSIS AND CONCLUSIONS OF VALUE

Valuation Methodology

The valuation process used herein is based on analysis of pertinent general and specific data. A conversion return method—a variant of an income approach--is relied upon in this instance with respect to on-site timber, reflecting the type of property, the intended use of the appraisal, the identified scope of work, and the quality and quantity of data available for analysis. The State has not offered or sold export-unrestricted sales usable as potential comparables due to the Act noted below; and such sale data are generally unavailable from alternative sources. A present net worth analysis—a variant of an income approach—is applied in estimating the value contribution of on-site sub-merchantable stands and a younger reproduction stand.

The Forest Resources Conservation and Shortage Relief Act of 1990 (Public Law 101-382) (the "Act") restricts the export of unprocessed timber originating from State and other public land. Chapter 240-15 of the Washington Administrative Code implements these restrictions, beginning January 1, 1991. Generally, the Act requires each agency managing public lands to designate timber sales to be sold as export-restricted and as exportable. The Act prohibits the export of unprocessed timber from export-restricted sales, but permits the export of unprocessed timber from export-unrestricted sales. Moreover, the Act does not apply to privately owned forest land. The Ninth Circuit Court of Appeals in May 1993 ruled that this Act violated 10th Amendment guarantees of state sovereignty. *Board of Natural Resources v. Brown*, 92-35004. The Act was, however, reinstated in slightly amended form; and as amended upheld state regulations adopted pursuant to the 1990 law. The extent that timber from public and private land is actually exported remains subject to normal qualitative and market constraints.

We first analyzed the subject stumpage for the purpose of evaluating those factors which would add to or detract from its value, such as log quality, location, accessibility, logging conditions, road construction requirements, and proximity to market. We also analyzed site factors to identify whether a land use more intensive than timber growing and harvesting might be permitted in the near to mid-term. The existence of environmentally sensitive conditions such as steep slopes, wetlands, intervening streams, critical aquifers, and flood, erosion, landslide and seismic hazards often preclude more intensive uses under the critical areas ordinance adopted by the County.

Timber within proposed acquisition area is valued under the premise of a prospective Class IV-General forest practice only as described on prior pages.

Other adjustments in estimating value contribution. The indicated estimates of value contribution of this sub-merchantable timber adjusts for nominal uncertainty only in the marketplace about the extent of permitted volume at prospective harvest dates; marketing and management costs; prospective time delay to receipt of timber or log

sale proceeds; and risk and profit to landowner in resale of on-site timber. A value adjustment of approximately fifteen percent (15%) is typically applied for these collective elements to merchantable-sized timber on operational-type stands that are expected to be legally harvestable under a Class IV-General forest practice. Adjustment is higher when economies of scale are less.

An adjustment for *each* of these foregoing items in line item form is not inferable from available market data relevant to this particular property: property and survey data usually support, however, a *collective* adjustment for these elements in deriving indications of contributory stumpage value.

Indications of contributory timber value reflects current log market conditions, aligned with current price forecasts included at end of Addendum B. Commodity pricing can, however, change sharply over short term periods.

Estimation of Average Log Values

The compilation of log prices from private sources involved our contact with mills and other log buyers in the market area to survey prices being paid for delivered logs of various grades and species at the valuation date, and of analyzing these data to estimate average log values.

Reconciled value for each log sort is appraiser's reconciled estimate derived from personal interview with various log buyer sources or published sources as of August 7, 2018. Export-type logs were priced as non-FAS and assumed an average log length of 36 feet or greater. Export logs range from 26 to 40 feet; domestic logs range from 12 feet to 40 feet.

Log prices have been surveyed in the south Puget Sound market area. Sources surveyed are itemized below and on a following page.

The reconciled log value rates on following pages are appraiser's estimate of log values, weighted to reflect reliability of sources and relative quantity purchased. It is assumed that the property owner would, subject to normal market and quantitative constraints, sell harvestable timber or logs at the highest available price. Specific sources do not, however, consistently quote high relative prices for all grades or sorts of a given species. Therefore, although reconciled values generally appear near the upper end of the range of price quotes, it is impracticable to procure the highest price quotes for all grades and sorts. Reconciled log value for some sorts only falls outside or exceeds range of quotes in order to reconcile with quotes for other sorts which are qualitatively superior or inferior. Reconciled value also reflects that some destinations are preferred to minimize hauling cost if net stumpage value is thereby maximized. These data are then applied to the subject timber based on the indicated log grade composition.

Logs produced from the subject property are deliverable to south Puget Sound area market.

Sources A through N in table 1 are coded on the following pages to protect confidentiality of prices attributable to specific sources. These sources of log price data, all operating in Puget Sound and vicinity are cited following table 1 (sources in parenthesis were considered but not relied upon in identifying project log buyers and destinations).

Table 1. Log prices quoted from various sources to processing mill site as basis for reconciled value in south Puget Sound areas and vicinity as of August 7, 2018.

		Pulp	58		300	514

Notes: Price for each log grade is appraiser's reconciled estimate derived from various log buyer sources as of July 31, 2018. All prices are second growth, per MBF. Export-type logs were priced to brow log (not FAS), prices on conifer export volume assume an average log length of 36 feet, ranging from 26 to 40 feet. Domestic prices assume an average log length of 32 feet.

Estimation of Logging Costs per MBF under Class IV-General forest practice:

Fee for temporary road use permit	$0
Road reconstruction:	0
Road construction: 2 stations @ $1,800/197 MBF	18
"Stump to truck" elements (fall & buck, yard & load, operator's overhead, and risk and profit to operator only)	110
Truck haul (per following page)	103
Fire protection & slash disposal*	7
Engineering, surveying and permits	18
Washington state timber excise tax	30
Total:	$286/M

Other supporting data on following page. Road construction rate includes move-in/move-out and low economies of scale

Yarding & loading: Class IV-General: 100% ground-based yarding @ rate indicated.

Note: Net value is unadjusted for cost of reforestation, which is generally required by law under WAC 222-34 unless the harvest application indicates that the land will be converted to another use. WAC 222-34-010 details other exceptions. Reforestation is an improvement to the underlying land both for appraisal and most tax purposes. Cost of reforestation typically ranges from $250 to $350 per acre for acres actually reforested, varying with location, site conditions, stocking density, size and species of seedlings or transplants, and project size. Whether the purchaser or seller of the timber pays this cost should be stipulated contractually.

*Further, fire protection and slash disposal cost shown assumes ordinary forest practices abatement and excludes costs of off-site debris hauling, slash chipping, stump pulling or grinding and disposal, land grading, buffer barricading, and also excludes costs of tree marking, reforestation, permit fees, real estate excise tax or business and occupation tax, and sales fees (if any) that may be incurred in procuring or harvesting the timber.

Truck haul – Volume in MBF:

		Destination					
Species	MBF	Tumwater/ Olympia	Kamilche	Belfair	Shelton/ Tacoma	Fredrickson	Centralia
Douglas fir	138	71	-	6	43	18	-
Hemlock	13	-	-	1	5	7	-
Red cedar	24	-	24	-	-	-	-
Alder	22	13	-	-	-	-	9
Totals:	197	84	24	7	48	25	9
Pct. of total:		43%	12%	4%	24%	13%	4%

Number of miles to log destinations on Class A roads: Tumwater/Olympia 76; Kamilche 62; Belfair 29; Shelton/Tacoma 55; Fredrickson 66; Centralia 95.

Average Class A mileage weighted by board foot volume to respective destinations: 66.9. Average mileage on Class C roads: 0.1.

Truckers customarily charge commercial clients for log haul at a rate averaging $6 to $8 per mile per load on Class A roads at the date of value (upper end of price range for short hauling distances); approximately $12 per mile on Class C roads. Varying by load capacity and log size, total board footage per load typically ranges between approximately 3,300 board feet on loads with smaller sized logs to 5,600 board feet per load in hauling larger sized logs. On particular loads, board footage may occur outside of this range. Sources of rates and load estimates: survey of and feedback from truckers, loggers and permitted users of prior appraisals. Average quantity per load on this parcel: 4,700 board feet. Average log haul cost per MBF: [($7.25 / 4.7 MBF) x 66.9 Class A miles] + [($12 / 4.7 MBF)] x 0.1 Class C miles = $103 per MBF.

Washington State timber excise tax (WAC 458-40; 2nd half 2018): Stumpage Value Area 4, Haul Zone 1; volume per acre adjustment: $-15; logging conditions adjustment: $-0; "chipwood" (pulp) unadjusted per WAC 458-40-660(3)(a). Notes: State of Washington Department of Revenue established the stumpage rates per MBF stated below during the months prior to the six-month period to which they apply for the purpose of calculating timber excise tax based on Class IV-General harvest; also applies proportionately to a Class III harvest at tax rate of 4.2%:

Species			Rate
Douglas fir	132	@	$601
Hemlock	12		386
Red cedar	21		1,299
Alder	9		611
Chipwood	23		117
Total	197		X $606 x 5.0% = $30/M

Indication of Contributory Merchantable Timber Value as of August 7, 2018, under a Class IV-General Forest Practice

	Delivered Log Value	Logging Cost	Stumpage Value Sub-totals
Douglas fir	[(138M @ $837) = $115,506]	- [(138M @ $286) = $39,468]) =	$76,038
Hemlock	[(13M @ $656) = $8,528]	- [(13M @ $286) = $3,718]) =	4,810
Red cedar	[(24M @ $1,280) = $30,720]	- [(24M @ $286) = $6,864]) =	23,856
Alder	[(22M @ $514) = $11,308]	- [(22M @ $286) = $6,292) =	5,016
	Total Delivered Log Value: $166,062	Total Logging Cost: $56,342	
	Rounded to: $166,000	Total Unadjusted Stumpage Value:	$109,720
		Value contribution @ 85%:	**$93,000**

Indicated estimate of value contribution adjusts for marketing and management costs; prospective time lag to receipt of timber or log sale proceeds; risk and profit to landowner in resale of timber commodity; and appraisal principle of conforming use.

Re: Scope of work/fee quote to cruise and appraise timber on property owned by Arness Tree Farms Inc., a Washington corporation; parcel 062602-1-018-2006

Dear Mr. Lyman:

You request a scope of work and fee quote to cruise and appraise merchantable timber on part the tax parcel referenced above. The "whole property" is legally described as that portion of Section 6, Township 26 North, Range 2 East, W.M., Kitsap County, Washington, described as Parcel II in Exhibit "A" of that title report dated January 30, 2018 issued by Pacific Northwest Title; order no. 32163844. Land area totals approximately 81.86 acres [assessor records]. Area proposed to be acquired consists of an approximately 14-acre subunit thereof as mapped on the attachment. Although subject to your determination, the "larger parcel" as defined for appraisal purposes potentially encompasses the entire contiguous ownership. Proposed acquisition area includes certain mapped wetland. Creeks rated as fish bearing occupy part of the whole property but are not believed to be part of acquisition area.

Scope of work. The cruise is an estimate of volume (in thousands of board feet) and grade for each species of merchantable timber; grading standards of Northwest Log Scaling & Grading Bureau and export sorts where applicable. Scope of cruising relates exclusively to timber within proposed acquisition area: this subunit will, however, be recognized as part of a larger "whole property" for the purpose of estimating unit log values and logging cost and efficiencies of the larger scale. Subject to findings about estimated number of merchantable stand acres, minimum proposed cruise intensity is one variable radius plot per 0.8 acre, applied to stands projected as both merchantable-sized and legally harvestable under a Class IV-General forest practice, i.e., up to approximately 16 variable radius plots. At least two-thirds of all trees on the indicated plots shall be fully measured and graded; remaining trees tallied

by species and diameter only. Grid layout for installation of plots to be equidistant or otherwise stratified within cruised stands.

The appraisal of on-site merchantable timber will estimate itemized logging costs per MBF (including hauling cost/log destination analysis for competing buyers), log values for each grade, and contributory timber value by a conversion return method (variant of income approach)—again, recognizing that the proposed acquisition area is part of a larger commercial unit. Merchantable timber on this property will at your request be valued exclusively under the harvest premise of a Class IV-General forest practice (with near term land use conversion). Therefore, cruise plots will not be installed within forested wetland, on which Kitsap County typically does not permit harvest under this class of forest practice. Timber will be valued to an export unrestricted log market as of a current date. Scope of work includes projection of yield and market discount rates if and to the extent that on-site timber is sub-merchantable or pre-merchantable. A fee simple estate in on-site timber will be valued in conformance with *Uniform Standards of Professional Appraisal Practice* (USPAP) when used with report of lead property appraiser. These data will be presented under one cover.

Permitted users; function. This cruise and timber appraisal shall be prepared for the sole and exclusive use of our firm's prospective client Richards & Associates and its lead property appraiser Gary D. Lyman, MAI and the firm's client Kitsap County. The sole function of the cruise and timber appraisal is to assist in establishing the market value contribution of the proposed acquisition area in order to establish a purchase offer by your client in a voluntary transaction.

Fee; performance period. Our firm's fee to Richards & Associates to field examine this timber and perform cruising and timber appraisal services, payable on delivery of the report, is as follows:

Cruise on-site timber:
Appraise on-site merch. timber—
Class IV-General: _____
Total

Reasonable efforts will be exercised to complete and deliver our findings to you within thirty-five (35) calendar days after notice to proceed. Please advise of any earlier or specific deadline. A locked color pdf will be emailed to you upon completion: a hard copy or copies will also be provided if you so request.

To authorize, please acknowledge by return mail with authorizing signature on the line below or by return email. Any additional file information that might be relevant in estimating market value is also requested if available. A permit to inspect the site is assumed to have been procured if and upon receipt of authorization to proceed. Details on entry protocol (contact person, phone no. or email address) are, however, appreciated.

You are welcome to include this timber scope of work as part your submittal to Kitsap County. Please feel free to contact me if you have any questions. Thank you.

Very truly yours,
S. A. NEWMAN FIRM

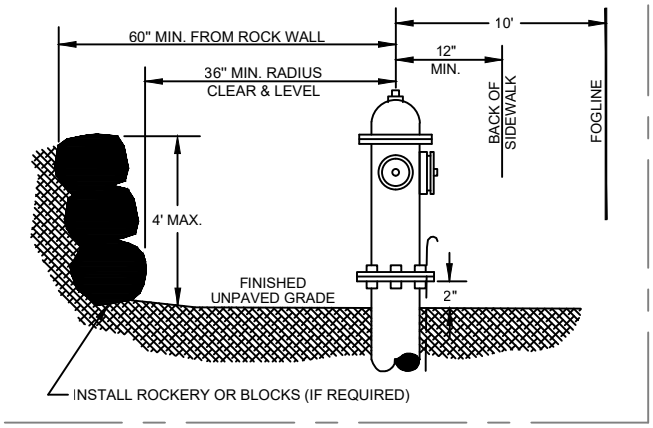
2" BLOW-OFF ASSEMBLY

FILE NAME: SD W-2 BOA.DWG	
DRAWN BY: KSE	REVISIONS: KSE
SCALE: NONE	REVISION: 1
STANDARD DETAIL: W-2	DATE: 02/12/2018



NOTES:

1. FIRE HYDRANTS WILL BE DOUBLE RESTRAINED; USING TWO OF THREE FORMS OF RESTRAINT BETWEEN AUXILIARY VALVE & HYDRANT ASSEMBLY.
2. MEGA LUGS POURED IN PLACE, CONCRETE THRUST BLOCK, 3/4" GALVANIZED SHACKLE RODS MAY BE REQUIRED (DEPENDING ON CONDITIONS).
3. REGARDLESS OF RESTRAINT METHOD, THERE WILL BE A POURED CONCRETE THRUST BLOCK BEHIND HYDRANT TEE. IF HYDRANT RUNS LONGER THAN ONE LENGTH OF PIPE, FIELD LOCK GASKETS WILL BE REQUIRED.
4. PROVIDE LEVEL ACCESS TO FIRE HYDRANT.
5. FIRE HYDRANT TO BE SET BACK 10' FROM FOGLINE, UNLESS REDUCTION APPROVED BY THE ENGINEER.

FIRE HYDRANT ASSEMBLY

FILE NAME: SD W-4 FHA.DWG	
DRAWN BY: KSE	REVISION: WHW
SCALE: NONE	REVISION: 2
STANDARD DETAIL: W-4	DATE: 067/2022

NOTES:

1. STAYING IN COMPLIANCE WITH D.O.H.'S EMPHASIS ON CROSS CONNECTIONS, A PHYSICAL SEPARATION BETWEEN THE EXISTING WATER MAIN AND ANY NEW EXTENSIONS, WILL BE MAINTAINED DURING THE COURSE OF CONSTRUCTION. THE INITIAL FILLING AND FLUSHING, WILL BE DONE THROUGH A REDUCED PRESSURE BACKFLOW ASSEMBLY (RPBA).
2. PUT A BLIND FLANGE/CAP WITH A 2" TAP WITH A STANDPIPE.
3. 5' TO 8' FROM THE TAP VALVE, LAY THE FIRST PIPE WITH A BLIND FLANGE/CAP OR PLUG WITH A 2" TAP AND STANDPIPE.
4. WHEN THE CONSTRUCTION OF THE MAIN IS DONE, FILL THE NEW MAIN USING HOSES AND REDUCED PRESSURE BACKFLOW ASSEMBLY (RPBA).
5. FLUSH CHLORINATED WATER USING THE REDUCED PRESSURE BACKFLOW ASSEMBLY (RPBA).
6. BACTI SAMPLES
7. HYDROSTATIC TEST
8. MAKE FINAL CONNECTION, SWABBING ALL PARTS AND PIPE WITH CHLORINE SOLUTION. (□INSPECTOR MUST BE PRESENT□)
9. AFTER FINAL CONNECTION, PERFORM DEBRIS FLUSH.

NEW WATER MAIN SEPARATION

FILE NAME: SD W-8 NWMS.DWG	
DRAWN BY: KSE	REVISIONS: KSE
SCALE: NONE	REVISION: 0
STANDARD DETAIL: W-8	DATE: 02/12/2018

NOTES:

1. THE DISTRICT'S RESPONSIBILITY "ENDS" AT THE METER BOX.
2. PROPERTIES THAT HAVE PLANS FOR HOUSE FIRE SPRINKLERS, MUST BE SINGLE SERVICE CONNECTIONS WITH 1" SETTERS.
3. TRAFFIC LOCATIONS:
   CARSON MSBCF 1118-12 PLASTIC BOX OR EQUIVALENT, DUCTILE IRON LID WITH VIEW READING DOOR FOR NON-PRV APPLICATIONS.
   CARSON MSBCF 1324-12 PLASTIC BOX OR EQUIVALENT, DUCTILE IRON LID WITH METER READING LID FOR PRV APPLICATIONS.
   METER BOXES MUST HAVE A 1-3/4" DRILLED HOLE IN A CORNER OR TOUCH PAD ADAPTOR (NOT TO INTERFERE WITH METER OR PRV).
4. NON-TRAFFIC LOCATIONS:
   CARSON 1419-12 PLASTIC BOX OR EQUIVALENT, PLASTIC LID WITH METER READING DOOR FOR PRV & NON PRV APPLICATIONS.
   METER BOXES MUST HAVE A 1-3/4" DRILLED HOLE IN A CORNER OR TOUCH PAD ADAPTOR (NOT TO INTERFERE WITH METER OR PRV).

SINGLE SERVICE CONNECTION
5/8" - 1"

FILE NAME: SD W-12 SSC.DWG	
DRAWN BY: KSE	REVISION: WHW
SCALE: NONE	REVISION: 3
STANDARD DETAIL: W-12	DATE: 6/7/2022

NOTES:

1. THE DISTRICT'S RESPONSIBILITY "ENDS" AT THE METER BOX
2. METER BOXES 1-1/2" AND 2" METER YOKES
3. TRAFFIC LOCATIONS:
   CARSON MSBCF 1730-18 PLASTIC BOX OR APPROVED EQUIVALENT
   DUCTILE IRON LID WITH A VIEW READING DOOR
   METER BOXES MUST HAVE A 1-3/4" DRILLED HOLE IN A CORNER (NOT TO INTERFERE WITH METER OR PRV)
4. NON-TRAFFIC LOCATIONS:
   CARSON 1730-18 PLASTIC BOX OR APPROVED EQUIVALENT
   PLASTIC LID WITH A VIEW READING DOOR
   METER BOXES MUST HAVE A 1-3/4" DRILLED HOLE IN A CORNER (NOT TO INTERFERE WITH METER OR PRV)
   NON-BOLT DOWN OR APPROVED EQUIVALENT

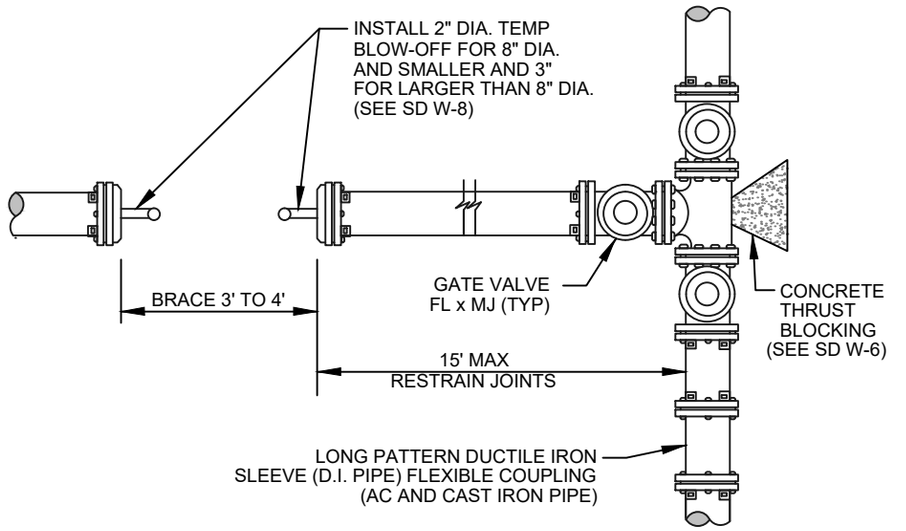
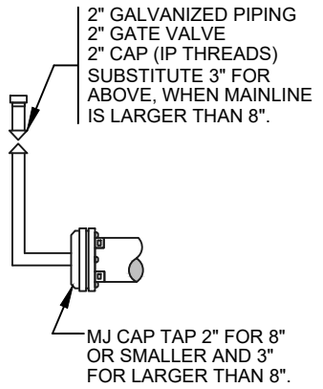
1-1/2" & 2" METER YOKE

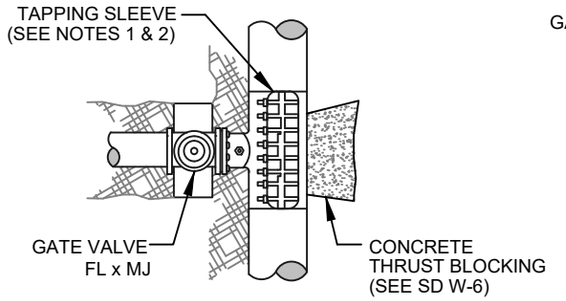
FILE NAME: SD W-13 MTR YOKE.DWG	
DRAWN BY: KSE	REVISIONS: KSE
SCALE: NONE	REVISION: 1
STANDARD DETAIL: W-13	DATE: 02/12/2018

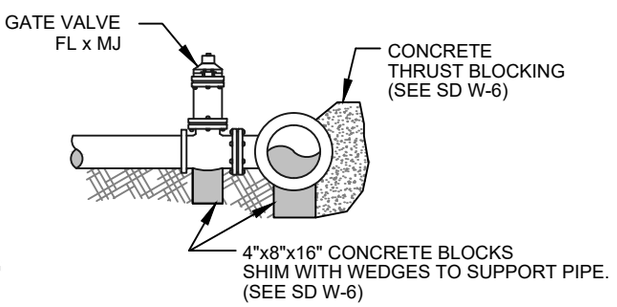


CUT-IN CONNECTION



TEMP BLOW-OFF





TAPPED CONNECTION

NOTES:

1. TAPPED CONNECTIONS NOT ALLOWED WITHOUT SPECIFIC APPROVAL FROM KITSAP PUD.
2. NO CONNECTION WILL BE ALLOWED UNTIL ALL PRESSURE TESTING COMPLETED, AND SATISFACTORY BACTERIOLOGICAL TEST RECEIVED. SEE CROSS CONNECTION CONTROL IN STANDARD DETAIL W-23.
3. TAPPING SLEEVE TO BE STAINLESS STEEL FOR AC PIPE AND EPOXY COATED STEEL FOR DUCTILE OR CAST IRON PIPE. CLOSEST EDGE OF TAPPING SLEEVE MUST BE 3' (MIN.) FROM COUPLING ON AC PIPE.
4. SEE STANDARD DETAIL W-9 (VALVE BOX) AND STANDARD DETAIL W-6 (THRUST BLOCKING). PIPE AND FITTING RESTRAINTS MAY VARY.
5. BACKFILL PER JURISDICTIONAL REQUIREMENTS WHEN IN ASPHALT. ALL OTHER AREAS PER STANDARD DETAIL SPECIFICATIONS.
6. TEMP BLOW-OFF'S MUST BE PROTECTED FROM DAMAGE. PLACE IN TRAFFIC BOX IF REQUIRED.
7. ALL MJ JOINTS TO BE MEGA LUG OR EQUAL.
8. SIMILAR TEMP BLOW-OFF REQUIREMENTS FOR TAPPED CONNECTIONS. LOCATE BLOW-OFF OUT OF ASPHALT WHEN POSSIBLE.
9. ALL FITTINGS AND PIPE SHALL BE STERILE SWABBED. CONNECTION SHALL BE INSPECTED FOR VISUAL LEAKAGE UNDER FULL LINE PRESSURE PRIOR TO BACKFILL.

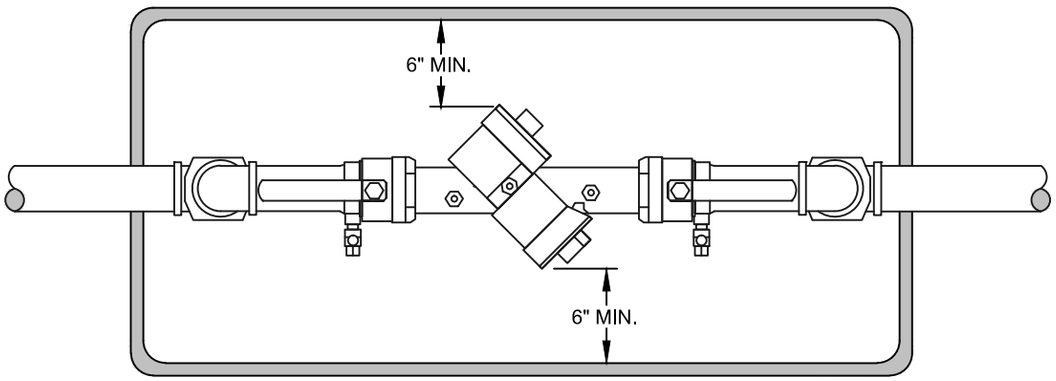
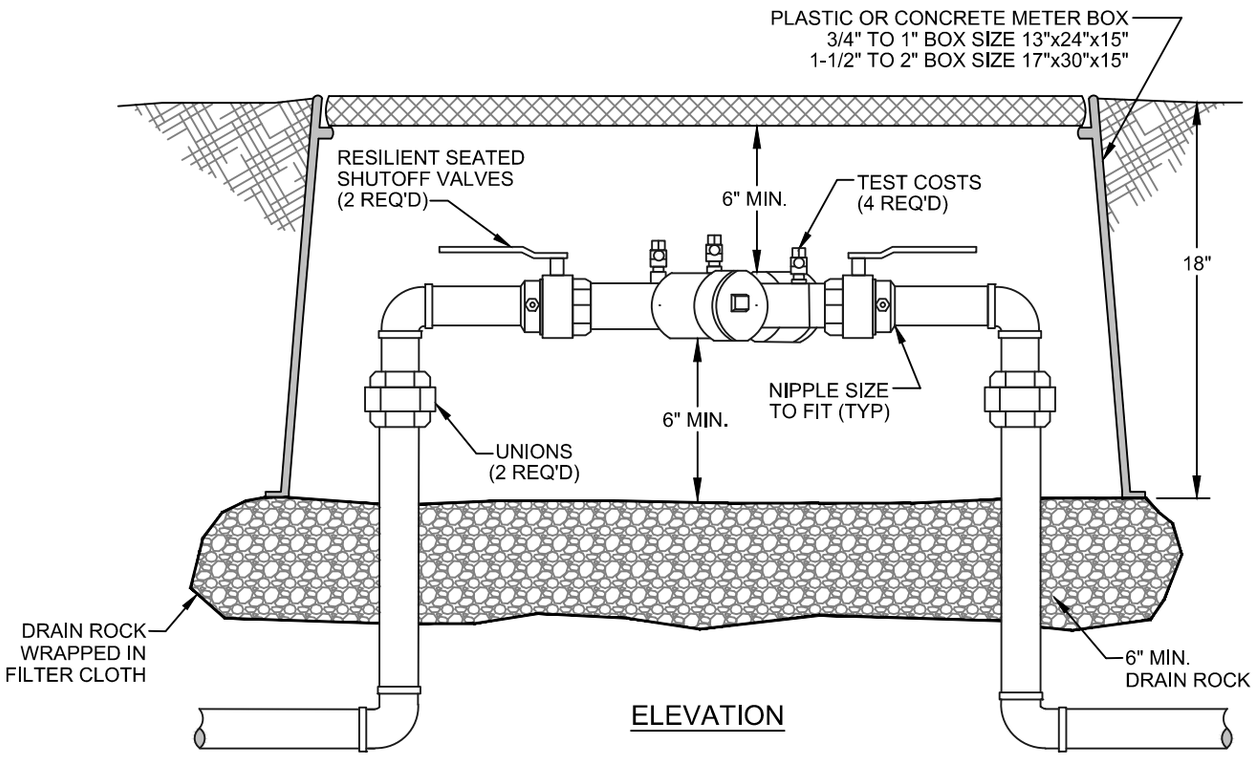
CONNECTION REQUIREMENT

FILE NAME: SD W-17 CR.DWG	
DRAWN BY: KSE	REVISIONS: KSE
SCALE: NONE	REVISION: 0
STANDARD DETAIL: W-17	DATE: 02/12/2018



PLAN



ELEVATION

NOTES:

1. DOUBLE CHECK VALVE ASSEMBLY (DCVA) WILL BE WASHINGTON STATE DEPARTMENT OF HEALTH APPROVED.
2. DCVA MUST INCLUDE (2) RESILIENT SEATED SHUT OFF VALVES & (4) RESILIENT SEATED TEST-COCKS WITH PLUGS INSTALLED AND (2) UNIONS.
3. 2" AND SMALLER DCVA IN (2) METER BOXES STACKED ON TOP OF EACH OTHER OR BOX WHEN NEEDED. (MUST HAVE A REMOVABLE COVER).
4. 4" MINIMUM AND 12" MAXIMUM DISTANCE BETWEEN UNDERSIDE OF LID AND HIGHEST POINT OF DEVICE.
5. DRAIN ROCK MUST BE A MINIMUM OF 12" DEEP AT THE BOTTOM OF THE BOX.
6. MINIMUM DISTANCE OF 4" - 6" BETWEEN LOWEST POINT OF DEVICE AND DRAIN ROCK.
7. Y-PATTERN DCVA SHOULD BE INSTALLED ON SIDE. WHEN TEST COCKS ARE FACING SIDEWAYS, THERE MUST BE A MINIMUM OF 6" CLEARANCE BETWEEN TEST COCKS AND THE SIDE OF THE BOX.
8. TEST DCVA BEFORE USE AND SEND REPORT TO KITSAP PUBLIC UTILITY DISTRICT FOR APPROVAL.

DOUBLE CHECK VALVE ASSEMBLY 2 INCH AND SMALLER

FILE NAME: SD W-18 DCVA-2 INCH&SMLR.DWG	
DRAWN BY: COBI	REVISIONS: KSE
SCALE: NONE	REVISION: 1
STANDARD DETAIL: W-18	DATE: 02/12/2018

MATERIAL LIST:

1. (2) MAIN GATE VALVES, RESILIENT SEATED. (SIZE VARIED BY ENGINEER)
2. 3/4" DOUBLE CHECK VALVE ASSEMBLY CONFORMED TO AWWA STANDARDS.
3. DOUBLE DETECTOR CHECK CHECK ASSEMBLY CONFORMED TO AWWA STANDARDS.
4. 5/8" x 3/4" DOMESTIC METER, 1 TO 20 GPM. (READS IN CUBIC FEET)
5. (2) 36" x 36" GALVANIZED STEEL DIAMOND PLATES WITH SPRINGS LOCKING LATCH WITH BOLT FULL SWING-OPEN 180° HATCH.
6. (2) NON-CORROSIVE SUPPORT FOR DEVICES 2-1/2" OR LARGER (MUST BE APPROVED BY THE DISTRICT).
7. 4" FLOOR DRAIN WITH A TRACE WIRE. IF DRAIN CANNOT BE SLOPED TO DAYLIGHT OR INFILTRATION PIT, A SUMP PUMP MUST BE INSTALLED.
8. (2) WATER LIDS (TABS WILL POINT IN THE DIRECTION OF THE WATER MAIN)
9. (2) CAST IRON VALVE BOXES (TWO PIECE - TOP & BOTTOM) OLYMPIC FOUNDRY OR APPROVED EQUIVALENT.
10. FLANGE (TYP)
11. (2) 90° ELBOWS
12. 3/4" BRASS PIPE - BYPASS
13. (4) 3/4" BALL VALVES - TEST COCKS
14. (2) FLANGE COUPLING ASSEMBLY
15. (1) CUBIC YARD OF WASHED GRAVEL
16. DUCTILE IRON PIPE (SIZE VARIED, BY AN ENGINEER)
17. MEGA LUG & FIELD LOK GASKETS (100' OR AS REQUIRED OR TIE BACK BLOCK). (TYP)
18. WALL PIPE, FLANGE WITH PLAIN END WITH INTEGRALLY CAST COLLAR.
19. PERMANENT FIXED GALVANIZED STEEL LADDER IN VAULTS OVER 4' DEEP.
20. CONCRETE VAULT

NOTES:

1. ANY FIRE SERVICE VAULTS MUST BE APPROVED BY THE FIRE MARSHALL.
2. 3" PIPING AND ABOVE SHALL BE DUCTILE IRON.
3. CLEARANCES STILL APPLY WHEN DEVICES ARE INSTALLED IN VAULTS.
4. PROVIDE PLUGS ON ALL TEST COCKS.
5. DEVICES MUST BE TESTED UPON INSTALLATION.
6. ALL "MJ" (MECHANICAL JOINT) FITTINGS SHALL BE MEGA LUG.
7. VAULT LOCATION SHOWN IS IN A LANDSCAPED OR UNIMPROVED AREA. (□INSTALLATION IN ASPHALT SHALL "NOT" BE ALLOWED, WITHOUT PRIOR APPROVAL□).
8. CONCRETE VAULT EQUAL TO HANSON PIPE PRECAST INC. OR UTILITY VAULT COMPANY. (OLD CASTLE PRECAST)

DOUBLE CHECK DETECTOR VALVE ASSEMBLY

FILE NAME: SD W-20 DCDVA.DWG	
DRAWN BY: KSE	REVISIONS: KSE
SCALE: NONE	REVISION: 1
STANDARD DETAIL: W-20	DATE: 02/12/2018

NOTE:

1. CONTRACTORS ARE REQUIRED TO MEET ALL WASHINGTON STATE DOT STANDARDS AND KITSAP COUNTY STANDARDS FOR TRENCH AND ASPHALT SURFACING.
2. ASPHALT CONCRETE MIX SHALL BE CLASS "B".
3. ALL UTILITIES SHALL HAVE 36" MIN. COVER UNLESS, OTHERWISE APPROVED BY THE COUNTY ENGINEER.
4. IF ROAD CLOSURES OR DETOURS ARE ANTICIPATED, A TRAFFIC PLAN INCLUDING; SPECIFIC DATES AND DURATIONS OF SUCH ACTIONS SHALL BE FILED WITH THE KITSAP COUNTY DEPARTMENT OF PUBLIC WORKS.
5. THE APPLICANT IS RESPONSIBLE FOR ALL TEMPORARY AND PERMANENT PATCHING.
6. NO OPEN TRENCHES LEFT OVERNIGHT.
